2. The failure of the rains during 1876 in this district appears to have been more utter than I had previously supposed. Hardly one-third of the average rainfall was vouchsafed. At no period of the year did any sufficing rain fall; even the Pennair River failed to come down in flood; and the dam across that river opposite the town of Nellore and the irrigation works dependent thereon have this year proved almost useless. Along the East Coast line, that is, in the villages immediately adjoining the margin of the sea, some rain fell; but it dwindled away to the westwards, till almost nothing fell in the western parts of the district at the base of the Ghât range of hills. I found very serious drought prevailing and considerable distress, especially in the vicinity of the well-known hill fort of Udaigarh. The total out-turn of the district is still estimated by the local authorities to be under four annas, or less than one-fourth of the average out-turn. On the other hand, in some parts of the district, especially the eastern, the people, finding water to be near the surface, have, with commendable industry, made the most of this slender opportunity and have dug temporary wells or deepened old wells, and thus raised a certain amount of spring crops. Between Nellore and the East Coast Canal, I saw cultivation of this kind stretching for several miles. In a short time the result of the accession of new grain supply will be felt throughout the district.

3. Meanwhile, the markets are well supplied with grain, coming both by inland and by water routes.

4. Out of the large number of relief labourers whom I inspected carefully (about 17,000 in all), very few were found to be apparently in a condition to sustain themselves; the vast majority seemed to be persons of the right sort for these works, that is, persons who really needed this form of relief. Their physical condition was generally fair. But among them were found sprinkled here and there persons whose physical state was low and unsatisfactory. Every one of these I brought to the notice of the Collector. The total number at the time of my visit, 55,000 persons on district works and 30,000 on the East Coast Canal (of which latter most belong to the Nellore district), in all 85,000, amounts to 6 per cent. on the population of the district—a proportion which, though liberal and sufficient to meet the existing distress, is not excessive, considering the failure of harvests. Nellore district.

5. But I think that this number ought not, without careful consideration, to be permitted to materially increase, because the condition of the ryots generally is reported to be good and free from indebtedness, and because the spring crops shortly to be harvested will bring in a fresh supply. To this favourable description the peasantry of the western parts form the only exception.

6. On the whole, I think that much more discrimination in regard to admission of people must in the first instance have been exercised in the Nellore district than in the ceded districts. The difference in the condition of the gangs in Nellore presented in this respect a marked difference as compared to the ceded districts, which is, so far, very creditable to the Nellore authorities. We may venture to believe that no undue expenditure on relief (to any appreciable amount) has been incurred in Nellore, which redounds to the credit of the Acting Collector, Mr. Sharp.

7. On the other hand, the occasional appearance, even among the ranks of the relief gangs, of persons in a reduced or depressed condition indicates clearly the need of a house-to-house visitation, more systematic than heretofore, in the villages throughout the district. This inference I pressed on the consideration of the Collector, who seemed quite alive to it.

8. No relief camps in the improved style established near Madras have been opened in this district, though charitable relief is being administered at several places. Proper camps ought, I think, to be opened without the least avoidable delay.

9. The relief works have been sometimes useful, consisting of excavation of irrigation channels and reservoirs, but have often been of doubtful value, such as opening out roads which the local funds will hardly be able to keep in repairs in future. The task-work, though perhaps in some places fairly well exacted, has, I fear, often been little better than nominal; the relief labourers have been employed too near to their homes, and the matter has been allowed to become too easy and attractive. Doubtless the Collector will try to remedy this; and some remedy has already been applied in the western portion of the district through the praiseworthy exertions of Mr. Underwood, Assistant Collector.

10. In proof of the objectionable attractiveness of the petty district works, I may adduce the extreme difficulty of transferring relief labourers from these works to the East Coast Canal—an excellent work in a salubrious position, remarkably suited for purposes of relief, and distant only 30 miles on the average. Able-bodied relief labourers on the district works are being ordered to proceed to the East Coast Canal, but they refuse to obey and go on "strike," remaining for days and days out of work sooner than proceed. It is to be hoped that these difficulties will be overcome by the firmness and patience of the local officers and by the people themselves being awakened to a sense of the necessity.

11. I have in a separate minute recorded my views regarding the East Coast Canal. Rumours unfavourable to the salubrity of the operations on this important project have from time to time been spread. I found, however, the position of the works very salubrious, and the arrangements, sanitary, engineering, and others, excellent, and very creditable to the District Engineer, Mr. O'Shaughnessy, of whose practical ability I am disposed to form a high estimate.

12. If the commencement of the Sungum irrigation project (from the River Pennair 30 miles above the town of Nellore) can be sanctioned, as recommended in my separate minute, that will afford a further field for the profitable employment of relief labour.

13. Though the state of affairs regarding the relief of distress in this district may be generally pronounced to be favourable, yet there is this cardinal defect, that although the district has the very best relief work in all Southern India (the East

Nellore district.

Coast Canal) running through it, still the relief labour of the district is not brought to that work to anything like a sufficient extent. The management of this particular matter is the primary point to which the attention of the Collector should be given.

No. 170.

No. 139.

LIII.—Memorandum on the Nellore District, visited by Sir Richard Temple from the 27th February to the 1st March 1877.

From North Arcot, Sir Richard Temple entered the Nellore district, proceeding thither from Triputty *viâ* Kalustri and Goodoor. At the last-named place he was met by the Collector, Mr. Sharp, C.S., and after inspecting the relief labourers there, drove into Nellore on Tuesday, the 27th February. The next day Sir Richard visited the East Coast Canal works at Maipad, Korutoor, and near the Pennair River, with the Collector and Mr. O'Shaughnessy, the District Engineer; there he also met Mr. Stevens, who is employed on the canal works. About 8,000 relief labourers on the canal, and in the evening some hundreds more on works near the Pennair anicut at Nellore, were inspected. On Wednesday night Sir Richard left Nellore, with the Collector and District Engineer, reaching Nellarpalem the next morning. Here he saw the tahsildar of the Atmakur taluk and inspected about 4,500 relief labourers who had been collected there by previous arrangement. Continuing his journey to Nandeveram, he met there Mr. Underwood, C.S., head assistant, who was on tour in the western taluks. Mr. Underwood accompanied Sir Richard, after seeing the labourers at Nandeveram, to Murripad, where more gangs were drawn up. From Murripad Mr. Underwood returned; Sir Richard and staff proceeded in palanquins by the Dornel, Ghât, Budvail, and Sinhout to the Wontimetta railway station in the Cuddapah district. At Nellore Sir Richard also met Mr. Goldingham, C.S., District Judge, and Mr. Christie, District Superintendent of Police.

2. The following facts were ascertained by inquiry, chiefly from the Collector, Mr. Sharp, C.S.:—

The district of Nellore has an area of 7,150* square miles, including zemindary tracts, and contains a population of 1,374,012 persons, according to the census of 1871. It is divided into nine Government taluks and four zemindary divisions, the extent and population of which are shown in the margin. Many zemindary villages, however, are scattered in all the Government taluks, except in Nellore and Rapur.

	Sq. miles.	Population.
Government taluks -	4,626	897,845
Venkutgiri zemindary	1,853	348,370
Kalustri „	526	100,866
Chundy „	124	21,990
Mutyalpad „	21	4,941
	7,150	1,374,012

* In the Nellore district manual it is stated to be 8,751 square miles.

3. The area of land in the Government taluks cultivated with the several food-grains, according to the returns sent to the Board of Revenue for Fusli 1285, was 884,852 acres, and the statistics of the important grains sown are as under:

	Area of crops sown in Fusli 1285. Acres.
Rice - - - - - - -	200,910
Jouna or cholum - - - - - -	360,063
Ragi (small millet) - - - - -	41,327
Luzza - - - - - - -	63,381
Aruga - - - - - - -	74,361
Varigalu - - - - - - -	115,316
Pulses, &c. - - - - - -	29,494
Total -	884,852

The current year's details of *crops sown* are not to hand as yet, but, speaking generally of the whole district with respect to the cultivated yield, there is an almost general failure of wet crops, with the exception of isolated patches here and there, under wells, under some of the Pennair River channels, and spring-fed ponds. A great part of the wet area was not cultivated this year, owing to the drought, and the sowings in many places were fruitless. As regards dry crops, those cultivated under wells have grown fairly, while the yield on those depending entirely on rain varies from nothing in some parts of the upland taluks to four annas or one-third of the average standard estimate. It must be, however, stated that a fair out-turn is expected in a few villages of Ongole in the north of the district. The average yield of purely "dry crops" for the whole district may not

be more than three annas. The rain-fed tanks in the district are almost entirely dry, while those under the Pennair anicut received but a scanty supply, so that cultivation under them was unsuccessful.

4. Of the total holdings of nearly 766,960 acres under the head of "dry" lands, only an area of 2,24,433, or 29 per cent., have been actually cultivated, and the Government demand on this area is only Rs. 2,98,265. Besides the poor state of the crops in general, the many important and valuable "kanchas" or pasture farms are devoid of fodder.

5. The rainfall of this district, from the month of April up to the end of January, was very light, as will be seen from the following details:—

	In.	Cts.
Average of four years to Fusli 1285 - - - - -	37	40
Average rainfall for Fusli 1285, from 1st April 1875 to 31st March 1876 -	27	29
Average rainfall for Fusli 1286, or from 1st April 1876 to 21st January 1877	11	35

Portions of the district feel the effects of the different monsoons which sweep in from the south-west and north-east, Udaigiri and Kanigiri receiving less than any other part of the district.

6. Nellore suffered from famine in the years 1832, 1854, and 1866, but the scarcity was not so severe as in the present year. The harvest in the year 1875-76 was on the whole poor and much below an average yield for nearly the whole district, especially as regards wet crops. The rainfall of that year was only 26 inches 49 cents., against 44 inches 32 cents of the previous year. The year Fusli 1284 was marked by floods, when many important large tanks and river channels were breached, chiefly in Atmakur and in the principal rice-growing taluk, Nellore, on account of the Pennair floods. The two bad years succeeding the year of the floods have evidently tried the resources of the district generally. In ordinary good years the produce of the country not only supports Nellore itself, but much grain is generally exported both by land and sea to other districts.

7. The condition of the ryots and labouring classes is good in ordinary years. Many of them formerly acquired a good deal of wealth from the sale of indigo, rice, &c., but in Kanigiri and Udaigiri taluks the soil is very poor and the ryots proportionately so. The ryots of the Coast taluks are far better off than those of the western upland ranges. The number of pattadars registered as paying direct revenue to Government is 95,710; of those, 8,627 own pattas of Rs. 50 and upwards, and 87,083 below that amount. The actual cultivators and inamdars, with their families, amount to nearly five-eighths of the entire population of the district. The majority of the population of the district is agricultural, and the *bonâ fide* labouring classes who depend solely upon labour may be estimated at about a sixth of the population.

8. The markets of Nellore, Ongole, and most of the towns of the district are now well supplied with rice. The extraordinary demands of the western districts have much reduced the district stock. The unusually high prices have induced merchants and others to purchase and import grain both by sea from Cocanada and other places from the north, also by the East Coast Canal, and by land from Madras and from Guntoor, &c. Competition among the merchants has now resulted in a slight fall in the price of grain. The present prices of grain, as compared with ordinary prices, in seers per rupee, are given below:—

	1st Week, February.	2nd Week, February.	Average for the last six Years, up to January.
Rice - - - -	8·	8·36	16·67
Cholum - - - -	9·18	9·24	24·42
Ragi - - - -	9·57	9·82	27·39
Cumbu - - - -	9·58	9·12	19·33
Wheat - - - -	6·87	7·	10·17
Gram - - - -	8·33	8·65	18·79

It should be remarked that cholum, cumbu, and ragi are not easily obtainable in the local markets. In the upland taluks of the district the prices range one seer dearer than in Nellore itself; but owing to the public competition noticed above, and partly, the Collector thinks, owing to the example set by Government in importing grain by sea, prices fell. The country ryots send in their carts to Nellore and make purchases both for their own consumption and for purposes of trade. There is little fear that the supply will fail. Recently it appeared necessary to make special arrangements to purchase for the western taluks, but trade generally, the Collector thought, was in no way interfered with by this undertaking. The merchants of Nellore were ready enough to supply rice in Nellore itself, but were unwilling to cart it to the western taluks. This

Nellore district.

was the reason assigned for buying and transporting the grain already purchased, in anticipation of further want in the western taluks.

9. Owing to the scantiness of produce in Fusli, years 1285 and 1286, and exportation, it is feared that the local stocks in hand are small, and no great quantity can be available for sale, as seed-grain is wanted for the next Fusli.

10. The affected tracts of this district are now relieved to a great measure by the many relief works already opened. The relief works consist chiefly of making new roads, river embankments, and repairing Government irrigation courses. Wells are either being newly sunk or repaired wherever water may be scarce, and the East Coast Canal already employs about 300,000 coolies, a few of whom are from the ceded districts as well as Nellore.

11. The following return shows the numbers employed on the 10th February in the several taluks:—

Taluks.	No. employed.	Per-centage to the Population.
Gudur	3,827	3
Rapur	2,783	4
Nellore	4,039	2
Atmakur	5,662	5
Kavali	5,610	7
Udaigiri	13,111	13
Kandukur	8,250	6
Kanirgiri	6,299	5
Ongole	1,526	1
Zemindary	5,899	2
	57,006	4
East Coast Canal	18,045	

If it be remarked that as the per-centages of population employed on relief work is very low, the district on the whole must be in a fair condition, it is answered that the idea of supporting himself as a coolie is held to be demeaning to a Nellore ryot. Malas and Madigas, who are in general exceedingly poor and have no such pride, form the majority of the present labourers. As there is no prospect of rain for the present, the numbers are expected to gradually increase. Task work is now exacted on the East Coast Canal range only, but in the remaining parts of the district the ordinary wage system is in force, or was up to a recent date. The names of all the labourers are duly registered by the subordinate officers, some of whom come from the Survey Department, others from the Settlement, and some have been temporarily appointed. All the tahsildars and some of the taluk subordinates are now supervising the relief works, and the divisional officers, moving about frequently, exercise supervision over them all.

12. The following are the rates of wages now paid or about to be paid in the district:—

	*1st. As. P.	2nd. As. P.
For adult males	1 6	2 0
„ females	1 4	1 6
Children above seven years of age	0 9	0 10

* For lower standard of task-work, which is being gradually introduced.

The total expenditure up to the 17th February on relief works is stated to be Rs. 3,84,363, and on gratuitous relief, Rs. 26,406. The number fed gratuitously on that date was 11,025. Relief labourers were in the beginning employed solely on road works from want of professional assistance, but with increased facilities for supervision, efforts are now being made to carry out irrigation works in communication with the District Engineer, who has sent in his proposals for repairing many tanks, and as each work now under progress may be completed, irrigation works will be gradually undertaken. But it is hoped that by far the larger part of the able-bodied labourers will be gradually drafted to the East Coast Canal.

13. At first relief was afforded at Nellore at the poor-house. Objections were found to this plan. Three different relief houses were then opened in the outskirts of the town. These by their proximity to the town attracted undeserving recipients. To lessen the risk of disease, and to prevent imposition, two large relief camps have now

been opened, one on the north, the other on the south of the town. Superintendents on Rs. 40 and 30 respectively a month have been appointed to supervise the cooking and distribution of food, and separate sheds have been erected for accommodating the helpless, sick, cholera, and small-pox stricken paupers. There are in all 18 relief houses throughout the district. No attempt has yet been made to secure the people being detained in the camps, but the plan of compelling them to eat their food in the camps is being introduced. The taluk relief houses are under the direct superintendence of either a tahsildar or deputy tahsildar. The pauper recipients get their food only once a day, at the following rates:— Nellore district.

Each adult - - -	One pound of uncooked food.	
Children under 14 years -	Half ditto,	with salt.

14. The condition of the cattle is very poor. Very little fodder is now available as pasture. The harvest of ragi and cholum may relieve the sufferings of the cattle to a certain extent. The tahsildars and many ryots state that one-fourth of the number have already died from starvation, and that as many more are likely to die. Every effort is now being made to feed the most valuable cattle, and attempts are being made to use prickly-pear as fodder. Many ryots have sent their cattle to the Kistna district, Viligondas and Nanamalla hills, but the absence of water in these hills is a drawback. Locally, efforts are being made to keep the cattle alive by giving palmyra and date leaves and green leaves of trees, specially in the western taluks.

15. Except in the beds of rivers, where water can be obtained by sinking shallow wells, and in villages on the seaboard, drinking water is procurable only with difficulty everywhere, and more especially in the western taluks, Kanigiri, Udaigiri, Rapur, Darsi, Todeli, and Venkutgiri. If no rain falls for the next two or three months, the distress for water is expected to be very great. On both sides of the road between Goodoor and Nellore many large pools of water were to be seen. Efforts are now being made to improve and add to all sources of supply from funds placed at the disposal of the Collector by the Board of Revenue, and the digging of ponds and wells is to be undertaken from the jungle conservancy funds wherever emergent. Special consideration is also given to the wants of Malas, &c., who are generally prohibited from drawing water from the ordinary supply wells. The Board's orders regarding the advances to be made for wells have also been published, and many advances have already been granted by the tahsildars.

16. The Rajah of Venkutgiri has promised to spend two lakhs on relief works. Up to this date he is said to have spent Rs. 13,000 annually. The Rajah of Kolustri has done nothing for the Pamur range, which is south of Kanigiri, in a poor and distressed part.

17. Under the above circumstances it is feared that the average revenue will fall short in the Government taluks, and that even the realisation of arrears must be postponed to relieve the present distress of the poorer ryots. It is proposed to give liberal remissions under the head of "wet" lands, and some partial remissions in "dry," wherever the case is thought really emergent. Though the abkari contractors have suffered to a certain extent by low rates, the maximum guaranteed to Government is now being levied from them without the least difficulty. There is, it is said, a slight fall in their profits only, and that the Government demand should not therefore be foregone. In consequence of the loss of fodder and pasture, combined with the wants of the Jail and East Coast Canal authorities for palmyra leaves, trees, &c., the number of the palmyra and date trees is stated to have been much diminished, and it is proposed to reduce the demand on the toddy revenue. This will be considered in due course after obtaining the divisional officers' reports.

18. In the Collector's opinion the number of local applicants for relief work may reach 100,000 at the worst time. It is at present probably 70,000, viz., 55,000 on local relief works + 15,000 relief labourers out of the 30,000 on canal. The Collector calculates the remissions on last year's figures thus:—

	Acres.	Assessment.	Probable remission or suspension.
		Rs.	Rs.
Dry - - -	766,960	8,97,790	5,98,500
Wet - - -	193,255	10,24,514	8,19,600

19. Sir Richard Temple has separately recorded his views on the East Coast Canal and the "Sungun" irrigation project.

No. 140.

Nos. 141. 170.

No. LIV.—Minute by Sir Richard Temple, reviewing his former Estimate of Famine expenditure in the Madras and Bombay Presidencies.

Coimbatore, 6th March 1877.

Revised estimate of cost of famine in Bombay and Madras.

I have been invited by the Government of India to submit a revised estimate of the cost to Government of the famine in the presidencies of Madras and Bombay, so far as known facts and the inferences therefrom deducible may enable me to do so, with an intimation than any figures of mine must be submitted immediately, if they are to be of any use, inasmuch as the financial statement by the Government of India may be coming forward by a very early date. I therefore on receipt of this instruction, despatched immediately a telegram on the 3rd March, to the effect that, owing to the actual accounts of the month of February and the beginning of March being so much more favourable than had been anticipated, to the expectation of the spring harvest, and other favourable circumstances, the estimates given by me on the 5th and 13th February* must be reduced for the total of the Madras and Bombay Presidencies as follows :—

*Nos. 52. 79.

Estimates of 5th and 12th February.		Estimates of 3rd March.	
	£		£
Expenditure -	4,180,000	Expenditure - -	3,336,000
Loss of revenue -	2,115,000	Loss of revenue - -	2,115,000
Total -	6,295,000	Total -	5,451,000

Difference, less on the 3rd March - - - - £844,000.

To this total must be added 180,000*l.* under the heading of Military, as shown by the telegram from the Government of India, making up the grand total to 5,631,000*l.* From this, however, must be deducted 350,000*l.* on account of extra traffic earnings on guaranteed railways as shown by telegram from the Government of India, making the net grand total 5,281,000*l.* But from this sum, it is still my opinion that it is proper to deduct the amount of probable recoveries of land revenue in future years, viz., 1,295,000*l.*, which would make the net cost of the famine 3,986,000*l.*; and this I submit as my revised estimate.

2. It was also stated by telegram that, whereas the estimate of the 5th February showed the maximum number of persons expected to come on relief as 1,840,000, the present estimate showed a maximum of only 1,196,000 persons.

3. To-day a memorandum is being despatched showing in detail the data on which the above statements by telegraph were founded.

4. In the estimate of the 5th February, it was stated that the main factor was the number of persons expected to come to the relief works. The maximum in April, 1,840,000 persons, was obtained from figures given me, district by district, by the Collector mostly after full conversations on the subject, which took place on various dates immediately following the 14th January. In these conversations much allowance was made for the reduction of the then existing numbers and the restriction of fresh admissions to the works in accordance with the principle which I knew the Government of India to have in mind and intention, and which I explained to the local officers. These principles, when thus explained to these officers, verbally, certainly seemed to commend themselves very much to the judgment of every Collector I met. And all the Collectors, almost without exception, seemed anxious to give effect thereto. I carefully avoided giving them authoritative advice or instructions, for which they were to look to the Madras Government alone. I confined myself to conferring with them and explaining to them for their own consideration principles and policy and the results of experience. I believe that in most cases they themselves, from their own observation, were prepared for these views, more or less, and proceeded to give effect thereto under the responsibility vested in them by their own Government. At the same time I submitted the same views officially to the Government of Madras on the 19th January, together with practical recommendations for system and economy.

5. On the 25th January the instructions of the Government of India (bearing date the 16th January) were received in the Madras Presidency, in which the above-mentioned principles were authoritatively laid down. The publication of these instructions doubtless stimulated all the local officers to further efforts in the direction of economy.

6. About the same time it appeared that the Madras Government had themselves formed the conclusion that the first outbreak of famine having been successfully met some systematic restrictions must be introduced. On the 28th January, they intimated to me their intention of adopting the substance of the recommendations which had been

made to them by me officially. On the 31st January, their orders were officially issued to the district officers, and again the efforts of these officers were stimulated in the direction of a just and reasonable economy. Revised estimate of cost of famine in Bombay and Madras.

7. I have since travelled about from place to place in the distressed districts, seeing how far the orders of the Government of Madras were or were not being carried out, avoiding, as before, the giving of any instructions or even of advice, but showing the local officers how they could best give effect to the orders of their own Government.

8. It seems necessary to state the course of the procedure in order to show the reasons why I venture upon an estimate lower than that given a month ago.

9. The effect of all this upon the numbers upon the relief works may be thus seen. On the 9th January the total numbers stood at 1,061,000. The number had been increasing weekly ever since the beginning of December. The beginning of January was thought by every one to be only the beginning of the trouble. No limit of relief had been in the first instance indicated, and no principle of restrictions had been prescribed, except the labour test, upon which reliance was placed. The people were availing themselves of the privilege to such an extent that ere long half, or more than half, the population of the ceded district and Kurnool seemed likely to come on relief. That alone would give two millions of persons, and the districts below the Ghauts seemed likely to yield another million. The necessity of making some fresh rules was forcing itself on the attention of the authorities. In the first instance, that is, in November and December, it was deemed best to let all have work who might ask for it, and to watch the result. But by January, the result showed that a rule must be promulgated to the effect that employment should not be given to those who seemed able to support themselves.

10. After making much allowance for the introduction of economy the sum of the calculations by the various Collectors showed a gradual increase, week by week, till the maximum of 1,840,000 was reached. Without such allowance for economy, the total would undoubtedly (according to the practice which was obtaining in the beginning of January) have reached two millions before April, and would have exceeded it after that date.

11. But, instead of increasing, the January number of 1,061,000 has been falling week by week, until the latest returns of February show only 713,000. The Madras Government and its officers may be congratulated on this result, considering the good condition of the people generally, the absence of mortality (subsequent to the mortality which occurred in some places at the outset before the introduction of the new rules), and the effective manner in which the distress has been met. In the face of this, however, it is impossible to maintain the estimates, which I had been before obliged to present for March, namely, 1,480,000; especially as there is a spring harvest ripening in several of the distressed districts, to an extent greater than the original anticipation. By parity of reasoning, it has become necessary to reduce the estimate for April and the subsequent months in the manner described in the memorandum, which will speak for itself. As time did not admit of a further reference to each Collector, it was thought best to make the alteration rateably all round. But although there is no present reason to apprehend that any district will show actually more than what is shown in this revised estimate, there is reason to expect that some districts will show even less, such as Cuddapah, North Arcot, Coimbatore, and Tinnevelly. On the whole, however, I have deemed it better to submit the revised estimates in its present form, believing that it has within itself a margin to cover unforeseen contingencies.

12. The same remarks apply, *mutatis mutandis*, to the heading of charitable or gratuitous relief.

13. While system and economy have been considered, every precaution has been taken to prevent those considerations causing relief to be withheld from those who really need it.

14. From the very day of entering the Madras Presidency, I have been constant and urgent in pressing on all concerned the duty of saving human life from starvation; of preserving people from such emaciation as might be dangerous to health; of not only admitting all deserving and needy persons who might apply for relief, but also of searching for and relieving all those who, being in such need, might from any cause fail to apply for relief, and further of making this search in the most comprehensive manner, village to village, and house to house. This is the practice of humanity in relief operations in the highest and strictest sense of the term. This is the discriminating charity which, while rejecting those who are not in real need, succours those who are in such need, and takes care that none of them shall escape observation or fail to receive assistance. This most important subject was officially brought forward on the 16th January (two days after my arrival), again on the 19th January, on the 4th February,

Revised estimate of cost of famine in Bombay and Madras.

on the 5th February, on the 8th February, on the 9th February, on the 11th February, on the 14th February, on the 26th February, on the 5th March, on the 6th March. This subject has formed the topic of more official representation on my part than any other subject whatever. And several of these representations are couched in the most forcible terms which I am able to employ. In every place which I have visited, and to every relief officer, European or Native, whom I have met, the matter has been explained by me in practical detail, and all those concerned have been shown exactly how they can most effectually compass this paramount object. In short, everything that can be thought of has been and is being done in this respect.

15. I can bear witness that this matter has always been thoroughly understood by the Madras Government and its officers, whose humane intentions can hardly be surpassed.

16. As regards the Madras Presidency, I must here reiterate what has been stated on previous occasions, that the revised estimate assumes that the usual spring showers of April be vouchsafed in Southern India, and that the checks and restrictions ordered by the Madras Government on the 31st January be steadily and faithfully maintained. If there be failure in any of these respects then the estimate may become exceeded, more or less seriously.

17. As regards the Bombay Presidency, I represented officially the expediency of economy in several respects on the 12th January and on various subsequent dates. The reduced estimate recently framed by the Government of Bombay has been embodied in my general estimates.

18. In respect to the searching out and relieving of all cases of serious distress, I addressed the Government of Bombay officially on the 12th January, and have repeated these representations on several subsequent dates. The Government have, I believe, been from the beginning fully alive to this consideration.

19. In the revised estimates I have adhered to the recommendation submitted with my minute No. XXX. of the 13th February, regarding the suspension, and not the remission, of only the land revenue from the dry or unirrigated lands in Southern India, because I find that so many of the most experienced Collectors in both the Madras and Bombay Presidencies are in favour of this plan. Here again the revised estimate assumes that the coming rains will be propitious and the harvests of the next season will be abundant. If there shall be failure in these respects then the estimate will be greatly disturbed.

No. 170.

No. 141.

LV.—Memorandum of the Revised Estimate of the probable Cost of the Famine in the Bombay and Madras Presidencies, with respect both to Relief Expenditure and Loss of Revenue, by Mr. C. E. Buckland, Private Secretary to Sir R. Temple.

It has now become possible to prepare from the figures available for the month of February a revised estimate, showing both the anticipated loss of revenue and the expenditure on relief in the Bombay and Madras Presidencies.

2. *Relief Works.*—In paragraph 5 of Mr. Bernard's memorandum attached to Sir Richard Temple's minute, No. XXVIII., of the 5th February, the estimated numbers on relief works for the six months from February to July inclusive were thus given :—

Total number of labourers in	February	- - -	1,228,000
,, ,,	March	- - -	1,480,000
,, ,,	April	- - -	1,840,000
,, ,,	May	- - -	1,530,000
,, ,,	June	- - -	795,000
,, ,,	July	- - -	310,000
			7,183,000

Now the actual numbers on relief works in Madras were, according to the returns I have seen—

On the 10th	February	- - - - - 868,423
,, 17th	,,	- - - - - 759,275
,, 27th	,,	- - - - - 713,821

which give an average of 780,500, and to make allowance for the higher number at the beginning of the month, the average for the whole of February may be taken at 800,000. The Board of Revenue, in their report for the week ending the 17th ultimo,

stated that the scale of wages ordered in Government order of 31st January 1877, No. 329, had not yet begun to take effect, and that the time for the introduction of the new scale must be counted from the receipt by Collectors of Government order of 12th February 1877. It will be safer for the purposes of this estimate not to assume that the orders of economy had taken effect to any great extent during the month of February. If this be granted, the 800,000 labourers of February must be considered to have cost an average of Rs. 3 for that month (*see* paragraph 6 of Mr. Bernard's memorandum, to which allusion was made above). The difference between the estimated number for February, viz., 1,228,000, and the actual number, viz., 800,000, is 428,000, *i.e.*, about 35 per cent. on the estimated number, 1,228,000. Revised estimate of cost of famine in Bombay and Madras.

3. It is not expected that the number on the relief works will rise in March above the average number given for February, 800,000; it is evident that even to attain that number a rise of over 80,000 must take place; but the settled tendency of late has been downwards. Instead, therefore, of the estimated number for March, viz., 1,480,000, it will be fair to take the number 800,000 as not likely to be exceeded.

4. For the remaining months, April to July inclusive, it will be safest to calculate upon the same per-centage of reduction in the estimated numbers that has actually taken place in February in the number for that month, viz., 35 per cent. on the estimated numbers. While, on the one hand, due allowance has been made in the previous estimates for the more trying circumstances of the months, April–July; on the other hand, the scrutinising of the gangs will be more strictly carried out, as experience is gained, as tests are enforced, and supervision improved; add to this that the district of Tinnevelly, which was thought likely to have 100,000 labourers in April, and 50,000 in March, had on the 27th February only 1,295 persons on relief works; moreover, the improved prospects of the ragi crop in parts of the districts of Cuddapah and North Arcot have to be considered; and on the whole it may be permissible to take the same per-centage of reduction of numbers of labourers for the months April–July that has actually taken place in February, viz., 35 per cent. on the estimated number of labourers for the month. The result of this calculation will be found from the appended statement to give a total of 3,708,750 labourers from March–July inclusive; and as it may be assumed that the Government orders for the reduction of wages will have generally come into force from the beginning of March, this number of 3,708,750 labourers may be estimated to cost Rs. 8,653,750 (at the average rate of Rs. $2\frac{1}{3}$ a person for each month, according to paragraph 5 of Mr. Bernard's memorandum).

5. The cost of the labourers' wages for February being 800,000 × Rs. 3 = 24,00,000, and for March to July Rs. 86,53,750, the total cost of the relief work wages in Madras for the six months from February to July amounts to Rs. 1,10,53,750, say Rs. 1,10,53,000. These figures compared with the same item in the previous estimate, viz., Rs. 1,79,00,000, show a reduction of Rs. 68,47,000, *i.e.*, 684,000*l.*

6. In the Bombay Presidency, according to the Bombay Government's letter, No. 109*a*–460, dated 24th February, to the Government of India, the revised estimate of expenditure upon relief works, charity, &c. amounts to 116 lakhs; which sum, being compared with the former estimate of 126 lakhs, shows a saving of 10 lakhs in the Bombay expenditure.

7. *Gratuitous relief.*—The number of recipients of gratuitous relief amounted at the beginning of February to about 60,000 persons, *see* paragraph 9 of Mr. Bernard's memorandum. Whereas in that same paragraph 100,000 has been taken as the number of persons to receive such relief in February, the real number was on the 27th ultimo slightly over 40,000. If 50,000 then may be considered as the mean number of recipients of gratuitous relief in February, when 100,000 was the number estimated, a large margin for the increase in the recipients of charitable relief (which must occur as the supervision on relief works is more strictly enforced) will be left, if instead of a half, two-thirds (*i.e.*, Rs. 12,00,000) of the former estimate of the cost of gratuitous relief (*i.e.*, Rs. 18,00,000) are reckoned as the probable cost under the same heading. Thus the reduction in Madras will be six lakhs under this heading; and the aggregate of the probable saving under both headings is 744,000*l.* In Bombay the aggregate reduction under both headings of relief works and gratuitous relief has been given at 10 lakhs.

8. The figures will then stand thus:—

	£
The total relief expenditure for the Bombay Presidency was, according to the former estimate - - -	1,260,000
Deduct - - - - - - - -	100,000
Revised estimate - -	1,160,000

Revised estimate of cost of famine in Bombay and Madras.

	£
The total relief expenditure for the Madras Presidency was according to the former estimate - - -	2,920,000
Deduct - - - - - - -	744,000
Revised estimate - -	2,176,000
The total relief expenditure in both presidencies according to the revised estimate will be—	
In Bombay - - - - -	1,160,000
In Madras - - - - - -	2,176,000
Total - -	3,336,000

9. From the telegram received, it appears that the Government of India have taken the probable loss of revenue as 2,000,000*l.*, and have also debited to famine a charge of 18 lakhs (180,000*l.*) in the military department, an item which had not been previously included in Sir Richard Temple's calculations. These two items, added to the 3,336,000*l.* previously ascertained, give a total of 5,516,000*l.* On the other hand, the Government of India take credit for railway revenue amounting to 350,000*l.*; thus the net result would be reduced to a cost of 5,166,000*l.*

10. Sir Richard Temple's former estimate of the probable loss of revenue, which would occur if the Local Government shall promise remissions of the land revenue, amounted to 2,115,000*l.*, thus exceeding the estimate of the loss of revenue framed by the Government of India by 115,000*l.*; that is, the cost of the famine would be 5,166,000*l.*+115,000*l.*, *i.e.*, 5,281,000*l.*

11. Sir Richard Temple's views on the important point of land revenue remissions were fully stated in the minute No. XXX of the 13th February and Mr. Bernard's memorandum which accompanied it. If those views meet with acceptance, it is not too much to hope that the sum of 1,295,000*l.* (*see* paragraph 15 of Mr. Bernard's memorandum) will represent the probable recoveries of land revenue in future years; and if this sum be deducted from the cost of the famine above given, viz., 5,281,000*l.*, the net cost will be 3,986,000*l.*

12. This estimate, like the others, which have been framed and submitted by Sir Richard Temple, postulates that the checks which have been recently ordained for the reduction of expenditure will be maintained in full force, and that the usual showers in April and May will fall. It has not been overlooked that in such a district as Tinnevelly, where severe distress was expected, it is a matter for consideration with the Board of Revenue whether the relief works should not be closed immediately, nor has the fact been disregarded that in some districts early spring crops are approaching maturity, which will before long afford work to the agriculturists, and a supply of food for a month or two to the population.

13. With respect to the distribution of the revised estimate of famine expenditure in Madras, viz., 2,176,000*l.* between the years 1876–77 and 1877–78, the following statement may be offered in the order adopted in paragraph 11 of Mr. Bernard's memorandum appended to Sir Richard Temple's minute No. XXVIII. of the 5th February, thus:—

For the year ending March 31st, 1877.

	Rs.
Relief works and other expenditure according to the Accountant-General's statement up to end of December - - -	37,25,000
Estimated expenditure on relief work wages during January -	31,17,000
Estimated expenditure on relief work wages during February -	24,00,000
Estimated expenditure on relief work wages during March -	18,67,000
Estimated cost of additional establishments and miscellaneous charges to 31st March 1877 - - - - -	6,00,000
Estimated cost of gratuitous relief to 31st March 1877 - -	4,00,000
Cost of grain purchased by Government - - - -	30,24,000
	1,51,33,000
Deduct cost of Government grain to be expended up to 31st March	7,22,000
	1,44,11,000
Say -	£1,441,000

For the year 1877–78.	Rs.
Estimated expenditure on relief work wages, April to July 1877 -	67,86,000
Estimated cost of additional establishments and miscellaneous charges, April to July 1877 - - - - -	12,00,000
Estimated cost of gratuitous relief, April to July 1877 - -	8,00,000
	87,86,000
Deduct cost of Government grain to be expended, April to July 1877	14,44,000
	73,42,000

Probable cost of famine in Bombay and Madras.

£		
1,441,000	Say -	£735,000
735,000		
Total estimate expenditure -	£2,176,000	

14. Some of the above figures require explanatory notice. The cost of the wages of relief labourers for February has been shown to be Rs. 24,00,000. For March the number of labourers given in the revised estimate is 800,000, who, at the average rate of Rs. $2\frac{1}{3}$ a month for each person, will cost Rs. 18,67,000,—

	Rs.
i.e., for February - - - -	24,00,000
for March - - - -	18,67,000
	42,67,000

The revised estimate of expenditure on relief works from February to July was given as Rs. 1,10,53,000. From this, deducting Rs. 42,67,000, the result is obtained of Rs. 67,86,000 as the revised estimate of cost of relief works from April to July.

15. For additional establishments and miscellaneous charges in the original estimate the sum of Rs. 18,00,000 was taken, as 10 per cent. on the original estimate of relief wages for the six months February to July (*see* paragraph 8 of Mr. Bernard's memorandum). These additional establishments and charges will not be materially affected by the variations in the numbers of relief labourers. Therefore one-third of the Rs. 18,00,000 may be estimated as the cost for the two months February and March; and two-thirds of the Rs. 18,00,000 as the cost for the four months April to July.

16. With regard to the gratuitous relief, in the revised estimate the sum of Rs. 12,00,000 has been taken as the cost. As in the preceding paragraph, this may be debited, one-third to February and March, and two-thirds to the four months April to July.

17. Similarly, in deducting as a set-off three-quarters of the cost of Government grain (as that grain will be used to pay labourers or relief paupers), it appears correct to credit one-third and two-thirds of the Rs. 21,66,000 to the years 1876–77 and 1877–78 respectively.

18. In the Bombay Government's letter, referred to in paragraph 6 above, the revised estimate of expenditure of 116 lakhs is distributed thus, viz., 47 lakhs to 31st March and 69 lakhs subsequent to 31st March.

STATEMENT referred to in paragraph 4 of the Memorandum dated 6th March 1877.

—	Estimated Number of People on the Works during the Month of						Total.
	February.	March.	April.	May.	June.	July.	
According to minute of 5th February -	1,228,000	1,480,000	1,840,000	1,530,000	795,000	310,000	7,183,000
Revised estimate -	800,000	800,000	1,196,000	994,500	516,750	201,500	4,508,750
Difference -	428,000	680,000	644,000	535,500	278,250	108,500	2,674,250

No. 142.

No. 12,327 G.–243, dated Bangalore, 6th March 1877.

ORDER thereon* by the CHIEF COMMISSIONER OF MYSORE.

Nos. 143. 221. Mysore emigrants to return to their own country.

Order.—The wishes of the Government of Madras, that an officer of this Administration should be deputed to supervise the return of Mysore people to their own country,

* V. Nos. 1, 6, 14, 35, 69, 91, 131.

will be complied with, and the Commissioner of the Nundydroog division is desired to detach Mr. Mahomed Ali, the Subdivision Officer at Chikballapur, Kolar district, to proceed at once, and in personal communication with the Head Assistant to the Collector of Bellary, ascertain the number of Mysore people receiving gratuitous or other relief from the Madras Government in the Hindupur, Madaksira, and Pennakonda taluks of that district. He will arrange for the return of all such as are capable of being moved into the several taluks of the Mysore districts adjoining, and, through the amildars of these taluks, provide means for deporting them from the Bellary district by easy stages, where food should be supplied. An advance of Rs. 500 should be made to Mr. Mahomed Ali by the Commissioner of Nundydroog to meet emergent requirements.

The Deputy Commissioners of Kolar, Túmkúr, and Chitaldroog will instruct the amildars of the border taluks to comply promptly with the requisitions made upon them for the purpose by the Assistant Commissioner. Those who are able-bodied should be relegated to the special or other relief works in progress, and those who are physically unable to work should be properly admitted to the feeding kitchens, under arrangements to be made by the Deputy Commissioners and their Assistants.

Nos. 161. 221.

No. 143.

ORDERED—That the following letter be addressed to the Chief Secretary to the Government of Fort St. George, in reply to his letter above recorded :—

No. 12,335 G.–43, dated Bangalore, 6th March 1877.

From the OFFICIATING SECRETARY TO THE CHIEF COMMISSIONER of MYSORE, to the CHIEF SECRETARY TO THE GOVERNMENT of MADRAS.

Mysore State not prepared to bear charge of maintaining its subjects who migrated to British territory,

I am desired to acknowledge the receipt of your letter No. 767 of 1st March, in which his Grace the Governor in Council again presses upon the consideration of the Chief Commissioner the proposal that the Mysore State should bear the charge of maintaining those of its subjects who have resorted to the frontier districts of Her Majesty's territory, either to seek relief on easier terms than they could obtain it in their own taluks, or to evade the payment of the land revenue.

2. While desirous of according the deference which is due to this expression by the Madras Government of their views, the Chief Commissioner is unable, for the reasons fully stated in my letter of the 15th ultimo, to assent to the grounds on which the demand for a contribution from this State towards the outlay incurred for relief purposes in the adjoining territory is based.

3. Mr. Saunders has no desire to advert to the causes which had, as he conceives, led many hundreds of the people in this province to migrate across the frontier, and which though to a certain extent conjectural as you remark, have received much confirmation from what is stated in paragraph 3 of Sir Richard Temple's minute dated 16th of February 1877. But it is important, I am to remark, as affecting the consideration of the equity of the claims put forward by the Madras Government, to remember that, while what may be fairly termed extraordinary inducements were held out to the people on the eastern frontier of the province to resort to the relief works and kitchens in the Bellary district, this migration was neither desired nor encouraged in the interest of this Administration, whose local officers were fully prepared to provide employment for all who needed it, and on terms which, though not so liberal as prevailed over the border, were well adapted to the then existing circumstances of the people.

the migration being neither desired nor encouraged.

4. With regard to the Wynad frontier, the inducements which led the people to migrate to that locality in larger numbers than usual were somewhat different, but, as the Chief Commissioner has reason to believe, notwithstanding all that was done by the local officers and by the returning emigrants to dissuade them from leaving the province, the people have persisted in moving into Wynad, as they have done into the coffee-growing districts of Coorg and Manjarabad, long after the demand for their labour had ceased, the cause must be found in the same desire which has operated throughout of evading task-work however light, as well as the endeavours which are still advisedly made to recover a fair proportion of the Government revenue.

5. It must be obvious in this view, that the duty of the Chief Commissioner lies in setting his face resolutely against any encouragement to these people to persevere in a course demoralising to themselves and injurious to the interests of this Administration, and as the means are available to all of this class, as explained in paragraph 6 of my letter

of 15th ultimo, of returning by easy stages, their immediate needs being provided for *en route*, Mr. Saunders would again urge upon the consideration of his Grace in Council that the humane intentions expressed in your letter can be fulfilled without recourse to the measure of maintaining the subjects of this State at the expense of this Government. Migration from Mysore to British territory.

6. On the other hand, the wish of his Grace the Governor in Council, that an officer should be deputed from this province to supervise the return of the people to their own country, will be at once complied with, and I am to state that Mr. Mahomed Ali, the Assistant Commissioner in charge of the Chikballapur Subdivision of the Kolar district, has been directed to proceed to Pennakonda, and after personal communication with the Head Assistant Collector, to arrange for the removal to their own taluks of all persons belonging to Mysore who may be receiving Government relief in the three taluks of Hindupur, Madaksir, and Pennakonda.

The Chief Commissioner will be willing, on receipt from you by telegraph of specific information as to other localities in which Mysore people are being maintained on Government works or relief houses, to make similar arrangements for the purpose of inducing their withdrawal.

7. The Chief Commissioner anticipates, however, that the number of "Mysore paupers" remaining in the Hindupur and other bordering taluks of the Bellary district will be small, for, on referring to the returns furnished to the Madras Government under date the 30th January last, and published in the Madras newspapers, it appears that between the 23rd and 30th January, the number on relief works and gratuitously fed in the Bellary district had fallen from 393,400 to 377,147, and that the Collector had officially reported that the reduction in these numbers was due "to a large number of "Mysore coolies being sent away from Hindupur, Madaksira, and Pennakonda." It was further stated that there was a decrease of more than 11,000 in the numbers gratuitously fed, chiefly in Hindupur, "where Mysore paupers have been sent back." This return, it will be observed, is of a more recent date than that of the Head Assistant Collector's letter, No. 34, dated 23rd January 1877, an extract from which is appended to your letter under reply.

8. A more recent return, moreover, shows that between the 10th and 17th February 1877, the numbers on relief works in the Bellary district had been reduced from 344,343 to 307,509, and from the fact which has been recently reported, and communicated to you in my letter No. 12,055—G. 42, dated 27th February 1877, that the tide of immigration has now set in from the Bellary district into the neighbouring taluks of this province, the Chief Commissioner is probably right in assuming that there must be comparatively few of the Mysore people still remaining in the Madras districts.

9. As regards those who are reported to be "hanging on" at the Wynad coffee estates, the Chief Commissioner has no information as to the numbers congregated there, but as ample provision has been made, as already stated, for finding employment, as well as other needful relief for them in the Mysore and Hassan districts adjoining, the Government need feel no apprehension as to the consequences of withholding from those people the means of idly prolonging their stay in those localities. As large importations of grain continue to be made into the Wynad weekly from the south-western taluks of the Mysore district, it is evident to the Chief Commissioner that the supposition expressed by the District Engineer of Malabar as to the cause of the unwillingness of Mysore subjects to return to their own country is an erroneous one.

10. With reference to the last paragraph of your letter, I am desired to explain that the notice alluded to was issued by the Commissioner of the Ashtagram division, and had reference solely to works in progress in the Mysore and Hassan districts comprised in that division.

No. 144. No. 170.

No. LVI.—Minute by Sir Richard Temple, reviewing the objections of the Sanitary Commissioner, Madras, to the reduced scale of wages.

Coimbatore, 7th March 1877.

I have examined and considered, with the attention due to the opinions of an officer so highly qualified and accomplished, the letter from Surgeon-Major Cornish, Sanitary Commissioner of Madras (addressed to the Chief Secretary to the Madras Government), in which he records various professional objections to the reduced scale of ration directed The reduced scale of wages. Reply to Dr. Cornish.

The reduced scale of wages.

to be adopted by that Government in its Resolution of 31st January last. The particular point to which he objects is the allowance of 1 lb. avoirdupois per diem to an adult labourer (not performing severe task work), plus half anna in cash. Inasmuch as his views, if these were to be adopted without adequate deliberation, might involve a large and unnecessary expenditure of public money, I would submit, for the consideration of the Governments of India and Madras, a few remarks on these objections.

2. Into the purely professional part of his arguments I cannot enter, further than to note that, while no doubt abstract scientific theories of great value on the subject of public health are of modern growth, the Indian population with which we are now dealing have lived for centuries in disregard of them, and practically at the present date the poorer classes, even in countries much more civilised than India, do not actually obtain either in food, lodging, or ventilation the amount declared by scientific men to be necessary. I would further note particularly that most of Dr. Cornish's observations refer to Europeans living in a cold climate, where waste is greater, and largely exceeding the Natives of India in average weight, requiring therefore more food. The Edinburgh inquiries which he cites, however applicable to European cases, and however valuable in the abstract, are not strictly and exactly applicable to the poorer classes of the Madras Presidency.

3. The practical question, however, is this. Can, and does, the new scale of wages suffice to keep the people with whom we are now dealing in fair health under present conditions and circumstances? More than this, this Government has declared itself unable to undertake.

4. Dr. Cornish seems to object, on the ground that a diet sufficient to sustain a man's life when at rest may be "wholly inadequate to his needs when employed on tasks "necessitating severe physical exertions," and again, that "a man engaged on task labour and paid at the rate of 1lb. of grain and half an anna in cash" cannot "procure a sufficiency to eke out the defects of his grain ration." I do not know whether Dr. Cornish would admit that 1 lb. of grain is sufficient to maintain a Native of India; in a state of rest, perhaps, he would. The evidence of relief camps in the Madras Presidency, however, shows that a Native at rest can gain flesh on a pound a day.

NOTE.—I was informed at Vellore that indigent adults admitted to the relief camps in consequence of their inability to work, have improved considerably on a ration of a pound a day. Dr. Fox, Civil Surgeon, and Captain Harris, the Relief Officer, were agreed on this point.

5. But in paragraph 5 he says that the "combined testimony" of numerous observers showed that "the maximum grain allowance of a man in health and in work was not "less than 24 ozs." or $1\frac{1}{2}$ lbs.

6. He apparently assumes that by the new scale a man cannot obtain $1\frac{1}{2}$ lbs.; but in the first place it is to be observed that at present prices throughout the greater part of the distressed district a man can, with the half anna which he receives in cash, buy an extra half pound of grain a day and still have a small margin over for condiments, that is, he earns sufficient to allow him the minimum quantity requisite to keep him in health while at work. More than this, I submit it is not in the power of Government to do.

7. Let it be assumed, however, that a man receives the 1 lb. plus the half anna, which will give him something over in grain, together with something for condiments. Then there is one defect in Dr. Cornish's line of argument which appears to me to invalidate his conclusions. I consider that the particular misapprehension to which I am about to advert renders his remarks inapplicable to the state of things as at present existing in the distressed districts. His argument is, that the present rate of wages (equal to 1 lb. in grain with half anna in cash), "will not permit of severe labour or task-work," is insufficient for men "employed on tasks necessitating severe physical exertion;" thereby implying that the bulk of the relief labourers in the Madras Presidency are employed on such tasks. This, however, is so far from being the case that the general condition of the people on the works approaches much more nearly to one of rest than to one of severe physical exertion. There are probably very few out of the thousands employed by Government who do nearly as much work as they do in ordinary seasons for their own support. In short, the reduced scale (1lb. and a half anna) is not applied to persons undergoing severe physical exertions, but to persons who are on light work or are comparatively at rest. In many places task-work has not yet been introduced; in many others it is only nominally enforced, and where it is in actual operation the amount of labour exacted is extremely light.

8. It must be remembered that in the Madras Government Orders of 31st January, two rates of working pay are laid down, and that all persons who do work amounting to 75 per cent. of the Public Works rates receive 1lb. of grain and one anna in cash; while those who receive a pound of grain plus half an anna (who alone are referred to by

Dr. Cornish) are only required to render task-work at half the Public Works rates. Now the Public Works labourers are paid by piecework, and no definite task is asked for; they do as much or as little as they like, and are paid accordingly. The reduced scale of wages.

9. The result is that those who really undergo the severe physical exertions described by Dr. Cornish do actually receive wages equal to 1½, perhaps even 2 lbs. a day, which is tantamount to what he recommends. It is only for those who do not undergo such exertion that the lower scale recommended by me and ordered by the Government of Madras is intended. Practically, at this time, by Public Works rate is meant the amount of work done per rupee, and relief labourers on the first standard are expected to do three-quarters as much for a rupee as common labourers; that is, supposing the Public Works Department rate for earth-work to be eight cubic yards per rupee, then relief labourers of the first class have to do six cubic yards for the same money; and two annas being taken as the minimum wage on which they can be maintained in health, three-quarters of a cubic yard is the task assigned to enable men in this class to earn their two annas. It is considered (and this is in accordance with Dr. Cornish's views) that persons doing less work than this can live on less, so while the second class labourer does only half a cubic yard of earth-work daily he receives in return 1½ anna. But, as observed, the Public Works rate is not a task but a scale, and ordinary labourers are not content to earn two annas daily by excavating one cubic yard, but, as a matter of fact, earn much more than this. I was informed by Mr. O'Shaughnessy, the District Engineer of Nellore, that some of the gangs at work on the East Coast Canal were earning five and even six annas a head daily, that is, were doing five or six times as much work as is demanded from the relief labourers on the lower scale.

10. The work of such relief labourers could, therefore, scarcely be described as "severe physical exertion," even if it were fairly rendered; and in many, if not in most districts, it is still little more than nominal. As more efficient supervision is introduced and task-work really exacted, all those willing to do the very moderate task asked for will gradually be admitted to the higher standard and receive full wages, while it is submitted that the lower rate is sufficient to maintain those employed on nominal tasks of extreme lightness.

11. The objection to the new scale, which Dr. Cornish states in detail, is popularly formulated by the phrase "a full day's wage (that is, something more than the 1 lb. and "the half anna) for a fair day's work." But the phrase postulates that there is a fair day's work, which is just what the vast majority of the relief labourers do not render. Therefore they are not entitled to, and do not physically need, the full day's wage. Where they render a really fair day's work there they do receive under the new rules more than the reduced scale.

12. The rates were avowedly recommended by me as experimental, and if they shall be found insufficient they may be increased; but it appears to me that they have not yet been found so, and that Dr. Cornish argues from a mistaken premise, which undermines his conclusions. If the poor people were found to be falling off in condition then I would at once recommend an alteration in the rate; but at present we have no such experience.

13. As a matter of fact, I must repeat that payments are not made in grain but in cash. A pound of grain has been estimated as costing one anna, and in no cases have the wages paid been less than an anna and a half, the anna being the supposed equivalent of a pound of grain, and the half anna being available to eke out the ration. An anna, however, represents in most parts of the worst districts more than 1lb. of grain. At Adoni, for instance, where nearly 50 per cent. of the population were recently on work, one anna will purchase about 1½ lbs. of cholum, which is the staple food of the people, leaving each labourer half an anna to buy pulse, condiments, &c.

14. It is impossible over such a large tract of country as is now affected with scarcity, where prices vary to some extent in almost every district, to lay down any rule which may not be open to local criticism and inapplicable to certain localities, but the scale laid down appears to me to be on the whole sufficient to yield the people that subsistence which alone Government can afford. We would gladly give more if it were in our power, but we must content ourselves with saving life, and cannot pretend to prevent all forms of distress.

15. There is one point which I must concede to Dr. Cornish's argument. In laying down the minimum scale it was, of course, intended that each labourer should be able to consume his own wages, and not have to share them with other persons of his family. These members of the family should either work for themselves, or if unable to do so, should be admitted to gratuitous relief. The case of young children who accompany their parents to the works, but are too young to work, that is, children from one year to seven years of age, has already attracted my attention, and I have recommended in a State minute that subsistence allowance be granted to them.

The reduced scale of wages.

16. Further, I would urge as the one motive common to the Government of India and Madras, and to all connected with the famine relief works, is the preservation of life and the mitigation of extreme suffering at the smallest cost to the State, consistent with the attainment of the object in view, that the inquiry as to whether the reduced scale of wages is sufficient to enable the people to tide over the next few months without serious danger to themselves should be decided not by pre-conceived physiological theories, but by patient practical examination of the people themselves, with a view to ascertain whether there is in fact any or any serious change for the worse in their physical condition under the new scale, as compared with their average condition in ordinary times. Having carefully inspected during my tour in this presidency thousands of relief labourers, I give it as my opinion that with very few exceptions, which are not as a rule traceable to insufficient relief wages, the general physical condition of the labourers is as good now as in ordinary years. If, as already stated, I find after a little more experience that the new scale of wages does seem insufficient to maintain the people in health, I will be the first to say so; but so far this has not seemed to me to be the case.

17.* In conclusion, it is not possible, I submit, to determine *á priori* on scientific data what amount of food is necessary to sustain the particular classes who come to our relief. The real point to be considered is whether in ordinary times they get more than 1lb. a day for a male adult. This is an economic question, which can be determined by calculating the rate of wages in the rural districts—not the wages of trained professional labourers employed by public bodies, not the wages of stalwart men of the professional class of workmen, but the men of lesser physique and lighter frame, such as that of the village poor, but the wages received by the labouring poor in the villages of the interior, and then by taking the prices of common grains in ordinary years. Now, from inquiries made in various districts of the Madras Presidency, I apprehend that the labouring poor in rural localities can hardly get more than 1lb. a day for a male adult in ordinary times. If this be so, then the reduced scale must be sufficient for these same people on the Government relief works and need not be increased.

No. 170. No. 145.

LVII. Minute by Sir Richard Temple, on the subject of giving Subsistence Allowance to the younger Children of Relief Labourers.

Subsistence allowance to children.

Since the introduction of the new scale of wages, complaints appear to be made that relief labourers are sometimes accompanied to the works by children too young to work, *i.e.*, below seven years of age, who have to be supported out of the earnings of their parents; and suggestions have been offered that a subsistence allowance should be made on account of such children.

2. The new scale is avowedly a minimum allowance sufficient for one person, and it is evident that if a labourer has to divide his wages with other persons they will not suffice either for himself or for them, and suffering must result. All persons who are able to do light work can earn subsistence on the works for themselves, all who are unable to work are entitled to gratuitous relief, so that it is only the young children who have to be considered. These cannot be separated from their parents even if it were desirable to send them to the relief camps, which, in my opinion, it is not. They accompany their parents to the works and have to depend for food on some small share of the family earnings. When several members of a family (father, mothers and elder children) are employed, it is probable that one or two small children could be sustained out of the joint wages; but in cases where there may be only one or two bread-winners, and perhaps three or four children, a supplementary allowance will be necessary.

3. I believe that in some way or other the local officers have the power to afford additional aid to persons burdened with young children, and that such children do in many places get something extra, but I think it is now time that relief officers should be formally vested with a discretionary power for the relief of all children between one and seven years of age. Up to a year the child is at the breast; at seven he is admitted to the works.

4. A child of six requires much more food than a child just weaned, and it might be expedient to have different rates for children of different ages, say one rate for babies from one to three years, and another for children from three to seven, but I think that any fixed rate would be so open to abuse that it would probably be better to leave the amount of aid to be granted to the discretion of the local officers, subject to a maximum limit not exceeding half the rates paid to working children.

4. I would also suggest that this aid should not be indiscriminately given to all children who may be brought to the works, as this would probably lead to large numbers of children being sent to the works by parents not on relief at all, and thus an abuse might spring up. It would be preferable that inquiry should be made into individual cases, and the aid extended to such cases only as seem to need it. Subsistence allowance to children.

No. 146. No. 147.

EXTRACT from the PROCEEDINGS of the GOVERNMENT OF INDIA, in the Department of Revenue, Agriculture, and Commerce, dated Calcutta, the 9th March 1877.

RESOLUTION.

The province of Mysore is undergoing, throughout a large portion of its area, the unusual misfortune of a second season of drought. The harvest of the year 1874–75 was abundant, but the south-west monsoon of 1875 failed so extensively as to cause a loss of the greater part of the dry crops, and the succeeding north-east monsoon was likewise scanty and insufficient to fill the tanks which are relied upon for the irrigation of about one-sixth of the province. The prevalence of distress was brought fully to the notice of the Government of India in January 1876, and aid was afforded by means of relief works and considerable remissions of the land revenue. During the present year both the south-west and north-east monsoons have been even more scanty than before, and distress has consequently been converted into a famine of much severity. The Province of Mysore.

2. In October last the Chief Commissioner reported very fully on the condition of affairs up to date, obtained a grant for relief works, and was requested to submit statistical information regarding each taluk similar to that called for at the same time with reference to the distressed portions of the Madras and Bombay Presidencies. Subsequently, a complete review and forecast, resembling that required for those presidencies, was considered to be necessary. The submission of the information thus expected has been unavoidably delayed by various circumstances, and it has not in all cases been found possible to ascertain details with the precision which might have been desired. The result has, moreover, been to a considerable extent anticipated by the graphic sketch of the condition of the province very recently presented by the minute of Sir Richard Temple dated the 14th ultimo, and its accompanying memoranda by Mr. Bernard. At the same time his Excellency the Governor-General in Council considers that there may be much advantage in making public a review of the tract suffering from scarcity which is based upon a comprehensive series of facts, collected by the several local officers who are in actual contact with the people and their difficulties, and expressed as far as possible in their own words.

3. The area of Mysore is 27,077 square miles, and its population 5,055,412, and the province is divided into eight districts, comprising 68 taluks. The Shimoga, Kadur, Hassan, and Mysore districts, which lie in order from north to south along the edge of the Western Ghâts, have suffered less than the others, and the two first named have even afforded by the jungles and grazing grounds in certain of their taluks most material aid to the remainder of the province. Chitaldroog and Bangalore come next in order of failure, while Tumkur, lying between them, and Kolar, the easternmost of all, have virtually lost nearly the whole of their crops. The affected area and population as estimated by the Chief Commissioner are given in the margin, and amount to nearly two-thirds of the whole area and one half the whole population of the province. If, however, all taluks be considered as affected in which the crop saved amounts to less than one half, the numbers will be 14,479 and 2,849,329, while if taluks with half crop saved be added the results will be raised to 16,160 and 3,141,747 respectively.

Area in square miles.	Population.
16,812	2,579,827

4. The rainfall during the past season is shown in the margin. As only one-third of the taluks have had less than half the average, and no less than 31 have received above one-half, the general result is more favourable than that of the rainfall in the distressed districts in the Bombay Presidency during the same period. The fact, however, of the present season being the second one of drought renders the deficiency far more serious in its consequences than it otherwise would have been. The Chief Commissioner reports that "the tanks generally are all "dry, and the gravity of the crisis is undoubted," and it is to be feared that a considerable increase of suffering to both man and beast is inevitable.

The Province of Mysore.

5. The attempt to estimate with any approach to accuracy the failure of crops is in the present case surrounded with considerable difficulties. The province is subject to the influence of two monsoons, and there is also a considerable amount of land dependent on irrigation, which again proceeds from several sources, some of which are less affected by the rainfall than others. In the absence of correct statistics as to the proportions of the total area under each class of cultivation, it is obvious that a mere estimate of the yield of each such class in annas in usually of little use. In some cases the taluk reports are sufficiently intelligible without such statistics, but in others it has been necessary to fall back upon the estimates prepared for the returns called for in October, which, though doubtless framed with all care, are probably less reliable than the more matured taluk reports of a later late, and which for the most part anticipated a loss somewhat heavier than has eventually resulted. The marginal table is the nearest estimate which, under these circumstances, it has been found practicable to frame. The Tumkur district, it will be seen, has suffered the heaviest loss; but is closely followed by Bangalore and Chitaldroog; Kolar and Kadur hold an intermediate position; Hassan and Mysore have failed but slightly, and Shimoga is almost untouched. Counting by taluks, the crop saved is above half in 25 taluks; the failure has been total in 10 and nearly so in eight more, while the intermediate number, losing from one-sixth to one-half both inclusive, is 25. These results are more extreme as regards both crop lost and crop saved, than those ascertained in the case of Bombay.

Total -	9	6	10	4	8	5	8	8	10

6. The estimates of probable remissions of land revenue which were formed in November amounted to no less than Rs. 25,64,956, the total demand for the year being Rs. 68,94,825, but further inquiry has reduced this figure to one half, or Rs. 12,76,672. It appears probable that still further reductions will be found practicable, especially in the Kolar district. The general principle laid down by the Chief Commissioner has been that eight annas in the rupee may be remitted on wet lands under tanks, if wholly unirrigated, and from four to six annas on dry land holdings, but that if any further concession be needed it must be in the form of postponement of recovery till next year.

7. The resources of Mysore in cattle and agricultural stock generally have not been reported, but they have already been most materially impaired, and it is to be feared that considerable further loss is unavoidable. The condition of the cattle may be said to be decidedly bad in 19 taluks, indifferent in 41, and good in eight only. The districts of Chitaldroog and Tumkur appear to be the worst, the reported losses being 79,700 and 97,600 head respectively. The remedial measures adopted have been the suspension of sales of grass on waste lands, the throwing open of the State forests, and above all, the removal of the cattle to the Ghât districts, particularly to the eight Mulnad taluks or hilly region in the Shimoga and Kadur districts. Prickly-pear has not found favour as fodder.

8. The scarcity of water is great through above two-thirds of the province; the condition in this respect of 17 taluks being bad and of 32 indifferent, and the suffering of the people and the cattle will be intensified in the event of no rain falling in the course of next month. The digging of temporary wells in the beds of nullas and tanks is the only measure which can be resorted to.

9. The course of prices during the three years months terminating at Christmas is chiefly remarkable as showing a general and gradual rise, rather than the sudden rise and subsequent recovery which was observable in the case of Bombay. Since that date there has been a decided amendment in the price of ragi, but that of rice has been more stationary. The condition and prospects of the grain trade have been ably reviewed in the memoranda by Mr. Bernard, to which reference has already been made, that it is sufficient to say that in Mysore, as elsewhere, private trade has shown great activity, that the demand on the railway is, and will continue to be, in excess of its carrying power, and that there appear to be not inconsiderable stocks in the hands of the people which will not be drawn upon until June and July, when it is to be hoped that rain will have fallen and removed all anxiety regarding the coming season.

10. Mysore, like the west of India generally, does not possess a wealthy zemindari class, who can be relied on to pay their revenue regularly, notwithstanding occasional bad years. and to deal liberally with their tenantry. The population contains a rather larger per-centage than usual of high castes, but the majority are poor, excepting, perhaps, in the Mysore district. The Province of Mysore.

11. The number of persons reported to have emigrated is 334,248, or about 13 per cent. on the affected population, but the movement has for the most part been only to the Mulnad taluks of the Shimoga and Kadur districts, for the purpose of grazing cattle, or to the coffee plantations of Coorg and its vicinity, where labour is in request. It is doubtful whether the change of climate has usually been found advantageous.

12. Up to the period when the taluk reports now under consideration were sent in, the organisation of relief works had not attained any very large dimensions, and the Chief Commissioner was endeavouring, with equal caution and judgment to meet, without exceeding the exigencies of the situation. The projects which have been undertaken have, owing to the want of facilities for large undertakings, been of limited extent, and have in the great majority of instances consisted of tank repairs and clearances. As such projects are particularly appropriate to the circumstances of Mysore, and task-work is everywhere enforced, with the cordial co-operation of the Public Works Department, there is good reason to believe that the result will be a material improvement of the irrigational resources of the province. The totals of the general expenditure up to December 31st, by means of which much relief will be afforded, are given in the margin. The appropriations for relief works under civil officers were on February 17th Rs. 4,98,568, out of which Rs. 1,92,968 had been actually expended. The relief appears to have been sufficient without being excessive.

	Rs.
District Fund Budget - - - -	1,85,323
Special relief works - - - -	1,19,269
Total - -	3,04,592
Imperial Public Works Irrigation Budget -	3,56,234
Ditto roads and buildings ditto	8,36,533
Total - -	11,92,767
Civil Budget; petty repairs, &c. - -	76,831
Municipal Budget - - - -	1,19,713
Total - -	16,93,903

13. The organisation for charitable relief has been carefully developed throughout the various districts. Considerable sums have been privately raised for the support of the aged, helpless, and infirm, and the Chief Commissioner, in accordance with sanction accorded to him at his request on the 2nd November 1876, has made in all cases an equivalent grant on the part of Government. Recently arrangements have been commenced at the suggestion of Sir Richard Temple for a careful house to house visitation, with the view of preventing, as far as human agency can effect it, the mortality which might otherwise possibly occur among those who are from any cause prevented from seeking relief on the works.

14. The local officers estimate, as shown in the margin, the numbers likely to be in receipt of relief. As regards the first-mentioned date, it seems sufficient to say that, according to the latest information obtained by telegraph and relating to the latter part of February, the total on the works and receiving charitable relief was 94,596. The estimate, therefore, while beyond the mark was not altogether excessive, and it seems not improbable that the numbers on the 1st of May may come up to the local calculation. By the 1st of July, however, a considerable reduction in numbers may fairly be anticipated, especially if a favourable commencement of the rains has taken place.

March 1st - -	140,000
May 1st - -	164,000
July 1st - -	166,009

15. In conclusion, his Excellency the Governor-General in Council has great pleasure in congratulating the Chief Commissioner and the officers of the Mysore Administration on the zeal, judgment, and humanity which have characterised their arrangements and exertions to meet the great calamity which has fallen upon the province, and the large measure of success which has hitherto attended them.

Ordered, that copies of this Resolution be communicated to the Secretary of State for India, the Chief Commissioner of Mysore, the Governments of Madras and Bombay, and Sir Richard Temple, and that it be published in the "Gazette of India."

No. 238.

No. 14 of 1877.

Agriculture and Horticulture.—Famine.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Calcutta, 9th March 1877.

Insufficiency of means of transit for grain.

The subject which has most particularly engaged our attention during the past week in connexion with the famine in the presidencies of Madras and Bombay, is the insufficiency of the means at present available for transporting grain from Madras to the interior, and more especially to the north-western districts of Cuddapah, Bellary, and Kurnool. The stock of grain at Madras awaiting removal by rail, including, we understand, some 26,000 tons of Government grain, is very large. Much of it is lying on the beach in bags exposed to the weather, and will be seriously damaged if rain should fall before it is removed. At present the Madras Railway is not able to carry more than 700 tons a day. It is of great importance that the carrying power of the railway should be increased with as little delay as possible, and with this view Sir Richard Temple has suggested, in a minute which we enclose, that the working of the Raichore section of the Madras Railway should, for a time, be made over to the Great Indian Peninsula Railway Company. On the 3rd instant we communicated to the Madras Government our concurrence in this proposal; but it now appears that there are difficulties in the way of its being carried out, owing, it is stated, to the rolling stock of the Great Indian Peninsula Railway not being more than sufficient to furnish haulage to Raichore. We hope to be able in the course of a few days to make arrangements for the supply of additional rolling-stock from the East Indian and other railways to the Great Indian Peninsula and Madras Railways. The strain on the railways for some months past has been undoubtedly very great, and the exertions of the railway officials have been most commendable; but still greater efforts will have to be made to avert disaster, and we trust that they will not be unsuccessful.

Grain purchases by the Madras Government.

2. Another matter which has caused us considerable anxiety, is the distrust which appears to be felt by members of the mercantile community, both at Madras and at Calcutta, in connexion with the purchases of grain made by the Madras Government some time ago. From letters which have appeared in the newspapers, and from information which has reached us from other quarters, there is evidently still an impression that the relations between the Madras Government and the firm which was employed by it to make its purchases, have not entirely ceased, and that there is danger of further similar purchases being made, and disarranging the calculations of the trade. Some colour was unfortunately given to the impression in question by a transaction which occurred at Bellary subsequent to the date on which the Madras Government brought to a close the arrangement with the firm alluded to for the purchase of grain. It appears that on the 12th of January, the arrangement with Messrs. Arbuthnot and Company having been terminated on the 5th, the Collector of Bellary purchased some grain for the relief works from a local firm without reference to the local agent of Messrs. Arbuthnot and Company, and was called upon by the Madras Government to explain why this particular transaction had been concluded without reference to the Government brokers, and it was not until the 29th January that the Government officers at Bellary became aware that Messrs. Arbuthnot and Company were no longer Government brokers. The fact that the firm in question had ceased to act for the Government in that capacity was not publicly notified by the Madras Government until the 8th February, a delay which was unfortunate, and which not improbably caused misapprehension in the minds of the mercantile community. From orders of the Madras Government which have recently been received, we learn that Messrs. Arbuthnot and Company were employed in issuing supplies of rice from the Government reserve, and in replacing in the reserve an equal quantity which apparently was supplied by them to the Government. In one of Sir Richard Temple's recent minutes, the same firm are alluded to under the designation of the Government grain agents. We are aware that the Madras Government have no intention of entering into further purchases of grain, similar to those made by them in November last; but it is so important that there should be no grounds whatever for misapprehension, either as to the action or intentions of the Government in this matter, that we have deemed it necessary to request that the Madras Government will lose no time in publicly notifying the quantity of grain now in its hands, both at Madras itself, and in the distressed districts, and its resolution to make no further purchases of grain outside of the distressed districts, unless it is satisfied that the trade is unable

To allay apprehensions of mercantile community, Madras Government will publicly

to supply the wants of those districts, in which case the grounds of that conclusion, and the exact intentions of the Government should be publicly made known. We have also instructed the Madras Government to notify that even in the distressed districts, the Government will abstain from making purchases except for the relief of localities which the trade is unable to reach; that all Government grain now in those districts will be removed to places at least 60 miles from the railway, and that no more Government grain will be sent to those districts from Madras so long as private trade is able to supply them.

notify intentions to make no further purchases.

3. In regard to the reserve of Government grain now at Madras, amounting, as we have said, to 26,000 tons, we have suggested, for the consideration of his Grace the Governor of Madras in Council, the expediency of disposing of this reserve by public sale to the trade. With reference to the large quantity of grain which appears to have accumulated at Madras, belonging to private traders, the retention of a Government reserve would seem to be unnecessary; and its existence is certainly calculated to keep alive the erroneous impressions which have taken possession of the public mind in regard to the probability of the Government again interfering with the grain market. We think that the reserve should be sold to the highest bidders in specified lots at intervals of, say, a fortnight, previous notification being given of the quantities to be sold, and of the dates on which the sales will take place. We feel sure that the adoption of these precautions will effectually dispel any apprehensions of interference on the part of the Government with private trade.

Government reserve at Madras should be sold to trade.

4. Among the enclosures of this Despatch will be found a minute by Sir Richard Temple on the expediency of drafting labourers from the relief works in the Nellore district, and also from the ceded districts and Kurnool, to the East Coast Navigation Canal, on which some 30,000 persons are now employed, but which will afford useful occupation to 60,000 more. This is one of the few relief works of magnitude at present in progress in the Madras Presidency. It is likely to prove a most useful work, passing, as it does, through the whole length of the Nellore district, connecting the delta of the Kistna River with Madras, and, as Sir Richard Temple observes, opening out "a large "field for inland trade between the presidency town and some of the richest agricultural "districts." It is a work which the Madras Government have long desired to carry out to completion, and it would have been completed under the Government of Lord Napier and Ettrick, who gave much attention to the project, had funds been available. It is very desirable that the present opportunity should not be lost. We have no doubt that in this, and in other cases, the difficulty of inducing people to leave their villages for a distant work on which a full day's work will be exacted can be overcome by patience and firmness on the part of the district officers and their subordinates.

East Coast Navigation Canal capable of employing 90,000 persons.

5. The following is Sir Richard Temple's telegraphic summary, received yesterday, of the present aspect of affairs in the Madras Presidency:—

Condition of Madras Presidency.

"Spring crop coming on in most of the distressed districts, tendency of prices slightly favourable, markets well supplied, but much anxiety about accumulation of grain at Madras. Great delay in doubling line to Arconum. Number on relief works further decreased by improved carefulness of local officers; task-work more strict from improved supervision. The reduction of wages is being introduced with much hesitation. Since letter reporting my inspection at various times of 97,000 relief labourers, I have inspected 30,000 more in districts of Cuddapah, Nellore, North Arcot, Coimbatore, and Salem. With some exceptions, physical condition of gangs inspected fairly good. In Nellore, relief labourers very reluctant to be transferred from petty village works under lax supervision to Coast Canal under professional control. Local rumours of mortality going on in Nellore district are without foundation. Applicants for charitable relief decreasing, because unwilling to submit to system of relief camps. General prospect tolerably favourable, with certain drawbacks only."

6. The number of persons employed in the relief works in the Madras Presidency, according to the latest returns, was 667,443, showing a decrease of 36,241 below the number of the previous week; 48,091 persons were gratuitously fed against 46,588, the corresponding number for the previous week.

Number in receipt of relief in Madras and Bombay.

7. In Bombay the number on the relief works during the week ending the 2nd instant was 263,053. As compared with the previous week, there was an increase of 11,630 persons; but the number on the works is enormously below the estimates referred to in the 10th paragraph of our Despatch of the 23rd ultimo, which gave the probable number for the 1st March at the respective figures of 750,000, 540,000, and 677,500. In Mysore the number on the works was 94,596.

The reduced rate of wages.

8. We have been furnished by the Madras Government with a copy of the letter addressed to them by their Sanitary Commissioner, which has been sent by them to your Lordship, regarding the alleged insufficiency of the reduced rate of wages lately prescribed for the relief works in the Madras Presidency. Sir Richard Temple has proceeded to Madras for the purpose of conferring with the Local Government on this subject. We shall probably be in a position to express our views upon it in our next Despatch.

No. 146.

9. We enclose a summary of the returns received from Mysore in reply to our call of the 30th October last, regarding the condition and prospects of the several talukas or subdivisions of districts in that province, together with our resolution reviewing them. As we have already noticed most of the salient facts connected with the famine in Mysore in our Despatch of the 23rd ultimo, we need not do more on the present occasion than draw your Lordship's attention to the papers now sent, which confirm the opinions we had previously formed from Sir Richard Temple's reports that the arrangements for dealing with the famine in that province have been characterised by zeal, judgment, and humanity.

10. When we deputed Sir Richard Temple in January last to visit the famine-stricken tracts and to confer with the Local Governments regarding the measures which were being carried out for the relief of distress, we had hoped that his mission would not occupy more than a few weeks; but it now seems probable that the arduous duty on which he is engaged will still occupy him for some time longer. It is impossible to over-estimate the value of the service which Sir Richard Temple is rendering to the State at the present juncture.

We have the honour to be, &c.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF MADRAS.

Grain purchases by Madras Government. Instructions of Government of India in regard to.

I am directed by the Governor-General in Council to communicate the following remarks with reference to the stock of grain purchased by the Government of Madras, a considerable portion of which is retained as a reserve.

2. The Madras Government are doubtless aware of the distrust which is felt by members of the mercantile community both at Madras and at Calcutta, and it is believed also at Rangoon, in connexion with the purchases of grain made by the Madras Government some time ago. This feeling has found expression from time to time in letters in the newspapers, and it is evident, from information which has reached the Government of India from other quarters, that there still exists an impression among persons interested in the grain trade that the relations between the Madras Government and the firm which it employed to make its purchases have not entirely ceased, and that there is a danger of other similar purchases being made, and disarranging the calculations of the trade. Some colour has unfortunately been given to the impression in question by the delay which occurred in notifying to the district officials at Bellary, and to the public generally, the termination of the appointment of Messrs. Arbuthnot & Co., as Government brokers for the purchase of grain; and from proceedings of the Madras Government which have recently been received, it would appear that Messrs. Arbuthnot & Co. were employed a few weeks ago in issuing supplies of rice from the Government reserve and in replacing in the reserve an equal quantity, which, apparently, was supplied by them to the Government. In one of Sir Richard Temple's recent minutes the same firm are alluded to under the designation of the Government grain agents.

3. The Governor-General in Council is aware that the Madras Government have no intention of entering into further purchases of grain similar to those made by them in November last, but it is so important that there should be no grounds whatever for misapprehension, either as to the action or intentions of the Government, that his Excellency

in Council deems it necessary to request that the Madras Government will lose no time in publicly notifying the quantity of grain now in its hands, both at Madras itself and in the distressed districts, and its resolution to make no further purchases of grain outside of the distressed districts, unless it is satisfied that the trade is unable to supply the wants of those districts, in which case the grounds of that conclusion, and the exact intentions of the Government, will be publicly made known before action is taken. Grain purchases by Madras Government.

4. This resolution should apply not only to additions to the reserve of grain now stored at Madras, but also to purchases made with the view of supplying the place of issues made from the reserve. It should also be notified that even in the distressed districts the Government will abstain from making purchases except for the relief of localities which the trade is unable to reach, that all Government grain now in those districts will be removed to places at least 60 miles from the railway, and that no more Government grain will be sent to them from Madras so long as private trade is able to supply them. I am to request that these instructions may be carried out with as little delay as possible.

5. In regard to the reserve of Government grain now at Madras, which, according to the latest information furnished to the Government of India, amounted to 26,000 tons, I am to suggest, for the consideration of his Grace in Council, the expediency of disposing of this reserve by public sale to the trade. With reference to the large quantity of grain which appears to have accumulated at Madras, belonging to private traders, the retention of a Government reserve would seem to be unnecessary, and its existence is certainly calculated to keep alive the erroneous impressions which have taken possession of the public mind in regard to the probability of the Government again interfering with the grain market. What the Government of India would suggest is that the reserve should be sold to the highest bidders in specified lots of, say, 5,000 tons each, at intervals of a fortnight, previous notification being given of the quantities to be sold, and of the dates on which the sales will take place.

No. 149. No. 181.

LIX.—Minute by Sir Richard Temple, dated Madras, 12th March 1877.

When recording my minute of the 19th February, upon the adoption of the Negapatam route for the supply of grain to Bangalore, I was under the impression that the rates for the carriage of grain from Negapatam to Bangalore had already been lowered, and that the effect would by this time have been apparent in considerable despatches of grain to Bangalore by this route. Negapatam route, supply of grain to Mysore by.

2. It was hoped that the augmented stock of engines would, by the 1st of March, have put the Madras Railway in a position to despatch grain from Madras up to the full extent of the carrying power of the single line between Madras and Arconum, and in addition to this to carry to Bangalore all the grain despatched from Beypore or Negapatam. And I look forward with much anxiety to the early attainment of this object.

3. With the large amount of grain now on the Madras beach, the immediate importance of the fullest possible despatches of grain from Madras is manifest. But I am advised that with the best arrangements the despatches of grain by the single line of rail from Madras to Arconum are not likely to exceed 45,000 tons a month; while the requirements in all the distressed districts from Madras and other sources of supply may rise even to 90,000 tons a month; and I have therefore invited attention to the great importance of the subsidiary sources of supply, namely, Raichore, Beypore, and Negapatam. Grain supply to Mysore.

4. Captain Bisset has now visited Negapatam and Bangalore, and in the record of his observations he shows that, even at present, 200 tons a day can be landed at Negapatam and forwarded to Bangalore; and that, with improved landing facilities at Negapatam and increased transhipping accommodation at Trichinopoly, a daily supply of 300 tons may be obtained at Bangalore by this route. He has noted, also, that the demand for grain in Bangalore is now put at over 500 tons a day, or nearly 100 tons a day above previous estimates.

5. On account of this growing demand, and because the progress of the doubling of the line of railway from Madras to Arconum is so much slower than I was led to expect when recommending this measure, the arrangements for developing traffic *viâ* Negapatam become even more important than before; and I would invite attention to

Grain supply to Mysore.

the several suggestions offered in Captain Bisset's narrative, and would make the following recommendations:—

I. That increased landing facilities be provided at Negapatam to meet a traffic, which, on the closing of the western ports by the monsoon, will become of vital importance to the country.

II. That the necessary measures be taken to avoid delays in the supply of waggons at Negapatam, and in the transhipment of grain at Trichinopoly.

III. That the system of waggon-interchange at Erode be adopted as suggested by Captain Bisset.

IV. That every publicity be given to the orders for the reduction of grain rates from Negapatam to Bangalore, and that a similar reduction be made in the rates from Negapatam to Kolar road, a station from which large supplies are sent to the northern parts of Mysore and the southern taluks of Bellary.

No. 115, dated Madras, 12th March 1877.

From the Secretary to Sir Richard Temple to the Secretary to the Government of India.

Forwarding No. 149.

By direction of Sir Richard Temple I have the honour to submit copy of a minute recorded by him in regard to the utilisation of the Negapatam port and route for the supply of grain to Bangalore and the Mysore country. The desirability of working this route first attracted the notice of his Grace the Governor, and it was in accordance with his Grace's suggestion that Captain Bisset was deputed to look into the facts on the spot. It is believed that steps have already been or are now being taken, under the orders of his Grace the Governor in Council, to meet some of the requirements noticed in the appended minute.

No. 181.

No. 151.

LXII.—Minute by Sir Richard Temple, dated Madras, 12th March 1877, on the employment of weavers in the Madras Presidency.

Light labour required for weavers and spinners.

I desire to invite attention to the advisability of establishing some light labour test for the many thousands of weavers and spinners who are now coming upon the hands of Government in several of the famine-stricken districts of the Madras Presidency. It was proposed, as I understand some months ago by some of the Madras authorities, that Government should advance money to enable destitute weavers to buy material and carry on their trade. For several reasons it was then thought the plan might be deferred. But I submit that the time has come when this proposal might, with such modification as may be required by local circumstances, be resuscitated and carried into effect.

2. Near Bangalore, on a tank, I saw a special gang of poor weavers, who were allowed a higher rate for their piece-work than ordinary relief labourers, because their habits and the condition of their hands and fingers prevented their doing a full day's work. Some similar arrangements are, I believe, carried out in several places in the Madras Presidency also. And such arrangements may suffice for those weavers who make the coarser fabrics at Adoni, at Bellary, and other places.

3. But there are many weavers who work in silk or who do the finer kinds of cotton weaving; and such people might, if put upon tank or road work, become physically unfitted, for a time at any rate, to return to their usual employment after the end of the famine. Yet many of these poor people are undoubtedly in great straits; they can get no market for their products, and they can get no credit wherewith to buy materials. Yet they are many of them quite ready to work to the best of their power, in return for such relief as the State may give them. At Salem, for instance, I learnt that the silk weavers had reduced themselves to some extremity sooner than go on relief works, and at present they are subsisting on an organised private charity. Similar instances will ere long occur in Vellore, even if they are not already occurring.

4. In parts of Bengal (Burdwan and other places), during the famine of 1874, advances were made to weavers, and their manufactures were taken over by Government officers in return for the advances and for their support. At some of the relief houses also weavers were employed in making cotton and silk fabrics. The stores of such manu-

factures were kept till after the famine, and these were sold to the best advantage; and in the end the loss was not very large. I suggest that the Madras Government might see fit to authorise its officers to make similar arrangements at towns or in tracts where there is a large population of weavers who make the finer kinds of cotton or silk cloth. The Collectors, with the assistance and advice of Native officers and non-official Native gentlemen, would be able to carry out arrangements such as are now suggested with the least possible loss to the State, and with much advantage to a deserving and industrious class of the people.

Light labour required for weavers and spinners.

No. 152. No. 181.

LXIII.—Minute by Sir Richard Temple, regarding relief camps and gratuitous relief in the Ceded Districts.

Madras, 12th March 1877.

In the distressed districts of the Madras Presidency below the ghâts there have been established relief camps for the reception and treatment of destitute persons who are unfit for labour on relief works. These camps consist of sheds erected in rows within large enclosures. They afford accommodation which is really good; indeed their accommodation ought not to be better than it is, otherwise a standard of comfort would be set up far superior to anything that could be obtained in the villages. They are organised and managed in a way that is most creditable to the officers concerned. Provided that the people were taken care of, their diseases treated and their necessities relieved, it was undoubtedly desirable at the outset that sojourn in these relief camps should not be made so agreeable and attractive as to lead to the pauperisation of the people. And so far the object has been attained.

Relief camps well organised,

2. But as the season advances, it is evident that these camps are not so largely resorted to as might be expected under the circumstances of the people. There seems to be some prejudice against them among the poorest classes. And there is actually reason to fear that destitute persons may shrink from going to relief camps so long that meanwhile they may drift into dangerous distress. It is noticed that in some cases people will not resort to the camps, and paupers who are taken there run away for a few days only to return in a worse condition than ever. It may therefore become necessary for officers in charge of relief camps to make their camps somewhat more popular than they are now.

but not popular.

3. After consulting various Native gentlemen of experience, I think that some concession might be made in relief camps to the caste feelings of the people. For the very poor classes, who in this presidency are often said to belong to no caste, the present system of public cooks in the camps might suffice. But for those who have grown up with caste feeling, some relaxation of the present arrangements might be permitted. Inmates might be allowed to cook their own food either for themselves or for self-arranged gangs, and they might be allowed to eat their meals apart and free from observation. In most of the camps there would be ample space for the enjoyment of such concessions. Then again, the sheds might be set apart for the principal castes; the casteless or very low caste people would in such case have sufficient shed accommodation for themselves. In most cases it would be possible to make these not very great (but still to Natives acceptable) concessions without any considerable increase of expenditure. If such concessions could be given, the relief camps would certainly become more efficient as safeguards against dangerous distress.

4. While the relief camp system has generally been adopted below the ghats, different arrangements have been made for giving gratuitous relief in the ceded districts. In those districts outdoor relief, in the shape of cooked food, is distributed to ticket holders and to orphan children at relief houses. Ordinarily there is one such relief house at the head-quarters of each taluk, and five or six other subordinate relief houses in the interior of the taluk. Each such relief house is under the superintendence of a selected village official, or of a Revenue Inspector. At the outset there may have been, indeed in some cases there certainly were, abuses at relief houses of this kind; and gratuitous relief was occasionally given with undue liberality at towns where arrangements, begun from private charity, were afterwards taken over by Government officers. But now that adequate supervision has been or is being provided for every distressed taluk, these relief houses are inspected once or oftener in each week; abuses will be prevented, and the numbers on charitable relief are by no means excessive.

Gratuitous reliefs.

elief camps
id gratui-
us relief.

5. The sad prevalence of cholera, and the practical* difficulties in the way of effective sanitation may prove obstacles to the extension of the relief camp system to the ceded districts. And under all the circumstances of the case, I would therefore now recommend that in those districts the present system of giving gratuitous relief be allowed to remain; and that the regular systematic inspection of all relief houses be enforced. One or two relief camps only in central places in the ceded districts might suffice.

*NOTE.—Persons of the sweeper caste are not readily procurable in the ceded districts.

No. 181.

No. 153.

LXIV.—MINUTE by SIR RICHARD TEMPLE, dated Madras, 12th March 1877, on his visit to the Coimbatore and Salem Districts.

Salem and Coimbatore.

In forwarding the accompanying memorandum of my visit to the districts of Salem and Coimbatore, a few brief remarks from me will suffice:

2. There can be no doubt of the heavy losses suffered in the eastern and north-eastern part of the Coimbatore district, and of the serious distress among the labouring classes.

3. The relief has been confined as yet to those classes, and has not yet been extended to the purely cultivating classes. Some portions of these classes are no doubt straitened, and had the relief system been at all lax, many of these would by this time have been in receipt of State charity. But the district authorities are very justly alive to the importance of keeping the peasant proprietory off State charity as long as possible.

4. My inspection of the various gangs of relief labourers, about 7,500 persons in all, was highly satisfactory, that is to say, the men and women were almost all of the sort which one would expect to find properly on relief; very few were persons who seemed able to sustain themselves, very few were in a physically reduced condition; task-work was rigorously exacted; there were many signs of system and organisation. About each person, singly, whose appearance seemed at all reduced, special inquiries were made. The local authorities were confident that the village headmen do understand and act upon the Government orders about searching for every individual case of distress throughout the district.

5. It is very satisfactory to find that the Collector does not anticipate any large increase of numbers on relief. This must, however, greatly depend on the weather.

6. On the whole, I consider the Coimbatore gangs to be the most satisfactory gangs which I have yet inspected anywhere. My impression regarding the carefulness, vigilance, and economy exercised by the Collector, Mr. Wedderburn, is very favourable. He is manifestly a thoughtful and experienced officer. The same watchfulness on his part which guards against waste or demoralisation will also ensure that no case of real distress will escape unrelieved. His Assistant and Sub-Collector, Mr. MacWalters, is an excellent manager, indeed, he is one of the very best relief officers whom I have met in this presidency.

7. My visit in the Salem district was cut short by the necessity of proceeding to Madras to confer with the Government on certain points. But I had the advantage of carefully examining the Collector, Mr. Longley, regarding the relief operations of the district in the presence of Mr. Puckle of the Board of Revenue. Here also I have formed a very favourable impression of the care and management of the Collector. He seems to me to be exacting task-work more strictly and completely than in any other district in this presidency. Considering the undoubted distress in the northern portion of his district, I think that his numbers on relief are moderate, though I fear they must increase. He is most thoughtful too, about searching for individual misery in every village. I have not met any officer yet in this presidency with sounder ideas on this important matter than Mr. Longley.

8. I have the pleasure to express my unqualified satisfaction with the result of the proceedings of the Collectors of Salem and Coimbatore, and my belief that in both these districts the Madras Government is thoroughly well served.

No. 154. No. 181.

LXV.—Memorandum on Sir Richard Temple's visit to Coimbatore and Salem on 6th, 7th, and 8th March, by Mr. C. E. Buckland, Private Secretary. Salem and Coimbatore.

Madras, 12th March 1877.

In the district of Coimbatore, on the 6th and 7th March, Sir Richard Temple met Mr. MacWalters, the Sub-Collector, the officer in charge of the relief works in the interior, the tahsildars of Bhowany, Parundoray, Pelladum, and Coimbatore. He observed on both days the aspects of the country between Erode and Coimbatore, which comprises the tracts that have most suffered from drought. At Coimbatore itself he stayed with Mr. Wedderburn, the Collector, from whom he learnt that on the 6th March there were on relief works 22,351 labourers, the number the week previous having been 22,900. The number of persons fed gratuitously was stated to be 1,312, of whom 600 were at Oodamalapetta, some at Suttyamangulum, and some at Bhowany. He thought now that the numbers would not rise above 30,000 at the worst time. The labourers are only paid for six days in the week, and task-work is enforced at the rate of 10 cubic yards for the rupee.

2. All the markets in the district are well supplied, as trade is extraordinarily active; Coimbatore itself is full of grain. The imports by sea all come from the west coast (Beypore). Cholum and ragi are imported largely from Bombay, and even Bengal rice comes round to Beypore. Last week 322 tons of rice were brought in, and 299 tons of dry grains. The price of grain has not varied greatly since last December. About the end of October and beginning of November prices ran up suddenly, in consequence of the demand for Mysore. The ordinary and present prices of food may be thus compared, in Madras measures for a rupee—

	Ordinary.	Present.
Rice - - - - - -	12·50	7·80
Cholum - - - - -	20·50	9·33
Ragi - - - - - -	23·50	10·20
Cumboo - - - - -	24·	10·60

The Collector regards the stationary prices of food grain since November as evidence of the existence of old stocks in the district. In his opinion, generally, one or one-and-a-half year's supply is kept in hand, though he has no means of gauging the amount accurately. And the fact of any quantity of rice being available at the rate of 7·80 seers the rupee, he thinks, keeps down the prices of the other grains; rice is only consumed by the upper classes as a rule.

3. The harvest just reaped has averaged about three or four annas throughout the district. The rice crop from the wet lands is nearly all cut, and the out-turn will be a half crop. For two or three months no field-work or agriculture is expected.

The Collector anticipates no necessity to make any remissions of land revenue in the Coimbatore taluk. Of the five lakhs assessment on "wet" land, where there has been a half crop, he expects to have to remit one lakh, and four lakhs out of the 19 lakhs assessment on the "dry" land.

5. The estimated expenditure sanctioned for the district is Rs. 4,68,346, of which, up to date, Rs. 1,40,860 have been spent.

6. During the week there were 1,158 attacks of cholera and 748 deaths.

7. On his way to Coimbatore, Sir Richard inspected collections of relief labourers, amounting to more than 5,500, at the stations of Perandoorg, Ootakally, Loonanoor, and Coimbatore, and on the return journey about 2,800 more at Avenashy road and Erode. Their condition struck him as middling, though sufficiently good with some few exceptions. Very few seemed to be able to sustain themselves without relief. Most of them belonged to the poorest and lowest classes. The velalars or cultivating classes were but slightly represented in these gangs, and these were either field labourers or cultivators of the poorest class. On the whole, the gangs comprised persons who need relief and hardly any others. There were no signs of waste or abuses, and many signs of care, system, and organisation. As relief labourers, these people appeared to be in a satisfactory condition, just in the sort of condition we should reasonably expect to find. At Coimbatore itself a number of weavers presented themselves, and complained that they had to work at the rate of 10 cubic yards the rupee, which was beyond their power. They had struck work in consequence. The Collector had under consideration the lowering of the task for these people.

Salem and Coimbatore.

8. At Salem, on the 8th, Sir Richard Temple met Mr. R. Puckle, member of the Board of Revenue, Mr. Longley, the Collector, and the Native Deputy Collector. He inspected the relief camp near the head-quarters of the district, and inspected one gang of relief labourers, who were in very fair condition. He examined some of the wells in the highly cultivated plain near Salem, and found most of them dry, although water might be reached by deepening them; these seemed cases for advances being made by Government. He again questioned Mr. Longley carefully on all the points comprised in the memorandum of the 25th January. Mr. Longley had just returned from a careful inspection of the most distressed taluk in the district, namely, Dhurumpuri. Its condition, by all accounts, is very bad, as bad as that of any taluk in the presidency; but the relief operations have been carefully inspected by the Collector, and he is confident of their success and sufficiency. Undoubtedly, those portions of the district which, geographically, form a part of the Mysore plateau must suffer severely. For the other part of the district there is not much anxiety. The Collector's answers to all questions in detail were highly satisfactory. Sir Richard Temple was himself about to visit the Dhurumpuri taluk when he was summoned to Madras on important financial business. He is bound to say that from no Collector in the presidency has he received more sound and explicit replies to all questions regarding relief than from Mr. Longley. The Collector is most strict and zealous in enforcing a full performance of work by the gangs, and most anxious that all cases of misery should be dealt with under the village relief system. He is in some difficulty in regard to finding suitable work for the silk-weavers, who are as a class much distressed. He also regrets that the excellent relief camp is not more largely attended. On the day of Sir Richard Temple's visit, the number of relief labourers was taken to be somewhat below 25,000; the question of this number remaining stationary or rising depended on the falling of the spring showers. In this district, as in Coimbatore, the relief comprises only the poorest and lowest castes, and the poorest stratum of the agriculturists. The numbers on charitable relief were now under 10,000, but these will probably increase. The Collector quite understands the importance of instructing the village headmen to seek out and care for all cases of distress.

9. Sir Richard Temple had the advantage of verifying all these matters with Mr. Puckle, who most forcibly drew attention to the drought and uncertainty of season caused by the rapid denudation of the hill sides once so richly clothed with forests.

No. 181.

No. 155.

Relief works and gratuitous relief.

LXVI.—Minute by Sir Richard Temple, dated Madras, 12th March 1877, on relief works and gratuitous relief.

In continuation of my minute dated 24th February, and the statement thereto appended, I desire to submit a further statement of the numbers of relief labourers and recipients of gratuitous relief inspected by me between the 24th February and the 8th March, and some persons of the poorest classes, for the most part in the districts of North Arcot, Nellore, Cuddapah, and Coimbatore.

2. These inspections were conducted in the manner previously described. The analysis of the numbers shows that the physical condition of 14,330, 17,069, 2,428, and 1,300 may be considered as having been good, middling, indifferent, and bad respectively.

3. I wish to take this opportunity of correcting the description given of the physical condition of the gangs of 500 and 2,000 relief labourers and recipients of gratuitous relief inspected by me on the 26th and 27th of January at Madras and at Red Hills. Instead of the word "indifferent" I should have used the word "bad." It had been my wish to avoid minute distinctions and to group the gangs into broad classes, which would be readily numbered. But on reflection I think that the gangs mentioned were so inferior in physical condition to any other collection of such persons I have seen, that the word "bad" would have been more appropriately used to describe them.

STATEMENT shewing the CLASSIFICATION of PERSONS on RELIEF WORK and RECIPIENTS of GRATUITOUS RELIEF inspected by SIR RICHARD TEMPLE between 24th February and 8th March 1877.

From the SECRETARY TO THE GOVERNMENT OF INDIA, Public Works Department, to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department (Railway).

Accumulation of grain on East Indian Railway.

Referring to your No. 121 of 29th January and telegrams of 2nd and 3rd February 1877, I am directed to forward, for the information of the Government of Bombay, copy of a note,* dated 13th February 1877, on the accumulation of grain at stations on the East Indian Railway.

2. It is evident that up to the date of this report the East Indian Railway was tendering to the Great Indian Peninsula Railway at Jubbulpore more waggons than the latter could take away. So long as this continues to be the case there can be no ground for intervention on behalf of the Great Indian Peninsula Company and its traffic in the manner desired by the traffic authorities of that line. The East Indian Railway meantime finds full use for its stock in transporting grain to the seaboard for export, and there is no apparent ground for the idea that this traffic has been favoured at the sacrifice of that to the Great Indian Peninsula Railway. To lock up an indefinite number of waggons at Jubbulpore waiting on the Great Indian Peninsula Railway would reduce, in this emergency, the useful effect of the East Indian Railway as a whole very materially.

3. The Great Indian Peninsula Railway Company returns the East Indian waggons within the limit provided in the working agreement.

* No. 83.

Grain accumulation on East Indian Railway.

4. For the accumulation at Jubbulpore and the long delay in clearing that station (paragraph 12) the Great Indian Peninsula is responsible.

5. The Government of Bombay will observe that it is reported that the strictest impartiality was being exercised in the despatch of consignments for the several stations of the East Indian Railway.

No. 181.

No. 157.

No. 728R., dated 13th March 1877.

From the GOVERNMENT OF INDIA, Public Works Department, to the CONSULTING ENGINEER TO THE GOVERNMENT OF INDIA for Guaranteed Railways.

I am directed to acknowledge receipt of your No. 440 of 23rd February 1877, submitting a note on the accumulation of grain at stations on the East Indian Railway.

2. It is evident that up to the date of this report the East Indian Railway was tendering to the Great Indian Peninsula Railway at Jubbulpore more waggons than the latter could take away. So long as this continues to be the case the Great Indian Peninsula Railway Company can have no just ground of complaint that its traffic is not fairly dealt with. The East Indian Railway, meantime, finds the fullest use for its stock in transporting grain to the seaboard for export, and there is no apparent ground for the idea that this traffic has been favoured at the sacrifice of that to the Great Indian Peninsula Railways. To lock up an indefinite number of waggons at Jubbulpore waiting on the Great Indian Peninsula Railway would reduce in this emergency the useful effect of the East Indian Railway, as a whole, very materially.

3. The Great Indian Peninsula Railway Company returns the East Indian waggons within the limit provided in the working agreements, and it has been confirmed from Madras that very few East Indian waggons have passed on to the Madras Railways. On the 21st January it had 21.

4. The accumulation of grain at Cawnpore, both for the Great Indian Peninsula Railway and for Howrah, was very large. At Atawa and Delhi also there were large accumulations. Goods registered at Jubbulpore so far back as the end of November were being sent off on February 4th; and at Jubbulpore, as also at the four adjacent stations of the Jubbulpore line of the East Indian Railway there were large accumulations. The Great Indian Peninsula Railway is apparently entirely responsible for the state of affairs at Jubbulpore.

5. It is reported that the heavy traffic on the East Indian Railway is being conducted with regularity, and that the strictest impartiality is being observed in the despatch of consignments from the several stations individually. This is satisfactory. It is presumed that the claims of all stations receive fair consideration in turn, even though in the case of some this may involve a very short lead.

6. The waggon mileage rate (paragraph 15) on the East Indian and Great Indian Peninsula lines is irrespective of the capacity of the waggons. This point was reserved for consideration at the conference, but should probably receive earlier attention.

7. The accumulations on the loop line are considerable. The Nulhatti State Railway appears to have been subjected to summary, if not arbitrary, treatment in the matter of its through booked consignments.

LXVII.—MINUTE by SIR RICHARD TEMPLE, dated Madras, 13th March 1877.

Grain trade from Bombay to Madras.

I desire to invite the attention of the Government of Bombay to the following remarks regarding the grain trade from (and through) the Bombay Presidency into the distressed districts of the Madras Presidency.

2. In the districts of Bellary, Kurnool, and Cuddapah, where the recent failure of harvests has been extreme, cholum (or jowari) is the staple food of the people. During the month of December cholum was, in those districts, selling, at times, as dear as $7\frac{1}{2}$ seers (15 lbs.) per rupee, or even at still dearer rates. At that time the Madras Railway was not able to dispose promptly of all the grain which the Great Indian Peninsula Railway delivered at Raichore. During January much improvement was effected in this respect; and throughout the month of February an average of 105 waggons (about 683 tons) of cholum was daily carried from Raichore into the Madras Presidency. One result of this large and steady importation of food was that the price of white (*i.e.*, northern) cholum became much cheaper in the ceded districts, and was ruling at $10\frac{1}{2}$ to 12 seers (21 to 24 lbs.) in the markets close to the railway.

3. During the last ten days, however, the smaller despatches of grain through Raichore have attracted attention. And one consequence of this decrease in the importations is that the price of cholum is already beginning to grow dearer. The decrease in the importation is not due to any shortcomings on the part of the Madras Railway, for that company is now carrying away promptly all the grain waggons which it receives from the Great Indian Peninsular Railway. It was at first conjectured that the fall in prices at Bellary and Adoni might have left no margin of profit for importers. But on the other hand the excellent spring harvests, now coming under the sickle in Northern India, will throw an immense quantity of food into the market. And I am assured that there are still large stocks of jowari, rice, and wheat in the districts known as the Nagpore section of the Great Indian Peninsula Railway, and that the dealers there would send off much more jowari (as much as ever), if only they could get waggons to carry it.

Grain trade from Bombay to Madras.

4. The season of greatest pressure in the famine-striken districts of Madras is now approaching. The best estimate I have been able to make shows that from 75,000 to 90,000 tons of imported grain per month may be wanted by those districts during the worst time. And it will be quite impossible to maintain that rate of supply if the grain traffic from the west should remain at an average of 85* waggons (550 tons) a day. I consider that for the due safety of the country the grain imports from the Great Indian Peninsula Railway should not permanently fall below 130 waggons a day, while they ought at the worst time to reach 150 waggons a day.

* This is the average number of grain waggons taken out of Raichore during the first ten days of March.

5. I am aware that there may at the present time be much pressure on the Great Indian Peninsula Railway to carry cotton, seeds, and other commodities down to Bombay for export by sea. But I am confident that the Governments of India and Bombay will be pleased to approve of the view that the safety of the lives of the people, and the food supply which secure that safety, is of paramount importance. And I would urge that such steps as the Government of Bombay may deem right be taken to secure that sufficient waggons be allotted to the grain traffic as will secure the delivery of at least 120 waggons of grain (on the average) daily at Raichore, so long as dealers may be ready to send food grains into the distressed districts of Madras. If it should hereafter appear that dealers do not come forward to fill with grain all the waggons allotted to the Madras grain traffic, then the position can be reconsidered. But so long as grain dealers are ready to send their grain, a sufficient number of waggons ought in my judgment to be allotted to the grain traffic for the Madras districts. The contingency must be kept in view, that hereafter the average requirement of 130 waggons may have to be raised to an average of 150 waggons per diem.

No. 181.

LXXIII.—Memorandum by Captain Bisset on the present state of the engine stock of the Madras Railway, dated Madras, 13th March 1877.

I have to-day learnt from the Consulting Engineer for Railways the following about the engine-drivers and the engines of the Madras Railway.

Engine stock of Madras Railway.

2. Ten engine-drivers have been engaged in England and are expected to reach Madras by the 29th March. 34 engines now running are expected to require repairs during the year. Of these, 11 must be taken off work in the course of the month of March, and the others at intervals which cannot be specified.

3. Of the engines now undergoing repairs, seven will be sent out in March, one in April, and two or three in the following months. Of those to be sent out in March one is a shunting engine.

4. Twelve of the borrowed engines have arrived, and are probably now at work, but the six engines got from the East Indian Railway Company are old and are expected to need frequent repairs.

5. Colonel Shaw-Stewart believes that an application has been made on behalf of the Great Indian Peninsula Railway Company for the use of the six State Railway engines which have yet to be received from Bombay.

6. On these points I would submit the following observations :—

There is already a clear gain of about seven engines, and it may reasonably be expected that when the remaining six engines arrive the clear gain will remain at from 10 to 12 engines.

Engine stock of Madras Railway.

7. As far as engine power is concerned, the estimate submitted with my note of the 7th March can be worked up to almost at once, and certainly after the arrival of the engine-drivers on the 29th March.

STATEMENT showing in parallel columns the present working (week ending 3rd March), and that which is possible with the additional engines:—

Despatched from	Present number of Waggons a Day.	Probable number of Waggons a Day.
Madras { to North-west line	73	90
Madras { to South-west line	68	90
Raichore - - -	104	140
Beypore - - -	45	60
Erode - - -	—	
Total - -	290	380
Or total tons a day -	2,030	2,660

8. With reference to the supposed proposal to divert the six engines from Madras for the use of the Great Indian Peninsula Railway, I have already represented that, while the engines of the Great Indian Peninsula Railway Company are worked very hard, the work on that railway is not, as on the Madras Railway, almost entirely grain traffic for the prevention of famine, and that even with the six engines there will be no more than sufficient power to carry the requisite amount of grain, even if the daily supply from all sources remains uniformly up to the full amount of the estimate.

9. It is true that 10 powerful engines have been ordered by the Madras Railway Company from England, but these cannot be expected to be at work here till the end of June at the earliest.

And up to that time, to be really secure against the fluctuations in traffic which leave trains empty one week and crowd them in the next, it is necessary in my opinion to have six powerful goods engines in addition to those already arrived and the six daily expected.

And the explanation of the need for these is as follows:—

The heavy goods engines now on the line are nearly all fully occupied on the numerous severe gradients on the north-west and the south-west lines, and on the Bangalore branch. And there are but a few of them left to work the trains on the Madras to Arconum section. It is only in Madras that stocks of grain exist large enough and near enough to the affected districts to meet a sudden demand, and until the line from Madras to Arconum is doubled (which I cannot consider possible before the 15th of June), it is only by running heavier trains on this section that supplies to the famine country can be largely increased. There is not the same immediate necessity for additional waggon stock, but if the supplies of grain in through waggons at Raichore are not more fully maintained, it will not improbably be necessary hereafter to borrow waggons also.

Dated Madras, the 13th March 1877.

DEMI-OFFICIAL from the SECRETARY TO SIR RICHARD TEMPLE to the COLLECTOR OF CHINGLEPUT DISTRICT.

Land revenue remission.

I have received an official letter from you yesterday (it seems to have been waiting some time at the Madras Club), saying that your views as to the possibility of collecting in future years part of the uncollected land revenue of this year had been misapprehended.

I append extract copy of the memorandum on Chingleput affairs which was published in the "Gazette of India."

That extract represents correctly, so far as the memory of Sir Richard Temple, Bisset, and myself serve us, the answer you gave to the question whether, if succeeding seasons were good, it might not be possible to collect a part at any rate of this year's arrears. Of course Sir Richard knew (and the fact has frequently been noticed in his minutes and memoranda) that it would be contrary to the customs of the Madras revenue system so to collect arrears. But it was not necessary to repeat that general fact in each successive district memorandum.

If you are certain that you never gave any such answer as we understood, and if you feel satisfied that no collection of any part of this year's arrears would under any circumstances (even if the system were changed, which the Government of India have decided to be unadvisable), then it would seem that we may have been under a misapprehension. And I will take Sir Richard's orders as to the way in which he wishes the misapprehension to be corrected, as soon as I receive your reply to this.

Chief Commissioner's Proceedings, No. 12,053–G239, of 27th February 1877.

No. 162.

No. 66, dated Hyderabad Residency, 13th March 1877. No. 181.

From Colonel Sir R. J. Meade, K.C.S.I., the Resident at Hyderabad, to the Additional Secretary to the Government of India.

I have the honour to forward for submission to his Excellency the Viceroy and Governor-General in Council a summary of information furnished to me by the Nizam's Government on the state of affairs in those portions of the Hyderabad territory which are more or less affected by scarcity, together with a memorandum* embodying the same. Hyderabad State. *No. 163.

2. It will be seen from these papers that the want in his Highness' dominions has never risen to a condition of actual famine, and that the area within which it prevails is much more circumscribed than was thought to be the case when the apprehensions of Government and the public were first excited on the subject.

3. So far as I can judge from the information now submitted, and from that I have from time to time verbally received from the Minister, there appears to be every reason to believe that the measures adopted by his Highness' Government for the relief of those needing assistance from the State are well adapted to the object in view, and will prove fairly efficacious.

4. His Excellency in Council will be gratified to learn from the enclosures that the conditions of the rabi harvest, now in course of being gathered, is generally fairly favourable, though there is more or less failure of the spring crops in all the affected taluks, and that no further extension of the area in which distress has hitherto prevailed is apprehended.

5. The maximum number of persons for whom it is estimated that relief will be required from the State during the remaining period of the scarcity is confidently limited to 43,000 per diem, and for that number the sanctioned relief works will probably provide ample employment.

6. The supplies of grain in the country are described as fully equal to all probable requirements for a lengthened period, and these will be largely supplemented by the out-turn of the present harvest.

7. The water supply is already very short in many parts of the country to which the scarcity of food-grains has not extended, or in which its effects are only felt from the great rise in prices of food that has taken place more or less throughout Hyderabad, and there is a good deal of anxiety as to how it may be further affected by the coming hot season.

8. Lastly, while there is, no doubt, a great want of fodder for the cattle in the taluks in which the monsoon failed, and it is deficient and high priced generally throughout the territory, the Government does not appear to entertain any serious apprehension as to the effect of this want or deficiency on the agricultural stock of the country.

9. It only remains for me to state for the information of his Excellency in Council, that the views and measures of his Highness' Government in connexion with the subject under report, so far as they have come to my knowledge, since the alarm of pending scarcity and famine was first raised, have been based on sound and liberal principles and have been directed with energy and judgment.

10. In all his proceedings on this occasion the able Minister, Sir Salar Jung, has acted in accordance with the principles enunciated by the British Government, as those by which its own officers should be guided in times of scarcity, and though, fortunately, the calamity has only extended to the districts under his administration in a comparatively

Hyderabad State.

mild and mitigated form, his Excellency is, I venture to think, entitled to every credit for the measures that have been actually adopted, and for the manner in which his Highness' Government was prepared to grapple with the difficulties of the case if they had assumed the serious character that was at one time anticipated.

11. It is but right that I should add that the central committee and the State officials employed in the affected districts appear to have carried out the duties entrusted to them with much zeal and energy, and to have laboured earnestly to give full effect to the Minister's wishes and instructions. I have every reason to believe that Sir Salar Jung is well pleased with their conduct generally in this respect.

A.

STATEMENT showing EXTENT of FAMINE and NUMBER of FAMINE-STRICKEN PERSONS in the NIZAM'S TERRITORY.

Division.	District.	Area in square miles.	Population.	Estimate of famine-stricken persons requiring relief.	Remarks.
Southern division -	Gulburgah - -	3,456	198,023	—	There is no famine in this district. State of crops generally fair.
Ditto -	Shorapur - -	2,112	272,345	6,000	Distress in this district is confined to the western portion of it.
Ditto -	East Raichur -	2,752	295,848	10,000	Famine exists only in the Alpur taluk ; prices high in other taluks.
Ditto -	Western Lingsugur	2,264	251,911	12,000	Crops scanty in taluks Sindnur and Kushtagi. Ryots and others suffering from famine.
Eastern division -	Khamam - -	7,808	270,250	—	Neither famine nor distress at present exists.
Ditto -	Nulgunda - -	7,424	226,619	5,000	Crops scanty in taluk Nalgunda, cultivators suffering. Grass, either green or dry, for cattle scarcely to be had.
Ditto -	Nagar Kurnool -	5,184	157,184	—	In none of the taluks in this district is there distress from famine, but high prices of grain prevail.
Western division -	Beder - -	4,288	212,001	—	The rabi crops in good condition. The kharif crops above the average, and the cultivators considerably benefited.
Ditto -	Nuldroog - -	3,420	267,180	10,000	In taluk Nelinga, the rabi season is good and the kharif also good, and according to expectations. In taluk Turjapur there is distress from scarcity of water, but no famine. In taluk Wasi, there is a scarcity of forage for cattle from want of rain. In taluk Nuldroog, season very favourable. In Dharaseo, grain plentiful, but cattle suffering. In Parenda, owing to an almost total failure of rain, distress is felt from want of water, but there is sufficient supply of grain.
Northern division -	Nandair - -	3,456	347,612	—	No famine. State of rabi and kharif crops fair.
Ditto -	Meduck - -	4,032	156,080	—	No famine. Season good.
Ditto -	Indore - -	3,328	243,298	—	State of agriculture very satisfactory, but apprehension entertained of high prices from exportations of grain and possible occurrence of famine. The state of this district, however, is better than all others.

STATEMENT showing the Extent of Famine and Number of Famine-stricken Persons in the Nizam's Territory—*cont.*

Hyderabad State.

Division.	District.	Area in square miles.	Population.	Estimate of famine stricken persons requiring relief.	Remarks.
Northern division -	Yelgundal - -	6,400	460,610	—	No cause of complaint whatever. Grain plentiful.
Ditto -	Sirpur Tandore -	Not given.	147,973	—	Crops flourishing.
North-western division.	Aurungabad -	5,824	331,702	—	In some villages of taluks Baizapur and Kanhar crops failed from drought, but on the whole famine does not exist, though high prices of grain prevail.
Ditto -	Beer - - -	4,096	258,338	—	Famine does not exist in any of the taluks of this district; but in taluk Ashti distress is apprehended from failure of crops. There is, however, a sufficient quantity of grain in this taluk.
Ditto -	bhani - -	3,520	276,620	—	No cause of complaint whatever.
		69,364	4,373,594	43,000

No. 181.

MEMORANDUM concerning the scarcity in his Highness the Nizam's Territory.

His Highness the Nizam's territory is divided into 17 districts, of which a list is given in the margin.* The pressure of want has been felt in seven taluks only of the districts, numbers 1 to 5. In four very severely, namely,—

(1.) Alumpur in Raichur, south.
(2.) Sindnur in Lingsugur, south.
(3.) Parainda in Nulgunda, east.
(4.) Ashti in Bheer, north-west.

And in three partially, namely,—

(1.) Kustagi in Lingsugur, south.
(2.) Indola, in Shorapur, south.
(3.) Dewar Konda in Nulgunda, west.

*1. Raichur.
2. Lingsugur.
3. Shorapur.
4. Nulgunda.
5. Bheer.
} Affected districts.

6. Gulburgah.
7. Khanram.
8. Nagar Kurnool.
9. Beder.
10. Nuldrug.
11. Nandair.
12. Meduck.
13. Indore.
14. Elgundal.
15. Sirpur Tandur.
16. Aurungabad.
17. Parbani.

NOTE.—The relief works in progress are shown on the map by red lines.

In the first-named faur taluks, the average crop was one of 4½ annas, while in Alumpur it was of 2 annas only. In the last-named three taluks the average crop was as high at 10¾ annas. Over the rest of the country the harvests for the last year were fair, and though the partial failure of the monsoon may cause some distress during the ensuing hot season, there can be no doubt that, with the exception of the taluks above specified, no other part of his Highness' dominions has any cause to dread scarcity of a nature likely to cause serious distress.

The total area of the districts affected by the scarcity may be roughly calculated at 3,400 square miles, with a population of 360,000, or about 106 human beings to the square mile.

When the first reports of an approaching famine began to spread some six months ago, considerable alarm was manifested in the city and at the head-quarters of the Government, and relief measures were authorised, that have since, under the guidance of experience and a more intimate knowledge of the facts, been considerably modified. The whole of the relief proceedings are now entrusted to and directed by a central committee established at Hyderabad, under the presidency of the Revenue Minister, Nawab Mukarrum-ud-Dowlah, nephew to Sir Salar Jung. This committee is composed of men of all classes, creeds, and professions. It receives periodical reports of what is going on in the famine districts, and takes measures and issues orders accordingly. Its proceedings up to the present time appear to have been conducted with prudence and judgment, and to have inspired a general feeling of confidence.

Hyderabad State.

The measures which the committee has principally addressed itself to have been the institution of relief works and the necessary arrangements for the supply in connexion therewith of a sufficient quantity of grain to feed the distressed and suffering poor seeking employment on these works.

Of actual starvation, no case has been reported to the capital, and it may be hoped that, however distressing the suffering inevitable from the high price of grain, death from sheer want of food will be warded off.

The relief works have been divided into two main heads, viz.:—

(1.) The construction of roads and the repairing of tanks and canals; and

(2.) The construction of new or the repair of old wells.

The total amount sanctioned for expenditure on relief works up to the 6th February 1877 was 4,22,021 H. S. rupees. The central relief committee is, however, authorised to recommend that an increase should be made to this grant if found necessary.

Of the above sum close on 1,20,000 H. S. rupees had been spent up to the 6th February, the total number of persons relieved being 941,377. The Minister's report only gives the daily average number relieved for the one week ending 6th February 1877, when it amounted to 26,558.

The wage allotted at the relief work is as follows per diem:—

	Rs.	A.	P.	Cts.	
A man 9 dubs =	0	1	8	$\frac{53}{100}$	Government coin.
A woman 6 dubs =	0	1		$\frac{9}{100}$	,,
A child 4 dubs =	0	1	10	$\frac{26}{100}$	,,

A male adult can purchase at the works about 1 seer of jawari with his day's wage as above.

The Government has not up to the present interfered in any way with the grain trade, and it is not probable that it will be called upon to do so. The trade in all species of grain is particularly lively. From the Southern Railway Station, between Gulburga and Raichur, in his Highness' dominion, no less than 40,000 tons of grain were exported within the five months up to February 1877, and those and the other stations along the line are still crammed with grain waiting to be removed. During the four months immediately preceding the commencement of the present year, the grain exports were 4,79,483 maunds against 1,57,676 maunds imports, while for the preceding year the figures show for the same period 2,13,601 maunds exports and 83,926 maunds imports, or less than half the quantities that have lately been transported under pressure of the existing partial scarcity. The grain, it may be mentioned, has up to the present time found its way into the affected districts by the ordinary modes of transit, carts, and brinjarah bullocks. The only complaints that have been made have had reference to the delays that have unavoidably taken place on the railway, and these complaints the railway authorities have ever done their best to rectify.

The system of transport by brinjarah bullocks works well, and will doubtless continue to do so should the very scanty fall of rain in many parts of the country not render the main lines of communication impracticable to beasts of burden from want of water.

The Government has not considered it necessary to issue any special instructions with the object of endeavouring to save the best of the stock of agricultural cattle in the affected localities. It is found that precautionary measures are generally taken by the owners themselves in behalf of the more valuable animals, and that Government interference is not needed. The value of the prickly-pear as an article of fodder has however been made known as widely as possible.

The state of the water supply in the various districts has not received the special attention of Government, beyond the issue of injunctions to the district officials to have wells dug and to improve the appliances at command for increasing the supply of water wherever feasible, and they have been authorised to spend money as required for this purpose at their discretion.

The measures taken for the preservation of health at the various relief works appear to be as satisfactory as circumstances will admit of; some few cases of cholera and small-pox have been reported, but there has been nothing like an epidemic, and the rules in force for the prevention of the spread of disease are satisfactory, and will doubtless prove effective if properly carried out.

Much care is now enjoined by the rules that have been laid down to obviate any individuals finding employment on the relief works who are not in actual want. The distribution of relief from private sources is as yet very limited, but may be expected to increase as the season advances.

His Highness' Government proposes, with the help of private aid, to establish generally throughout the affected districts poor-houses where relief may be distributed locally to such sufferers as are either unable to reach, or are not fit for employment on, the relief works, but from whom light labour will be taken, when found practicable. Hyderabad State.

On a rough estimate it is calculated that up to the 6th February 1877 the total number of the Nizam's subjects that had passed from Hyderabad territory into British limits aggregated about some 10,000 persons, and that this efflux was counterbalanced by an influx of no less than 29,000 emigrants from British territory, while it is also represented that over 11,000 of the latter were employed on the relief works in his Highness' territory during the week ending 6th ultimo. The extraordinary rise in the number of this class of persons from 1,663 in the week ending 29th January, to 11,149 during that ending 6th February is worthy* of attention. It should, however, be added that it is acknowledged by his Highness' officials that these figures cannot be depended on, and that nothing in the nature of a complaint regarding the advent of immigrants from the British districts in search of employment has been made by his Highness' Government.

*NOTE.—Inquiry has been made on this point.

In the parts of his Highness' territories most affected by the famine, the prospects of the crops now in the ground are generally good, and in some few places unusually so, and it may, indeed, be stated generally that the grave apprehensions of famine in his Highness' dominions which so generally existed some months ago have not been realised, either as to the intensity or extent of the threatened severity. It has been ascertained beyond a doubt that there is far more than sufficient grain in the country to meet any want that the Government is now likely to have to deal with. The scarcity is in fact well in hand, and the Government entertains, it is believed, a well-founded confidence that the measures that have been organised will suffice to stand the strain that may be put upon them, and that these measures are meeting the difficulty in as efficacious a manner as could have been looked for. The estimate of the maximum number that may have to be provided for on the relief works during the coming hot season does not exceed a daily average of 43,000 persons, and his Highness' Government appears to be satisfied that that estimate may be accepted as reliable.

The accompanying abstract statements of information supplied by his Highness' Government give full information on the several points briefly touched on above. They also include a list of the various prices of grain ruling in the capital and the districts.

LXVIII.—MINUTE by SIR RICHARD TEMPLE, reviewing DR. CORNISH's objections to the REDUCED SCALE of WAGES.

Madras, 14th March 1877.

In my minute dated 6th March, I refrained from commenting on the scientific argument used by the Sanitary Commissioner of Madras, Dr. Cornish; but having since had the opportunity of making some inquiry on the subject, I have to make the following remarks, The reduced scale of wages.

The reduced scale of wages. Sir Richard Temple in reply to Dr. Cornish.

2. Dr. Cornish's scientific propositions are as follows :—

That (paragraph 4) the carboniferous and nitrogenous principles of food should be in the proportion of three of the former to one of the latter.

That (paragraph 6) according to all scientific investigators, 140 to 180 grains of nitrogen are required, in a state of rest, to oil the human machine, so to speak, while it is not working.

That in ordinary labour 300, and under great physical exertions 500 to 600 grains of nitrogen will be necessary.

That if such quantities are not provided under the corresponding circumstances, "the body must prey on its own tissues so long as any remain to be preyed "upon."

That (paragraph 13) "in regard to this question of a pound of grain being "enough or not enough, we should never know the result until the mischiefs "resulting from a deficient supply of nitrogenous food have gone so far that a "retracing of our steps would be powerless to save life."

3. This last statement is made with much confidence. From its nature it can hardly be disproved, but it seems to me that it may be regarded as a mere expression of opinion, if we can show that Dr. Cornish's other propositions given with equal precision and arguable, perhaps, in theory, are not applicable, or but very partially applicable, to the circumstances of Native life and Native diets.

4. In the Madras Manual of Hygiene, compiled under the orders of Government, and published in 1875, the main parts of Dr. Cornish's theories are adopted. It is stated, page 96, "The unavoidable internal work of the body of an adult human being, that is, "the movements necessary for respiration, circulation, and digestion, require a minimum "of 138 grains of nitrogen in 24 hours for their maintenance. In a state of idleness of "mind and body, the least amount compatible with health may be stated as 200 grains "for a man and 180 for a woman. In the ordinary circumstances of the soldier, the "artizan, the field-labourer, and the prisoner in most of our jails, 300 grains will be a "fair minimum. Very great physical exertion will demand 500 grains or even more."

5. Sir Robert Christison's theory, founded, as I understand, on careful experiment on Scotch labourers, and possibly applicable to them, is therefore adopted in its entirety by the Sanitary Commissioner, and by the author of the Madras Manual of Hygiene, as applicable to the natives of Southern India. It is on this assumption that Dr. Cornish's whole argument is based, and in the Manual it is expressly applied to the "prisoners in "most of our jails." Its application, in fact and in practice, has now to be considered.

6. The opinion that 1 lb. a day of grain might suffice for a relief labourer, together with some allowance for condiments and the like, or some nutritious substance, was not, indeed, based on scientific theory. It was founded rather on probabilities practically deduced from the condition of the poorer classes in ordinary times, and on the results of general experience. It was not put forth with absolute confidence. It was to be subjected to trial, not by theoretical data, but by the observation of its actual results.

7. Dr. Cornish protests against this opinion as "in direct contradiction to the accumu-"lated testimony of scientific observers in every country in which this question of the "quantity and variety of food essential to keep a labouring man in health and strength "has been the subject of investigation."

8. Certainly this opinion was not based on so called scientific evidence, apparently taken as proved on the strength of experiments made on men of different race and habits, living under different circumstances, in an altogether different climate, and probably exceeding by a third in average weight the people to whom the results of the experiments are with such confidence applied. For administrative and financial purposes I should not base my recommendations on such data, inasmuch as the question must be one extremely difficult of scientific ascertainment, and in respect to which even the best conducted experiments, if made in different parts of the world, might lead to varying results. And in order to show how little these data can be accepted for these purposes, it is sufficient for me to refer to the Madras Manual of Hygiene itself.

9. In an appendix from pages 361 to 380 are given the whole range of Madras dietaries for soldiers, sepoys, and prisoners, military and civil, under various circumstances, in sickness and in health. The quantity of each food is given, together with an elaborate analysis of its composition, and the proportion of each of the physiologically essential elements, one column showing the amount of nitrogen, another the quantity of carbon in each diet.

10. Had those quantities corresponded to, or even approximated to, the amounts so authoritatively declared to be necessary, it would still have been open to me to say that

the dietaries have been decided by European committees by the advice and with the assistance of Sanitary Commissioners; that they are intended for persons from whom full work is demanded, and who receive in return not a subsistence allowance, but a full ration; that rations are avowedly fixed on a liberal scale so as to suffice for persons who consume more than the average; that it is matter of common reproach, both in this country and in England, that prisoners are better fed than paupers, whose poverty is their only crime; and that it is absurd to suppose that the poorer classes in this or any country get as much to eat as prisoners or soldiers, or that they cannot live on much less.

The reduced scale of wages. Sir Richard Temple in reply to Dr. Cornish.

11. All these arguments might, however, be set aside, for an examination of the dietaries in the book itself prove conclusively not only that the theories advanced by the Sanitary Commissioner have very little application in practice, but that the reduced scale of wages suffices to supply the relief labourer with more than sufficient nitrogen and carbon to keep him in health. They prove, first, that, as regards Natives of this country, the carboniferous bear to the nitrogenous elements of food the ratio of about 7 to 1 instead of 3 to 1 as in the English dietaries [in the ration of the sepoy on foreign service the proportion is 10 to 1, 26·70 oz. to 2·68 (page 3,791)]; and as the absolute weight of food taken daily by Natives and Europeans is probably about the same, it follows that the amount of nitrogen required by Natives must be much less than that required by Europeans; and when the diets are examined, this is found to be the case. The Madras sepoy, when ordered on foreign service, during which he may be, and often is called upon to undergo severe physical exertion, receives a full ration from Government. According to the theory he requires a minimum of 300 grains of nitrogen when performing ordinary duties, but when marching or undergoing severe labour he needs 500 or 600 grains. As a matter of fact he gets (page 379) only 178 grains, little more than half the minimum required, and only about a third of what is declared necessary to support him when called upon to do strenuous work. According to this theory, then, the Madras sepoy would be undergoing starvation at the hands of the Government which employs him. But in fact, he is not so reduced physically, nor does he fail that Government when it calls on him for exertions compared to which the labour demanded from most of our relief labourers is as nothing. This case, I submit, makes very strongly against Dr. Cornish's theory, but a still stronger one yet remains behind.

12. The British soldier, to whom if to any one the theory should apply, requiring, like the sepoy, 300 to 600 grains under like circumstances, receives 242 grains of nitrogen in his full ration, that is, 25 per cent. less than the minimum required to keep him in health when in garrison, and less than half what he ought to have when marching or on service. But this is not all, for when his ordinary work is not demanded of him, as when he is in prison or at sea, he receives only a reduced ration, and singularly enough, though the details of the two rations are altogether different (Madras Manual, pages 364 and 369). The amount of nitrogen contained in each is identical, namely, 155 grains, about half of the amount declared to be the minimum necessary to maintain him in health, a quarter of what he should have when on service, and considerably less than the least amount compatible with health in a state of rest of mind and body, as laid down in the quotation from the Madras Manual already cited. According to this theory, we should have to imagine that the British soldier is half starved on boardship, or that he is landed in India in a reduced condition physically, or in a state of health which could hardly be restored by subsequent nutrition. The actual fact is, of course, the reverse.

13. This instance appears to be a crucial one. This British soldier is not reduced by a diet containing 155 grains of nitrogen. His average weight is probably a third greater than that of the average relief labourer, and it would seem to follow that the relief labourer could be maintained in health by the same proportion, *i.e.*, two-thirds of the absolute quantity of nitrogen required by the European soldier. But 1 lb. of the cholum contains, according to Dr. Cornish (paragraph 7), 100 grains of nitrogen, therefore, a pound of cholum should suffice to keep him in moderate condition when something in the way of condiments and nutritious substance is added.

14. I need not press the argument so far, however. The labourer's allowance is not a pound of cholum, but a pound of grain *plus* half an anna, or in practice $1\frac{1}{2}$ annas, in cash. Taking grain at an anna a pound (it is 25 per cent. cheaper in many places), he can buy with this amount as much nitrogenous food as is allowed to the British soldier on board ship. According to the facts furnished by the Madras Manual (but not its theories), the above allowance would appear sufficient to keep him from starvation.

15. With regard to the carbonaceous element of food, the result is the same. The Manual lays down (page 98) that 3,500 grains of carbon are required in a state of rest,

The reduced scale of wages. Sir Richard Temple in reply to Dr. Cornish.

and that 5,000 "may be safely taken as a maximum under any circumstances of "exertion." The dietaries show that the European soldier gets 4,307 grains in his full ration, and 2,986 when on board ship, while sepoys get 6,659 when on foreign service, and Native prisoners 5,616, or rather less, according to the particular constituents of their diet. A pound of cholum contains 2,764 grains (page 376), so that on a pound a day the relief labourer gets much more in proportion to his weight than the soldier on board ship, and can purchase with the wages given him almost as much as the soldier gets in his full ration.

16. These statements and estimates of the chemical constituents of the military rations, both for European and Native troops, are not (be it remembered) made by me, but they have been furnished by the Madras Manual of Hygiene; they are put in the simplest possible form, and can be verified by any one though he may not be versed in the chemistry of food or the data on which the calculation are made. And I submit that they prove conclusively that the theories enunciated by English authorities, however eminent, and apparently adopted without additional experiments by the Manual, do not apply to Natives of this country; only, in fact, apply in the most general way to Englishmen themselves, and cannot be at all accepted as valid reasons why Government should desist from a trial suggested by experience, which, if successful, will conduce to saving the people on the one hand, and to preventing unnecessary expenditure on the other.

17. I should not have discussed this matter at all had not the scientific theory been propounded with so much precision, and with so strongly-worded remonstrance against the disregard of it. But we see that the theory is not applicable, and cannot be implicitly accepted. If, as stated in my minute of the 6th current, it is found on a deliberate and dispassionate trial that the new scale is insufficient, and that the labourers do not maintain their health, it can, of course, be revised. I have sufficiently shown that this is a matter which may be left to careful observation of the condition of the people, and not deduced, *á priori*, from theoretical considerations which break down when subjected to plain criticism, and are shown to be inapplicable to the case in hand.

18. Though constrained to demur to the manner in which the Sanitary Commissioner applies certain theories to the proposed practice in our relief operations, I am fully conscious of the benevolent and charitable motives by which Dr. Cornish is actuated, and of his meritorious labours for the welfare of the people in this presidency.

No. 166.

MEMORANDUM by MR. BERNARD and CAPTAIN BISSET on the points raised by HIS GRACE the GOVERNOR OF MADRAS respecting Mysore grain supply.

Madras, 14th March 1877.

Mysore grain supply.

According to the best computation that we can make, the Mysore country ought to get and actually requires * 500 tons of grain a day at stations on the Bangalore branch. This quantity will suffice for the wants of the Mysore districts of Bangalore, Kolar, Tumkur, and part of Chitaldroog, containing about $2\frac{1}{4}$ millions of people. Part of the Chitaldroog district with a population of perhaps 350,000 persons will and now does draw its supplies of foreign grain from Bellary. But then, as a compensation, the taluks of Pennekonda, Hindupore, and part of Madaksirra in the Bellary district now get and will continue to get their supplies from Bangalore. The population of these two taluks and part of the third may be about 200,000 persons. The districts of Shimoga, Hassan, and Kadur, with a population of $1\frac{1}{2}$ millions, are said to be living on their own produce, eked out by food imported from the western coast. Shimoga and Hassan, with a population of 1,170,000 between them, had an 8-anna and 9-anna harvest. Kadur had only a 4-anna harvest. When the monsoon closes the ports on the western coast, then these three last districts cannot draw supplies from the seaboard, and we do not know how far the stocks of Canara and Malabar can afford to contribute to the support of Western Mysore. Looking to the Board's returns of grain imports into the western ports and to the large railway despatches from Beypore, we cannot think that any very large quantity of grain from beyond the sea has hitherto regularly found its way into Western Mysore. Much of the import shown in the margin goes to Coorg and the Mulnaad coffee districts. We should not put

NOTE.—Hitherto the daily deliveries have averaged about 440 tons during the last six weeks.

Rice importations into West Coast ports other than Beypore and Calicut—

September 1876	-	2,000 tons.
October „	-	3,800 „
November „	-	4,100 „
December „	-	2,800 „
January 1877	-	7,000 „

the demand of these districts for foreign grain at above 1,500 to 2,000 tons a month, or say about 50 tons a day. But of course this estimate is little else than a guess, and may be beyond the truth. Mysore grain supply.

2. According to the estimate in the foregoing paragraph, the demand of Mysore may be summarised thus :—

Bangalore branch demand - - -	500	tons of grain daily.
Western Mysore demand which, after the 15th May, may have to be drawn through Bangalore.	50	„ „
Chittaldroog demand on Bellary for 350,000 people, less the Bellary supply for 200,000 people now drawn from Bangalore.	20	„ „
Total - - -	570	

3. His Grace the Governor asks for an opinion whether there is in Mysore any accumulation of imported grain sufficient to enable the province to tide over a short interruption of imports such as any accident might cause. To this question we can give no precise reply. But we note the following points as bearing upon this subject: the Bangalore traders told Sir Richard Temple early in February that their demands would continue constant until next crop came in; they told Captain Bisset that they now had to refuse grain orders from the interior, because they could not get enough grain from Madras; and they said they could take 100 tons a day more than they now receive, if only it could be carried to them from Madras by railway. On the other hand there are certainly considerable stocks in the country, which will begin to come out into the market as soon as the tanks fill and next season's crop is tolerably secure. The net result is that there is not, so far as we believe, any considerable accumulation of imported grain in the Mysore markets. And a daily supply nearly equal to the total given at paragraph 2 ought to be regularly carried into Mysore.

4. The question then arises whether this full supply of * 570 tons can or cannot be maintained. And the answer to this question involves the general question of the demand of, and supply to, all the Madras famine districts. We think that for the purposes of the present question we may reckon that the districts of Nellore, Chingleput,† South Arcot, Trichinopoly, Madura, part of Kurnool, and Tinnevelly, will get what foreign grain they may require without throwing any work on the Madras Railway. There remain, then—

* 500 tons from East coast.
50 „ West „
20 „ Bellary.

† NOTE.—Parts of Chingleput may perhaps draw their supplies from the railway. But then parts of North Arcot may be supplied from the sea.

	Population.
Class A.	
Bellary - - - - - -	3,800,000
Cuddapah - - - - - -	
Kurnool ($\frac{4}{5}$th of) - - - - -	
Class B.	
Coimbatore - - - - - -	5,500,000
Salem - - - - - -	
North Arcot - - - - -	

According to the estimate made in the memorandum of the 27th January, the districts in Class A. will require :—

	Tons.
Imported food for two-thirds of their population, or per diem	1,040
While the districts in Class B. will require imported food for one-half their population, or per diem.	1,100
Add the Mysore demand as previously worked out - -	570
	2,710

5. This total quantity is, so far as we are able to judge, the largest quantity which will be required, and we believe that this quantity can and will (if the grain comes

Grain supply.

forward) be carried by the railway. The subjoined table of Captain Bisset's explains this :—

	Number of Waggons despatched daily.	
	Present Working.	Probable or Promised Working.
From Madras to North-western line	73	90
„ „ to South-western line	68	90
„ Raichore, south-east ward	104	140
„ Beypore	45	—
„ Negapatum and Erode	—	60
Total	290 waggons.	380 waggons.
Or in tons a day	2,030 tons.	2,660 tons.

6. Thus the Madras Railway can, if it works well, send into the distressed districts daily the full amount of grain which they could according to our estimate require. But it is to be noted that the famine districts have as yet never received, and presumably have not absolutely required the full amount of grain shown in the estimate. The spring crops in irrigated lands of Kurnool, Cuddapah, and North Arcot do, no doubt, to some extent supply the wants of their immediate neighbourhoods. And perhaps the full demand shown in our estimate may be required only for a very short time, if at all.

7. The statement in paragraph 5 (above) provides for working to their full power all the 18 borrowed engines, but does not reckon on the 10 new engines ordered by the Madras Railway coming into work before the 15th June. Also, it does not reckon on the Madras to Arconum length being doubled before the 15th June. The doubling of the line to Avady, 13 miles from Madras, may however be done by the 1st April, and will considerably facilitate the grain traffic on the Arconum section. Still if our estimate of the possible demand be accepted, then it seems necessary to have some reserve of engine power available. For this purpose it will be necessary either to borrow, or to have power to borrow, six heavy engines able to draw trains of 30 waggons each on the Arconum section.

P.S.—We have not discussed in detail the way in which the Negapatam and Erode route ought to take the place of the Beypore route when the monsoon breaks, because Captain Bisset's Negapatam notes and Sir Richard Temple's minute thereon go fully into that question.

No. 181.

No. 167.

LXXII.—Minute by Sir Richard Temple, dated Madras, 14th March 1877.

Necessity for reserve of carrying power. Madras Railway engine stock weak.

The amount of sea-borne grain remaining in Madras is so great, and the existence of large surplus stocks of food-grains in the Berars and in Hindustan is so well known, that no anxiety exists about the sufficiency of the distant markets to provide the necessary supplies.

2. But while well-founded hopes exist that with an absolutely regular traffic the necessary amount of food may be carried to the people, it cannot be forgotten that both from variations in prices and from irregularities or mishaps on the railways themselves, this perfect regularity cannot be attained.

3. To provide against these irregularities a reserve of power is absolutely necessary. And on the Madras Railway the condition of much of the engine stock is doubtful, and the number of engines, and particularly of goods engines is small, so that even after the receipt of the 18 borrowed engines there is no such reserve of power.

No. 159.

4. The accompanying memorandum * by Captain Bisset, which has been prepared under my instructions, embodies the result of his inquiries into the present state of the engine stock of the Madras Railway, and into the amount of grain which these engines, with the 18 already borrowed, can carry from all sources into the distressed districts.

5. A consideration of the facts and opinions recorded in this memorandum leads me to recommend earnestly that arrangements be made by the Government of India for borrowing and placing at the disposal of the Madras Railway Company six of the most powerful goods engines which can be found in India.

6. Since recording the above remarks I have had the advantage of discussing the question of railway carriage with his Grace the Governor of Madras, and of ascertaining that the foregoing recommendation meets the views which his Grace had already taken of the further requirements of the Madras Railways.

No. 168.

No. 181.

LXXIV.—Minute by Sir Richard Temple, on the Red Hills and Palaveram Relief Camps.

Red Hills and Palaveram Relief Camps.

Madras, 14th March 1877.

Having inspected the relief camps at the Red Hills at Yerroocancherry and at Palaveram, I desire to record the following observations :—

2. The improvement in the appearance and physical condition of the inmates of the Red Hills camp, since my first visit at the end of January, is very marked. On the day of my visit about 2,000 of these poor people were so far recovered as to be able to work, and were about to be drafted on the relief works in the neighbourhood.

3. Among the new arrivals I observed some from the north-east portions of the North Arcot district, especially the zemindaris of Kalustri and the eastern part of Karvátnagar, and from the Nellore district, especially the zemindari of Venkutgiri. This circumstance affords additional proof of the necessity of the increased precaution for ensuring house-to-house visitation, village to village, which necessity was mentioned in my minutes of the 5th March and the 6th March regarding those districts, and which is, I believe, now practically recognised and acted upon by the district authorities themselves.

4. Though the same facilities for such visitation exist in the zemindaris as in the regular ryotwari tracts, yet my visit to those zemindaris compels me to report to the Madras Government that the zemindars are either not able or not prepared to do all that is needful, unless further pressure be put upon them. I have suggested that in such zemindaris the Collector should depute some trustworthy and experienced official, European or Native, to see that this visitation is so conducted that all persons in distress are really brought forward for relief. If this were done, then these wandering poor would not be straying away from their homes, and finding their weary way to the relief camps near Madras itself. So long as new arrivals at the Red Hills camp are people of the Chingleput district in which the camp is situate, there is no occasion for remark; but when they hail from North Arcot or from Nellore, then occasion arises for inquiring as to how and why they left their homes, and why they were not picked up near their own villages, or cared for in their own districts. The occurrence of such cases is calculated to throw doubt on the arrangements for charitable relief in those districts. I trust, however, that it will be found that recently these arrangements have been so far perfected in both these districts that no more people will come from there, at least no appreciable numbers, to the relief camps near Madras.

5. At the Yerroocancherry camp I observed a system of housing and lodging different from that in the other relief camps. In those camps the people are accommodated in long barrack-like rows of huts. In this camp, however, there are separate huts for each group of two or three families. And there was an air of cheerfulness about the inmates, several hundreds of whom were paraded for my inspection, very different from the air which is generally to be perceived in those camps. Evidently this sort of camp is much more popular with the poorest classes than the other camps. And the cause appears to lie in the plan of having separate family huts. Inasmuch as the rendering the relief camps less distasteful than they now are to the poorest classes and to the destitute wanderers,—who still have some pride of caste remaining—is one of the problems in the organisation of charitable relief, I would commend the practice of the Yerroocancherry camp to the consideration of the Government of Madras.

6. The Palaveram camp appeared to me to be in very fair order, and the separation of those who have caste from those who are pariahs and below caste, was more complete than in some of the camps which have been visited, though even here the arrangements might in this respect be improved.

No. 181.

No. 142, dated Sholápur, 15th March 1877.

From C. E. Buckland, Esq., Private Secretary to Sir Richard Temple, to the Additional Secretary to the Government of India.

Taluks and zemindaris visited by Sir Richard Temple.

I am directed to submit, for the information of the Government of India, a copy of the list of taluks and zemindaris visited by Sir Richard Temple in the districts of the Madras Presidency and in the Mysore State between the 14th January and the 14th March.

List of the Taluks and Zemindaris visited by Sir Richard Temple in the districts of the Madras Presidency and of the Mysore State.

Month.	From 14th January to 14th March 1877.	Condition of affairs at time of visit, as observed by Sir Richard Temple.
	In the Karnool District (8 *taluks*).	
January - -	Ramalkota taluk - -	Relief works excessive and beyond control, but being brought under. Tehsildar and Deputy Collector moderate in ability.
February - -	Pattikonda ,, - -	Relief works in fair order; tehsildar of good ability.
	In the Bellary District (15 *taluks*, 1 *zemindari*).	
January - -	Gooty taluk - -	Relief work not well in hand.
Ditto - and February -	Bellary ,, -	Relief work open to objection during my first visit; better during my second visit.
February - -	Alur ,, - -	Relief work not under control; great want of discrimination; tehsildar indifferent.
Ditto - -	Adoni ,, - -	Relief work excessive and uncontrolled; but reform being introduced by Mr. Glenny, C.S., and Captain Hamilton; tehsildar pretty good.
Ditto - -	Hospett ,, - -	Relief operations in fair order; Native Deputy Collector and tehsildar good.
Ditto - -	Tadputri ,, - -	Ditto ditto; tehsildar good.
Ditto - -	Anantapur ,, - -	Ditto ditto; Native Deputy Collector and tehsildar good.
Ditto - -	Dharmaveram ,, - -	No particular remarks.
Ditto - -	Pennekonda ,, - -	Under Mr. Ross, C.S.; relief operations had been much out of control, but were improving.
Ditto - -	Hindupore ,, - -	Relief operations not well in hand; tehsildar very indifferent.
Ditto - -	Sundoor zemindari - -	Under Mr. Macarthy; relief works fairly under control.
	In the Cuddapah District (11 *taluks*).	
January - -	Cuddapah taluk - -	Relief operations had been somewhat out of hand, but were improving.
March - -	Sedhout ,, - -	Relief works under control; tehsildar good.
Ditto - -	Budnail ,, - -	Relief works appear to be in control.
February - -	Madnapalli ,, - -	Under Mr. Gribble, C.S.; relief operations had been out of hand, but were fast improving.

Month.	From 14th January to 14th March 1877.	Condition of affairs at time of visit, as observed by Sir Richard Temple.	
	In the Nellore District (9 *taluks*, 4 *zemindaris*).		
February - -	Nellore taluk - -	Relief operations chiefly confined to East Coast Canal.	Taluks and Zemindaris visited by Sir Richard Temple.
March - -	Atmakur „ - -	Relief works fairly under control; tehsildar good.	
Ditto - -	Udayagiri „ - -	Under Mr. Underwood, C.S.; signs of poverty; doubtful whether village relief sufficient.	
February - -	Goodoor „ - -	Tehsildar moderately good; doubt about sufficiency of village relief.	
Ditto - -	Venkatagiri Zemindari -	Relief apparently not sufficient; three zemindars not doing enough.	
	In the North Arcot District (9 *taluks and* 13 *zemindaris*).		
February - -	Chandragiri taluk - -	In good case, save one corner which was bad but under relief; tehsildar good.	
January - -	Chittore „ - -	No particular remark.	
Ditto - -	Palmanair „ - -	No particular remark; tehsildar good.	
February - -	Gourittam „ - -	Not in bad case.	
January - -	Wallajah „ - -	No particular remark.	
Ditto - -	Arcot „ - -	Tehsildar good.	
Ditto - -	Vellore „ - -	Town relief in a doubtful condition.	
Ditto - -	Poonganoor Zemindari -	Relief operations well under control; zemindar good.	
February - -	Carvátnagar „ -	Western part pretty good; eastern part bad.	
Ditto - -	Kalustri „ -	One of the worst parts; relief insufficient, but further orders issued by Collector.	
March - -	Arni „ -	No particular remark.	
	In the Chingleput District (6 *taluks*).

No. 170.

No. 15 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Calcutta, 16th March 1877.

Reviewing Sir Richard Temple's minutes

We enclose copies of minutes and memoranda which we have received from Sir Richard Temple during the past week, regarding various matters connected with the famine in the Madras and Bombay Presidencies.

* Nos. 138–9.

2. Among these papers will be found an interesting report on the district of Nellore,* together with a separate minute proposing the early commencement, as a famine work, of an irrigation work in that district known as the Sangam project. Nellore is a large district on the east coast, of which the southern boundary is about 50 miles to the north of Madras. Its area is 7,150 square miles, and its population, according to the last census, 1,374,012. During the 10 months ending with the 31st January last, the rainfall was only 11 inches 35 cents. In the previous year, 1875–76, the rainfall had been scanty, amounting to 26 inches 49 cents., against 37 inches 40 cents., the average rainfall of the preceding four years. In 1874–75 there had been heavy floods, and many important tanks and channels had been breached. Two years of drought following a year of floods had greatly tried the resources of the district. The total yield of the crops of the district for the present year is estimated at less than one-fourth of the average out-turn, although the people with commendable industry have in some parts of it dug temporary wells and deepened old wells, and thus raised a spring crop. The drought was worst in the western taluks, at the base of the Eastern Ghâts, and adjoining the district of Cuddapah. The number of persons on the relief works at the time of Sir Richard Temple's visit was 85,000, or about 6 per cent. of the population of the district. Sir Richard Temple inspected about 17,000 labourers, and found very few who appeared to be in a condition to sustain themselves. He considered that much more discrimination had been exercised by the Nellore authorities in admitting persons to the relief works than had been the case in the ceded districts; but that the depressed condition of some of the persons he had seen on the works, indicated the necessity of a house-to-house visitation more systematic than had been as yet introduced. Some of the relief works were useful, but many were of doubtful value, and task-work had often been little better than nominal. The small local works, in fact, had been made too easy and too attractive, and as we noticed in our last Despatch, great difficulty was in consequence experienced in inducing the people to go to the one large relief work, the East Coast Canal, which runs through the district, and which Sir Richard Temple describes as the very best relief work in all Southern India. The markets are well supplied with grain, coming both by inland and by water routes.

Sangam project.

† No. 135.

3. Of the Sangam project, Sir Richard Temples writes † that the plans and estimates are ready, and the work could be put in hand at once. Its estimated cost is 27 lakhs, the irrigable area 94,000 acres, and the estimated return from water tax 2½ lakhs. Sir

Richard Temple considers, from the information supplied to him by the District Engineer that, of the entire project, works estimated to cost 19 lakhs, and to yield an annual revenue of $1\frac{3}{4}$ lakhs, might be executed in a great part, at all events, by relief labour. He has suggested the work to the Madras Government as one which is deserving of consideration, at a time when so much stress is laid upon the expediency of employing relief labour upon really good and reproductive works. The suggestion is doubtless receiving the consideration of the Government of Madras, with whom we shall communicate upon the subject. Sangam project.

4. Sir Richard Temple has paid a third visit to the district of North Arcot,* having received conflicting accounts regarding the degree of distress in certain parts of it, and having had reasons to fear that in other parts, and especially in the zemindari tracts, chiefly in the north-east of the district, the distress might become serious. The results of his inspection appear to have been more satisfactory than he had anticipated. In a great part of the Chandragiri taluk the spring crops were good. The Kárvetnagar zemindari, with the exception of the eastern portion of it, had not suffered from drought. The autumnal showers had given it a fair winter crop. Irrigation from wells and from watercourses was giving it a good spring crop. In Kálahasti, on the other hand, which is the other great zemindari in North Arcot, the drought had been exceptionally severe. Sir Richard Temple made suggestions for improving the system of gratuitous relief, and extending that of house-to-house visitation, and also for arranging some light textile work on which the distressed weavers (a numerous class in the North Arcot district) might be employed. North Arcot. * No. 137.

5. The results of Sir Richard Temple's visits to North Arcot are summarised in the following terms:—

"I find that distress does not threaten the mass of the people; that the numbers on relief works will probably not much exceed the comparatively small number now employed, if only the usual showers of April shall last; that the numbers on charitable relief will probably increase considerably as the season advances; that in the old towns scattered over the district, in the sacred haunts so much frequented by pilgrims and beggars from distant places, and in the jungle tracts fringing the edges of the district, there are classes among whom many cases of individual distress are to be expected; that on the whole the relief measures taken in hand are sufficient to meet that degree of distress which is to be anticipated; that the relief works are of a small description, the number of able-bodied relief labourers not being large enough to justify their congregation upon large works, but if such large works should be wanted, there are many tanks to be repaired; that in some particular places the delay which at one time occurred was owing to technical and other reasons beyond the control of the local authorities; that the arrangement for house-to-house visitation in every village (save the zemindaris, which are being separately arranged for) are very systematic and satisfactory. I have discussed with the Collector ever measure of relief which I can think of. My impression is, that he is now doing everything which ought to be done in this respect."

6. Among the enclosed papers will be found a review by Sir Richard Temple † of the objections advanced by the Sanitary Commissioner at Madras to the reduced scale of wages lately prescribed for the relief works in that presidency. The gist of Sir Richard Temple's remarks is, that the present rate of wages appears, so far as experience goes, to be sufficient to maintain in health people employed on the very light work which is enforced on most of the relief works in the Madras Presidency, and provides as much food as the labouring poor in rural localities get in ordinary times; that it is not possible to determine *à priori* on scientific data what amount of food is necessary to sustain the particular classes who come to the relief works; that the effect of the present rates should be tested by careful practical examination of the people themselves; and that, if it should appear that there is a change for the worse in their physical condition, the rates should be raised, but not otherwise, and that wherever really hard labour is exacted a higher rate of wages should be given. This is practically what is now being done in the Bombay Presidency. Sir Richard Temple has, within the last few days, had a personal conference on this subject with the Government of Madras; and from a telegram from his Grace the Governor which reached us on the 14th instant, we learn that "the "Governor in Council having considered various reports" (from district officers) "has "decided to defer the consideration of the general adequacy of the scale for further "report; the special attention of officers being directed to securing that labourers "receive full benefit of allowances, and to scrutinising all cases of apparent weakness; "children under 10 being relieved from test work, and weakly persons being formed "into special gangs with special nourishment where necessary." The reduced scale of wages. † No. 144.

Insufficient grain transport.

7. In our Despatch of the 9th instant we adverted to the insufficiency of the means at present available for transporting grain from Madras into the interior, the Madras Railway not being able to carry more than 700 tons a day. The subject has been engaging the careful attention of our Public Works Department, and arrangements have been made, which it is hoped, will have enabled or will speedily enable the Madras Railway Company to carry 1,400 tons a day. Satisfactory arrangements have been made for sheltering and housing the grain, both public and private, on the Madras beach.

Estimated cost of famine.

* No. 140–1.

8. In his Minute of the 6th instant, No. 54,* and the memorandum * annexed to it, Sir Richard Temple has furnished a revised estimate of the expenditure on and loss of revenue from the famine. The result is a total estimated loss of five crores and Rs. 281,000. In the financial statement made yesterday in the Legislative Council by our colleague Sir John Strachey, the net cost of the famine is set down at five and a quarter crores of rupees, or five millions and a quarter, according to the old calculation of 2*s.* for the rupee, of which sum 3,100,000*l.* will fall on this year, and 2,150,000*l.* on 1877–78. This estimate does not take into account future recoveries of land revenue suspended for the present, which Sir Richard Temple estimates at the considerable sum of Rs. 1,29,50,000 out of Rs. 1,87,96,000, which must for the time be left uncollected. The question whether these balances should be held in suspense or entirely remitted, is one which, as stated in our Despatch of the 16th ultimo, we have deemed it proper to leave to the unfettered discretion of the Local Governments. Sir Richard Temple states in his present minute (paragraph 19) that many of the most experienced Collectors in both the Madras and Bombay Presidencies are in favour of the plan of suspending only, and not entirely remitting, the land revenue on the dry or unirrigated lands. These opinions and the grounds upon which they are based will doubtless receive due consideration from both the Governments concerned. For the present, however, we have deemed it safer to exclude from our calculations any reduction of the cost of the famine from this source.

9. We have this day received the following telegrams from Sir Richard Temple:—

Telegram, dated 15th March.

"I proceed for few days to Bombay Presidency. Throughout Madras Presidency the relief works are now fully controlled and carefully restricted to dimensions of actual distress. Much credit due to local officers in districts. The organisation of charitable relief not equally successful, but further efforts being put forth. Destitute people often unwilling to resort to relief camps. Some casual deaths near Madras itself still happen, chiefly owing to insufficiency of measures in three large remindaries. Remedy being applied. Reduced wages still being tried. Spring crops good in many parts of distressed districts; prices somewhat stiffening. Condition of people good generally, but cholera breaks out temporarily in many places. Large accumulation of grain at Madras well housed. Anxiety about railway arrangement on Madras and Bombay lines. Still hope that these two lines will supply the large and active demands of inland grain trade. Markets continue well supplied."

Telegram, dated 16th March.

"In continuation of yesterday's telegram for mail. It was ordered a month ago throughout Madras Presidency that if any children below seven years of age, belonging to persons employed on relief works, cannot be supported, they shall receive special relief. This is being carried out with my full concurrence. Children above seven have from beginning received relief wages. It has also been ordered, with my full concurrence, that if any relief labourer shall be found to suffer physically from reduced wages, he shall receive special allowance, or else be put to light work. Have complete evidence that most of the large gangs are standing the reduced wage without suffering. Whether they can bear it, as the season advances, remains to be seen. Having inspected in the presence of many officers about one hundred and thirty thousand relief labourers in scattered gangs throughout Madras Presidency, I have reason to believe the physical condition of these people to be generally good. I picked out in every gang every person who seemed below par, and suggested special measures regarding each individual."

10. There has been a further decrease in the number of persons on the relief works both in Madras and Bombay. In the former presidency the number, according to the latest return, was 657,365 against 667,443, the number for the previous week. In Bombay the number was 223,865 against 263,053, the total reduction in the two presidencies

being thus 49,266. In Bombay, however, there were also children under seven years o age, and women in charge of them, to the number of 44,150.

In the number charitably relieved there was an increase of 10,226 in Madras, and a decrease of 999 in Bombay, the totals for the two presidencies being 58,317 and 5,566 respectively.

The Mysore returns give 38,808 persons as employed on the relief works under civi officers, in addition to 30,794 employed by Public Works agency, and 30,097 in th receipt of charitable relief, making a total of 99,699.

We have the honour to be, &c.
(Signed) LYTTON.

J. STRACHEY.

No. 171. No. 181.

No. 131, dated Sholapur, 16th March 1877.

From the SECRETARY TO SIR RICHARD TEMPLE to the REVENUE ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

I am directed to submit a minute * recorded by Sir Richard Temple regarding the need for maintaining a steady and sufficient importation of northern grains into the famine districts of the Madras Presidency. * No. 158. Grain supply from northern India.

2. Sir Richard Temple has directed Captain Bisset of the Railway Department, who is attached to his staff, to visit Bombay and the Nagpore section of the Great Indian Peninsula Railway, with a view to consulting with the Consulting Engineer of the Bombay Government, and the Great Indian Peninsula Railway authorities as to the best means of securing the result to which Sir Richard Temple attaches such great importance.

No. 172.

LXX.—MINUTE by SIR RICHARD TEMPLE, dated Sholapur, 16th March 1877.

When I was at Madras this week, his Excellency the Governor expressed anxiety as to the requirements of and the supply of grain to the province of Mysore. His Grace was apprehensive lest, if any accident should temporarily arrest the daily supply of railway-borne grain to My ore, the demand of the Mysore population might cause sudden depletion and dearness in the bordering districts of the Madras Presidency. His Grace therefore asked me to let him know whether Mysore had any accumulation of imported grain and to review my calculation on the Mysore supply question, and to consider whether that calculation was ample, and whether it was within the power of the railways according to the practical working thereof, at the time when the western ports shall have been closed by the monsoon. Mysore grain supply.

2. I have caused the appended memorandum † to be drawn up, stating in detail how matters are, according to the latest available information, believed to stand. I do not think there is in Mysore any considerable accumulation of imported grain. Such grain as comes to the railway stations is either consumed or despatched into the interior. I estimate the outside Mysore requirement at about 570 tons of imported grain per diem; and I believe that the railways can maintain this supply together with sufficient supplies for the Madras districts, even after the western ports are closed, provided:— No. 166.

(1.) That the Negapatam route is fully worked.
(2.) That six additional goods engines can be borrowed and placed upon the Madras Railway.

Regarding these two provisoes, I have recorded separate minutes, and I therefore need not dwell upon them again.

3. A copy of this minute will be laid before the Chief Commissioner of Mysore, with my recommendation that his Government should investigate the accuracy of the estimates offered in the enclosed memorandum; should watch the importations closely so as to take steps in case they decrease; and should urge very strongly on Bangalore dealers the need for employing the Negapatam route.

Dated Elphinstone Park, Madras, 16 March 1877.

DEMI-OFFICIAL from the COLLECTOR OF CHINGLEPUT DISTRICT to the SECRETARY TO SIR RICHARD TEMPLE.

Land revenue remissions. * No. 160.

In reply to yours of the 13th,* I would observe that, when I conversed with you and Sir Richard Temple, I was unaware that it was even in contemplation to suspend collections, and had no idea whatever of being "able to realise much of the balance due on "dry crop lands next year if the seasons are favourable." I have since on the 1st February 1877 requested the Board of Revenue to remit all dry waste absolutely.

As to the possibility of collecting such arrears "under any circumstances," I do not recollect expressing an opinion; but if I did, it would have been that to do so would entail coercive process, was unadvisable, and would ruin the ryots already impoverished by an almost unprecedented succession of bad seasons.

No. 181.

No. 174.

LXIX. — MEMORANDUM by MR. C. E. BUCKLAND, Private Secretary to Sir Richard Temple, on the CONDITION of the ALUR and TADPATRI TALUKS of the BELLARY DISTRICT in the latter part of February 1877.

Alur and Tadpatri Taluks. Bellary.)

About the middle of February Sir Richard Temple was much struck with the excessively large numbers of relief labourers in the taluk of Alur in the Bellary district, in which 47,000 persons were receiving relief out of a total population of 95,000. He had a conversation with Mr. Glenny, the Sub-Collector, who stated that the number was apparently much too high, but that Mr. Maltby, the Relief Officer, and the tahsildar, would endeavour to reduce the number, and to limit relief to those who really needed it. Sir Richard accordingly made inquiry from Mr. Maltby and the mamlatdar, and ascertained the following facts.

2. There had been no rainfall in the taluk since last July, only a few showers; many of the cattle were dying. There was plenty of grain throughout the taluk, and no need to import any in behalf of Government. There were stocks in the country, though the amount could not be stated. Every market-day some 50 cart loads of rice and cholum are brought in. The price of cholum was 8 seers (of 80 tolas) the rupee; on market-day 9 seers. Rice was $7\frac{1}{4}$ seers the rupee; on market day $7\frac{1}{2}$ seers. The ordinary food of the people is cholum.

Alur.

3. On the 10th February the then last returns showed 46,643 on the relief works out of a population of 94,995, viz., 19,206 men, 20,277 women, and 7,160 children, distributed on six roads thus: (I.) Alur-Bellary, 6,117; (II.) Alur-Auspri, 8,264; (III.) Alur-Goondakul, 14,212; (IV.) Alur-Adoni, 4,599; (V.) Alur-Sirgoopa, 4,803; (VI.) Adoni-Sirgoopa, 8,648. The road from Auspri to Alur had lately been closed under orders from the Sub-Collector, who had directed that only two roads should be open in the taluk, viz., (I.) from Alur to Goondakul, and (II.) from Alur to Sirgoopa (*viâ* Raveri on the Haggari River). About 1,500 relief labourers on the Auspri-Alur road had lately "struck"; they were inhabitants of neighbouring villages, and said that they could not go to the Goondakul road. On the Goondakul road there were at that time from 15,000 to 16,000 labourers, chiefly of the Chukla, Bhoya, and Pariah castes, most of whom had been for three or four months on the works and were said to have improved in appearance during that time. The daily wage had lately been reduced from 2 annas, 1 anna 6 pie, and 9 pie, to 1 anna 6 pie, 1 anna, and 6 pie, for a man, woman, and child respectively. The numbers were gradually diminishing on account of the closing of all but two roads. Orders had some time before been received in the taluka to turn off coolies who had got landed interests, ornaments, or grain. Orders to admit no new labourers, except those who appeared to be really in need, had also reached the tahsildar.

4. The numbers on relief works had risen from 20th to 27th January from 38,528 to 49,257 in consequence of the transfer from the Adoni taluk of labourers on the Adoni-Sirgoopa road, which took place on the 15th January, but was then first brought into account.

5. The sum of Rs. 2,49,268 had been spent on relief works, and Rs. 347 on gratuitous relief up to date. Task-work was not exacted. Government tools were supplied, but apparently not in sufficient quantities.

6. For famine relief work the tahsildar had under him one sheristadar, three famine inspectors, one revenue gomashta, five paymasters, and throughout the taluk 132 mistries (gangmen) at Rs. 8 a month, and 1,015 kolkars at 4 annas a days. The coolies were paid twice a week, and did no work and received no pay on Sundays. They were supposed to work from 7 a.m. to 5 p.m., stopping for an hour during the day. They declined to bivouac out at night. Cases were known of people going 20 to 25 miles to work, and the refusal of the labourers on the Auspri-Alur road was recognised as a sign of their being in no great want. Two months before orders had been received to stop the small works, such as the small tanks and wells; also the orders to make the labourers bivouac near the roads had reached the tahsildar. Alur and Tadpatri taluks.

7. No death from starvation had been heard of. One hospital assistant had been specially sent, and there was previously one hospital assistant. There was no cholera prevalent and very little small-pox. There had only been eight cases of cholera since the 20th January.

8. Gratuitous relief was being given at seven places in the taluk, viz., Hoolagundy, Teddahotoor, Auspri, Alur, Nuggurdroog, Santicooloor, Halhuroy, each of them the centre of a circle containing about 20 villages. There was a reddi in charge of each poor-house. The Alur poor-house had been open some two months; the others had recently been opened. There were altogether on gratuitous relief perhaps 150 persons, of whom some 75 were in Alur. The orders of Government to the effect that the village authorities were responsible for relieving any person found to be in a badly reduced condition had been received in the taluk two months before, and the reddies were said to be aware of their duties.

9. There had been no dacoities since last September, and crime hardly existed. The people were quiet, as the road-works were open; if they had not been opened there would have been many crimes.

10. On the whole, looking at all the facts, Sir Richard Temple was of opinion that the numbers in this taluk were excessive as compared with any standard of relief that had been allowed in the Madras Presidency; that the excess was calculated to demoralise the peasantry of the taluk; that the main causes were the non-exaction of anything like real task-work, and the employment of the people too near to their homes, they being employed on lines of roads running through their own villages; that the judicious orders given by the Sub-Collector, Mr. Glenny, had not been carried out by the tahsildar, and Mr. Maltby, though willing to do his best, was not sufficiently experienced to be able to keep the tahsildar in order; that Mr. Glenny was himself aware of these defects, and would doubtless take the earliest opportunity of rectifying them after personal visitation.

11. At Tadpatri Sir Richard Temple ascertained the following facts:—The population of the Tadpatri taluk is 115,000. About 12,000 persons were on the relief works, and 1,565 in receipt of gratuitous relief. On the 17th February there were 10,501 on relief works; on the 19th there were 11,600; the increase had taken place on the Yadaki and Bellary roads, under the orders of Mr. Sharkey, the Deputy Collector, and two road superintendents. On the tahsildar's roads, those to Cuddapah and Anantipur, there had been no increase. Tadpatri.

Two months previous there were 13,000 persons on the works. On the 2nd February orders were received to turn off all respectable people, pattadars, those with ornaments, on which 2,000 had been rejected.

12. On each of the Anantipur and Cuddapah roads there were about 2,500 relief labourers, for the most part engaged in stone-breaking, as they sat in gangs under the trees, while a number of them collected the stones from the fields. There was a kolkar in charge of each gang. Since the 17th of February the men had been receiving 1 anna 6 pie, the women 1 anna, the children 6 pie, instead of the 2 annas, 1 anna and 6 pie, and 9 pie they obtained formerly. On the Cuddapah road there had been 4,000 labourers in January. The gangmen had been directed to take on nobody without the tahsildar's orders. No child was admitted to the works under seven years old, nor to the poor-house if they had parents alive. Up to the 19th February Rs. 2,500 had been spent on gratuitous relief, and Rs. 80,000 on works in the taluk. There were 351 recipients of gratuitous relief.

13. There was plenty of grain in the markets in the taluk. Jowari was at $9\frac{1}{2}$ to 10 seers the rupee. In November it was at 7 seers (never less), and the owners were disposed to hold their stocks; but importations made them produce the grain, and the prices fell. There were no crops on the dry land, and not more than 4 annas on the wet. There were two inches of rain in August and one inch last September.

Tadpatri taluk.

14. Under the tahsildars there were four revenue inspectors and four paymasters in the taluk, one for each road, the four roads being (1) to Anantipur, (2) to Cuddapah, (3) to Bellary, (4) to Yadaker.

15. The tahsildar was aware of the necessity of simultaneously enforcing their responsibility for the villages on the reddies, and he expressed himself as able to manage the people without difficulty.

16. On the whole, Sir Richard Temple was of opinion that the tahsildar's proceedings were fairly satisfactory, but that Mr. Glenny might with advantage inquire why the number increased on Mr. Sharkey's road when there was no increase on the tahsildar's road. This might have occurred through Mr. Sharkey's want of local experience.

No. 175.

Telegram, dated 17th March 1877.

From Revenue Additional Secretary, Madras, to Revenue Additional Secretary, Calcutta.

Government grain reserve.

Government consider it imprudent to vary distribution of reserve grain at well-considered places. Suggested sale of grain now remaining in Madras would necessarily interfere with trade, and would be a breach of faith after public pledge that it was strictly held for emergencies. Government, therefore, cannot accept either of these suggestions, and have announced this decision, as publication of suggestion in Gazette has much unsettled trade. Your announcement of this decision to Calcutta and Burma will be useful to re-assure trade.

LXXVII.—Minute by Sir Richard Temple, respecting the present condition of Relief Operations in Kurnool.

Sholapur, 17th March 1877.

Relief operations in Kurnool.

In my minute dated the 20th January last, it was mentioned that Mr. R. Davidson, who had recently been appointed to the Kurnool district, was doing all he could to bring affairs into order; but that before his arrival, relief operations must have passed beyond control locally, and had been apparently conducted in a manner calculated to cause a heavy drain upon the Treasury and to render the people too dependent upon the State.

2. I have recently ascertained the condition of relief operations and the character of relief administration, as they now exist in the Kurnool district. I find that matters have very greatly improved, and the present state of affairs is as follows: Order and system have been introduced, a competent and energetic officer has been placed in full relief charge of every taluk, the gangs of relief labourers have been concentrated on a few works, and task-work is in many cases exacted; persons who could support themselves have gone to their homes; the revised wage rate, with the prescribed allowance for the infants of workpeople, has been fully adopted; the total numbers on relief works have fallen from 330,000 to 195,000; from five to eight relief houses have been opened in each taluk, whence cooked food is distributed to about 4,500* destitute people; these relief houses are inspected by the taluk relief officer, and abuses are prevented; the village officers are sending paupers into the relief houses, and the village relief organisation is being roused into activity by the constant supervision of European officers. So far as the local officers can ascertain, deaths from starvation are not occurring in the villages. The physical condition of the people on the relief works continues fairly good; private trade continues to be active, and the supply of imported grain is more plentiful than it was in January. System and economy were not enforced so early in the Cumbum division as elsewhere; but even there, also, matters are now brought into conformity with the instructions of the Madras Government. The local officers expect that the numbers on relief works and on charitable relief may reach 250,000 and 25,000 respectively, as the season advances and pressure on the people increases.

* Note.—The 2,200 persons who receive gratuitous relief in Kurnool city from private sources are outside this number.

3. Much of this result is due to the exertions of Mr. Davidson, the Collector, who, since the middle of January, has visited every part of the district, and has seen matters with his own eyes. Mr. Davidson is assisted by an efficient staff of Civil, Military, and Native assistants; he appears to be employing his assistants to advantage; but he asks

for additional engineering subordinates, and also for the services of selected officers and men of the Native army. The officials of the engineering staff are now co-operating with the relief officers. Relief operations in Kurnool.

4. Although much improvement has thus been achieved, and though the Madras Government has been so far well served by Mr. Davidson and his assistants, yet I am not able to report that every economy which, under other circumstances might be practicable, has been attained in Kurnool. It is noteworthy that the proportion of the population receiving relief is now much higher in Kurnool than in either Bellary or Cuddapah.

5. In my minute of the 20th January, I drew attention to the contrast between relief operations as conducted in Kurnool, and as conducted in the similarly circumstanced Bombay district of Sholapur. A renewal of the comparison between these two districts makes me believe that the relief operations in Kurnool may still be beyond the actual necessities of the case. I do not say that the scale of relief in Kurnool can, after all that has been done and permitted, come down to the Sholapur scale. But still I think the contrast is, both for our present information and for our future guidance, worth making, thus:—

——	Proportion of Crops saved in 1876–77, according to the Collector's Estimate.	Total Population.	Number of Persons on Relief Works.		Number on charitable Relief on 1st March.	Number of Relief Works opened 1st March.
			10th January.	1st March.		
Kurnool	1½ annas out of 16	917,000	330,000	194,000	3,651	About 24 works.
Sholapur	1 anna out of 16 -	718,000	93,000	48,000	500	16 Public Works Department works, besides 45 works for the 4,000 civil agency relief people.

A much wider and more general private charity is practised by the people of Sholapur and its towns than has been shown by the people of Kurnool and its towns. But, with this exception, I am unable to point to any sufficient explanation of the very great difference between the extent of relief operations in the two districts. Probably there may be some undetected differences in the circumstances of the two districts; still I cannot think such difference could be sufficient to account for the great excess of Kurnool relief expenditure over Sholapur. In the Sholapur district the staff of relief officials is very ample; each village has its patel (headman), and its kulkarni (accountant); over each circle of 10 villages has been placed a special relief inspector; and in every taluk is stationed a European or Native assistant and a mamlutdar (tahsildar), whose whole time is given to relief work and to village inspection. On the information furnished by this chain of relief officials, the Collector is able to say that the condition of the village people is (17th March) fair everywhere, and that the people are not starving at their homes. It is, therefore, reasonable to conclude that the Sholapur relief operations suffice for the necessities of the case.

6. I believe one great cause of the difference in the numbers on relief works in the two districts is, that for several weeks work has not been offered to Sholapur villagers close to their homes; while in Kurnool everybody could at first, and very many can even now, find easy relief work at fair wages close to their homes. The attention of the Collector might still be given to this point. It is probable that when the Kurnool relief officers pick out gangs of 20,000 stalwart relief labourers for transfer to Nellore, many may decline to go, and in this way the numbers will decrease by the act of the people themselves.

7. It may be well to draw attention to the necessity for keeping one point in view. The Government grain reserve in Kurnool amounts, so far as I could ascertain, to from 10,000 to 12,000 tons. This grain is being housed and protected, and it is not now being used at all. Grain for relief-house expenditure is bought in the local markets. But it will have to be considered at what season and in what manner this grain ought to be disposed, so that large quantities may not be kept on the hands of Government when the next season's crop ripens.

No. 177.

No. 181. LXXV.—MINUTE by SIR RICHARD TEMPLE, on the Labour Test and the Wage Test.

Sholapur, March 18, 1877.

Labour test and wage test.

I desire to offer certain remarks on the labour test and the wage test, which remarks are suggested by my experience of two months spent amidst the thick of the relief operations in the Madras Presidency.

2. At the outset of the affair, that is, in the last week of December and the first week of January, there was an extraordinarily large number of persons of both sexes on relief works in the districts of Bellary, Kurnool, and Cuddapah; about 950,000* persons out of a population of four millions, or about one-fourth of the whole people. No doubt the failure in 1876 of the south-east or later monsoon, following a failure of the south-west or earlier monsoon, did cause distress to come on with unusual rapidity, and, as it were, precipitated the outbreak of famine. Still, in reference to the early period of the season, to the length of time which had to run before the next coming rains of 1877, the accession of such great numbers was calculated to excite surprise and alarm. If these districts, it may be asked, showed as many as 950,000 persons in the first or second week of January, what would they be showing in March, and still worse, what might they show in May?

*Bellary - -	420,000
Kurnool - -	320,000
Cuddapah - -	210,000
Total -	950,000

3. At the beginning of January 1874, the relief works in the worst districts of Bengal, Behar, showed hardly more than a few hundreds, or at the most but a very few thousands. The numbers remained low till the middle of March. They reached their culminating point hardly before the end of April. If then Bellary, Kurnool, and Cuddapah had nearly a million by the middle of January, what, it was anxiously inquired, would be the enormous muster roll of April and May? No doubt there is a difference of at least one month of season between these districts and Bengal, which difference might bring on the outbreak of famine a month earlier in these districts than in Bengal. Still this would not fully account for the remarkable haste with which the famine seemed to be approaching in the Madras Presidency. There must have been something in the system which had begun to be pursued to encourage people to resort to the relief works.

As a matter of fact, the numbers on relief works in these three districts have fortunately not gone on rising and rising in the manner which was to have been feared; on the contrary, they have been falling and falling. The necessity of additional precautions was immediately represented to the Madras Government, who promptly took various measures accordingly. The execution of these measures has since been diligently watched. The total for the three districts is now under 500,000, thus:—

Bellary - - - -	240,000
Kurnool - - - -	195,000
Cuddapah - - - -	58,000

And it may now be said (though with various qualifications), that the relief works in these three districts are on the whole supervised tolerably well, and that the numbers are reduced in a manner partly in some degree (though far from exactly) proportionate to the dimensions of actual distress. So far the Madras Government may be congratulated on the result. But the ideas in the minds of the people, which produced the original excess in numbers, are still existing, and would again burst into activity, if vigilance were to be relaxed even for a moment. It is therefore practically useful to consider what those causes were, and how they have been or are to be remedied.

5. The causes were—

Offering of work close to the homes of the people;

Rendering the work light and easy;

Making the wages worth having irrespective of bare subsistence;

Admitting all comers, without any question as to whether they were able to sustain themselves for a time;

Allowing all applications for employment without exception.

These several concessions are deemed by the rural country people to be considerable advantages.

6. The remedy has been, withholding these advantages, making the scene of work more distant from home, causing the labour to be more hard and irksome, rendering the wage less advantageous, and besides, rejecting all those who appeared able to support themselves for a time, at least.

7. It was at the outset held in the Madras Presidency that the wage offered, though liberal enough in ordinary times, would be thought low in reference to the high prices of scarcity time, and that the rural and agricultural classes would not resort to the works

under such circumstances unless really pressed by want. It was doubtless hoped that the works would be so distributed as not to be too near and handy to the relief labourers, and that task-work would by degrees be enforced. It was probably difficult, under the pressure of last December, to fulfil this hope. At all events, from one cause or other, it was not fulfilled; the works were easily accessible, and the task-work was nominal. Labour test and wage test.

8. Then an important circumstance became observable, namely, this, that rural classes who are not yet pressed by want, who are able to sustain themselves, and to live without Government aid, will largely resort to relief work so long as those works are close at home, as the labour is easy and the wage worth having, and in the rural classes I include not only the menial servants in the villages, the beggars who subsist on village charity, the professional workpeople, the field labourer, the feudal serfs, but also the "pattadar" ryots (technically so termed), that is, the peasant proprietors, ryots having a beneficiary interest in the soil under the ryotwari settlement, and paying land revenue to Government. In some populous tract it came to this, that relief road ran through the middle of the villages, and the peasantry living on either side of the line within sight of it sauntered leisurely on to the works.

9. On or about the 1st of January there were some persons in all these classes who, even at that early date, really needed relief, and would have submitted to much trouble in order to obtain it. There were, however, many who would gladly take relief if they could get it without trouble, but who would prefer to dispense with it rather than submit to such trouble. There were thousands and thousands of powerful men, representing what would be termed a fine peasantry, whose physical condition would be called splendid, who thus got State wages for some few weeks, under the name of relief, though to them it really was gain. This has been indeed checked. But that this should be the view taken by so many of the peasant proprietary (as it was actually taken by tens of thousands of them) is a circumstance to arouse reflection.

10. It was natural enough, indeed, that such a view should be taken by the rural classes. A man and his family are not in actual want; they are not prepared to interrupt their domestic arrangements or to undergo severe toil; they are not willing to encamp out, perhaps to bivouac, to be on the work all day in inclement weather; still the times are hard, and may become harder, their ordinary work is slack, they have nothing in particular to do, they would be glad to make a little money, which would come in usefully, would replace dead cattle, would help to pay for deepening the well for irrigation, would reduce the debt to the village banker, and so on. And at that time (January) a man might have thus earned Rs. $3\frac{3}{4}$, his wife Rs. $2\frac{3}{4}$, and say his two elder children Rs. $3\frac{1}{2}$ more, in all Rs. 10 in a month; in four months (probable duration of distress) Rs. 40 would be obtained, which is really a consideration to a rustic family. If, then, the relief works suit this idea, they afford a temptation to tens, even to hundreds of thousands. Thus it is that resorting to relief works is *not* necessarily a test of distress. Thus it is that State charity becomes indiscriminate and superinduces a certain sort of demoralisation. That some demoralisation was beginning to creep into the rural community in these districts I distinctly apprehended, though we may now trust it has been checked. And the State, however much it may be bound to save life and to prevent extreme distress, is not bound to allow this; on the contrary, is bound to set its face against everything of the sort.

11. When, therefore, the numbers on the relief works became so much reduced during February, the main causes were the distribution of the works so as to render them more distant from the homes of the workpeople and the augmenting of the task. Instance after instance has occurred of gangs, some thousands strong, being told that the road on which they were engaged was sufficiently finished, and that they must march on to another road ten miles, even five miles off, and then melting away or never mustering again; or being told that they must do such and such a task, and rejoining that they did not like this, as it would involve so many hours a day, and then ceasing to appear. This is not, of course, the demeanour of persons who are in real need. And yet it has been exactly the demeanour of a large part of the million of relief labourers in these three districts during January.

12. When, therefore, it is sometimes asked how such large numbers were turned off during February, the answer is that for the most part they turned themselves off, and that they chose to be at rest on finding that they could not get relief on their own terms.

13. A certain number no doubt were picked out to be discharged, under the rule that those were to be rejected who seemed able to sustain themselves for a time, at least.

14. The reducing the wage, also, is calculated to keep people away from the works by diminishing the inducement, but it has not been long enough in operation to produce any marked effect.

Labour test and wage test.

15. As a remarkable example in a district adjoining these three districts, I may cite the case of the East Coast Canal, an excellent work under professional supervision. Labour is sorely needed for this work. The district all around it (Nellore) is much distressed, and might well send, say, 30,000 labourers to it (in addition to the few thousands already sent). But the rural poor of Nellore were at the outset comforted by convenient village works, and they refuse to leave these works to go to the canal; if pressed to go they strike work and decline relief altogether on such terms. Similar efforts were made, under stringent orders of the Madras Government, in Bellary, Kurnool, and Cuddapah, to induce relief labourers to go to the canal, but with very little success.

16. I distinctly apprehend that thousands and thousands of stalwart relief labourers in these several districts will leave the little village works and refuse relief altogether sooner than go to the canal or to any large public work under professional supervision, at any, even a moderate distance from their homes. I should even fear that they will undergo some distress and privation before they will yield, if indeed they ever do yield. It is indeed manifest enough that people who thus behave cannot be in severe want, nevertheless, the test of going away from home ought to be persistently applied to able-bodied applicants for relief. This can be done by concentrating operations as much as possible on larger works which have been or may yet be suggested. In my minute of the 14th February was said all that then occurred to me regarding these larger public works in the Madras Presidency.

17. I have never been insensible to the objection that these larger public works might cause extra expense in one particular way, namely this, that professional labourers might be engaged for them on account of their skill and efficiency, who might not be in absolute need, or who might have been able to obtain private employment; for experience shows that even in the distressed districts the practised and efficient labourers can generally find work for themselves; it is rather the inferior labourers, and they are legion, who suffer. But when a work of this description is opened, not primarily for the sake of material improvement, but for the purpose of relief, it is easy and necessary to order that no person shall be employed who is believed to be in any way able to sustain himself, for a time at least, or who lives so near that his attendance only shows that he is making a convenience of the work in order to earn a little money. And when this is ordered, then the only objection which exists to these works being undertaken for relief is removed.

18. On the other hand, the advantages of these professionally-controlled public works for purposes of relief are absolute. These works being at some distance from the homes of the people, involving some hardship and exposure, requiring people to camp out or to bivouac, exacting labour under engineering supervision, which cannot be cheated or evaded, restricting remuneration to work done according to "task" or "piece" and "measured up" professionally, supply a labour test, which assays the character of the relief-seeking classes, just as money is assayed at a mint. Those who are really in need must submit to all this. Those who are not in such need, but who would be glad enough to avail themselves of relief, that is, of State charity, if easily and conveniently obtained, will not submit. In the Madras Presidency the process of examining gangs of relief labourers, rejecting those who are well-to-do, and retaining those who are not, is described by an expressive phrase, "shroffing," in allusion to the manner by which a "shroff," or money-changer, tests the intrinsic value of the coins presented to him. The simple order to the able-bodied among the relief gang to proceed to one of the larger public works at a distance has immediately caused thousands of thousands to "shroff" themselves, that is, to take their discharge from the relief department altogether. And I apprehend that a similar order, if given even now, to many of the strongest gangs in Bellary, Kurnool, and Cuddapah would cause tens of thousands more to do the same. If indiscriminate charity by the State is to be avoided, if the charity is to be truly discriminating, relieving only those who are in want, and doing that effectually, then these larger public works afford a self-acting test.

19. The primary importance, therefore, of having large public works of this description ready beforehand for all districts where scarcity or famine is to be expected, becomes manifest. Even at this comparatively advanced season the plan may be still further worked with much effect in the Kurnool and Bellary districts especially.

20. It is to be remembered, of course, that there are many classes among the distressed poor who could not labour on these larger public works. For the employment of these people petty works must be provided close to their homes, and with but a very light task. But such works should be begun sparingly and as slowly and cautiously as possible, they should not be scattered all over distressed tracts until the famine has pronounced itself and the season of trouble has advanced, and none should be admitted

to them who could be reasonably expected to resort to the larger public works. The excess which occurred in Bellary, Kurnool, and Cuddapah, and which in the middle of January threatened, if not checked, to be overwhelming, arose because easy works close at home were opened all over these districts at the very commencement of the scarcity, and because there were hardly any large public works ready to which the able-bodied applicants for relief could be sent, under penalty of being discharged from relief if they should refuse to go. Labour test and wage test.

21. Besides the petty relief works in the villages, there is the charitable relief to be administered by searching out every distressed person (even those who may fail to complain) by a house-to-house visitation throughout the country. But this important topic need not be pursued here.

22. Most or all of the considerations set forth in this minute are doubtless already known to the Government of India and to the Government of Madras. But the experience gained recently in the districts of Bellary, Kurnool, and Cuddapah affords such striking confirmation of the view, that I have deemed it my duty to record that experience while it is still fresh.

No. 178.

LXXVIII.—Minute by Sir Richard Temple, recommending that immediate sanction be given to the Commencement of the Repairs to the Begum Talao in the Kaladgi district. No. 213.

Camp Wortee, Kaladgi district, 20th March 1877.

During my visit to the northern taluks of the Kaladgi district I had the advantage of visiting the large tank known as the Begum Talao, near the ruined city of Beejapur, in company with Mr. Molecey, the Executive Engineer, and Mr. Silcock, the Assistant Collector. This interesting reservoir was one of the sources of the prosperity of the city of Beejapur in the celebrated time of its Mahomedan sovereigns. If, as I learn to be the case, there is an intention of transferring the civil station of Kaladgi to Beejapur, which is centrically situated for the district, then the restoration of the great reservoir would be essential to such a plan. Begum Talao Tank, near Beejapur, recommended for relief work.

2. I understand that a project has been prepared in the Irrigation Department, and approved by the Bombay Government, for putting this tank into order at a cost of about Rs. 50,000. The work to be done consists mainly of earthwork and of rough stone pitching. The Government have, however, directed that the work should not be begun as a relief work until there is absolute need for more relief employment in that part of the country.

3. Looking to the merits of the project itself, I find that this tank has an ample catchment area; that it can contain a very large supply of water; that its water used formerly to (and can again) irrigate a considerable area, and that it can supply drinking water to a great city; looking also to the fact that the embankment, more than one mile in length, is breached in two places only; that the silt, which has collected in great quantities at the bottom of the tank, can be easily excavated for the repair and heightening of the embankment; looking to all these considerations, I think that the repairing of this ancient reservoir is worthy of consideration.

4. From a relief point of view also, I should think that the work might well be undertaken. In that case its early commencement would appear to be very desirable. The situation of the work is salubrious. The numbers on relief works in the Kaladgi district have indeed fallen from 49,973 during the first week of February to 22,584 during the second week of March. But the local authorities anticipate that the numbers will again rise. Nearly all the road work that can in future years be maintained by the local funds has in this (the northern) part of the district been completed. And my inspections of about 6,800 relief labourers and of about 3,500 poor persons who are not in receipt of relief, satisfies me that, for the present at any rate, there is need for another large relief work in the Beejapur and in the south of the Indee taluk. On both grounds, therefore, the great usefulness of the undertaking and the ascertained necessity for more relief work, I would recommend to the Bombay Government that sanction be given to the immediate commencement of the repairs of the Begum Talao as a relief work.

Nos. 180–1.

Telegram, dated 21st March 1877.

From Revenue Additional Secretary, Calcutta, to Revenue Additional Secretary, Madras.

Grain reserve of Madras Government, disposal of.

Your telegram regarding grain reserve. Have you made the public notification requested in paragraphs 3 and 4 of our letter of the 9th instant, except that relating to the removal of Government grain to places 60 miles from railway. If not, please explain why? With regard to distribution of reserve grain, we request you to inform us as soon as possible what are the places less than 60 miles from the railway where reserve of Government grain are stored; what is the quantity so stored in each such place; and what your reasons for retaining it in a locality which, *primâ facie*, ought to be easily reached by private trade. Telegraphic answer to these inquiries and early written reply to our letter of 9th instant are requested. The Government of India also request that all important announcements made, or decisions arrived at, by the Madras Government regarding the famine may be promptly telegraphed to Supreme Government. The public announcement, that the Government would hold the stock of grain at Madras in reserve, was not communicated to us at the time.

No. 180.

No. 181.

No. 313, dated 23rd March 1877.

From the Additional Secretary to the Government of India to the Secretary to the Government of Madras.

Grain reserve of Madras Government.

I have had the honour to receive your telegram of the 17th instant, in answer to my letter, No. 276, of the 9th instant.

2. In reply, I am directed to state that before coming to a final decision on the subject of the 2nd, 3rd, and 4th paragraphs of that letter, his Excellency the Governor-General in Council will await the result of the further reference which was made to the Government of Madras by telegraph yesterday.

3. The proposal in paragraph 5, that the reserve of grain now held by the Madras Government should be gradually sold off in small quantities at fixed intervals, was, I am to explain, intended to relieve the mercantile community from the standing menace which seemed to be involved in the existence of a stock of grain in the hands of the Government, liable to be despatched into the distressed districts, or to be thrown on the market at any time. From such inquiries as the Government of India have been able to make, it appears that at Calcutta there is considerable difference of opinion on the subject; although some of the leading merchants consider that the sales contemplated would tend to confirm the confidence of the mercantile community in our policy of non-interference with private trade, and that if conducted in the manner, and at the intervals proposed, they would not be of sufficient importance to have any serious effect upon prices. As, however, the general opinion of the trade at Madras appears to be adverse to the measure, and as his Excellency the Governor in Council has given a public pledge that the grain shall be retained in reserve to meet future emergencies, the Government of India will not press its suggestion further. I am, however, to add that the reserve should not be moved or utilised in any way without the permission of the Government of India, which, in case of necessity, may be applied for by telegraph, with a full explanation of the necessity of the case.

Not to be utilised without permission of Government of India.

No. 181.

No. 16 of 1877. No. 244.

From Government of India, Department of Revenue, Agriculture, and Commerce, to the Secretary of State for India.

Calcutta, the 23rd March 1877.

We enclose, for your Lordship's information, copies of minutes and memoranda which we have received from Sir Richard Temple during the past week, referring to the following subjects :— Reviewing Sir Richard Temple's minutes.

1st. The utilisation of the Negapatam port and route for the supply of grain to Bangalore and the Mysore country. Nos. 132. 136. 149.

2nd. The employment of weavers on some light work suitable to their physical condition. No. 151.

3rd. The expediency of making some concession to the caste-feelings of the people in the arrangements of the relief camps. No. 152.

4th. The present condition of the districts of Coimbatore and Salem. Nos. 153–4.

5th. The condition of persons on relief works and receiving gratuitous relief recently inspected by him. No. 155.

6th. The question of the sufficiency of the reduced rate of wages. No. 165.

7th. The relief operations in the taluks of Alur and Tádpatri, in the Bellary district. No. 174.

8th. The need for maintaining a steady and sufficient importation of northern grains into the famine districts of the Madras Presidency. No. 158.

9th. The causes which led to the enormous influx of persons to the works in the ceded districts during the earlier months of the present famine. No. 177.

10th. The expediency * of employing European and Native officers and privates of the Madras Army on the relief works. No. 97.

11th. The relief camps at the Red Hills and Palaveram. No. 168.

12th. The taluks and zemindaris in the Madras Presidency inspected by Sir Richard Temple between the 14th January and 14th March. No. 169.

2. We also submit a letter† from the Resident at Hyderabad, forwarding a report on the present condition of those districts in the Nizam's country which are more or less affected by scarcity, and the measures which have been taken for the relief of distress. † 162–3.

3. None of these papers call for lengthened remarks from us; but in all of Sir Richard Temple's minutes suggestions are made, which appear to us to merit, and which we have no doubt are receiving the careful attention of the Government of Madras. The question which still causes us the greatest anxiety is that of the transport of grain by railway into the ceded districts both from the north-west and from Madras. Every effort is being made in the Railway Branch of our Public Works Department to overcome the difficulties which at present impede the transport with sufficient rapidity of the supplies which are considered to be necessary; but at least six heavy goods engines are needed, in addition to those at present available in this country, to meet the requirements of the grain traffic. We have requested your Lordship by telegraph to arrange for this number of engines being sent to Bombay by way of the Suez Canal with as little delay as possible. Grain transport causing anxiety.

4. The facts stated and considerations urged by Sir Richard Temple in his minute of the 18th instant, regarding the causes which led to the enormous influx of persons to the relief works in the ceded districts and in Kurnool in the earlier months of the famine, indicate the urgent necessity of so arranging the works as to render them as little attractive as possible to those who are not in absolute need. Sir Richard Temple shows that whereas in December the number on the relief works in those districts amounted to 950,000, it has now been reduced to 493,000. The relief works were close to the homes of the people; the work was light and easy; the wages were more than sufficient to afford a bare subsistence; all comers were admitted, without any question as to whether they were able to sustain themselves, and the consequence was that thousands and thousands of powerful men, representing what might be called a fine peasantry, whose physical condition was excellent, and who were really in no need of relief, received State wages as relief labourers. This was the state of things in January. The reduction in the numbers which has since taken place is mainly attributable to the relief works having been so re-arranged as to render them more distant from the homes of the workpeople and to augmenting the task. Sir Richard Temple states that "instance after instance Causes which have produced diminution of numbers on relief works.

* The original of this minute appears to have miscarried in the post. The copy which reached us on the 22nd instant is a duplicate.

" has occurred of gangs, some thousands strong, being told that the road on which they " were engaged was sufficiently finished, and that they must march on to another road " ten miles or even five miles off, and their melting away or never mustering again; or " being told that they must do such and such a task, and rejoining that they did not " like this, as it would involve so many hours a day, and then ceasing to appear." Other causes which have contributed to the diminution of numbers are the reduction of the wage and the discharge of persons who seemed able to sustain themselves; but in Sir Richard Temple's opinion, the main causes were the re-arrangement of the works and the enforcement of heavier tasks. Both these remedies, he considers, should be still further enforced in the three districts above mentioned, and if combined with petty relief works with light tasks for weakly persons, from which able-bodied labourers should be excluded, and by a searching house-to-house visitation systematically arranged, there need be no apprehension of the distress being inadequately dealt with.

* No. 175. Grain reserve of Madras Government, its disposal.

5. We enclose a copy of a telegram* which we received on the 18th instant from the Government of Madras with reference to the instructions conveyed and the suggestion offered in our letter of the 9th instant, regarding the stock of grain now in the hands of the Government in that Presidency, to which allusion was made in the 2nd and 3rd paragraphs of our Despatch of the same date. Copies of a telegram† which we have addressed to the Government of Madras, calling for further information on certain points, and of a letter‡ expressing our acquiescence, under the circumstances, in the decision arrived at by the Local Government, not to sell for the present the reserve of grain now in their hands at Madras, are also enclosed. Your Lordship will observe that in suggesting the sale to the highest bidders of the stock of Government grain now at Madras, in moderate specified quantities, at specified intervals, our object was to confirm the confidence of the mercantile community in our policy of non-interference with private trade, and to remove the standing menace to the trade which seemed to be involved in the existence of a stock of grain in the hands of the Government, liable to be despatched into the distressed districts or to be thrown into the market at any time, to the serious derangement of the calculations of private traders. From the inquiries which we have been able to make here, we find that at Calcutta there is considerable difference of opinion on the subject, although some of the leading merchants consider that the sales contemplated would tend to remove the uncertainty and distrust which have been felt regarding the action of the Government, and that if conducted in the manner and at the intervals proposed they would not be of sufficient importance to have any serious effect upon prices. At Madras, however, the preponderance of mercantile opinion appears to be adverse to the measure; and as it appears that his Grace the Governor in Council has given a public pledge that the grain shall be retained in reserve to meet future emergencies, and will not be utilised so long as private trade meets the requirements of the distressed districts, we have not deemed it advisable to press our suggestion further. We have desired, however, that the reserve should not be moved or utilised in any way without the permission of the Government of India, which, in case of necessity, may be applied for by telegraph, with a full explanation of the nature of the necessity.

† No. 179.

‡ No. 180.

6. We have much satisfaction in reporting that there has been a good fall of rain in several of the distressed districts, including Bellary, Kurnool, Cuddapah, Nellore, Trichinopoly, and Tinnevelly. It has also extended to Mysore. The particulars have not yet reached us.

7. Sir Richard Temple telegraphs as follows on the 21st instant:—

"I have during past week visited districts of Sholapur and Kaládgi in Bombay Presidency, and inspected in these districts 19,000 relief labourers, most of whom employed on task-work, professionally supervised and measured up. Physical condition generally satisfactory. Gangs under civil officers much diminished in numbers. Efforts to prevent waste or abuse very creditable to local authorities. System of relief strict. Some doubt whether village relief and house to house visitation sufficiently effective. General impression of Bombay management favourable. Comparison between Madras and Bombay Presidencies thus: Principles now the same in both; but in Madras the management more indulgent to people, relief more freely allowed, and expense more liberal. In Bombay the management is more rigid, the system more exact, the economy more complete. In neither Presidency is there enough visitation from village to village to search out individual cases of distress."

8. There has been a slight decrease in the numbers on the relief works in Madras and an increase in Bombay. In Madras the number according to the latest return was 656,997 against 657,365, the number for the previous week. In Bombay the corresponding numbers were 226,841 and 223,865. The net increase in the two Presidencies was 2,608. There was, however, in Bombay a decrease of 11,947 children under seven

years of age and of women taking care of them, the number having been reduced from 44,150 to 32,203.

In the number of persons charitably relieved there was a large increase, amounting to 23,750 persons in Madras, the number having risen from 58,317 to 82,067. In Bombay the corresponding numbers were 6,135 and 5,566, showing a decrease of 569.

In Mysore the number on the relief works was 36,600, in addition to 30,794 employed by Public Works agency, and 37,361 charitably relieved, making a total of 104,755 against 99,699, the corresponding numbers for last week.

9. It will be seen from the Resident's letter, and from the papers appended to it, the opinion expressed in Sir Richard Temple's minute on the condition of Hyderabad, which was enclosed in our Despatch of the 9th ultimo, that the distress in that State was likely to be less than was at first apprehended, has so far been justified by the event. The condition of the rabi harvest, now in course of being gathered, is generally fairly favourable, and no further extension of the area in which distress has hitherto prevailed is apprehended. The maximum number of persons likely to be on the relief works is estimated at 43,000. The Resident bears testimony to the judgment with which Sir Salar Jung has dealt with the matter.

We have the honour to be, &c.

No. 182.

MEMORANDUM by MR. BERNARD, Secretary to Sir Richard Temple, regarding RELIEF OPERATIONS in the SHOLAPUR DISTRICT, as ascertained by Sir Richard Temple during his visit of the 17th, 18th, and 22nd March 1877. Nos. 186. 213.

Camp, Poona District, 23rd March 1877.

Relief operations in Sholapur district.

Sir Richard Temple met at Sholapur the Revenue Commissioner, Mr. Robertson, the Collector, Mr. Percival, and the Executive Engineer, Major Mathew. In his minute of the 12th January were offered some general statistics regarding the distress in the Sholapur district, and it will suffice to note here that the district comprises an area of 4,496 square miles, with a population of 718,034 persons; that the failure of the crops has been general all over the district; and that the average out-turn of the food-crops was estimated at one anna out of 16 for the whole district.

2. In the month of January there were 93,000 persons on the relief works in the Sholapur district, now (20th March) there are only 48,855. Of these about 4,500 (or 600 in each taluk) are on the works under Civil agency, the remainder being employed under the officers of the Public Works Department, by whom task-work is exacted and efficient supervision is exercised. The Collector, Mr. Percival, assigns several causes for the decrease in numbers; thus, he attributes it in part to—

(*a.*) The reduction in the rate of wages.
(*b.*) The concentration of the people on works at a distance from their homes.
(*c.*) The exaction of task-work.
(*d.*) The ability of the people to do without relief to an extent not previously believed.
(*e.*) The large charity still going on in all the towns and larger villages at the hands of Natives.

3. The rates of wage are 1 anna 10 pies for adult men on the Public Works, and 1 anna 3 pies for adult men on the Civil agency works. If persons or gangs on the Public Works do not perform the full tasks their wages are subject to deduction.

4. Regarding the condition of the people the Collector says that the gangs on the regular Public Works are in decidedly good condition; that the condition of the people on Civil ageney is fair at present; but that he is apprehensive about these people, and recommends that the wage rate should be raised to 1½ annas, or else that a Sunday wage should be given. The Commissioner, Mr. Robertson, does not admit that necessity has yet been shown for any increase in the rates. The Collector believes the condition of the people outside the works to be fairly good; he receives weekly diaries from relief officers, who get reports from relief inspectors and visit a great number of villages themselves. No single report of a starvation death has yet reached the Collector. He recently received a report from a single relief circle of 10 villages to the effect that

Relief operations in Sholapur district.

the condition of the people there was much depressed. The Assistant Collector has gone to visit this circle, and his report has not yet come to hand.

5. The charitable relief arrangements are on this wise: a relief house is established at every taluk head-quarters; each taluk is divided into eight or 10 circles of 10 villages each; over each of these circles is a relief inspector on Rs. 12 a month, whose duty is to visit every village in his circle twice a week; in every taluk there is a mamlatdar (Native subdivisional officer) whose full time is given to relief work; and over every taluk is a European or Native Assistant Collector, whose duty is to inspect villages and direct the subordinate agency. A register of paupers has been prepared and is periodically revised for every village; and every pauper who cannot support himself is expected to reside and be relieved at the taluk relief house, save in exceptional cases of infirm people who cannot travel and are relieved by the patels (village headmen) at the cost of the State. The relief houses are not popular with paupers, as they have to reside there. Only about 1,100 persons are now in receipt of charitable relief, besides some 6,000 young children whose parents are on the relief works. A very great deal of relief is being given by private charity; a Native charitable relief committee is doing good work in every considerable town in the district; in Sholapur town itself the committee spend Rs. 4,000 a month on distributing charitable relief to about 2,300 persons daily. The Collector has noticed with satisfaction the extent to which the helpless village poor are cared for by their own people, even in these hard times. Still he anticipates that larger numbers of these poor creatures must sooner or later come upon the Government for charitable relief.

6. Among other testimony given to Sir Richard Temple regarding the condition of the people in the Sholapur district may be mentioned:—

Lieutenant C. J. Dickson, District Superintendent of Police, who, in his last diary from tour, reports that he has visited many villages and found the state of the people to be good.

Lieutenant Christie, R.E., from the Midnapore district of Bengal, who has been employed for one month in the interior of the district. He has seen a great many of the workpeople. Last week he visited the Ashti tank, whereon 7,000 people were employed; and he was moving about among the people for two days. He found the workmen in "capital condition," and he considers them to be "as good coolies as one "could see anywhere." Among 7,000 labourers there were of course some few weakly people; but the hospital was almost empty.

Lieutenant Affleck Graves, Assistant Engineer from Agra, has been employed for one month in the interior of the district, and has under him now 43 miles of road on which 3,000 labourers are employed. The wage rate for adult male is 1 anna 9 pies; and the people have throughout been in good condition, better indeed than the gangs recently working under him on the Agra district roads. The children especially seemed to be in good case.

7. Sir Richard Temple inspected a considerable number of relief labourers and of other poor in the Sholapur districts; thus—

Moteebagh tank near Sholapur.—Four thousand labourers under Public Works agency, doing full task-work, on wages of 1 anna 10 pies a day for adult males; the condition of the gangs, men, women, and children was decidedly good; but it was said that, when this work was opened three weeks ago, many of the labourers were in a much reduced state. They had recovered their condition under the present reduced wages.

Kumbul tank, six miles from Sholapur.—Two hundred persons, all of the poorest classes, under Civil agency, on a wage of 1 anna 3 pie for adult males. These gangs were composed mainly of elderly persons, the able-bodied having been drafted on to the Public Works Department works. Their condition was fairly good, and Sir Richard Temple marked only one woman and one child as apparently suffering from want.

Another small tank, two miles further from Sholapur.—Three hundred labourers of both sexes on the Civil agency wage rate. These gangs, though composed of people from the very lowest classes, were generally in good physical condition, and did not appear to have suffered from the low rate of wages. Sir Richard Temple marked two men who ought to have been on charitable relief, and he marked four persons who were in a somewhat reduced condition of body.

The inhabitants of the village near the aforesaid tank.—All the people of this village (to the number of about 200) turned out for inspection. Sir Richard Temple found the condition of these people to be much the same as the condition of the people on the works, save that they wore better clothes. The only emaciated cripple was a man who, on inquiry, turned out to be a professional beggar whose trade paid better than State relief, for his family consisted of a sturdy, comfortable-looking wife and five well-

conditioned children, besides a sixth child who was said to be away begging in the streets of Sholapur. Relief operations in Sholapur district.

Beejapur road near Wurrukbal, ten miles from Sholapur.—Two thousand five hundred labourers under Public Works agency and on a wage rate of 1 anna 10 pies for adults. The general condition of these gangs was very good; several hundreds of the men and women were remarkably fine specimens of the Deccan peasantry, well set up and well nourished. Only a very few cases (one per cent. in all) of persons in an apparently reduced condition were marked by Sir Richard Temple. The condition of the children in these gangs was specially good, save in the case of a very few infants. In some of the cases on this road it seemed doubtful whether the people were not being employed too near to their homes.

8. The Collector cannot say what the total amount of land revenue to be remitted may be. The total of remissions will probably fall short of the first estimate. He is now, with the assistance of the subordinate revenue officials, dividing his district land revenue demand into three categories, viz.,—

(*a.*) Revenue that should now be collected;

(*b.*) Revenue that should be suspended and collected in future years, if the harvests are good;

(*c.*) Revenue that must now be remitted.

9. The Collector fears that cattle must have died in large numbers. During the last two months 30,000 hides are said to have come into the Sholapur market alone. But things are not quite so bad as they were; cattle which were selling in December and January for Rs. 2 now fetch Rs. 8. The people, too, seem to have more hope than they had; they are bringing back some of their cattle, so as to be ready for agricultural work directly the April showers come. Crimes against property have decreased since January last, and there was no perceptible increase in crime after (or in consequence of) the reduction of numbers on the relief works.

No. 183.

MEMORANDUM by MR. BERNARD, Secretary to Sir Richard Temple, of the facts concerning RELIEF OPERATIONS in the KALÁDGI DISTRICT, ascertained by Sir Richard Temple on his visit of the 19th–21st March 1877. Nos. 186. 213.

Camp, Poona District, 23rd March 1877.

On the 18th March Sir Richard Temple started from Sholapur for Beejapur, a central town of the Kaládgi district. He passed through the taluk of Sholapur in the Sholapur district, but on that day no workpeople were on the road. On the right bank of the Bheema he was met by the mamlutdar (Native sub-district officer) of Indee, the most northerly and most severely distressed taluk of Kaládgi. On the confines of the Beejapur taluk he was met by Mr. Molecey, the Executive Engineer, Mr. Silcock, the Assistant Collector, and Mr. Dunsterville, of the Survey Department, who is now employed upon relief work. Mr. Hogg, the Collector, had not received intimation of Sir Richard Temple's visit in time enough to enable him to attend. Relief operations in Kaládgi district.

2. The general statistics of the Kaládgi district were given in Sir Richard Temple's minute of the 12th January, but it may be repeated here that the Kaládgi district contains 5,695 square miles and a population of 816,037 persons; that the rainfall over the whole district was short and the crops failed utterly in the north of the district; and that the failure was very great in the other taluks, so much so that the average out-turn of the season's crop is not estimated at above one anna out of 16. But Kaládgi is better off than the districts of Sholapur and Poona, in so far that its soil is better and its people are believed to possess greater resources. It is noteworthy that there was no increase of crime against property in the Kaládgi district when the numbers on relief works fell during February. There is now not more crime in Kaládgi than in ordinary years. In the months of November and December, on the other hand, crimes of violence and against property were very rife.

3. The number of people on relief works in the Kaládgi district was 54,000 during the first week of February, and it stands now (third week of March) at Rs. 27,000. Of this last total Rs. 22,500 are employed on works under the Public Works Department, and Rs. 4,500 are on works under the Civil officers. The great decrease in the number of people on relief works has been caused mainly by a strict adherence to the practice whereby gangs of labourers are shifted from one work to another and are employed at a distance from their homes. The enforcement of a moderate task-work has had some effect in keeping off the workpeople who could support themselves at home. The staff

Relief operations in Kaladgi district.

of engineering subordinates is quite sufficient to control and to enforce work from the comparatively reduced numbers now on the relief works. On the Civil agency works are taken infirm or weakly people, who could not do a good day's work; people on these works who grow strong are transferred to the regular engineering works.

4. The Executive Engineer, the Assistant Collector, and the mamlutdar were all agreed that, so far as their inspections and inquiries went, the people who had left the works were supporting themselves in one way or another at their homes. They did not believe that any people were dying of hunger away in the villages. The distressed taluks have not been parcelled off into circles, as has been done in Sholapur, but the mamlutdars are relieved of ordinary duties and are employed on relief work alone. They and the Assistant Collectors visit the villages and examine the lists, which every village headman (patel) has to keep, of persons requiring relief. These officers have therefore much though not such full means as in Sholapur of knowing the condition of the village people.

5. The wages paid on the Kaladgi public works are 2 annas per diem for an adult male; because the price of food (jowaree) keeps dearer than 9 seers per rupee. The Executive Engineer, Mr. Molecey, thinks that his wages suffice for the people who receive them. He regards the condition of his gangs to be various, though on the whole good. He thinks that the results of the shifting people to roads away from their homes must be carefully watched, as their reluctance to go far from home sometimes makes the people drift into danger. On the Civil agency works the maximum wage is $1\frac{1}{2}$ annas for an adult male. The Executive Engineer and Mr. Silcock consider that these wages are sufficient, as the people appear to keep in sufficiently good condition. But it was understood that the Collector (Mr. Hogg) and some other of the Civil officers regarded the Civil agency wage as too low. No wages are paid for, and no work is done on Sunday. On both classes of works a subsistence allowance of 3 pie per diem is made to those children of persons on the works who may be too young to do any labour for themselves.

6. Sir Richard Temple inspected at Beejapur 1,120 labourers on the Executive Engineer's works, besides about 800 new applicants for work who had presented themselves during the last three or four days. These people are employed on a road outside Beejapur, and they for the most part sleep in temporary huts, which they have provided for themselves close to the road. There was a certain small number of sturdy, well-to-do men and women among the Beejapur gangs, who could probably have done without State charity for a time at any rate. Out of the 1,120 labourers Sir Richard Temple marked 11 who were in a very reduced physical condition, and he noticed 12 such persons among the 800 applicants. The local officers made inquiries into each of these cases.

7. Out of the town of Beejapur and from the villages round 2,300 persons of the poorer classes were collected for inspection, in order that Sir Richard Temple might form an idea of the condition of the poorer classes that were in receipt of no relief at all. These people were called together suddenly; they were to all appearance poorly off, and they were probably fair representatives of the classes regarding whose condition anxiety might be felt. Out of the total number (2,300) Sir Richard Temple marked 48 persons whose physical condition was apparently much reduced by hunger; some of these cases would, in all probability, be soon in a dangerous condition. These people are now being looked after by the Civil officers. Sir Richard Temple at the same time inspected the people (about 120) in receipt of charitable relief at Beejapur; all these poor creatures were decidedly fit recipients for this kind of charity.

8. At Wortee, 20 miles outside Beejapur, Sir Richard Temple inspected, in company with the Executive Engineer, the Assistant Collector, and the mamlutdar, 4,800 labourers who are now at work on the road from Wortee to Indee, and also 250 persons of the poorest classes from Wortee and the surrounding villages, who were receiving no relief at all. The Wortee gangs were generally in poorer condition than those inspected at Beejapur; and Mr. Molecey explained that they were the very poorest gangs in his district. Out of these gangs Sir Richard Temple marked 133 persons whose condition was low. A very few infants were in an emaciated state, either from illness or from failure of their natural supply of food; but with these exceptions the children of the Wortee gangs were well nourished and comfortable. Still the labourers in these gangs were almost all of them suitable persons to be upon the relief works. The representative poor who came from Wortee and the adjacent villages for inspection were clearly in very poor circumstances, and among them Sir Richard Temple marked three cases which were in a very reduced physical condition, induced apparently by want of food.

9. On the whole it appeared to Sir Richard Temple that the relief works were well managed and were restricted to persons in real need of State aid. The test of shifting labourers and employing them far from their homes had been properly and successfully applied. It appeared, however, to Sir Richard Temple that the system of village visitation and village relief is not sufficiently carried out or adequately supervised. Among the representative bodies of villagers which Sir Richard Temple examined, from one to two per cent. appeared to be in a really reduced condition, and it seemed that this condition was due to hunger. Many of such people, if not searched out and relieved, must die during the next two months. If the same per-centage of bad cases exists in the villages all over the most distressed parts of Kaládgi, then no time should be lost in searching them out and relieving them. Raising the wage rate would not meet the necessities of the case; real and active village visitation under energetic supervision is required. Relief operations in Kaládgi district.

10. The Asssistant Collector and the Executive Engineer appear to think that one or more additional relief works would be required in the northern taluks of Kaládgi now that the road-works, which could be usefully undertaken, were nearly completed. Regarding one of these works, the Begumtalao, Sir Richard Temple has recorded a separate minute. Mr. Silcock recommended strongly that four tanks in the Indee taluk, for which the Irrigation Department has plans and estimates ready, should be taken in hand and repaired. Mr. Burke, the Irrigation Engineer, informed Sir Richard Temple that he could begin these works at once; he considers them to be more useful than a continuance of road-works, though the tanks are not such as in ordinary years would be considered remunerative irrigation works. Some colour was given to Mr. Silcock's opinion that one or more additional works were required for the Indee taluk, by a representation made to Sir Richard Temple by the patels, koolkarnees (village officers), and ryots of the villages of Dhoolkheif, Chanégaon, and Sirnala, on the northern border of the Indee taluk. 450 persons of these and certain neighbouring villages were inspected by Sir Richard Temple; it was stated by the people, and affirmed by the village officials, that from 100 to 200 of these people had worked on the Sholapur road till work there was closed, and that they had afterwards gone to the Wortee road (distance 20 miles) for work, but they had for some reason or other been refused admission to the works. Among the people who said they had gone to find work at Wortee were four or five persons whose physical condition was low; but, on the whole, the 450 villagers inspected appeared to be in a fairly good physical condition.

11. Sir Richard Temple saw at Dhoolkhair 15 tons of Government grain (jowaree), which had been brought at the beginning of the scarcity when grain importations had hardly begun and supplies for the labourers seemed likely to run short. Other small parcels of Government grain are stored in different parts of the Kaládgi district. These stores have not yet been used, as the local markets sufficiently supply all wants. But as some of the grain is being destroyed by insects, and the supply in the local markets appears quite secure, the Bombay Government has ordered these stores to be sold by auction to the local merchants.

No. 184.

MEMORANDUM by MR. BERNARD, Secretary to Sir Richard Temple, regarding RELIEF OPERATIONS in the AHMEDNAGAR DISTRICT. Nos. 186. 213.

Camp, Poona District, 23rd March 1877.

Sir Richard Temple was not able to visit the interior of the Ahmednagar district; but he met Mr. Jacomb, the Collector, in company with Mr. Robertson, the Commissioner, at Dhond, and he inspected a gang of 4,000 labourers on the Dhond and Munmar Railway relief work near the Bheema River, just within the confines of the Ahmednagar district. Mr. Izatt, C.E., who is in charge of the works, with Mr. Vacher, the Executive Engineer, was present. Relief operations in Ahmednagar district.

2. The gangs of Ahmednagar labourers on the railway works were in very good condition. They are doing task-work on a wage rate of 1 anna 8 pie for adult men. At the outset they did not perform their full task; but now the engineers under Mr. Izatt get full work out of the people, who accordingly receive their full wage. Mr. Izatt reports that the disbursements on account of charitable relief (3 pie a head per diem) to young children amount to 10 per cent. of his whole expenditure for wages.

Mr. Jacomb's account of affairs in his district was briefly as follows:—

(*a.*) The north of the district in the Godavery valley has had fairly good crops. The bad parts are in the south, the Srigunda and Kurjut taluks, with parts of Nuggur and Parner. On the relief works there are now 11,800 labourers, as

Relief operations in Ahmednagar district.

against 26,000 in the beginning of February. Of this total only 900 are on the Civil agency works, where they receive a wage of 1 anna 1 pie for adult men. The Collector thinks this rate is too low, but he cannot say that he has found the people actually suffering in consequence of these low rates. Some of the poor of the district are wandering from their homes, but none are starving. No cases of starvation have ever been reported.

(*b.*) In the worst taluks and in parts of others the villages are divided into circles, with an Inspector over each circle. These Inspectors furnish diaries of their work and of what they see. Over them are the mamlatdars (Native sub-divisional officers) and the Assistant Collectors. The patels do really look up and relieve the village poor; save, perhaps, in the case of the Mhars (out-castes), regarding whom men of higher caste are very reluctant to exert themselves.

(*c.*) The supply of food in the local markets is everywhere ample, and will continue to be so.

(*d.*) In the Kurjut taluk only is there any real difficulty about water-supply. Wells are being deepened there, and also in other parts of the district.

(*e.*) There has not as yet been any very great mortality among the cattle. The great majority of the animals in the worst taluks were driven away to distant pastures. Possibly one third of the emigrant cattle may die; but nothing certain is yet known.

(*f.*) The Collector cannot say for certain, but he expects that out of the 12 lakhs of revenue demand from his district he may be able—

To collect 6 lakhs.
To suspend 4 lakhs.
To remit 2 lakhs.

In January last it had been estimated that 6 lakhs might have to be remitted.

No. 185.

Nos. 186. 213.

MEMORANDUM by MR. BERNARD, Secretary to Sir Richard Temple, regarding RELIEF OPERATIONS in the POONA DISTRICT, as ascertained at Sir Richard Temple's visit of the 22nd–24th March 1877.

Camp, Poona District, 24th March 1877.

Relief operations in Poona districts.

Sir Richard Temple met in the western or more distressed tracts of the Poona district—

Mr. Norman, the Collector.
„ Keyser, the Assistant Collector.
„ Fletcher, „ Holland, „ Symonds, } relief officers.

Major-General Kennedy, R.E., Secretary to the Bombay Government, in charge of the Famine Department, who was good enough to come to meet Sir Richard Temple.

Colonel Merriman, R.E., Chief Engineer of the Irrigation Department.

Mr. Clarke, Executive Engineer.
„ Joyner, Executive Engineer.
„ Toogood, Assistant Engineer.

The distressed area of the Poona district comprises the whole of the Bheemthari and Indapur taluks, with parts of the Haweyli (head-quarters) and Poorandhar taluks. These tracts contain a population of about 320,000 persons, and the failure there has been so great that the season's out-turn is estimated at only 1 anna out of a 16-annas (full) crop.

2. In the month of January there were 54,000 people on relief works in the Poona district; now (20th March) there are only 42,000, of whom about 38,000 are employed on works under Public Works officers, who exact full task-work and exercise very thorough supervision over the workpeople. The full wage of an adult man on the works under Engineering officers is 1 anna 10 pies per diem; but the workpeople incur deduction if they do not perform the full task. On all the great works which Sir Richard Temple visited in the Poona district, most of the labourers had forfeited from one fourth to one sixth of their wages during the earlier weeks that task-work was imposed. But now all the gangs, with but very few exceptions, do their full task and get their full wage. On the works under Civil agency the wage rate is 1 anna 3 pie.

3. The peculiar feature of the Poona district relief is that the relief labourers are concentrated on a very few large and useful works, mainly under the Irrigation Department,

viz., the Moota Canal, the Nira Canal, and the great reservoirs at Mahtoba and Sirsophul. Some gangs, gradually increasing in numbers, are employed on the southerly section of the Dhond and Munmar Railway. On every one of these works the labourers come, for the most part, from a distance, and they live in temporary huts provided by themselves close to the works. Various accounts are given of the condition of the thousands who have left the relief works since January. And the outcome of all these accounts is that some of the people have emigrated to the Nizam's country or to the hill pastures with their cattle; some have gone to Bombay to get work; and some few are in their villages preparing for the coming agricultural season. All the inspecting officers who visit the interior are, however, agreed that comparatively few of the ordinary residents are left in the villages of the Bheemthari and Indapur taluks.

Relief operations in Poona district.

4. Sir Richard Temple was able to inspect a considerable number of gangs of relief labourers and of other poor in the Poona district. He visited,—

The Dhond and Munmar Railway Works, whereon are 2,800 labourers of the Poona district. These gangs were among the poorest Sir Richard Temple has seen in the Bombay Presidency, and some proportion of the men were below par. Their wages were 1 anna 9 pies per diem for adult men who did full task. It was explained that the men were in poor condition when they came to the work; during the first 10 days no deduction was made for short work; then deductions began, and the men for about 10 days earned little more than half the full wage; during the last week they have been doing three quarters of full work; and the engineers have, at the Commissioner's request, decided that fines for light task shall not reduce the daily wage below the subsistence rate allowed on Civil agency works. The reduced people in these gangs, who are more numerous than in any other gangs inspected by Sir Richard Temple, are now being looked after by the officers in charge.

The Boreebayal Tank, on which were 60 labourers under Civil agency. Most of these people were old and infirm; all were very poor; still Sir Richard Temple marked only four persons who seemed reduced by want; 40 children were here in receipt of the 3 pie charitable allowance, and were all in excellent case. The able-bodied people had been drafted off to the Public Works Department works, and there was nothing in the condition of the labourers left to warrant an apprehension that the Civil works wage was insufficient to maintain the people's strength.

The Sirsophul Tank, whereon were 3,200 labourers, out of whom Sir Richard Temple marked 11 persons who seemed to be in a reduced physical condition. The remainder were in good case, the younger men and women looking stout and well. All were on the Public Works Department wage, and lived in temporary huts close to the work. Some few of the people looked as if they could have managed for themselves without State aid. There were 1,160 children and 33 infirm paupers belonging to the workpeople, who were all in receipt of charitable relief.

The Patas Tank, 1,300 labourers on Public Works Department rates, besides 51 employed under Civil agency. The condition of these gangs was on the whole good; and the people appeared to be well nourished. Fifty-three persons belonging to Patas town, who were on charitable relief, were inspected and were seen to be fit recipients for such charity.

Patas Town Poor who were not on Relief.—Two hundred and fifty of the poor of Patas, who were receiving no kind of relief, were inspected. The people all looked poor, but Sir Richard Temple marked only two persons who were reduced in physical condition, and ought to be taken on charitable relief. One of the two, a Mhar by caste, entirely declined to accept Government charity.

Moota Canal Works.—Ten thousand and two hundred people are now employed along about 22 miles of this canal, which was the first large work begun in this part of the Deccan. At one time as many as 19,000 people were employed on the canal. The exaction of task work which has been enforced rigorously since January caused the reduction in the numbers. From the beginning the workpeople have lived in temporary shelter close to the works, and have been shifted 8 or 10 miles down the canal as the work went on. On this canal Sir Richard Temple inspected 4,764 workpeople, besides 1,370 young children and 137 infirm old people, making 1,507 in all who were receiving charitable relief on the works. The condition of these people was decidedly good. Sir Richard Temple marked only six persons who were apparently in a reduced physical condition. The children were in particularly good case. The wage on these works for an adult man who does full work is 1 anna 9 pies. During February the deductions on account of short work came to 9 per cent. on the total wages; but during the month of March 90 per cent. of the

Relief operations in Poona district.

gangs have earned full wages. Mr. Joyner, the Executive Engineer in charge of this work, makes careful inquiry into the case of each gang that comes under deduction, so as to prevent the possibility of any gangs losing strength by reason of insufficient food. When task-work was first exacted to the full extent in January last, some of the gangs fell for a time below par; but remedies were applied, and all are now in excellent condition.

Mahtoba Tank, also an Irrigation Department work, on which Sir Richard Temple saw 5,400 workpeople, besides 1,600 children on charitable allowance. The physique of these gangs was not quite so good as that of the people on the Moota Canal, where relief works were opened early in the season. Still the condition of the Mahtoba gangs was good; the children were plump and happy; less than $\frac{1}{4}$ per cent. of the people were marked by Sir Richard Temple as in a reduced condition of body. The gangs were for the most part doing full task and getting full wage.

5. The supply of grain is ample in all markets of the Poona district. A village dealer whom Sir Richard Temple saw close to the Motee Canal was selling grain (jowaree) to the labourers at $10\frac{1}{2}$ seers (21 lbs.) per rupee. No one appears to have apprehensions respecting the sufficiency of the supply of grain, which private trade will maintain in all parts of the Poona district.

6. The numbers on charitable relief are :—

In villages - - - - - - -	3,042
On works, chiefly children - - - - - -	12,649
Total - -	15,691

The Poona system of giving charitable relief differs from that practised elsewhere. No regular relief houses are established whence cooked food is distributed. But the patels (village headmen) are authorised to give paupers, who are entered on the village lists, an order on the village corn-dealer for half a seer (1 lb.) of grain per diem plus 3 pie in cash per week. The village dealer issues this relief and sends his bill to the nearest relief officer. The European Civil officers who inspect the villages, the engineers who are constantly among the people, and the Native officials from the mamlatdar (subdivisional magistrate) downwards are all agreed that the relief so given suffices for the needs of the village poor, and that no people are starving, or are likely to starve, at their homes in the villages. Sir Richard Temple's inspections quite bear out these assertions of the local officers. A good deal of private charity is being dispensed in Poona city and other towns in the interior. And wherever a municipality exists the municipal committee discreetly administer charitable relief within their borders. It is creditable to the patels and to the supervising officers, as well as to the people themselves, that the State charity administered through the village officers is not abused. It seems that the people are very loth to receive charitable relief if they can help it. And a case was related of a Poona villager in receipt of charitable relief, whose son on his return home at once and of his own motion repaid to Government the full amount spent on the relief of his mother during his absence.

7. The water-supply in some villages is short, but it is nowhere absolutely wanting. In or near the larger villages where deficiency occurs the relief officers are deepening the wells. This is specially needed for the outcast tribes (Mahas, &c.), who are not allowed to drink from the ordinary village well.

8. It seems to be generally admitted that a great number of cattle have died, and that the greater part of the residue have emigrated, some of which will die in distant pastures. The mamlatdar of Bhimthari, an officer of experience, who is much trusted by the district officers, reports that out of 72,000 head of cattle in his taluk, 44,000 have emigrated, 20,000 have died, and 7,000 are left alive. He says, however, that the cattle left and those which may return will suffice to distribute supplies of food into the interior of the districts, wherever it may be wanted.

9. The Collector of Poona has, as yet, granted no remissions of land revenue. He will continue collecting all he can; he has already collected in several taluks more than he had expected in January last; and he will suspend the demand instead of remitting in cases where eventual collection of revenue may be impossible. But in Indapur and Bhimthari much remission will have to be given; and perhaps in the end, if next season is good, the Poona remissions of land revenue may reach $3\frac{1}{2}$ lakhs as compared with 6 lakhs named in the January estimate of remissions.

No. 186.

MINUTE by SIR RICHARD TEMPLE. No. 213.

Camp, Poona district, 24th March 1877.

In forwarding the accompanying memoranda of facts ascertained during my present visit to the districts of Sholapur, Kaládgi, and Poona, in the Bombay Presidency (which are the three most distressed districts), I have to record some general observations. Sholapur, Kaládgi, and Poona districts.

2. It will be in the recollection of the Government of India that on my first visit to the Deccan districts of the Bombay Presidency on the 10th and 11th of January last, I submitted several recommendations, the principal of which was to the effect that the petty village works close to the homes of the people, with easy or nominal work, on which the great majority of relief labourers were then employed, should be generally discouraged and closed wherever possible; and that the relief labourers should be concentrated as much as might be practicable on larger public works, generally at some distance from their homes, with rigid tasks under professional supervision. This principle was thought likely to prove acceptable to the Local Government, which had evinced a tendency to proceed in that direction. It has since been declared publicly to be in accordance with these views. It has certainly been acted up to during the two months and upwards which have elapsed since the above-mentioned dates with a rigour and decision which leave little to be desired, and with a result upon which, after allowance for any slight drawbacks that may be found, the Government of Bombay may be heartily congratulated.

3. On the 12th January I found 331,447 relief labourers in all, of whom 136,629 were on petty village works and 194,818 on professionally supervised public works. On the 20th March there are 209,000 relief labourers in all, of whom 34,000 only are on village works, while 175,000 are on the larger public works. In other words, whereas a moderate majority were on public works and a large proportion on village works, now the vast majority are on public works, and only an insignificant minority on village works. Again, on the 1st January, I found an universal expectation that the then large number would increase by 80 per cent. before the end of March. I find on the 20th March that the January number instead of increasing has actually decreased by 64 per cent.

4. Although the tendency of our measures has been to transfer large numbers to the public works, still even on these works there has actually been a decrease. This has arisen from the enforcement of the task-work previously ordered. Many persons came to work on task so long as they found it easy, but absented themselves when they found it becoming harder. On the Civil works the manner in which the reduction of numbers occurred was in this wise. The Public Works Department (including its general branch and its special irrigation branch) has been strongly organised with a staff of officers and of trained subordinates in the distressed districts. Professional preparations for public works on a sufficiently large scale, consisting partly of main roads, but chiefly of irrigation reservoirs (tanks) were got ready. To these all applicants (save and except those who appeared to be able to sustain themselves, for a time at least, without Government aid) were admitted. To these also all the labourers who had previously been on village works were drafted, except those who from age, infirmity, or other good cause were unable to go. The able-bodied were informed that they could no longer be employed on the village works, but that employment was available for them on the larger public works; to every person some such work at a reasonable distance was indicated; he was also informed, however, that in event of his refusing this offer he would not be otherwise employed. Very many did in fact refuse, and by so doing virtually discharged themselves from Government relief, thereby affording proof that they were not in real distress and could afford to stay away. Many, however, accepted the offer and are still serving on the public works, proving by their industry and discipline that they really need the support thus obtained.

5. The number who discharged themselves from Government relief in the manner above described were about 102,000.* They did, indeed, at first show signs of some method and system in their proceedings. They liked the village works with a lax system from which they had been discharged. They disliked the public works with a strict system to which it was proposed to transfer them. They imagined that by throwing themselves suddenly out of employ, they virtually offered a passive resistance to the orders of Government. Many of them endured more or less of inconvenience and privation in furtherance of a plan whereby they hoped ultimately to regain their position on the easy going village works. For so favourable an object they deemed that some suffering might be borne. They counted somewhat on

i.e., difference between 136,000 on 12th January and 34,000 on 12th March as above stated.

Sholapur, Kaládgi, and Poona districts.

exciting the compassion of the authorities, and still more on arousing fears lest some accidents to human life should occur. They wandered about in bands and crowds seeking for sympathy. They probably did meet with sympathy, indirectly at least, in various quarters. They certainly had leaders both from among their own body and from among the employés, whose vocation had ceased from the contraction or cessation of the village works. Moreover, the village headmen (patels) are, as a class, much opposed to any system of relief works which takes the people away from their homes. This feeling may be natural on their part, but it cannot receive attention when it militates against so important a principle as the application of a definite test to a relief system in time of famine.

6. The Local Government, however, did not yield, though it did report the matter to the Government of India, apparently with a view to strengthening the position by eliciting further authoritative declarations. The Government of India, on two occasions, declared in effect that undue concessions must not be made to combinations of workpeople formed with sinister or self-interested objects; and that although Government was bound to do its utmost to save people from death by starvation, it could not always undertake to save them from death owing to their own obstinacy or misconduct. These views have doubtless helped to guide the thoughts of the people and to subdue any unreasonable hopes which may have been engendered.

7. Of those who thus deserted the relief works some returned to labour when they found resistance unavailing. But many after wandering about for a short time settled quietly in their own villages, where they still are (as I have myself seen them in several places) in a condition which, if not good, is yet not reduced. Of these it is thought that many must ere long be constrained to apply for relief.

8. On the other hand, while severity is deserved by those who try to resist the just efforts for reform and economy in the administration of relief, there are many poor ignorant persons misled by designing leaders. No exertion is spared to induce these misguided persons to accept the reasonable sort of relief which they are believed to need. To the village works only those are admitted who cannot be expected to perform the tasks set on the larger works. It was thought that these works would be more largely attended than they are. The authorities are ready to receive many more if they come, either on existing works, or upon other works which could be immediately opened. These works being of the simplest character can always be opened without any preparation. The gangs which I have inspected are exactly those whom we might expect to find, that is, they are people evidently needing assistance, strong enough to do light work near home, but not strong enough to perform the tasks of the public works.

9. For the larger works, as already stated, preparation is always needed. And this preparation has been made in case there should be any accession or influx of numbers as the season advances. After consulting the Public Works authorities I find that the works now open can accommodate 75,000 additional persons at the shortest notice. Here again, however, the rolls of the workmen do not fill as fast as was expected. Evidently the comparatively strictness of system is acting as a deterrent to keep away all save those who are truly in want.

10. Nothing can be more suitable than the character of the gangs on these works, whom I have carefully inspected in various places of these districts, numbering in all about 40,000 persons. By a suitable character I mean this, that the men and women belong to the labouring classes who are cast out of employ by dearth of employment, in consequence of the scarcity, and who really need assistance; they are able-bodied and fully equal to the hard task-work they perform; their physical condition is generally good, often it is very good, indicative of a fine peasantry which any Government may be proud to reckon among its subjects. There are some few exceptions indeed, but in almost every instance there is some satisfactory explanation as, for instance, a man is very thin, but then, though able to labour, he is suffering from some local disease, and he prefers for sake of keeping company with his relatives to be on this work rather than go to the easier village work, and so on.

11. Even to these larger works there are attached sets of weakly persons, and very young children, relatives of the able-bodied labourers, from whom they cannot well be separated. These sets receive special relief according to circumstances.

12. I have inspected many sets of persons receiving gratuitous relief from Government. These are truly miserable persons, and fit recipients of charity.

13. The same cannot always be said of the recipients of private charity in these districts, who are often persons hardly needing this form of relief. It were much to be desired that the charitable donors would consent that their charity should be administered on the same rules as Government charity.

14. The wage of 2* annas a day for an adult male (the wage of females being graduated accordingly) allowed on the public works is certainly sufficient; its sufficiency being attested by the fine physique of the majority of the labourers. Certainly, the task (slightly less than the rate for professional labourers in ordinary years) is not too much for these gangs. For some of the finest sets of these men, it is probably not quite hard enough. The wage allowed on the petty village works, equal to 1 lb. of grain a day plus ½ anna for adult male (the wage of females being graduated accordingly, which is at least 25 per cent. less than the wage on the public works, is probably sufficient, as is shown by the fact that the labourers are looking much as they look in ordinary years. There are, I know, opinions to the contrary, but these are based on general considerations and not upon the one real ground, namely, the actual condition of the labourers. The children of all ages, even the tenderest, of the relief labourers are receiving some allowance. Sholapur, Kaládgi, and Poona districts.

15. On the whole I feel sure that in the Deccan districts of Bombay no abuse of State charity is allowed; no appreciable amount of Government money is wasted; no demoralisation of the rural classes is going on; on the contrary they are being taught the hard but salutary lesson of self-help in time of danger.

16. With this rigidity of system, and this careful restriction of relief, there must be some anxiety lest individual cases of unrelieved distress should occur and escape observation. So far as my inspection of the poorest classes not on relief has gone, it is to be inferred that they are generally in tolerable condition. Occasionally, though very rarely, I have found instances of persons whose appearance would ensure to them relief immediately on their asking for it. No doubt there is much scope for incessant vigilance. I drew attention to this on the 12th January. Subsequently when representing the same thing to the Madras Government, I sent a copy of that representation to the Government of Bombay, who in reply acknowledged the correctness of the principle and expressed a belief that it had been already carried out. And certainly I find that in the Bombay Deccan, so far as orders go, such vigilance ought to be secured. All village headmen have been warned of their duty in this matter; they frequently do give temporary relief on their own responsibility pending orders of relief officers. Lists have been made out in every village of persons likely to come within this category. European officers are posted in each one of the many subdivisions (talukas) of the distressed districts; and they, together with their Native subordinates, are constantly patrolling the villages and seeing whether the village headmen really do bring forward every deserving case or not. In every subdivision (taluka) of every distressed district there is a relief centre for the reception of these cases. The number on charitable relief is large indeed; but looking to the circumstances of the country, I should be glad to see it larger. It is, however, remarkable that many of the destitute poor are reluctant to resort to the poor-house from a feeling of self-respect which is creditable to them. Here and there, however, I have discovered persons who ought apparently to have come under the operations of these rules; and I think that the local officers cannot be too often reminded of these excellent orders.

17. I have not received any trustworthy evidence whatever that any death from starvation occurs or is in danger of occurring in these districts. But I have received much excellent evidence to the effect that nobody is dying or likely to die of this cause. Statements of an opposite description are sometimes made, but they are merely general in their terms, and are manifestly advanced in support of the view that easier terms of relief should be offered to the people. I am unable, however, to discover upon what foundation any statements that the people are starving can possibly rest. If any instance has happened within the last two months it must be very exceptional. If any instance happens now, it must be owing to some extraordinary conduct on the part of the person concerned, certainly not to any want of means of relief at hand.

18. The number of relief labourers having fallen and continued comparatively so low, the question whether it will greatly rise again is much canvassed locally. If it should rise, then the authorities are ready. I am more concerned to verify this than to debate a matter around which much uncertainty hangs, but which will, by the event, soon be placed beyond doubt. Doubtless the liberal scale, as it is now thought the too liberal scale, on which relief was at the outset administered had the effect of putting money into the pockets of the people on which they are now living. To some extent, but to a slight extent only, this may account for the decrease in numbers. The people are now

* Note.—This is the wage so long as grain is not cheaper than 18 lbs. per rupee or dearer than 16 lbs. per rupee; when the price of food ranges beyond these limits, the wage is altered according to a sliding scale, so as to give the value of 1 lb. grain and one anna in cash to each adult male labourer who does full work.

Sholapur, Kaládgi, and Poona districts.

seen to possess some self-sustaining power which is difficult to be gauged beforehand, but which proves to be greater than was at first supposed. The peasantry of these Deccan districts may be poor (as is sometimes affirmed), but they apparently can for the most part support themselves for one year notwithstanding the loss of their crops. They may have fallen into indebtedness, but still they have credit enough to obtain advances of grain from the village dealers, or others who hold stocks of grain. The grain markets continue to be very well supplied. And the price of food still ranges at 20 lbs. for the rupee, which is cheaper decidedly than a famine price.

19. As the case stands at this moment there are in the Bombay Presidency—

	Persons.
On works - - - - -	209,000
On charitable relief - - - -	42,000
Total - - - -	251,000

20. The fate of the cattle in all this drought is sadly uncertain. That numbers have died or will die is certain; these are probably the inferior animals. The best have been sent to the pasturage grounds of the Western Ghât mountains. We do not know exactly how they are faring there, not very well in all probability, as even those uplands have but meagre pasture in a year like this.

21. If the numbers of relief shall not materially increase beyond the present total, then there will be a considerable reduction, even below the reduced estimate of expenditure recently furnished for the Imperial budget.

22. During my first visit I drew attention to the importance of using all fair means to collect the land revenue of the current year in all the distressed districts, so far as the people could pay without undue pressure. The revenue authorities seem to have recently made and to be still making successful efforts in this direction. The loss of land revenue by reason of this famine is not thought likely to exceed 54 lakhs of rupees, and may even be less than that. It will be in the recollection of the Government of India that in the beginning of January, when the loss of land revenue was estimated at 50 lakhs, I strongly represented the expediency of not promising remission, so long as any hope of recovering the revenue should remain. Though nothing specifically was settled at the moment, the representation and the consequent agitation of the subject has evidently been of service fiscally. Another cause, no doubt, is the general improvement of the situation.

23. If these favourable anticipations shall be in any degree realised, then the famine of 1877 in the Bombay Presidency will not be so financially burdensome as was once feared. But they depend (it must always be remembered) upon an early and propitious rainfall during the coming summer. If that unhappily were to be withheld, then a fresh conjunction of adverse forces would arise.

No. 187.

No. 213.

LXXXV.—Minute by Sir Richard Temple, dated Camp Poona District, the 24th March 1877.

Relief labourers and others inspected by Sir Richard Temple.

I desire to record a brief mention of the several gangs of relief labourers and other poor people whom I have inspected during my present tour in the Sholapur, Kaladgi, and Poona districts, and in one corner of the Ahmednagar district. I note at the same time the general impression I received of the physical condition of each set of persons whom I inspected.

2. The gangs were as follows:—

Sholapur District.

Moti Bagh tank - - -	4,000	labourers under Public Works Agency; condition of gangs, men, women, and children, decidedly good.
Kambal tank, 6 miles from Sholapur	200	labourers under Civil agency; condition of all fairly good.
Second small tank, 8 miles from Sholapur - - -	300	labourers under Civil agency; condition toleraly good.
Poor of village near above-mentioned tank.	200	persons; middling condition.
Wurukbal road, 10 miles from Sholapur - - - -	2,500	labourers under Public Works agency; remarkably good condition.

	KALADGI DISTRICT.	
Beejapore road - - -	1,120 labourers under Public Works agency; good condition.	Relief labourers and others inspected by Sir Richard Temple.
The paupers of Beejapore town and neighbouring villages - -	800 new applicants for work; good condition. 2,300 persons not receiving any relief; several of these people were much reduced, rest very poorly circumstanced.	
Inmates of Beejapore relief house -	120 persons; infirm and old, but now fairly well nourished.	
Wortee road - - -	4,800 persons; about 2 per cent. of them were in reduced condition, 15 per cent. were indifferent, rest were middling.	
Village poor of Wortee - -	250 persons; not reduced by want, condition middling.	
Village poor of Dholheir and other villages on the Bheema - -	450 persons; a very few in indifferent condition; rest fairly good.	
	AHMEDNAGAR DISTRICT.	
Dhond and Munmar Railway -	4,000 persons; all of whom were in good condition.	
	POONA DISTRICT.	
Dhond and Munmar Railway -	2,800 persons; most only middling, and about one-fourth in indifferent condition.	
Boreebayal tank - - -	60 persons; under Civil agency; middling condition.	
Sirsophal tank - - -	3,200 labourers under Public Works Department agency; good condition.	
Patas tank - - -	1,300 labourers under Public Works Department agency. 51 labourers under Civil agency; all of them in good condition. 53 on charitable relief; condition middling. 250 paupers of the town; condition good and middling.	
Moota Canal work - - -	4,764 labourers under Public Works Department agency; good condition.	
Mahtoba tank - - -	5,400 labourers under Public Works Department agency; good condition.	
Khairgaon village poor - -	200 persons; fair condition; only two marked as reduced by want.	
Total - -	39,118	
Add the children getting three pie a day charitable allowance on the works, all of whose condition is good, save a very few infants at the breast - - - -	5,600	
Grand total -	44,718	

No. 188.

LXXXIV.—MEMORANDUM by DR. HARVEY, on Special Duty with Sir R. Temple, on the PHYSICAL CONDITION of the PEOPLE in the DISTRESSED DISTRICTS of MADRAS and BOMBAY. No. 213.

Keirgaon, March 25, 1877.

Having accompanied Sir Richard Temple thus far on his tour, and had the opportunity of seeing the greater part of the persons inspected by him, I beg to record at his request my professional opinion on their physical condition. Physical condition of people in Madras and Bombay.

2. The persons seen have been—

I. Those employed on relief works;

II. Those in receipt of gratuitous relief;

III. Portions of the general population not in receipt of relief.

Physical condition of people.

3. I. Those employed on relief works may be subdivided into—

(*a.*) Those employed under the supervision of the Public Works Department; and

(*b.*) Those employed under Civil supervision.

During the last few weeks this subdivision has to some extent meant that persons in class (*a*) under the Public Works Department are receiving the old rate of wages, while those in class (*b*) are on the reduced scale. For some time, however, most of the persons on Civil works were receiving the higher wage, and the number of persons seen who have been long enough on the lower rate for its effects to be manifest has been very small.

(*a.*) *Persons employed by the Public Works Department.*

4. The immense majority of persons in this class—men, women, and children, have appeared to me to be in as good physical condition and health as the average population of Upper India in ordinary times. Occasionally, no doubt, individuals have been met with, who from one cause or another, generally age, sickness, or the fact that they were sustaining others than themselves, were below par, and showed more or fewer signs of poverty or suffering; but such cases have been quite exceptional. I should say of every gang in this class that so far as physique and condition are concerned, it was good; and almost of every individual in every gang that he had not seriously suffered, and was in no danger of dying of starvation. It occasionally happens that young children, and especially children at the breast, are brought to the works by their parents in an emaciated condition; but these have been comparatively few, and the condition of the children has on the whole been satisfactory.

(*b.*) *Persons on Work under Civil Agency.*

5. A very large proportion of the labourers in the Madras districts belongs to this class, and to a great extent the above remarks apply to them. The majority are in good condition, and in no danger of starvation; and it is surprising to see so many apparently well-to-do people on the works. The gangs have, however, been much less level, and during the fast few weeks a considerable number of the people have been receiving the reduced rate of wages. As yet, however, I have seen no signs of any general deterioration among the work-people in consequence of the reduction. The worst gangs seen were at Cuddapah on the 19th January, at a time when the full rate of wages were paid; the best were at Goondakal on the 22nd February, just after the new rates had been introduced, but before they had had time to affect the people. The difference between these gangs was considerable. The Cuddapah people evidently belonged to a much lower class than those at Goondakal, and were inferior in physique and condition. Few or none appeared to be actually starving, but a good many were thin and pinched, and all or almost all seemed to be very poor and badly off. The majority of the Goondakal people on the other hand belonged to a class above the lowest, and were almost without exception in a very fine condition, looking as if they had undergone no suffering, nor even missed a meal.

6. The gangs seen elsewhere have been intermediate between these two, the Bellary and Kurnool gangs generally approximating to those of Goondakal, while the people on the works in North Arcot, Nellore, Salem, Coimbatore, though superior to the Cuddapah gangs in physical condition, seemed to belong to a lower grade in the social scale than many of those in the Bellary and Kurnool districts. In these districts, as elsewhere, very many persons did belong to the lowest classes, but the presence of a better class of people in large numbers gave a distinctive character to the gangs, and made their general level considerably better than those of other districts. It is probable that in every gang a certain number of persons could have been picked out who were below the average, and showed some signs of being in poor health and condition, but such anæmic persons are to be found at all times in every village throughout India, and I do not think they were much, if at all, more numerous than usual.

7. Within the last 10 days I have seen many thousand labourers in the Bombay districts of Sholapur, Kaladgi, Poona, and Ahmednagar. The great majority were employed under the Public Works Department, and consisted of able-bodied persons, presumably fit to accomplish a fair amount of task-work. They are paid on the sliding scale, and receive the value of a pound of grain plus one anna for a male adult. The general condition of these people I consider to be excellent, but some of the gangs in the Poona district at work on the Dhond and Munmar Railway were decidedly inferior in condition to those in Sholapur and to the Nagar gangs on the same work. The rate of task exacted was higher than in Sholapur, and many of the men were not earning the full

wage, which may explain why some of them were weak and thin, but they had been but a short time on the works, and it was expected that they would improve. Some 4,500 people employed on the Motee Bagh tank near Sholapur, who are now in admirable condition, are reported by the Engineer officers to have been in very poor case when taken on the works three weeks ago. They had been out of work for some time previously. Physical condition of people.

8. The numbers on works under Civil agency in these Bombay districts are now very small, as all able-bodied persons are put on the regular works under the Public Works Department. All those seen by me were old or infirm persons not capable of doing hard work and all seemed to belong to the poorer classes. Many of them were old and feeble, some few were emaciated and seemed to have suffered from insufficient food before their admission to the works, but their general condition was satisfactory, and they did not seem to me to be worse off than such persons usually are.

9. *II.*—Those in receipt of gratuitous relief. People in this class are supposed to be unable to do any work; and the majority everywhere were the very old and feeble, the lame and the blind, lepers, and other sick persons. A considerable number were young children, and in most of the gangs there was a proportion of sturdy beggars and other persons quite able to work had they been so inclined. The general character of these gangs varied a good deal. In the majority there seemed to be little difference between the physical condition of the people and the usual condition of the same class of people in ordinary times. They were of course much below the relief labourers in physique and general health, but no special emaciation, or other sign of severe suffering was evident, save in exceptional cases. Many of the people at Vellore, however, and the great majority of them in the relief camps at Madras itself, were greatly emaciated and reduced, and had evidently endured great suffering. Many of the Madras people seen at my first visit were so far reduced that death was inevitable, but those seen at my last visit were not nearly so bad, and great improvement was evident in the general health and condition of those in the camps. Most of these poor people had not been employed on relief works, or been in receipt of relief until they arrived at the camps. They had left their homes without sufficient provision for the road, and had been wandering without proper food. Occasional isolated cases of a similar nature have been seen in almost every district.

10. *III.*—General population not on relief works. The poorer classes in various towns and villages have been paraded for Sir Richard's inspection. It has generally happened that a few persons have been found in poor condition and apparently distressed, who, for various reasons, have not applied for relief, but with these exceptions these people have seemed to be in much the same condition as those of their class on the relief works.

11. Speaking generally, and with reference to the distressed districts as a whole, I have been agreeably surprised and greatly pleased to find the people of all classes on the works, on gratuitous relief, and the poorer classes generally in much better physical condition than I expected, or than I imagined to be possible, considering the extent of the failure of crops, and the severity of the scarcity. I was at Bharatpur during the whole of the Rajputana famine of 1868–69, and although prices were very high, Bharatpur suffered so little compared to the rest of Rajputana, that it was considered to be outside of the famine limit. Yet even then the condition of the people was, I think, very decidedly worse than it now is in the distressed districts, except in the relief camps at Madras, and to a certain extent at Vellore. I have seen almost nothing to recall what were every day sights at Bharatpur in 1869. Isolated cases of severe distress have been seen, but I consider the general physical condition of the great bulk of the population throughout all the affected districts to be wonderfully good.

12. I have not seen enough of the operation of the reduced rate of wages to be able to give a positive opinion as to whether it is or is not enough to keep the people in health. I believe that it is so, provided always such person gets his own wages, and has not to share them with others. And I think the general satisfactory condition of the Bombay labourers, where the reduction is more stringently carried out than in Madras, and where more work is got out of the people, seems to show that it is so, and that no bad effects have followed its introduction.

No. 161, dated Adoni, the 26th March 1877.

From the Secretary to Sir Richard Temple to the Additional Secretary to the Government of India.

Land revenue remissions.

*p. 43.

†No. 130.

‡No. 160.

§No. 173.

By direction of Sir Richard Temple, I have the honour to address you regarding paragraph 10* of the memorandum on relief affairs in Chingleput, where it was stated on the authority of the Collector that much of the arrear of land revenue of this season could be collected next year if the seasons were favourable.

2. Some time after the publication of that memorandum, I received a letter† from the Collector, stating that there must have been some misapprehension, as he had never proposed to suspend any of the land revenue, but had recommended the "absolute remis- "sion of all the revenue on dry lands" whereon there had been no crop. I then had the honour, by Sir Richard Temple's direction, of writing‡ to Mr. Barlow, the Collector, stating what had been the impression left on Sir Richard Temple's mind and my own by what passed when the question of land revenue remissions was discussed with Mr. Barlow, as it has been with every other Collector whom Sir Richard Temple has had the advantage of meeting. Mr. Barlow has now written§ to the effect that he was unaware it was even in contemplation to suspend the balances of land revenue; and that if he had expressed an opinion on the possibility of collecting arrears under any circumstances, his opinion must have been that such procedure was unadvisable and would ruin the already impoverished ryots.

3. In submitting these papers, I am directed to say that Sir Richard Temple has no doubt of the accuracy of the general impression left on his mind and my own by the conversation which passed with Mr. Barlow regarding the remission question. It was well known, and had been stated in previous memoranda, that it was contrary to the Madras revenue system and to the practice of Madras revenue officers to suspend instead of remitting balances of land revenue which could not be collected as part of the demand of the year. It was known that other Collectors, and it was supposed that Mr. Barlow would be adverse to changing the Madras system in this respect. But the question before Sir Richard Temple which (as it is believed) was put to Mr. Barlow, as well as to other Collectors, was this: If the seasons are good, could not much of the balance of this year be paid by the Chingleput ryots, whose assessment is on the whole very moderate? And to that question it was distinctly understood that Mr. Barlow gave an affirmative answer. Some such answer indeed must have been given, though it must have passed from Mr. Barlow's recollection, perhaps being given in conversation it may have been made without particular deliberation. Nor did Sir Richard Temple lay any stress upon it. Mr. Barlow's present letters make it clear that, when the answer was given as understood, Mr. Barlow would have wished to qualify it by a declaration of his opinion that the suggested procedure was unadvisable, or opposed to the Madras system.

4. As this question beween the policy of remitting and the policy of suspending, in part at least, the land revenue in famine years, will have to be considered and decided for the guidance of officers concerned with future famines, it would be well that there should be no doubt about the deliberate opinion of any responsible officer, who has expressed himself on the matter. And therefore Sir Richard Temple would be glad if the same publication could be given to this letter and its enclosures, as to the previous memorandum on Chingleput.

5. It may not be out of place to add here that in Bombay, where the system of land tenure is the same as in Madras, and where the land revenue presses, at least as heavily (if not more heavily than) in Madras, the question put by Sir Richard Temple has been decided differently. Bombay Collectors in the famine country are now engaged, with much fiscal advantage to the State, in dividing off the land revenue of their districts into—

(*a.*) Revenue that can be collected now;
(*b.*) Revenue that should now be suspended, and may perhaps be collected in future good years;
(*c.*) Revenue that must now be remitted at once.

No. 190.

Revenue, No. 27.

To his Excellency the Right Hon. the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, March 29, 1877.

The Despatch of your Excellency in Council, dated 16th of February, No. 11 of 1877, forwarding a summary of the principal matters which have engaged your attention in connection with the famine in Madras and Bombay since the 9th February, has been considered by me in Council. No. 92.

2. Among the enclosures to the Despatch are minutes by Sir Richard Temple on the condition of Chingleput and North Arcot. In Chingleput the redeeming feature is that, in consequence of the presence of three railways in the district, the markets are well supplied with grain, but I regret to observe that the death-rate is very high in the relief camps, and that a heavy mortality among the cattle is expected, unless showers fall within the next six weeks. As this is the third bad season in the district, it cannot be regarded as matter for surprise that the Collector does not anticipate that more than half the land revenue will be realised.

3. In North Arcot, which Sir R. Temple has now visited for the second time, he found the condition of the district less favourable than he had hoped it would prove when making his first inquiries. I trust that the Government of Madras has disposed of the departmental difficulties which have delayed the commencement of certain relief works, by appointing a superior officer, as suggested by Sir R. Temple, for the general direction and control of all relief operations in the district.

4. I am glad to understand that Sir R. Temple considers the relief arrangements in Mysore to be "carefully and economically conducted," and that, in the Ceded Districts and Kurnool, "the condition of the people is fair and good, and the private trade in "grain extraordinarily active."

5. I concur in the opinion expressed by your Excellency in Council and by the Government of Bombay, as to the mischief of yielding to a strike on relief works attributable to combination.

6. The question of granting remissions of land revenue in Madras has been very properly left to the discretion of the Government of that Presidency.

7. It is satisfactory that the returns again show a decrease in the number of persons on the relief works in Madras, the aggregate number being, for the week under report, 876,000, as against 908,410 in the previous week. The number of persons receiving gratuitous relief is also reduced by more than 7,000, the figures being for the present week 53,287, and for the previous week 60,402.

I have, &c.
(Signed) SALISBURY.

No. 191.

LXXXVI.—MINUTE by SIR RICHARD TEMPLE upon the Land Revenue Suspension Question. No. 213.

Gooty, March 29, 1877.

Land revenue remission question.

Since writing my minute, No. LIV. of the 6th March, in which I stated, among other things, that many Collectors in the Madras Presidency are in favour of the plan of suspending and not remitting the assessment on "dry" or unirrigated lands, I have seen that the Government of Madras observe in their Despatch of the 24th March that they have no knowledge of these opinions. This observation on the part of the Local Government has caused me to reconsider the statement made in my Minute above quoted, in case it should need any qualification or explanation; and I find that it does need to be further explained. If the statement were taken to mean (and it might be so read) that some Collectors appeared to me from their conversation to be in favour of suspending in the first instance the land revenue in distressed districts, leaving the question of remission for final decision when the coming season shall have declared itself—or to be in favour of making any substantial change of system—then it might need qualification. I did not exactly mean this, however, although the statement, made as it was in brief and general terms, might be so construed. I desire, however, to explain at greater length, and with more precision what I meant, and do still mean, which is this.

2. As regards what are technically called "wet" lands, that is, lands irrigated from tanks, canals, or water channels (but not wells) I never heard the Collectors express any opinion but one, namely, this, that in these cases there is a contract (which, if not expressed, is implied) between the State and the ryots to the effect that, the irrigation

Land revenue remission question.

work being under Government superintendence, there will be no revenue levied if the water be not supplied at all; if the water be supplied to a part of the lands, the revenue would be levied on that part only, and so on. But I understand that if, notwithstanding failure of the irrigation, some crop (perhaps an inferior crop) be raised on any portion of the lands in question, then such portion will be chargeable with dry or unirrigated rates.

3. As regards what are technically called "dry" or unirrigated lands (including, however, lands watered from wells), I understood and still understand that the Collectors regard the remission or suspension of the revenue in bad seasons to be a matter of grace, and not of contract at all, not even implied contract. Here, as elsewhere in India, there is a settlement of some sort; in some districts there has been a regular settlement after a professional field survey, in other districts the older settlements still run on, but in every district there is a settlement. The said settlement consists in this, that at the beginning of the agricultural year the ryot determines what fields he will give up or reap; upon those which he does keep he virtually engages to pay the settlement revenue rate. If upon the year the harvests turn out good, then the advantage is wholly his. If they turn out bad, then the disadvantage ought (in abstract justice) to be wholly his also; but practically, if the harvest is very bad, the disadvantage is partly borne by the State; in other words, is shared with him by the State. It is admitted, however, that he ought to bear as much of it as he reasonably can, inasmuch as he has enjoyed, and will enjoy, the entire advantage of good years without question or inquiry.

4. Now as regards the "dry" lands, the original estimates of remissions of revenue to be made in the official years 1876–77 and 1877–78, on account of the failure of harvests in the calendar year 1876, seemed to me to be very large, to have been framed at an early period of the distress, and to be susceptible of some alteration in favour of Government, as the out-turn of the season became more clear. And I perceived, or thought I perceived from the conversation of some Collectors, a hope that, when the actual out-turn of the whole of the crops came to be ascertained, and when the coming season (if happily it opened propitiously) should offer renewed prospects of plenty, the collection of the instalments of land revenue due on account of the winter and spring harvests of 1876 and 1877 might be considerably larger than the first anticipation, larger also than what was (as I supposed) the original estimate of the Board of Revenue. The remissions or suspensions would, in other words, be probably less than the first anticipations. Something considerable must, I knew, be remitted at the best; and this much of remission would be promised by an early date. But I gathered that some Collectors were disposed to hold in abeyance the remission of the remainder, refraining at present from collecting it and postponing decision as to its ultimate remission or collection until a future date.

5. It seemed to me to follow from this that there ought to be great caution exercised in promising extensive remissions at an early period, that is, until the summer of 1877. If a part of the revenue is not collected at present, and its ultimate collection is left undecided for some months (say till July or August next), then it is said to be suspended.

6. It was to all this that I meant to give brief expression in my minute above quoted. Whether, when conversing with the Collectors on a subject which is often obscured by technical or departmental phrases, I may have in any degree misapprehended local officers I know not. At all events, I submit that the view as above expressed was a reasonable one for revenue officers to hold. And if I supposed it to be held by the several Collectors, the supposition seemed to be consonant with the well-known rule of the Madras Presidency, which prescribes that in "dry" lands there shall be no remission save in very exceptional years, or in very exceptional cases. At present, indeed, there are many cases which come in this category. My apprehension was that (unless great circumspection be exercised) some cases might become included in this category which—in regard to the frequent occurrence of partial drought in Southern India—are not really so exceptional.

7. I quite understood that in a matter of this sort the several Collectors would look to the wishes of Government. If the Government thought that in justice to the general interests of the country and in reference to the circumstances of the ryot classes, reasonable efforts should be made to collect the revenue, notwithstanding the badness of the season, the Collectors would, I understood, be prepared to make such efforts. If the Government thought otherwise, then the Collectors would have no objection to spare the people accordingly. The case was not one for abstract opinion on the part of the revenue officers; it was rather one to be dealt with according to the view taken by superior authority of the fiscal obligation of the people and of their ability to discharge the same.

No. 192.

LXXXVII.—Minute by Sir Richard Temple respecting the further Utilisation of the Department Public Works Agency in exacting Task-work from the Relief Labourers employed in the distressed Districts of the Madras Presidency. No. 213.

Gooty, March 29, 1877.

Task-work best exacted by Public Works Department agency.

It has been known from the first that the difficulty in exacting task-work is one of the points to which attention has most to be directed in the Madras Presidency. Notwithstanding the many improvements which have been effected in the management of relief, the defects in the exaction of task-work continue to be very considerable. And even now there is time to make further improvements in this direction, inasmuch as two of the worst months of the scarcity remain (April and May), if the Madras Government shall be pleased to issue further orders on the subject.

2. The main cause of the failure to exact task-work lies in this, that the Public Works Department in each of the distressed districts is not sufficiently employed—indeed is sometimes hardly employed at all—in the tasking, an affair which is of all affairs the very one which it is most competent to manage, and which can be thoroughly managed by it alone. In Bellary and Kurnool especially (which are the two most important districts) and in other districts, the number of relief works under the Department Public Works is very small, while the vast majority of the relief works are under the Civil officers. Although these officers doubtless endeavour to the best of their ability to exact tasks, yet they cannot do so properly. Their tasking is at the best but light; and when the supervision is Native only, the tasks are too often nominal. So long as the relief works are under Civil officers only, the tasking will not be really effective. This is of course much to be regretted: it must tend to demoralisation with such large numbers as those who (despite all reductions of numbers) still remain on the relief rolls of the Madras Presidency. While the numbers remain so large, this defect may to some extent be inevitable; it may be said that the professional agency available does not suffice for the departmental supervision of hundred of thousands of relief labourers. Nevertheless that it is no reason why the Department Public Works should not be regularly employed at all in this business. It might be employed to some extent which *pro tanto* would be beneficial. It is this point then which I would bring to the notice of the Madras Government.

3. I know, indeed, that the Department Public Works staff do render some professional assistance to the Civil Officers. But such assistance is general only and not specific. In few and rare cases only is this staff really in charge of a relief work from beginning to end. As a rule they help in laying out the work and in appraising its worth after completion and the like, but they do not at all enforce task, and they are not at all answerable for the conduct of the operation or for its cost.

4. I have just visited the ceded districts once more for the examination of this particular point, as Bellary and Kurnool are the two most important of all the distressed districts of the Madras Presidency. In the Bellary district there are about 210,000 relief labourers, of whom very nearly all are under the Civil officers, and are often but inefficiently tasked, if tasked at all; but very few are under the Department Public Works, so few that practically we may say that there are none at all. Yet in that district there is an engineering establishment with officers and subordinates of various grades, who do not seem to be much occupied just now, and who are quite able, and doubtless would be most willing, to undertake the tasking of those relief labourers (within certain limits as to number) who may be made over to them. Surely, I submit, it is expedient to make use of this agency. The commencement of the earth-work on the railway from Bellary towards Dharwar is now under the Department Public Works, and the Civil officers are very properly selecting the strongest men and women from their relief gangs and making them over to Department Public Works for the railway work. These people then will be really well tasked.

5. But further I would suggest that in every taluk some particular work be selected and placed under the Department Public Works. For this work the Civil officers would pick out all the strongest men and men from the relief gangs, and these would at any rate be brought under real task. If the persons so picked out should refuse to go, they would of course be discharged. Those who were in real need would not refuse. The moral effect upon the relief labourers generally would be excellent. From local inquiry I am sure that such works could be immediately selected, and the plan could be

Task-work best exacted by Public Works Department agency.

carried out within a day or two from the receipt of the orders. And after making this inquiry, I would suggest the following works :—

(1.) The re-making of the road from Pennekonda to Gooty and Adoni, which would employ on task-work under Public Works Department officers 3,000 persons in each of the taluks of Hindupore, Pennekonda, Anantipore, Gooty, and Adoni - - - - - - - - 15,000 persons.

(2.) The road from Alúr to Goondacal, giving employment to 3,000 persons in the Alúr taluk - - - - 3,000 „

(3.) Certain tanks in Madaksirra for employing 3,000 persons - 3,000 „

(4.) The Húbli Railway, on which, with a special establishment, up to 30,000 men can be employed from the Bellary and the four western taluks - - - - - 30,000 „

I believe that these works will be found to be the most suitable for this purpose, but if there be any doubt regarding any of them, some other ones might be substituted. Opposite each work I have entered the number of relief labourers who could probably be employed. The total amounts to 51,000 out of the total of 210,000 relief labourers in the whole district. In other words, about one-fourth of the whole could be thoroughly tasked and superintended by the professional and engineering staff: the remainder continuing under the Civil authorities.

6. Similar remarks apply, *mutatis mutandis*, to the district of Kurnool. In that district the Civil authorities indeed are beginning to make over a few out of the many relief works to the engineering staff, which will cause some very few thousands to be thoroughly tasked out of the total of 198,000 of relief labourers in the whole district. But this plan, excellent so far as it goes, needs, I would submit, to be further extended. And after local inquiry I believe that it might be so extended with the concurrence of the Engineer officers and their subordinates, and to the great convenience of the Civil officers. Over and above these advantages there is this cardinal advantage, that the strongest persons in the numerous relief gangs would be made over to be tasked by professional officers, whose profession includes the art and science of tasking. The moral effect of this will be salutary upon all the relief-seeking classes. After the local inquiry I believe that the following works might be thus treated, that is, made over absolutely to the Department Public Works. If there be doubt in any case, then some other work might be easily substituted. Opposite each work is entered the number of relief labourers who might be employed upon it; the total amounts to 52,000. In other words, more than one-fourth of the relief labourers of the district might be thoroughtly subjected to task by a professional establishment :—

			Labourers.
Ramalkota taluk - Pattikonda „ -	Gooty road repair - - - -	could employ	6,000
Ramalkota „ - Pattikonda „ -	Bellary road to Auspri railway station -	„	4,000
Ramalkota „ - Pattikonda „ - Koilkantla „ -	44 tanks requiring repairs, for 27 of which estimates are ready - - -	„	3,000
Koilkantla „ -	Rampore Pass road; new line sanctioned by Government - - - -	„	6,000
Nandial „ - Sirwell „ -	Trunk road No. 17 - - -	„	6,000
Nandial „ - Cumbum „ -	Trunk road No. 7, including Nundicunnamal Ghaut - - - -	„	4,000 8,000
Nundikotkoor „ -	Road from Kurnool to Atmakoor - -	„	3,000
„ „ -	Irrigation tank repairs - - -	„	2,000
Markapore „ -	Road from Cumbum to Doopal - -	„	8,000
„ „ -	Irrigation tank repairs - - -	„	2,000
			52,000

7. With this view, however, it would be necessary to concentrate some of the Department Public Works establishment which is somewhat scattered in this district. Individual Engineers are employed here and there in advising the local Civil officer and in helping generally towards the introduction of system in relief. They would, however, be more effectively employed, if they could be placed under the orders of their own department and upon particular works solely under their charge.

8. In my minute No. LXXV., dated 16th March, I discussed the very great advantages of professionally controlled relief works; and the object of the present minute is to show these advantages can, under present circumstances, be attained in the ceded districts. In representing this matter to the Government of Madras, I am not without precedent; for this very plan is in full force at this moment throughout the distressed districts of the Bombay Presidency; and although it may not be possible to introduce it to the same extent in Bellary and Kurnool, yet even in these districts it might be easily carried out to some extent, and to that extent it would prove most beneficial.

Task-work best exacted by Public Works Department agency.

No. 193.

XCI.—Memorandum by Captain W. S. S. Bisset, on his visit to Bombay and the Nagpore District of the Great Indian Peninsula Railway.

Nos. 210. 221.

Bangalore, 31st March 1877.

According to the instructions conveyed in Sir Richard Temple's minute of the 13th March 1877, I visited Bombay on the 19th March, for the purpose of inquiring into the causes of the diminution of the supply of food grain from the north to the ceded districts, and I was present at a meeting held on the 20th March between the Consulting Engineer and the Agent and the General Traffic Manager of the Great Indian Peninsula Railway.

Grain traffic arrangements.

At this meeting a resolution* was recorded to the effect that the grain destined for the famine districts should have preference to all other consignments, and that waggons for its conveyance should be provided to the full extent indicated in Sir Richard Temple's minute.

* A copy of this resolution has already been sent by Colonel Hancock for Sir Richard Temple's information.

2. I visited the Nagpore line of railway on the 21st, 22nd, and 23rd March and made inquiries into the accumulations of grain at each station, and also about the urgency of the demands for carriage. My notes† are appended in detail.

† Not forwarded.

3. The accumulations of grain which existed in the month of January‡ had been cleared off by the middle of February; the fresh stocks§ now lying in the railway stations are much smaller than the previous ones, and they are to a larger extent than before destined for Bombay itself, probably for shipment‖ to the ports on the western coast. The detention of grain at the stations is not so prolonged as formerly, but owing to the uniform demand for carriage from all parts of the Great Indian Peninsula Railway and to the large through traffic from Hindustan to Bombay, it has not been found possible to provide waggons or train-room to carry away the grain as fast as it is offered.

‡ On 19th January 1877 there were lying at Nagpore - - 8,500 tons grain.
At smaller stations - - 7,000 „ „
Total - - 15,500 „ „

§ On 21st March 1877 there were lying at Nagpore - - 1,500 tons grain.
At smaller stations - - 3,500 „ „
Total - - 5,000 „ „

‖ The shipments from Bombay to the Southern Mahratta ports amounted to nearly 9,000 tons in the first 15 days of March. The despatches to the more southerly ports are not abstracted.

The reduced accumulations at the railway stations seem to indicate some reduction on the demand for carriage, but there have been changes in the mode of receiving goods which have tended to limit these deposits; and there seems no doubt that large quantities of grain are from various causes kept back in the bazaars and in the villages.

The brokers in attendance at the minor stations say they keep much of their grain back rather than take the risks of exposure to the weather and to the ravages of white ants during the unknown period of detention at the smaller railway stations. And for these reasons I believe that the reduction of the demand for carriage is not proportionate to the reduction in the weight of goods awaiting despatch.

4. The system of registration of goods actually deposited in the Nagpore station yard is most carefully carried out, and it appears to give the greatest satisfaction. The merchants understand it thoroughly, and they look after their own and their neighbours' allotments very sharply.

At the smaller stations some of the consignors think their claims are postponed for the advantage of senders from other stations, but they have no grounds for this belief

Grain traffic arrangements.

except their annoyance at having to wait. The only important requirement is that more goods shall be carried away, and with the present extraordinary pressure on the railway, this is the cry from all sides, and it is not perhaps much satisfaction to the merchants who have to wait to know that their goods are having, or that they are likely to have in their due turn, their proper place in the largest traffic that has ever been carried on this railway.

I have, however, ventured to suggest that instead of an undefined date for clearing off the accumulations at the roadside stations, there should be a periodical clearance, any one day of the week being fixed for each small station on which goods might be received, consigned, and despatched to such extent as is practicable. On the motion of Colonel Hancock, Consulting Engineer for Railways, this proposal has already been taken into consideration by Mr. Conder, and a decision may be expected shortly.

5. A few of the consignors at the smaller stations were loud in their appeals for waggons, not, however, to take away grain, but mainly to convey linseed to Bombay to meet contracts made for the end of March.

In the grain trade there is not at present the same prospect of large profits that there was in January, and, although there appears to be abundance of grain for despatch, there is less speculation and less anxiety for immediate transport. The anxiety is proportionate to the anticipation of profit, and the present prices in the famine districts of Sholapur and Madras give a sufficient but not a very large profit.

6. And there is a heavy demand for grain from Bombay itself, apparently of equal urgency with the needs of the Deccan and Madras. This is evident from the figures in the margin, which show the despatches of linseed, grain, &c. from Nagpore during the seven days immediately preceding my visit. It may be necessary to explain that under the present arrangements for receiving and despatching grain at Nagpore station, these figures indicate very exactly the current demands of the several markets.

The shipments from Bombay to the Southern Mahratta Ports amounted to nearly 9,000 *tons in the first* 15 *days of March.*

EXTRACT FROM NOTES.

In the week from the 15th to 21st March the despatches from Nagpore are shown below:—

—	To Bombay.	To Poona and Sholapur.	To Raichore and Madras.
	Tons.	Tons.	Tons.
Linseed	493	—	—
Wheat	188	455	143
Jowari	219		
Rice	60		
Pulses	65		
Total tons	1,025	455	143

On the 22nd March the consignments were—

	Tons.	Tons.	Tons.
Linseed	80	—	—
Grains, &c.	180	176	66
Total tons	260	176	66

So that, although it is moderately certain that much more grain would have been despatched from Nagpore if there had been more waggons available, it is apparent that the merchants might have sent much more to the Poona and Sholapur Districts and to Madras if they had preferred doing so to sending linseed or grain to Bombay. And a very small rise in prices will again divert the flow of traffic to the south.

7. It is satisfactory to learn that although the deliveries of grain by railway have during the past fortnight been smaller than those which in the early part of the month excited some apprehension, the prices of grain have remained steady at Poona, Sholapur, and in the principal markets of the ceded districts of Madras. And it may be inferred that the requirements of grain have been estimated at too high a figure, and that the present importations are sufficient to meet the present wants.

8. The Great Indian Peninsula Railway has so much to do that it must sacrifice some of its Bombay traffic to carry more grain to Sholapur and Madras. The Government of India are arranging to augment the engine power of this railway, and in the meantime the Agent and Mr. Conder are prepared for the sacrifice, and they have arranged that the requisite number of waggons shall be provided as soon as the grain is presented.

The Madras Railway has, comparatively speaking, nothing but grain and salt to carry at present, and it is, I have good reason to believe, capable of carrying about half as much more grain as it has conveyed* during the month of March.

There is therefore every reason to hope that the railways will be equal to their share of the work, and from the evidence afforded by the recent reports there is little room to doubt the sufficiency of the means of carriage from the railways to the interior of the affected districts.

* Approximate total delivered by rail from all sources during March, 52,000 tons.

No. 194.

EXTRACT paragraph 7 from LETTER from GENERAL TRAFFIC MANAGER, to ACTING AGENT, Great Indian Peninsula Railway Company, No. 1,040, dated 2nd April 1877. Nos. 211. 256.

With regard to Jubbulpore there are 18,212 bags at the station. This is a much larger quantity than it would otherwise have been, owing to the East Indian Railway having booked grain from stations on their Jubbulpore line to Jubbulpore which was intended for Bombay. In some cases they have invoiced it through to destination, unloading it at Jubbulpore, to be reloaded into our trucks there, and in other cases, as I am informed, they have booked it as far as Jubbulpore only, both plans being contrary to the agreement and injurious to the trade; and also complicating our arrangements and causing delay. I am communicating with the East Indian Railway authorities on this matter, and, if necessary, will refer the question to you for further action. Grain accumulation at Jubbulpore.

LXXXIX.—MINUTE by SIR RICHARD TEMPLE regarding the Physical Condition of Relief Labourers with reference to the reduced Rate of Wages. Nos. 196. 221.

Bangalore, 3rd April 1877.

When questions arose as to the sufficiency of the revised scale of relief wages in both the Madras and the Bombay Presidency, the Government of India was pleased to depute, at my suggestion, Dr. Townsend, the Sanitary Commissioner, to visit the distressed districts and advise me whether the present rate of wages is sufficient to keep needy relief labourers in moderately good health. Dr. Townsend has now inspected more than 32,000 persons on relief works, of whom 29,000 were in the Madras Presidency; and he has drawn up a report stating his views and the grounds upon which he forms them. The reduce scale of wages.

2. I desire to lay this report of Dr. Townsend's before the Government of Madras. It will be seen that Dr. Townsend's experience and his knowledge leads him to lay little stress on the physiological argument that the reduced wage does not furnish the relief labourers with a sufficiency of certain elements of food. He prefers to decide the question, so far as decision is now possible, by investigating the physical condition of a large number of labourers of both sexes and all ages, who have been subsisting on the reduced wage for periods ranging from three to five weeks. His report and its annexure show that he found the relief gangs which he inspected to consist, in the main, of men, women, and children who were in good health and in moderately good condition. In nearly every large body of labourers he found some persons whose condition was below par. But in most of these cases he found that the sufferer's condition was referable to other causes than inadequacy of wages. Either the person had come very recently on the works—in some cases he or she was supporting others from the subsistence wage intended for one person's support only—or the person had recently suffered from fever or guinea-worm. In some gangs a very few cases remained of persons whose reduced physical condition was not due to any other causes. But Dr. Townsend considers that the number of such exceptional cases was hardly greater than that which would be found among ordinary workpeople in ordinary years. Though Dr. Townsend has no special knowledge of the Southern India races, he has a very extensive knowledge of all classes of the people in other parts of India.

3. I am able to say that Dr. Townsend's views on this important matter coincide with mine, which have been formed after inspecting nearly 200,000 people under relief in Southern India. And my impression is that the majority of the Civil officers, the relief officers, and the engineering officers, employed in supervising relief operations in the Madras Presidency, hold the same views. Yet these officers are in no way wanting in thoughtful consideration for the people, or in energetic care in watching their condition. Of the senior Civil officers, Mr. Price, the Collector of Cuddapah, is the only one who has, to my knowledge, reported an opinion that the reduced relief wage is generally inadequate. But that view is not borne out by Dr. Townsend's inspection of some gangs at or near Cuddapah. And from my own knowledge of the relief gangs in that district, I should not be disposed to concur with the Collector.

4. Every relief officer must occasionally, as Dr. Townsend did, and as I have often done, come upon cases of relief labourers who are really reduced and who require special treatment. But I see no reason for thinking that such exceptional cases require or warrant a general enhancement of the wage rate.

5. The orders of the Madras Government, dated the 14th March, which were passed by them after conferring with me, and in which I fully concur, direct that relief officers

he re-
ced scale
wages.

shall treat specially all cases of relief labourers who, from any cause, have fallen into a reduced condition of body. So far as my inquiries have gone, very few officers have found any cause to avail themselves of this discretion. But the humane instructions of the Government in this matter ought to be acted upon, wherever necessity arises; and if they are so acted upon, then I am confident that if the full wage* reaches punctually and not less than three times a week, then the present scale will suffice to keep in health relief labourers who do only a very moderate daily task.

6. I would therefore recommend the adoption of the opinion of the Sanitary Commissioner, Dr. Townsend, to the effect that there are not as yet any sufficient grounds whatever for any general raising of the relief wage rates in the Madras Presidency.

7. And I would again represent in the most earnest terms that, if unhappily some poor wanderers fall in a dangerously reduced condition and die, as has been the case in the relief camps near Madras, then such sad occurrences can be prevented and should be prevented, not by any general raising of relief wages, but by increased care and watchfulness in conducting house-to-house inspection, and in all the villages throughout the interior of the country, and in searching out all cases of poor creatures who wander away in search of charity and who never go upon the relief works at all.

XC.—Report by Surgeon-Major S. C. Townsend, Officiating Sanitary Commissioner with the Government of India, on the Condition of the Famine Relief Labourers in the Madras Presidency.

Bangalore, 3rd April 1877.

hysical con-
tion of
bourers
aintained
ı reduced
ale of
ages.

I was directed by the Government of India to proceed to Sholapur and put myself in communication with Sir Richard Temple under the following circumstances.

2. The Government of India in letter from the Additional Secretary in the Department of Revenue, Agriculture, and Commerce to Sir Richard Temple, No. 45, dated 16th January last, had laid down as the principle on which relief in the famine-affected districts of Bombay and Madras should be conducted, and while every effort should be made, so far as the resources of the State admit, for the preservation of deaths from famine, it is essential that the most severe economy should be practised, and moreover that, apart from financial considerations, it would not be just on the part of Government to attempt the task of preventing all suffering, and giving general relief to the poorer classes of the community, that indiscriminate charity on the part of Government would not only inevitably lead to the imposition of heavy and permanent burdens on the industry of the country, but would also tend to demoralise the people themselves.

3. In order to carry out the principle thus laid down, relief works were established of two kinds; one under the Department Public Works on which task-work could be exacted, and on which a full wage for a full task could be obtained by those who were able and willing to work; the other, works under the Civil administration established solely with the view of affording relief to persons who might be incapable of performing full task-work, or who in ordinary times would not undertake out-of-door labour. These Civil relief works have for the most part been established near the centres of population and conveniently near the homes of the people that would come on them. But while the Civil works form a very necessary part of the measures of famine relief, they are attended with the danger of creating difficulties in the labour market by withdrawing numbers of labourers from the usual occupation, and also of inducing a large influx of persons of both sexes who are not really in need of relief. In order to obviate this danger it was necessary to fix the rate of wage as low as possible, and to make it no more than is sufficient to maintain the applicants for relief in fair physical condition under the light amount of labour exacted from them.

4. Up to the middle of January the rate of wage in the ceded districts of the Madras Presidency was 2 annas per diem for a male adult and proportionately less for women and children. This rate was fixed on the supposition that it would purchase $1\frac{1}{2}$ lb. of grain per diem, a quantity which was deemed essential for a man while at work. But it seemed to Sir Richard Temple that this rate of wage was too high, and that it had the effect of inducing numbers to come on the works who were not really in want, and withdrawing many from their usual occupations which were still open to them. He

---

* Note.—That is to say—

$10\frac{1}{2}$	annas for a	man,
$8\frac{3}{4}$	„	woman,
$5\frac{5}{8}$	„	working child,
$1\frac{3}{4}$	„	infant unable to work,

per week, when food is not dearer than 8 seers (16 lbs.) per rupee.

accordingly recommended in his minute of the 19th January that the rate of wage given on Civil relief works should be reduced from 2 annas to 1½ for an adult, which at the prevailing prices would purchase a pound of grain, and leave a margin for condiments, vegetable, and the like. This recommendation was in effect adopted, and a reduced rate of wages ordered in the Madras Government order No. 329, dated 31st January 1877.

Physical condition of labourers maintained on reduced scale of wages.

5. The reduced rate was fixed so long as grain could be bought at 16 lbs. per rupee at 1½ anna for adults, 1¼ anna for women, 9 pie or ¾ of an anna for children above seven years of age. This rate appears to have been brought into force generally on the relief works from the 15th to the 20th February. The practice is not uniform on all works with respect to payment for Sunday. On most of the works it is given; in some, as at Adoni and Cuddapah, it is not.

6. About the same time the allowance of 3 pie or ¼ of anna to children too young for labour was sanctioned, a measure which practically nullified the reduction in the case of married people with three or more children which they had been obliged to feed on the former rate of two annas.

7. In a letter to the Secretary to the Government of Madras, No. 115, dated the 13th February, Dr. Cornish, the Sanitary Commissioner for Madras, objected to the reduced scale of diet recommended by Sir Richard Temple, that it was not sufficient to maintain labouring persons in health, and that its adoption was fraught with great danger to the health of the people. Dr. Cornish's objection to the scale was founded chiefly on physiological grounds, that a pound of any of the grains used by the people did not contain the nitrogenous elements of food in sufficient quantity to supply the waste of the muscular and other tissues under labour. As Dr. Cornish's argument on this point seemed to Sir Richard Temple open to question, and as the conclusion arrived at, if acted upon, would involve a large increase of expenditure on famine relief, Sir Richard Temple deemed it advisable to ask for another opinion on the subject, and on the 16th of March I was directed to proceed to Sholapur and join Sir Richard Temple.

8. The point in question cannot in my opinion be decided on physiological grounds. It is true that some years ago the doctrine on the subject was, that muscular exertion entailed waste of muscular tissue, and that in order to compensate this waste, food containing nitrogenous principles must be supplied in proportion to the labour undergone, but later investigations have, I believe, tended greatly to modify this teaching, and certainly at the present time there is no theory on the subject so generally accepted or founded on data so incontrovertible that no economic question involving the expenditure of large sums of public money can be decided by it.

9. The question of the sufficiency or otherwise of any scale of diet can only be decided by observation of its effect on individuals and on masses of people, and observations of this kind in a time of scarcity like the present, if conducted impartially and without bias towards theories, cannot fail to contribute facts bearing on the question of the quantity of food of different kinds that is necessary to the support of the human system under certain conditions which would be of great value, from a scientific point of view, as well as for guidance in the conduct of measures of relief in future times. Observations of this kind, however, are beset with certain difficulties and sources of error, which have to be guarded against. Accurate information is wanting regarding the state of the people when they first came on the relief work, and again of their state when the rate of wages was reduced. Moreover, a knowledge of the aspect and condition of the poorer classes in ordinary times is requisite to enable one to form a just estimate of the effect that the prevailing scarcity may have had on them. I have no knowledge of the population of this Presidency, but considerable experience in other provinces leads me to believe that at all times signs of mal-nutrition are more or less visible among the poorer classes of the populations of India. A loose and shrivelled skin, a pale and anæmic aspect and emaciation will certainly follow privation and insufficient food, but the same appearances may arise from defective nutrition resulting from constitutional debility or disease. Again when famine presses hard on the population, diminutive and emaciated infants become numerous and form one of the most painful evidences of the prevailing distress; but in the best of times, if any large portion of the poorer classes were subjected to inspection, the number of these distressing objects would be considerable. Our statistics show that the rate of mortality of infants among the population of this country is as high or even higher than in the manufacturing districts of England, and it is more than probable that the number of women who are unable to nourish their infants is as numerous here as in other countries, while it is not the habit of the mothers to supplement their own defective supply by other food. In short, the scale of living among the population of this country is at all times low. Diseases resulting from mal-nutrition are common, and the rate of mortality compared with that of other countries is very high; therefore when inspecting masses of people

Physical condition of labourers maintained on reduced scale of wages.

collected from the poorer classes with the view of estimating the effects of abnormal scarcity among them, a very large allowance must be made for what may be called permanent poverty, and which it is beyond the power of Government to remove.

10. The want of accurate information as to the extent to which the people on the relief works possess sources of support, other than the daily wage given them, is another obstacle in the way of forming a correct estimate of the sufficiency or otherwise of that wage to maintain them in fair condition. Where the gangs are encamped on works away from their homes, and where the men are equal to or outnumber the women, it is probable that the majority are dependent solely on the wages they earn; but when the works are near the larger towns and the gangs are composed to a very large extent of women and children, it may be assumed that the men are earning wages in some form elsewhere, and that the earnings of the women and children are simply accessory to the ordinary means of support. On the other hand, inquiry will often elicit the fact that individuals on the works are supporting with their earnings a child or relation at home besides themselves.

11. But notwithstanding these difficulties it is possible by a careful scrutiny of large gangs of people in different localities, combined with information derived on the spot from the officers who have superintended the relief measures from the commencement and have watched the condition of the people, to arrive at a fair estimate of the extent to which the people have suffered and are suffering from the prevailing scarcity of labour and dearness of food, and how far the measures adopted for their relief have proved successful.

12. The appended notes give the details concerning the several gangs that I have inspected in the course of my tour. I will here only direct attention to the points more particularly bearing on the question of the sufficiency of the reduced rate of wage. The first bodies of relief labourers that I inspected were at Sholapur in the Bombay Presidency. Here there were two bodies of labourers, a large body of upwards of 3,000 employed under the Department Public Works, and performing about half the task ordinarily exacted from able-bodied labourers. The men were receiving $1\frac{3}{4}$ annas, the women $1\frac{1}{4}$, and the children $\frac{3}{4}$ of an anna. Here there was no question as to the sufficiency of the food. Men, women, and children appeared in good condition, and there was no doubt on the part of the officers superintending the works that the wage was quite sufficient for the support of the labourers in health.

13. The other body of labourers was employed under the Civil authorities and numbered about 300. A large proportion of them was above middle age, and they had come on the works in January in an enfeebled state. Some of these people had improved since they came on the works, but as a body they were much lower in condition than the gangs under the Department Public Works. The wage given was in both instances the same, with the exception that the men employed on the Civil works received only $1\frac{1}{2}$ annas instead of $1\frac{3}{4}$; in neither case was payment given for Sundays, when no work was done. The lower condition of the Civil gangs was no doubt due chiefly to the circumstance that they had become more reduced before coming on the work. The average age of the adults was greater, and it is probable that at the best of times they were below the average in physique.

14. At Adoni I inspected nearly 13,000 relief labourers, the greater majority of whom had been on the reduced rate of wage for above a month. The task-work performed was very light, not more than one-tenth of the task exacted from a coolie in ordinary times. The largest gang employed on the Yemmogamir road was composed chiefly of inhabitants of the town of Adoni; the other gang contained chiefly people belonging to the agricultural population. As a rule, all these people were in fair condition, and in the opinion of the relief officer they had not deteriorated since the reduced rate of wage had been in force. There were of course exceptions, and weakly and feeble people were here and there picked out; but these exceptions consisted of persons who have never been in good health and condition, or it was found on inquiry that the individuals shared their wages with a child or other relative.

15. At Bellary I inspected upwards of 10,000 relief labourers. At the Hiliyal road, where a large body of 7,500 was employed, the men considerably outnumbered the women. Task-work was exacted, and if the task was not complete, less wage was given; and the great majority were receiving less than the reduced rate. There was, however, no sickness among them. The number whose appearance called for inquiry was very small, and the impoverished appearance of the individuals lighted on was usually accounted for in much the same way as at Adoni. The relief officer stated that these gangs had improved greatly in appearance since the works were established, and they had certainly not fallen off since the reduced rate of wage had come into force.

16. In Cuddapah I inspected two bodies of labourers; one numbering 950, employed close to the town and station, consisted chiefly of the inhabitants of the town, and the women greatly outnumbered the men; and several of these women were the wives of syces and other servants of Europeans. The daily task exacted was light and was commonly completed. In my opinion these people were in appearance little, if at all, below the standard of health common in the town populations of this country. Some were no doubt thin and anæmic, but the number was small, and in the majority of these cases the individuals had only lately come on the works or had been suffering from fever. The other gang, 800 strong, that I inspected in Cuddapah was composed chiefly of agricultural population belonging to the surrounding villages. Here also the women generally outnumbered the men, who were said to find work elsewhere. The general appearance of these people was very good. A very large number of the men and women were as stout and healthy-looking as they could be in the best of times; here and there thin and weakly persons were observed, but on inquiry it did not appear that their weak condition was attributable to want of food. The relief officer stated that when the people received the higher rate of wages they did not spend more in food that they do now, but saved the difference, and they have not deteriorated in condition since the wage was reduced. Physical condition of people maintained on reduced wage.

17. At Vellore, North Arcot District, I inspected altogether about 3,000 people: 1,120 employed and 400 applicants for employment in the construction of an embankment on the Palaar River, may be considered as samples of the population who have not hitherto been on relief, for those employed had been collected some for about a fortnight, others for not more than a few days. The proportion of men employed here was small, being only 7 men to 28 women and children, and a very large proportion of the men were old or elderly. The task exacted here is 75 per cent. of the ordinary Department Public Works rates, and the people are paid at the following rates:—

Men - - - -	1 anna 11 pie.
Women - - - -	1 anna 5 pie.
Children - - - -	1 anna.

This is higher than the reduced rate given in other districts, and seven days' payment is given for six days' work. The elderly men were most of them of spare habit, but they were fairly muscular and their appearance healthy. The younger men were for the most part robust and in good condition. At the Sooriaghuta tank 1,600 people are employed, and here the proportion of men is very small, being only 3 to 35 women and children. This small proportion of men on the works is attributable to the circumstance that in this part of the country agricultural operations and other means of employment are not suspended to the same extent as in the ceded districts, and that the able-bodied men are for the most part employed in the occupations that engage them in ordinary seasons; but at the present prices of food their earnings do not suffice to maintain their families, and women, who in ordinary times would not undertake coolie labour, are on this account induced to come and earn additional means of subsistence on works which are conveniently near their homes. The gangs at the Sooria tank were first formed on the 24th November. From the 19th February to the 25th March they were on the reduced rate, but it has now been again raised to the same rate as on the Palaar Embankment, because the people did heavier tasks. As a body, these people were in fair condition, and so far as I was able to ascertain did not deteriorate or show signs of weakness during the five or six weeks that they were on the reduced rate of wages.

18. At the Vellore relief house 700 people who are incapable of work are fed. The proportion of men and women is about equal. Each adult male receives daily 1 lb. of dry rice cooked; 10 ozs. of this is given at 10 o'clock, and the remainder in the evening. To the evening meal is added half an ounce of dal mixed with vegetable and condiments in the form of curry. In many of these people the effects of famine are very evident, particularly among a number of people who have come in from the Kulhustri zemindari, but they are improving on the food now given them.

19. Taking the evidence that has come before me in the course of my tour, I can arrive at no other conclusion than that the rate to which the wage of the relief labourer was reduced on the recommendation of Sir Richard Temple is sufficient to support them in fair condition, provided that care is taken that the individual recipient is the only person who is supported on it. And I see no reason why the wage should be raised unless an equivalent amount of work is performed.

No. 197.

No. 221. NOTES by DR. TOWNSEND, Officiating Sanitary Commissioner with the Government of India, deputed at the request of SIR RICHARD TEMPLE to investigate and ascertain whether the Scale of Wages now given to the People employed on the several Famine Relief Works is sufficient to support them in fair health.

Bangalore, April 3, 1877.

Reduced scale of wages. Report by Dr. Townsend after inspection of people.

Sholapur (*Bombay*), *March* 20*th*.—Inspected a large body of people, about 3,000, including women and children employed under the Department Public Works in excavating a large tank (Moti Bagh). The men are employed on task-work, the daily task being 54 cubic feet, or about half the ordinary task for an able-bodied coolie; for this he receives 1 anna and 9 pie. The women and children employed to remove the earth excavated receive $1\frac{1}{4}$ and $\frac{3}{4}$ of an anna respectively. No work is done and no pay given on Sundays.

Men, women, and children are in good condition. They exhibit no signs of being underfed, and there is no sickness among them attributable to insufficient food. I inspected the camps, and many of the people were preparing their evening meal; some had jowari, many wheat of a rather inferior quality, some Indian corn and jowari mixed; others bajra and toor. Salt, chillies, onions, were in common use. The young children were in very good case.

March 21*st*.—This morning rode out with Mr. Percival, the Collector, to visit a gang of labourers employed under the Civil authorities in excavating a tank about three miles from Sholapur. These were a much poorer lot than the gangs employed on the Moti Bagh tank. A very large portion of them were old and infirm, or in some way incapacitated for hard labour. Task-work is not exacted, and they accomplish very little in the day. The number employed here was about 300. The men receive $1\frac{1}{2}$ annas, the women $1\frac{1}{4}$ annas, and the children 7 to 9 pie. The bigger lads are reckoned as women Children too young to work receive 3 pie each.

The greater number of these people had been on the work at the above rate of wages since the middle of January. Their condition varied considerably. Many were stout and in good condition; others were thin and weakly. The majority of the latter were old and infirm, but there were a few among the lads and young women who were undoubtedly suffering from the effects of insufficient nourishment. These cases, however, had come on the relief work very feeble and emaciated, and they had improved since. The young children were in very good condition and looked to be well cared for.

On the way back we inspected the charitable relief house, where about 200 people, old and infirm, or from other causes incapable of work of any kind are relieved. All were fit recipients of relief.

Adoni (*Madras*), *March* 26*th*.—Inspected with Mr. Oldham and Captain Hamilton.

1. Inefficient gang established 10 days and composed of persons who had previously been in receipt of charitable relief at the relief house, and of old and weakly persons drafted from other gangs. The number, including women and children, was 253. They were employed on light work, forming platforms for the sheds constructed near the railway station for storing grain.

Ration given—

To men	- - -	$1\frac{1}{2}$ annas.
,, women	- - -	$1\frac{1}{4}$,,
,, children on works	-	$0\frac{3}{4}$,,
,, young children	- -	$0\frac{1}{4}$,,

Only the inefficient gangs receive pay or relief on Sundays.

Many old people were thin and shrivelled by reason of age. Only two old women looked weakly. There were no symptoms attributable to insufficient food. The children as a body were in very good case. Two infants, very thin and miserable-looking, had been suffering from fever.

2. A body of people numbering nearly 700 wanting work. These were mostly people who had been employed on relief works, but who had been discharged in consequence of their refusal to shift to works not more than 10 miles distant. The condition of the people was generally good, especially the women and children. The people who looked in worst condition were a few who had not been on any relief work at all.

3. A gang of 507 workpeople.—These people have been on works for some months altogether, and for one month on the reduced scale above given. As a body they appear to be in good condition. No sickness among them, with the exception of small-pox among the children. A few that we picked out as looking rather weakly had been only a few days on the works. One man had been feeding two children who were not in receipt of relief. Practically task-work is not exacted.

Five hundred cubic feet of earth-work is assigned to 50 men, which is half the ordinary task, but on measurement it is found that they execute only one-fifth of the task assigned.

Reduced scale of wages.

4. Gangs from Sirgoopah Road, 1,208 in number, exclusive of very young children.—The condition of the women here was not so decidedly good as in the gangs close to Adoni. There was, however, nothing in their appearance to afford ground for fear that they were not now receiving sufficient nourishment. The condition of the men and the children on the other hand was very good. In some few cases men whom we lighted on as looking weakly, were found on inquiry to be sharing their ration with a wife or child at home.

Report by Dr. Townsend after inspection of people.

5. A gang of applicants for labour, 139 in number, who had struck work on being selected for transfer to a short distance 20 days ago.—All in very fair condition. In a similar gang belonging to the Aloor taluk, 220 in number, a few persons exhibited signs of having been insufficiently fed.

6. Gang of Madaveram, 3,100, inclusive of 400 young children.—As a body, men, women, and children in good condition. Here and there where a weakly-looking individual was lighted on, it was found that he or she was suffering from fever, or sharing his ration with a relation not on the works.

7. Yemmigenoor Road.—Gang 7,000 strong, including women and children.—The greater number of these people are inhabitants of Adoni, and come out daily to the work, a distance of four or five miles. The total population of Adoni is stated to be 25,000. As a body, men, women, and children are in good condition. The young men and women with few exceptions were plump and well nourished. The exceptions consisted of persons who at no time are in good health and condition; one youth, for instance, consumptive; another had the scars of old ulcers in the thigh, and was lame from this cause; a third had a withered hand. Among the older people many exhibited that shrivelled condition of skin which is common among elderly natives of this climate at all times; but in other respects they were in good condition and looked healthy. In cases exhibiting weakness and want of nourishment the same explanation was given as in the gangs previously inspected. Either the individuals had been suffering from fever, or a child or other relation was sharing their means of subsistence with them. This was particularly the case with some of the women, for the allowance of 3 pie to each young child had not been distributed to the full extent intended by Government. The Adoni relief officers are now remedying this shortcoming.

Bellary, March 27th.—Gooty Road.—Gangs assembled on the fifth mile. The whole number employed from the fifth to the tenth mile amounts to upwards of 7,000, but the order to bring them together for inspection did not reach the relief officer sufficiently early, and not more than half were collected for inspection. The wages here given are the same as at Adoni. As a body, the people were in good condition, and a large number of the men who were stout and able-bodied were selected as fit for transfer to the Nellore irrigation works, others for the earth-work of the line of railway to be constructed from Bellary to Dharwar. Of those selected for transfer to Nellore about 50 per cent. consented to go.

Bellary, March 28th.—Hiriyal Road, sixth to eighth milestone from Bellary.—Gangs numbering altogether 7,500 * have been established three or four months. The employment consists in breaking and stacking metal and in excavating gravel. Task-work is exacted at the rate of six cubic yards from each gang, consisting of 25 men, 20 women, and 5 children; and for this task the payment is $1\frac{1}{2}$ annas men, $1\frac{1}{4}$ annas women, and 9 pie children; but very few gangs not amounting to 500 people altogether complete this task in a day and draw the full wage. The great bulk receive only $1\frac{1}{4}$ anna men, 1 anna women, and 7 pie children. The young children are allowed 3 pie each.

* 3,750 men
3,000 women.
600 children above 7 years.
600 children under 7 years.

Rice is the food chiefly consumed by these people. Cholum is procurable in the shops where they purchase their food, but they buy rice in preference. The bazaar price of rice is 8 seers per rupee. Mr. Smith, the relief officer, showed great knowledge of the people under him and was able to give the history of a great number that we had reason to inquire about. As a body, these people are in very good condition. In walking down the long line the number whose appearance called for inquiry was very small, and in all or nearly all cases the impoverished appearance of the individual lighted on was accounted for:—

1st. A thin child through an oversight had not been registered in the list of those receiving the 3 pie allowance.

2nd. A very thin famished woman had only joined the work from a distant village two days previously.

Reduced scale of wages. Report by Dr. Townsend after inspection of people.

3rd. Another woman who gave the same explanation.
4th. Two brothers who had been on the work less than a week.
5th. An oldish man who had been on the work about a fortnight, and though thin had improved since he joined.

Mr. Smith, the relief officer, states that as a body these people have improved greatly in appearance since the works were established, and they have certainly not fallen off since the reduced rate of wage came into force. If on first arrival any of them are in a very bad state, they are first fed on cooked food for some days, but as soon as they are at all able they were allowed to wander on the works though without doing much, and they seemed to improve better on this plan than when kept altogether in the relief hospital. In some few cases the infants at the breast showed signs of being insufficiently nourished, but it was by no means the rule in their cases that the mother was in bad condition. At all times in a certain number of cases women will be unable to sufficiently nourish their infants.

Cuddapah, March 29th.—Inspected some gangs of labourers employed in excavation of a tank close to the town of Cuddapah. Dr. Cornish, Sanitary Commissioner for Madras, was kind enough to accompany me. They mustered 950 in all, arranged in gangs of 50, consisting of 20 men and 30 women and children. The number of children was small; the women greatly outnumbered the men, the people were chiefly the residents of the town and of villages within two miles, and the Civil Surgeon, Mr. Hyaswamy, stated that a very large number of the women were the wives of syces and other servants of Europeans. The wages given are:—

Men, 1 anna 5 pie.	Children above 7, $8\frac{1}{2}$ pie.
Women, 1 anna 2 pie.	Children under 7, 3 „

Payment is made on Sunday for six days. The daily task-work nominally exacted is 24 cubic yards of earth-work for a gang of 50. This task, which is very light, was commonly completed; but even if it were not, the wage above mentioned was generally given.

In my opinion these people were in appearance little, if at all, below the standard of health common in Native populations. Some were no doubt thin and anæmic, but the proportion in this condition was not great. In many instances individuals that struck us as being more enfeebled than others were found on inquiry to have been on the works a very short time. One of them had been on a fortnight, another came on only yesterday. A very thin weakly-looking woman had come on the works three days ago, another, a Brinjara, had been on only four days. A thin elderly man who looked weak was suffering from fever. One man, thin and anæmic, had been on the works from the commencement, but on either side of him there was a very stout strong man who had also been on the works for months.

I also inspected at Cuddapah a relief camp whereat persons coming in from the districts in a weak and enfeebled condition are supported until they become fit for work, when they are transferred to the works. The food here given is cholum and ragi mixed. Two meals are given daily at 10 and at 5, each meal consisting of 12 oz. of the above grain with condiments for an adult male. Women and children receive less. The greater number of these people were old and unequal to labour of any kind. It appeared that many of them were kept at the camp against their will; they would prefer being at large, picking up what they could by begging. No betel-nut being given was one reason why they disliked being detained in the camp.

Some of the people supported in idleness at the camp would, I think, have been more suitably provided for at the works. There was one woman, for instance, in very good condition with four children in equally good case; also a stout strong man with his family; the reason given for their being kept at the camp being that there was no one to look after the children while the parents were at work.

Cuddapah District, March 30th.—Booja road, three miles from Cuddapah.—Inspected with Mr. Macarthy 800 people divided into 16 gangs, each composed of 20 men, 25 women, and 5 children. The women generally outnumber the men, who find other work. The people all belong to the surrounding villages. They are employed in digging and stacking gravel. The daily task assigned is 18 cubic yards for each gang, a more severe task than is imposed upon the labourers at the tank inspected yesterday. It is, however, exacted without difficulty. The rate of wage is the same as the other gangs in the district. The labourers are paid once a week on Sunday for the six days. A considerable proportion of the people in these gangs, as well as in those inspected yesterday, belong to castes who eat meat. The Wudas kill and eat sheep and pigs but

not bullocks. The pariahs eat carrion or the flesh of bullocks and other animals that have died. The shepherds eat the flesh of sheep and goats that die.

Reduced scale of wages. Report by Dr. Townsend after inspection of people.

The general appearance of the people composing these gangs was good. A very large number of the men and women were as stout and healthy looking as they could be in the best of times. Here and there thin persons in weakly condition were observable, but their history did not prove their condition to be attributable to want of food.

Gang No. 1. Two thin men but not unhealthy looking.
„ „ 2. One spare weakly looking man states that he has been so for years.
„ „ 3. Two thin feeble men state that they have always been so; one sickly child has had fever.
„ „ 4. All in good condition.
„ „ 5. One feeble looking man states that he has always been so.
„ „ 6. The same.
„ Nos. 7, 8, 9. All in good condition.
„ No. 10. An emaciated boy has been on the works a fortnight and has improved since he joined.
„ „ 11. A thin weedy lad always so.
„ „ 12. All in good condition.
„ „ 13. A feeble man has a large spleen; is better now than he has been for a long time. Another sickly looking man has lately suffered from fever.
„ Nos. 14, 15, 16. All in good condition.

These gangs have been established from November last.

Mr. Quinlass, the relief officer, says that when the people received higher rate of wages they did not spend more in food than they do now, but saved the difference. They have not deteriorated in condition since the wage has been reduced. About 15 men who had been sent to Nellore returned again to these gangs. They said the place did not agree with them; that the water was bad and gave them dysentery. The task-work at Nellore appears to be harder and the maistries more severe upon people transferred from other works.

There were 26 applicants for work. Only one man among them, and he was a ryot, who had lost all his cattle, and having no other source of maintenance came on the works. He was a strong healthy man. The rest, all women and children, were in good condition.

Vellore, March 31st.

1. Relief gangs employed in constructing an embankment along the Palaar River, 1,120 people divided into 8 gangs of 32, in the proportion of 7 men, 16 women, and 12 children. Some of these gangs were formed on the 15th of March; others on the 21st to 23rd, and some as late as the 29th.

These people are employed on task-work, the task being 75 per cent. of the ordinary public works rates. And they are paid at the following rate:—

Men, 1 anna 11 pie.
Women, 1 anna 5 pie.
Children, 1 anna. No allowance is given to young children.

Payment is made once a week; seven days' pay is given for six days' work.

A very large proportion of the men employed were old or elderly, and many of them were of spare habit, as is very commonly the case with the Natives above the middle age, but they were fairly muscular and their appearance healthy. The younger men were for the most part robust and in good condition. The same may be said of the women. Many of the older women were thin and spare and some of them weakly looking, but the younger women were for the most part plump and in good condition. The children on the whole had the appearance of being well nourished.

There were present about 400 applicants for employment on these works, chiefly women and children belonging to the town. Of late too, a large proportion of Mussulman women have come on the works, and this is considered a sign that the distress is spreading to classes that have not been hitherto touched by it. The general appearance of the new applicants, however, did not indicate that they have been insufficiently fed.

2. Gangs of coolies, chiefly women, employed in fencing the relief camp. These gangs had been established about six weeks, and had been on the reduced rate of—

1 anna 5 pie for men,
1 anna for women,
9 pie for children.

Reduced scale of wages. Report by Dr. Townsend after inspection of people.

They appeared to me to be in very fair condition, and there was no sickness among them.

3. *Relief Camp.—Hospital.*—Forty-one patients, chiefly old people suffering from diarrhœa and dysentery, and it is probable that the per-centage of mortality among them will be high. There are about 700 people fed in the relief camps, the proportion of men, women, and children being about equal. In many of them the effects of famine are very evident, particularly among a number of people who had come from the Kalhustri zemindari, but they are now improving.

Each adult male receives daily 1 lb. of dry rice cooked; 10 oz. of this is given about 10 o'clock, and the remainder in the evening. To the evening meal is added half an ounce of dâl mixed with vegetable and condiments in the form of curry.

4. *Sooriaghunta tank.*—1,600 people employed in excavation work divided into gangs consisting of 3 men and 35 women and children. The gangs were first formed on the 24th November, and from the 19th February up to the 25th March were on the reduced rate of wages, viz., men 1 anna 5 pie; women 1 anna 2 pie; children 9 pie. No allowance was given for children too young for work.

No work is done on Sunday, but the people receive pay for that day.

As a body these people were in fair condition, and as far I was able to ascertain they did not deteriorate or show signs of weakness during the five or six weeks that they were on the reduced rate of wages.

The small proportion of men on these works is attributable to the circumstance that in this part of the country agricultural operations and other means of employment are not suspended to the same extent as in the ceded districts, and the able-bodied men are for the most part employed in their usual occupations; but at the present price of food their earnings are not sufficient to maintain their families, and women, who in ordinary times would not undertake coolie labour, are on this account induced to come on works which are conveniently near their homes and earn additional means of subsistence.

Telegram, dated April 4, 1877.

From Sir Richard Temple, Bangalore, to Revenue Additional Secretary, Simla.

Telegraphic summary.

Have again visited Ceded Districts and investigated matters there. Relief labourers in Madras Presidency not increasing, numbers on charitable relief slowly rising, task-work still imperfectly exacted, professional agency not sufficiently employed. I have made specific suggestion for utilising engineering staff for remedying this defect. Bellary railway work beginning, efforts to send relief labourers to East Coast Canal not yet successful. Dr. Townsend, Sanitary Commissioner, Government of India, has inspected 29,000 relief labourers on reduced wages in Madras districts, and finds their condition good on the whole. I agree in his view. Showers have fallen in parts of Madras Presidency. Impression increasing that people show more power of sustaining themselves, and that stocks and stores of grain are more adequate than was originally anticipated. Favourable rain nearly two inches has fallen all over Mysore province, doing great good for water-supply, fodder, and agriculture. Prices at Bangalore cheaper in consequence, and population inspired. Grain supply in Mysore abundant. Relief works appear adequate in Mysore, and village relief generally sufficient.

No. 199.

No. 19 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, April 5, 1877.

Telegram from ryots of Sholapur and Poona. As to truth of facts alleged.

We replied briefly, by telegraph, on the 12th ultimo to your Lordship's telegram of the 6th idem, which requested us to obtain confidentially information as to facts alleged in a telegram, signed professedly by ryots of Sholapur and Poona, which had been received by your Lordship and others. A telegram in explanation of the facts was also sent to your Lordship on the 8th ultimo by the Government of Bombay.

2. On reference to the Government of Bombay we learn that—

1st. Wages have not been reduced except on Civil agency works. Simultaneously with the reduction large works under Public Works Department were opened, on which old rates were maintained. These works are still available, and ready to take as many people as require relief and will work for their wages.

2nd. Wages on Public Works Department works 2 annas, will purchase 2 lbs. of grain while grain is dear, more when grain is cheap. Wages on Civil agency works will purchase $1\frac{1}{2}$ lbs. of grain, and so the Sabha's statement is incorrect.

3rd. Children under seven years of age whose parents are on relief works get 3 pies = 1 pice. This is an act of charity or grace on the part of Government, and is given even to infants. Children over seven years of age are employed on works, and draw regular wages according to the scale in force.

4th. Only one death is believed to have occurred from starvation.

5th. The Sarvajanik Sabha are interested in the question of remissions, as some of its members are the real owners of land in certain districts.

6th. They regret the transfer of Mr. Grant from Sholapur, as they have lost much influence by it and by the stricter system of relief which now prevails.

3. The Bombay Government report, on the subject of the authorship of the telegram, that "it was no doubt sent, as it purports to have been, by the Sarvajanik Sabha, a "political association or club, having its head-quarters in Poona and a branch at "Sholapur."

We have, &c.

(Signed) F. P. HAINES.
ALEX. J. ARBUTHNOT.

No. 200.

Revenue, No. 28.

From the SECRETARY OF STATE FOR INDIA IN COUNCIL to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, April 6, 1877.

Reply to Nos. 43. 44. 65. 66.

Para. 1. I have considered in Council your letters of the 2nd and 9th February last, Nos. 7, 8, 9, and 10, Revenue, Famine.

2. I have in other Despatches informed you that the Government highly approve of the measures which you have taken for the relief of distress in the Presidencies of Madras and Bombay, and have expressed their sense of the vigilance and sagacity which have marked your policy.

As to the difference of opinion between the Governments of India and Bombay.

3. On the present occasion I propose to make some remarks upon the points in respect to which a difference of opinion has arisen between the Government of India and that of Bombay. The extent of this divergence appears to me to have been much overrated by the Government of Bombay, and in itself would hardly require any notice from me. But the emphasis which has been laid upon it by that Government makes some observations on my part necessary.

4. The two points of presumed difference upon which the Bombay Government have laid stress are, the extent to which the obligation of giving relief should be accepted, and the mode in which relief labour can be most advantageously employed.

5. With respect to the first of these two points, I am unable to see the divergence to which the Bombay Government has called attention, and which, apparently, has embarrassed their decisions. I gather that these difficulties arise from seeking for an exactly defined rule, in a case where exact definition is impossible. Both your Government and that of Bombay concur in the wise and humane principle that human life shall not perish

As to the difference of opinion between the Governments of India and Bombay.

through want, when it is in the power of the State to preserve it. Both Governments are equally sensible of the necessity of guarding this rule from being wrested to the encouragement of indolence or of waste. It follows that the grievousness of destitution must be ascertained by labour tests, severe enough to deter from accepting relief all who can possibly obtain subsistence in any other way, yet not so hard as to repel those who are really starving. Special provision is requisite for the case of secluded women and of the infirm, and for the rarer cases where caste feeling makes gang labour inapplicable.

6. Any administrative rule may be damaged in argument by the suggestion of extreme cases for which it will not provide a solution. In the present instance, it is possible to ask, as the Bombay Government have done, what is to be done if you meet with a man whose love of life is so feeble, or whose dislike of exertion is so overpowering, that he had rather starve than work? Such a state of feeling cannot have been of long standing, as the subject of it must have long since died, at least if he belonged to the classes whom a few months of famine could reduce to a dependence on State aid. Of such singular exceptions, if they exist, it is only necessary to say, that they can be provided for by no rule, but must be left to the discretion of the officer who meets with them.

7. The other subject of discussion is of considerable importance, though the extent of the difference of view between your Government and that of Bombay has not in the end proved to be very large. The Government of Bombay were from an early period of opinion that the calamity should be treated as one of great magnitude, and that consequently relief works should be organised on a large scale. Proceeding on the assumption of a widespread famine, which events have unhappily justified, their policy was evidently sound. The most important argument in its favour is that effective supervision can be provided for one large work at far less cost than for many small works. The President in Council, however, upon the evidence before him, considered that the organisation of large relief works was premature, and was reluctant to sanction the commencement of undertakings which, except as famine works, the state of the finances would not justify the Government in completing. His objections were naturally fortified by the circumstance that the estimates furnished by the Government of Bombay for the works which they proposed were in some instances too imperfect to enable the Government of India to calculate the burden which their consent would throw upon the Treasury.

8. The Government of Bombay deserve great credit for the accuracy with which they foresaw the gravity of the calamity that was impending, and the energy of the measures which they took to meet it. At a greater distance from the localities where the distress was showing itself, the Government of India for some time were disposed to wait for more conclusive evidence, and in the meantime to be guided by the general principle that relief works ought to be proportionate to the distress they were intended to relieve, both in respect to duration and extent. When the evidence was more fully laid before them, the Government of India resolved to sanction a system of larger works, in view of the wider distress which it was necessary to relieve.

9. Large works admitting of the employment of a considerable number of men are more suitable for the relief of extensive calamities like the present, not only because they admit of a less costly supervision, but also because they furnish a more effective test of destitution than smaller local works. For a large work the greater number of those employed will have to move a considerable distance from their homes, and a necessity so unwelcome generally to the labouring classes in India offers a security that only those will submit to it who are forced to do so by the entire destitution of every other means of sustenance. A similar guarantee is not offered by the repair of village tanks, which are mostly accessible from the homes of those who are employed upon them.

10. In the selection of the larger works for the employment of the destitute population, it is undoubtedly desirable to prefer, where such a choice is possible, those which will be in some degree remunerative to the Treasury. I was therefore glad to learn that you had sanctioned the commencement of the earth-works of railways through the affected districts. The work, if completed as a railway, may not pay full interest upon the cost of its construction, but it will, from its first opening, contribute something towards that expenditure. A work, on the other hand, like a great road, though perhaps nearly or quite as advantageous to the inhabitants of the country through which it passes as the railway, will directly yield nothing towards defraying the yearly cost which its construction will entail upon the Exchequer. A very long period must elapse before its indirect effects will influence the revenue. Wherever, therefore, it is possible to do so, a directly remunerative work should be selected.

I have, &c.
(Signed) SALISBURY.

No. 201.

Revenue, No. 29.

From the SECRETARY OF STATE FOR INDIA IN COUNCIL to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 6th April 1877.

The Despatch of your Excellency in Council, dated 23rd February, No. 12 of 1877, forwarding further minutes and memoranda by Sir R. Temple relative to the famine in the Presidencies of Madras and Bombay has been considered by me in Council. Reply to No. 115.

2. The information contained in this Despatch and its enclosures has been, for the most part, anticipated by telegrams from your Excellency in Council. The minutes of Sir R. Temple are full of interest, and I have only to record that the intelligence to be gathered from the Despatch and its enclosures is, on the whole, more reassuring than could have been anticipated.

3. I fully concur in the praise bestowed by your Lordship in Council on the punctuality, care, and ability with which the tabular returns of the Bombay Presidency have been prepared, and I join with your Government in congratulating the Government of Bombay "on the manner in which the substantial safety of some five millions of people is being "secured under circumstances of great danger."

I have the honour to be, &c.

(Signed) SALISBURY.

No. 202.

Telegram, dated 6th April 1877. No. 213.

From SIR RICHARD TEMPLE, Bangalore, to REVENUE ADDITIONAL SECRETARY, Simla.

Doctor Townsend has inspected 34,000 relief labourers in distressed districts of Bombay and Madras; he has submitted a full minute. The final paragraph is as follows:—Taking the evidence that has come before me in the course of my tour, I can arrive at no other conclusion than that the rate to which the wage of the relief labourer was reduced on the recommendation of Sir Richard Temple is sufficient to support them in fair condition, provided that care is taken that the individual recipient is the only person who is supported on it, and I see no reason why the wage should be raised unless an equivalent amount of work is performed. I have laid Dr. Townsend's paper before Government, Madras, with expression of my full concurrence in Dr. Townsend's views. Copies have gone to you. The reduced scale of wages.

No. 203.

XCII.—MINUTE by SIR RICHARD TEMPLE, explanatory of his reasons for recommending the Commencement of the Earth-work of the Conjeveram and Chingleput Railway Project. No. 221.

Bangalore, the 6th April 1877.

In memorandum No. XXVII., dated 30th January, were explained the reasons why I was then unable to recommend that the proposed railway from Chingleput to Conjeveram should be undertaken as a relief work. It was explained that the proportion of the cost that would be expended on relief wages was small, and that the financial prospects of the proposed line did not seem very good. The Conjeveram and Chingleput Railway project.

2. Since that memorandum was submitted the Government of India have been pleased to sanction my proposal that the earth-work of the Bellary and Hubli line should be begun as a relief work, without the Government being pledged to complete the line; which case establishes the principle that in a dearth of large projects for employment of relief labour the earth-work of any such project may be commenced, even though the Government may not be able at present to complete the scheme.

Further I have seen in the Madras Presidency that there is great need for large works, on which a large number of relief labourers can be concentrated under adequate professional supervision. My minutes dated the 18th and 29th March set forth the great advantages to be obtained by placing relief works under professional supervision. In Chingleput and North Arcot districts there was special need for professionally supervised works. So long, therefore, as the Government of India was not committed to the completion of the proposed line, I considered that it might be better to employ relief labourers

The Conjeveram and Chingleput Railway project.

under engineering control on a work that might hereafter be useful, than to leave them all on the scattered Civil works, whereon little real labour was exacted, and over which there was practically no adequate supervision.

3. Under these circumstances it seems to me that the conditions under which the Chingleput and Conjeveram Railway project presents itself have altered. I have now, therefore, recommended that, subject to the restriction above mentioned, the earth-work on the proposed Conjeveram and Chingleput Railway should be begun as a relief work, whether the line be subsequently completed or not. And that recommendation the Government of India has been pleased to approve.

No. 204.

Nos. 205. 221.

XCIII.—Minute by Sir Richard Temple regarding the emigration of people from the Mysore Province to the relief institutions in Madras districts.

Bangalore, 6th April 1877.

Migration from Mysore to Madras districts.

I have, while at Bangalore, investigated the facts regarding the emigration of people from the Mysore Province to the relief works and relief houses in British districts of the Madras Presidency. At one time there were some, perhaps many, thousands of Mysore people on the relief works in the Bellary and Cuddapah districts; and there were large bodies of Mysore labourers in the coffee districts of the Wynaad. Immigrant labourers from Mysore do indeed flock yearly to the coffee districts, and do much useful work there. This year, by reason of the scarcity, double the usual number emigrated to the Wynaad, and as the coffee crop was short there was less than the usual quantity of work to be done.

2. In my minute No. XXXVII., dated 16th February, I expressed my opinion that the distressed people of Mysore could be relieved by the Mysore Government which had made adequate provision to that end, and I advised that such people should, after receiving temporary relief, be sent back under proper arrangements to their homes.

3. If there were still at this time any considerable number of Mysore people receiving or needing relief in British districts, then I should advise that the Chief Commissioner's offer to depute an officer, who would take over such refugees, should at once be accepted. For there is no reason why the British Treasury should be burdened with the support of distressed persons from neighbouring States, which are both able and willing to relieve their own people.

4. But, as matters now stand, there seems no present need for action. The Wynaad coolie question is settling itself, for the Collector reports that the Mysore emigrants are returning to their homes. It is probable that while they were in the Wynaad they had earnings or other means of supporting themselves at least until they could recross the Mysore frontier.

5. In Bellary and Cuddapah the numbers of Mysoreans appears comparatively trifling. On the borders between provinces like Bellary and Mysore there will always be some interchange of population in times like this; and the Commissioner of the Nundidroog division recently learnt that several hundreds of British subjects from the Pennekonda division had come to the relief centres in Kolar and Bangalore, having fled from their home by reason of the cholera which was then raging.

6. Although there is no present need for action, yet, if hereafter there should be any large gathering of Mysore people on relief works, or at relief centres, I consider that early intimation should be given to the local officers in Mysore, so that the Mysore authorities might promptly take over and relieve their own people, as indeed they are very ready and able to do.

No. 205.

No. 221.

XCIV.—Memorandum by Mr. Bernard, respecting Mysore people in the Madras distressed districts.

Bangalore, 2nd April 1877.

Migration from Mysore to Madras districts.

The case now stands on this wise:—

Mysore declined to pay the charges which Madras might incur in relieving Mysore immigrants either by relief wages or otherwise. But Mysore offered to send and fetch back her people. Accordingly an Assistant Commissioner was sent from Kolar to Pennekonda to fetch back Mysore people who might be on the Bellary works. But

none were found in Pennekonda, and only 35 in the other taluks. So the Assistant Commissioner came back empty. Migration from Mysore to Madras districts.

2. It was about Pennekonda that the question first arose. Subsequently Madras represented that Mysore people were surging over into Coimbatore; and specially that large numbers* of people, who had gone to the Wynaad for employment on the coffee estates, were now practically on the hands of the Madras Government, for there was no coffee labour to be had, and the people seemed disinclined to go back to Mysore. The correspondence between the Collector and the planters shows that there is much want of roads in the Wynaad, and the present is considered a favourable opportunity of getting these roads made. The Madras Government inquired whether Mysore would contribute one-third the cost of these roads, on the ground that Mysore poor would be employed thereon and sustained thereby. Mysore declined the offer, because she too had plenty of good relief works waiting to be done, and on which in some places workpeople would not come. At the same time Mysore repeated the expression of her readiness to send and fetch her people home.

* Note.—In the correspondence the Collector of Malabar offers no estimate of the number of these immigrant Mysoreans. But at Madras the figure was stated (no doubt roughly) at 60,000. We telegraphed yesterday to know what was the Collector's estimate of the numbers.

3. Madras has now replied asking that Mysore would at once send officers to fetch back her people from the Wynaad, Coimbatore, Bellary, and Cuddapah, and has begged that Mysore will take steps to prevent her people immigrating into Madras country for the future.

4. The Chief Commissioner of Mysore is now ready to send officers and will do so. The largest number of his tenants are said to be in the Wynaad; he has works close to the border to employ them, and he has relief houses along the road whereat the returning emigrants can be fed as they come along. But he anticipates that many of them will be quite unwilling to come back, if they can get easy, highly paid, work in the Wynaad. He foresees too that there will be difficulty, and there may be loss to the coffee interest if emigration from Mysore into the Wynaad is permanently checked or restricted. The Chief Commissioner has suggested that the Wynaad authorities should decide which Mysore people ought to be sent back home, and which should be kept.

Bangalore, 2nd April 1877.

Bangalore, 6th April 1877.

P.S.—After the foregoing paragraphs were written telegrams were sent by Sir Richard Temple's order to the Collectors of Malabar, Bellary, and Cuddapah, asking for an estimate of the number of Mysoreans needing relief in the Wynaad, in Bellary, and in Cuddapah. The Collector of Malabar replied that "no Mysore people in Wynaad now "need relief. They are returning already to Mysore, and all say they intend returning, "as crops and prospects have improved at home." The Collector of Bellary replied that he estimated "the Mysoreans on relief works and receiving gratuitous relief at not "more than a few hundreds." The Collector of Cuddapah replied that he could "form no estimate," as he had "no data."

No. 206.

XCV.—Minute by Sir Richard Temple on the present condition of relief affairs in Mysore. Nos. 207. 221.

Bangalore, 6th April 1877.

I have again inquired into the state of relief affairs in the Mysore Province. I find that the total numbers on relief are now 116,000, equal to about 2 per cent. of the total population of Mysore, or about 3¼ per cent. of the population of its distressed tracts. An unusually large number of Mysore people had emigrated to the coffee districts, and though they are now coming back, yet for some months they obtained subsistence by working on the plantations. When the failure of season, which is now going on for the third year consecutively, is remembered, these numbers appear very moderate, and show, firstly, that the people must be in good condition and must have some self-sustaining power; and secondly, that the authorities are administering relief very carefully and economically. Condition of relief in Mysore favourable.

2. The results of relief administration in Mysore still compare favourably with the neighbouring districts of the Madras Presidency, namely, the ceded districts and Kurnool, even after all the economy and reduction which have been introduced into those districts.

3. The labourers on the relief works are all employed on piece-work at rates somewhat cheaper than the piece-work rates of the Public Works Department in ordinary years.

ondition of lief in ysore.

They can earn in this way enough to support themselves, and they are in fairly good physical condition. Their earnings on piece-work are estimated to amount to 2 annas per diem for adult men. The people who receive gratuitous relief at the relief centres, also do a certain amount of light work. From the helpless poor, who are relieved at their villages through the agency of the patels (village headmen), no work of any kind is exacted.

4. I am still of the opinion expressed in my minute, dated the 14th February, that the Government of India and the Chief Commissioner may be satisfied with the progress of relief affairs in the Province of Mysore. Already favourable rain has (1st April) fallen over the whole province; prices have fallen, and the people are taking courage.

No. 207.

lo. 221.

XCVI.—Memorandum by Mr. Bernard on the present condition of relief affairs in Mysore.

Bangalore, 6th April 1877.

Since Sir Richard Temple was in Mysore last, the following changes have occurred in the relief operations and their results :—

(1.) The distressed districts are much the same as before stated, except that severe distress has declared itself in the northern taluks of the Mysore district.

(2.) The number of labourers on the relief works has increased somewhat, and so also have the numbers on charitable relief, thus :—

Name of District.	Total Number on Relief Works.		Number on charitable Relief.		Total on all Relief.	
	In January.	On 15th March.	January.	15th March.	January.	15th March.
Bangalore - - -	13,000	18,200	11,500	10,300	24,500	28,500
Municipality - - -	—	1,000	—	6,200	—	7,200
Kolar - - - -	8,500	8,700	3,700	4,200	12,200	12,900
Tumkur - - - -	8,900	10,600	2,100	18,200	11,000	28,800
Mysore - - - -	5,500	9,800	3,700	1,900	9,200	11,700
Municipality - - -	—	200	—	1,600	—	1,800
Hassan - - - -	9,700	7,100	4,200	1,400	13,900	8,500
Shimoga - - - -	1,200	3,200	1,500	300	2,700	3,500
Kadoor - - - -	6,300	3,000	1,400	800	7,700	3,800
Chittaldroog - - -	6,000	7,800	1,800	1,800	7,800	9,600
Total - -	59,100	69,600	29,900	46,700	89,000	116,300

(3.) Some of the increase is said to be due to the efficient village relief that is now being carried out. The Moonsiffs and Civil Court establishments are now employed on relief work, now that their ordinary business is so slack. For each distressed taluk a sufficient relief staff has been appointed; villages are really visited, and patels (village headmen) are kept up to their duty by responsible officers, whose weekly diaries show what is being done, and how useful the village relief is.

(4.) Ample number of relief works are open and ready to be open in every district of the province.

(5.) The importations of grain by railway into the Mysore Province has gone on increasing; they averaged 330 tons a day in January; they were 530 tons a day during the last week of March. Since the rain of Sunday (1st April) prices are cheaper, and importations have somewhat slackened. Of this total only about 30 tons a day as yet comes by the Negapatam route.

2. The Mysore Government issues every Monday a short progress report with tables showing the progress of relief operations during the week. These reports contain all necessary information as to the condition of the people and as to the relief operations.

3. I may note that Colonel Christie, Superintending Engineer of Irrigation, has recently been on tour in Chitaldroog. He tells me that he saw no emaciated people save in the relief kitchens, that the physical condition of the people on the relief works is good, and that in some cases his officers were unable to get labour for tank repairs which they wanted to carry out.

No. 208.

XCVII.—Minute by Sir Richard Temple regarding the advisability of undertaking the earth-work of three short branch railways to Arcot, Vellore, and Salem as relief works. No. 221.

Bangalore, 6th April 1877.

Arcot, Vellore, and Salem railways; commencement not recommended.

The Government of India have asked my opinion on the suggestion that relief labour should be employed on the earth-work of three short branch railways, which have been projected to the towns of—

Arcot - - - - -	population	11,000
Vellore - - - - -	„	38,000
Salem - - - - -	„	50,000

The Madras Railway line passes by each of these towns at a distance of from three to five miles. The Commission which reported on the traffic of the Madras Railway in 1875 recommended that these three branch lines should be undertaken in order to draw traffic to the railway. If the railway were now being aligned, there would be no doubt that it should be taken to Salem and Vellore, for Salem is the largest town south of Madras which this line serves; while Vellore is a great, if not the chief, trading mart between Madras and Trichinopoly. But the question now is whether it is advisable to undertake the earth-work of these branch lines as relief works.

2. I have not been able to see any detailed estimates for these lines. The Madras Government estimate the cost of the three at approximately 20 lakhs of rupees; and consider them not to be so well adapted for relief work as the Conjeveram and Chingleput line. I have traversed the lines which these three branch railways would probably take. On each of them the banks would, save perhaps at the Palar bridge approaches, be very light, and the great items of cost on the Vellore and Arcot branches would be the bridging of the Palar; for I understand that the existing narrow road bridge near Vellore would not suffice for a standard gauge railway.

3. I understand from Captain Bisset that, in default of detailed estimates, the earth-work and ballast on these branches could not be estimated at more than about Rs. 50,000 in all. This amounts to $2\frac{1}{2}$ per cent. on the total cost of the line; it is doubtful whether the work could (failing previous detailed surveys) be begun before the first week in May. And if good rains fall in May, it is most probable that relief labour would not suffice to finish even the banks and ballast. I fear that it would not be practicable to organise large gangs of skilled relief labourers (such as stone cutters of the Waddah caste) for employment on these lines, in time enough to do any considerable quantity of work before the rainy season begins.

4. Under these circumstances, however anxious I may be to find some public work on which relief labourers can be properly tasked, I hardly see how to recommend that these branch lines be undertaken as relief works. In regard to the general question whether the branch lines would pay, I attach weight to the view expressed in Mr. Elvin's dissent at page 18 of the Commission's report. And I think much inquiry should be made before the Government decide to add 200,000*l.* to the guaranteed capital of a railway which does not pay, in order to construct branch lines which also may not pay. If any of these branch lines could be undertaken by private enterprise, as suggested by Mr. Elvin, then perhaps Government might see fit to grant some aid to the projectors of such branch railways.

No. 209.

From Dr. Cornish, the Sanitary Commissioner for Madras, to the Chief Secretary to Government, Public Department, Fort St. George. Nos. 218. 245.

Madras, 6th April 1877.

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

I have the honour to acknowledge the receipt of two minutes dated respectively the 7th and 14th March 1877, by the Honourable Sir Richard Temple, Bt., K.C.S.I., in reference to my objections to the subsistence allowance of relief coolies being calculated on the basis of 1 lb. of grain a day, and to submit herewith for the consideration of the Madras Government a memorandum in further elucidation of the subject.

2. The Government of India, while giving every publicity to the "minutes" above referred to in the official Gazette of India has not thought proper to give a like publicity to my letter No. 115 of 13th February to overthrow the arguments of which these minutes were especially designed.

3. The subject involved is the sufficiency or otherwise of an arbitrary allowance of food to maintain the health and strength of the labouring poor. It is a practical question of the highest interest to men of science, political economists, and social reformers in

he reduced ale of ages. r. Cornish reply to ir Richard emple.

every part of the world, and in the interests of humanity generally I venture to express a hope that the fullest publicity be given to my own part in the discussion, as well as to Sir Richard Temple's, so that the public, and scientific men in particular, may have the subject of discussion before them.

A Reply to Sir Richard Temple's Minutes of the 7th and 14th March as to the Sufficiency of a Pound of Grain as the basis of Famine Wages.

In a letter addressed to the Madras Government, dated 13th February 1877, No. 115, I felt it my duty to protest against a suggestion made by Sir R. Temple in his minute dated 10th January, that 16 ounces of cereal grain per diem would suffice for the maintenance of a labouring adult in health and strength.

Sir Richard Temple thought that the sufficiency or insufficiency of this grant of food was a matter of "opinion," and recommended that a scale of payment, based on the price of a pound of grain, should be tried "as an experiment" in the various relief operations throughout this Presidency, and the Madras Government had already acceded to the proposition, and issued orders for the enforcement of a reduced scale of wages, before I was aware that the subject had been before the Government. Under these circumstances there was a choice of courses before me. I might have held my peace, and in the event of subsequent calamity have sheltered myself under the plea that the Madras Government had not done me the honour of seeking my advice before sanctioning the reduced scale of wages; or knowing from long and painful experience the risks to the population resulting from inadequate food and nourishment, and the general want of accurate knowledge of subjects by most people, I might have ventured unsolicited to sound a note of warning to the Government, and to state my opinion in terms admitting of no misunderstanding. I chose the latter course, and I am very glad that I did so, as my letter has drawn forth two elaborate minutes from Sir Richard Temple regarding the basis on which he calculated that a pound of grain a day would suffice for a labouring man, and the subject can now be discussed purely on its merits by scientific men and the public at large, quite irrespective of the official positions of the parties contributing to the solution of the problem of feeding a people with the least expenditure of life and money.

I have, of course, been an attentive reader of famine literature, to which Sir Richard Temple has been so large and valuable a contributor. His most masterly "Narrative on the Famine in Bengal and Behar in 1874" lays down with clearness and precision the data on which the importation of grain was then determined, and I need not say that I agree almost entirely with every word Sir Richard Temple then wrote in regard to the quantity and quality of the food supplies necessary for the maintenance of the health of the people of Bengal.

The only error I find, in fact, is one of an arithmetical, and not of a physiological character. Sir Richard Temple based his calculations on 1½ lbs. of grain per head being required for a certain period for a certain proportion of the population, whereas 1½ lbs. ought to have been taken for an adult, and half the quantity for each child under 10 years of age. The error was, of course, one on the right and humane side, but involved the provision of more than 100,000 tons of grain beyond what was necessary according to accepted physiological data.

Even so late as January 1877, in a minute written at Sholapur in Bombay, Sir Richard Temple accepted, without question, the fact that the relief wages in Bombay were calculated on the basis of 1½ lbs. of grain per diem for an adult. It was only on his arrival in the Bellary district of the Madras Presidency that he appears to have undergone a conversion to the "pound a day" theory; but Sir Richard has not explained in the minute dated 13th January (to a portion of which I took exception) the grounds of his sudden change of opinion, and as his views in 1874 and 1877 appear to me to be irreconcileable, I can only quote them here in parallel columns, in the hope that some attempt may be made to explain them.

Sir R. Temple in 1874. (*Bengal Famine.*)	*Sir R. Temple in* 1877. (*Madras Famine.*)
"This rate (¾ of a seer or about 1½ lbs. per head for men, women, and children) at which grain should be provided was assumed after due consideration and discussion. The lowest diet provided in Bengal jails for non-labouring prisoners	"The present rate of wages is fixed at 2 annas per diem for an adult and proportionately lower for women and children. This rate is fixed upon the supposition that it will purchase 1½ lbs. of grain per diem, a quantity which is deemed essential for a man while at

is equal to about 1 seer or 2 lbs. The ordinary diet of a labouring adult in Bengal is taken after statistical inquiry to be 1 seer of rice besides $\frac{1}{4}$ seer (about $\frac{1}{2}$ lb.) of fish, pulse, pepper, or other condiments. The diet prescribed for adult Bengalee emigrants on ship-board and for Bengalee sailors always exceeds 1 seer a day in total weight, and in some cases it reaches 2 seers a day. Many of the poor people for whom grain was to be provided would be labouring hard on relief works during inclement and exhausting weather. Nearly the whole of the Government provision of grain consisted of rice, which contains less strength-giving qualities than wheat and some other grains. It was known that each bag of the expected consignments of Burma rice would contain from 8 to 20 per cent. of innutritious husk. In view of all these considerations, I framed my estimates of total requirements on the basis that each person to be relieved would on the average require $\frac{3}{4}$ of a seer ($1\frac{1}{2}$ lbs. of grain) a day. In practice it was found that even to ordinary paupers, who did not do any work, local Committees had to give $\frac{2}{3}$ of a seer of rice daily besides one pie ($\frac{3}{8}$ of a penny) for the purchase of salt and condiments; to women in delicate health and to persons reduced by previous hunger a still larger daily dole had to be allowed.

Being responsible for the general character of these estimates, I feel bound to record my tribute to the utility of the census which had been carried out two years previously under Sir George Campbell—the first regular census which had ever been taken in Bengal. If the success of the prescribed plan of relief operations has in any degree depended on the framing of estimates, if these estimates have in any degree enabled the Government to make a proper forecast of the supplies, and the resources necessary to encounter the crisis, then it is to be remembered that these estimates could never have been framed had not that census existed."

work. There might indeed be a question whether life cannot be sustained with 1 lb. of grain per diem; and whether Government is bound to do more than sustain life. This is a matter of opinion, and I myself think that 1 lb. per diem might be sufficient to sustain life, and that the experiment ought to be tried. Possibly the gangs might not perceptibly fall off in condition. After a week or fortnight's experience it would be seen whether they so fall off, or not; if they were to seriously fall off, then the point could be considered."

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

* * * * *

(11.) "The objection to the new scale, which Dr. Cornish states in detail is properly formulated by the phrase a full day's wages (that is, something more than the 1 lb. and the $\frac{1}{2}$ anna) for a fair day's work. But the phrase postulates that there is a fair day's work, which is just what the vast majority of the relief labourers do not render. Therefore they are not entitled to, and do not physically need, the full day's wage."

* * * *

(14.) * * "The scale laid down appears to me to be on the whole sufficient to yield the people that subsistence which alone Government can afford. We would gladly give more if it were in our power, but we must content ourselves with saving life, and cannot pretend to prevent all forms of distress."

* * * *

(16.) "Having carefully inspected during my tour in this Presidency thousands of relief labourers, I give it as my opinion that with very few exceptions, which are not, as a rule, traceable to insufficient relief wages, the general physical condition of the labourers is as good now as in ordinary years."

* * * *

(17.) "In conclusion it is not possible, I submit, to determine, *à priori*, on scientific data, what amount of food is necessary to sustain the particular classes who come to our relief. The real point to be considered is whether in ordinary times they get more than 1 lb. a day for a male adult. This is an economic question which can be determined by calculating the rates of wages in the rural districts, not the wages of trained professional labourers employed by public bodies—not the wages of stalwart men of the professional class of workmen, but the men of lesser physique and lighter frame such as that of the village poor—but the wages received by the labouring poor in the villages of the interior; and then by taking the prices of common grains in ordinary years. Now from inquiries made in various districts of the Madras Presidency, I apprehend that the labouring poor in rural localities can hardly get more than 1 lb. a day for a male adult in ordinary times." * * *

In his minute of the 7th March 1877, Sir Richard Temple declines to enter into the "purely professional arguments" advanced in my letter, further than to note "that

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

"while no doubt abstract scientific theories of great value on the subject of public health "are of modern growth, the Indian population with which we are now dealing have "lived for centuries in disregard of them." I must confess that I am not quite clear as to the meaning of the above extract. I did not put forward any "abstract scientific theory," but merely stated *a fact*, that as the human frame, in every race and climate, disposes of a certain amount of nitrogenous matter every 24 hours, a like amount must be taken into the body in food to restore that waste, otherwise the tissues of the body will gradually disappear, and that in my opinion 1 lb. of rice containing from 68 to 80 grains of nitrogen and a small money payment of six pice or three farthings, would not suffice to enable a labourer to provide a sufficiency of nitrogenous food to restore his daily expenditure of tissue. In reply I am told, in effect, that abstract scientific theories are very pretty in their way, but that the Indian people who disregard them manage to get on very well without them. But this manner of disposing of the subject does not seem to have satisfied Sir Richard Temple, for in a subsequent "minute" dated 14th March, he endeavours to grapple with the scientific objections to his proposals.

I think, however, in dealing with this double reply, it will be more convenient if I discuss the practical objections of the first minute here, leaving the scientific arguments of the second minute for the conclusion.

Sir Richard Temple objects in the first place that my data refer to the case of Europeans, and that owing to the greater size and weight of the white-skinned races, the quantities of food necessary for Natives of India cannot be decided by European experience. I am very sorry if I failed to make myself clear on this point, because in paragraph 5 of my letter I expressly alluded to an important statistical inquiry undertaken *in India* in the year 1863 regarding the nature and quality of the food of the various classes of the people of *India*. I took an active part in this inquiry as regards the Madras Presidency. I drew up the instructions for the medical officers who made the investigations in the various districts, and I compiled the report in which the observations were submitted to Government and the Secretary of State for India. I not only did all this as regards the collection of facts from the Madras Presidency, but for many months I made a collection of the various food grains, experimented with them practically in my own person, as to the methods of preparing and cooking them, and their digestibility, and I further learned by questioning all sorts and conditions of men the average quantity of food they were in the habit of using. I did all this under a conviction that the statistical inquiry ordered by the Secretary of State was one of vast importance, and I took unusual trouble to attain accuracy based on actual investigation, because I was convinced that the heavy mortality in our jails was in a great measure due to bad and unscientific feeding, and that the only chance of improving the existing jail diets lay in putting the evidence so clearly before Government that the deductions would be irresistible.

But this investigation was not confined to the Madras Presidency. A similar inquiry was made, so far as I can remember, by every Administration in India, and the results are no doubt available for Sir Richard Temple's guidance, though in regard to many of the provinces I never heard of the results having been published. I imagine that the "statistical inquiry" alluded to by Sir Richard Temple in his "Narrative," and in which the quantity of grain per adult is said to be from one to two seers per diem, must be the one made in Bengal in 1863. I think it is much to be regretted that papers of this kind were not at the time collected and published as a standard authority on food supplies and Indian dietaries. There may perhaps be copies of my official reports in the Government Offices, or in the India Office, but I do not myself possess a single copy. My paper on "food and prison dietaries" published in Vol. VIII., pp. 1–73 of the "Madras Medical Journal," embodies all the facts collected in reference to the nature and variety of food supplies and the quantity of grain habitually used by the people of Southern India.

It is not easy, therefore, to account for the mistake that my remarks had reference to the dietaries of Europeans, when I was at special pains to point out that an independent investigation conducted by some 20 or 30 medical officers in the Mofussil Civil stations, and checked by my own independent inquiries and observations, showed that the minimum grain allowance of a man in health and in work was not less than 24 ounces, and that it was frequently double that quantity in favourable seasons.

Moreover, in regard to the proportion of nitrogenous to non-nitrogenous food, the reference I made to Sir Robert Christison's labours was simply to show the standard to which all successful dietaries should approach, and I expressly admitted that in the food of an Indian people, the "proportions of one to three are but barely attained, and "the tendency is always to a smaller proportion of nitrogenous food" (paragraph 4).

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

I referred moreover to the experience of Indian jails (paragraph 8) in which practical food experiments on many thousands of persons have been going on for a long series of years under very strict tests as to supervision and observation, with the view of showing that the food of a people was a more complex question than that of providing a certain quantity of grain.

The whole experience I wished to bring forward on this question of food and health was Indian experience, and I am surprised that Sir Richard Temple, who knew so well in 1874 what the ordinary food of the people was, should write as if there had never existed any periodical medical literature in India, or that he should ignore the fact that every Indian medical authority who has written on the subject of food for prisoners is opposed to his recent opinions. One might think from Sir Richard Temple's minute that men like Leith, Chevers, Ewart, Bedford, Strong, Mouat, Fawcus, Irving, Forbes, Watson, Mayer, Lyons, myself, and many others, whose papers I have not immediately at hand to refer to, had never thought out the subject of feeding in its practical and scientific aspects, and that jail and other diets in India had been constructed without reference to the nutritious quality of the food-grains, or to the proportions of the various kinds of food. It must be abundantly clear to the Government that, if this new theory of Sir Richard Temple is correct, viz., that 1 lb. of grain and a small money payment equivalent to three farthings is enough to keep a man in health and strength while undergoing a fair daily task, then every Administration in India has been for years past inciting people to break the law by providing criminals with a dietary beyond their actual necessities, and all the carefully recorded experience of the last 30 years, as to the effects of food on health in Indian jails, must be discarded as worthless.

I shall have occasion to show, however, that the carefully built up experience of the past must be our guide in this matter, in preference to the mere "opinion" of a gentleman who apparently unconscious of the cruelty involved in his proposals, would desire to begin a huge "experiment" on the starving poor of this country, at a time and under conditions which would prevent the results of that "experiment" ever being tested and recorded.

What in fact was the proposition of Sir Richard Temple's to which I took exception? It was this: "There might indeed be a question whether life cannot be sustained with "1 lb. of grain per diem, and whether Government is bound to do more than sustain "life. This is a matter of opinion, and I think that 1 lb. per diem might be sufficient "to sustain life, and that the experiment ought to be tried. Perhaps the gangs might "not perceptibly fall off in condition. After a week or fortnight of experience, it would "be seen whether they so fall off or not."

If it were not so serious a matter as a blind experimentation on the limits of human endurance, it would be amusing to note the method by which Sir Richard Temple here proposes to test the results. "After a week or fortnight of experience" he says "it "would be seen whether the gangs fall off perceptibly in condition." Now what are the conditions abroad in the country by which such an experiment could be subjected to those rigorous tests which would satisfy practical men, as well as scientific men? Our relief works are scattered over many thousands of square miles of country, they are but indifferently supervised, and in no instances are the Native supervisors qualified to test the results of any special system of feeding or payment as regards the health of the people. To record the results of such an experiment with the accuracy required, it would be essential to weigh every individual of a gang, to enter their names and weights in columns, and to repeat the weighing week by week for a period of several months, to note also the condition of each individual, week by week, as to anæmia, pulse, tongue, heart's action, muscular power, &c. An "experiment" of this nature might be carried out as regards a few persons under the constant observation of a medical man, aided by careful assistants, but it is obvious that the results on a large scale according to the tests proposed by Sir Richard Temple could never be ascertained. Sir Richard Temple does not seem to be aware of the fact that "a week or two" of low living, while doing much mischief, might still give no results measurable by the eye or by weighing.

There is nothing more remarkable in connexion with these famine relief works than the sudden changes and fluctuations in the "personal" of gangs. The people inspected one day may be away the next. The people falling ill and unable to work are replaced by others, and there is never any certainty that two inspecting officers going over the same ground, within a short interval of time are seeing the same people. Any comparison of their observations or reports therefore can scarcely be gone into profitably, while this uncertainty exists in regard to the identity of the individuals composing the gangs.

There is, however, a rough and coarse test of the results of the reduction of wages which may commend itself to the notice of Government. It is that while the numbers paid for, and supposed to be employed on, relief works in the first week of February were 907,316, they fell in the last week of March to 662,195, and that the numbers "too weak for "work, requiring cooked food in relief houses," had increased from 38,163 in the first week of March to 99,113 in the last week of the same month. From my recent inspection in Maddanapully and Royachoti, I found these helpless and infirm people were increasing at the rate of more than 100 a day at each relief house, they continue so to increase, as I think it but too probable, the numbers to be fed in the Cuddapah district will probably reach 20,000 within the next two months, instead of 3,294 as in the last week of March. I leave it for others to determine whether the policy of substituting a bare subsistence wage on relief works has, or has not, contributed to the enormous increase of the sick and feeble, and of the gratuitous feeding throughout the distressed districts.

Sir Richard Temple is of opinion that the task-work required of coolies who are paid on the lower scale is very nearly equivalent to a condition of rest, and that the scale of food necessary for persons in a state of idleness will very well suit those who only execute light work.

The condition of the labouring gangs varies very much in the several localities. Some have very little distance to go to their labour, and in such cases the collection of half a cubic yard of road material may not involve any unusual exertion. But even in these cases I have seen work attempted when the ground was as hard as iron, and with tools much too heavy for the strength of those who had to wield them, and officials of the Public Works Department have told me that in their contract rates, no coolies would ever think of attempting work of this kind, except when the ground had been softened by rain. In such cases the bodily wear and tear of moving half a cubic yard of material, or executing 50 per cent. of a Department Public Works task, is considerable, and especially in the case of weakly gangs.

I have seen moreover very wretched and enfeebled creatures in the gangs who have come distances of four, six, and even eight miles to their work, some of them dragging their children to and fro with them, and I have no hesitation in stating that when these walking distances and carrying weights are taken into account with the day's work, that the expenditure of force is far ahead of its replenishment in the shape of food wages.

Sir Richard Temple states that his lowest scale of wages will permit in most instances of men buying 1½ lbs. of grain in addition to condiments and some other nourishment, but, however, this may be the case in the Bellary district or in certain stations on the line of railway which I have not yet inspected, it is not so in the upland taluks of North Arcot and Cuddapah. At Goorumkonda the other day the bazaar price of rice was only 13 lbs. the rupee, and at Royachoti about 14 lbs., so that 1 anna would not purchase even a pound of grain.

The mode of calculating the wages of the coolies too in some districts has practically the effect of reducing the earnings of men from 1 anna 6 pie to 1 anna 5 pie or 1 anna 4 pie, and what with deductions for short work, and the "customary tribute" to the gangsmen, there is reason to fear that in a very large proportion of cases the labourers do not get anything like the whole of the reduced wage.

Sir Richard Temple has, however, made a most important concession to the famine labourers in consequence of my protest, and if no other good has resulted, I feel bound to thank him for the consideration given to the last paragraph of my letter, in which I pointed out that a man must *eat*, even if we give him no *work* on Sundays, and that a subsistence wage ought not to be shared with young children. Practically, there is now very little difference between Sir Richard Temple's wage rate and my own recommendations. I have contended, and given reasons for considering, that the basis of a pound of grain for a labouring man was unsafe, especially when that wage was paid only for six days in the week, and when helpless children had to share in the food. Sir Richard Temple admits the weakness of this portion of his scheme, and by conceding additional help to feed the young, has of point in fact yielded all that I felt justified in urging.

According to my observation, though the ordinary wage rate of 2 annas, 1–6 and 1 anna, for men, women, and children respectively, may in some districts be too little to procure a sufficiency of nourishing food to keep up health, yet in times like these the people are ready enough to work for wages cheerfully and with a good heart, getting payment for and doing work only on six days in the week. Whatever deficiencies in their food there may be, they supplement in their own fashion by using articles that, though not in general use, may help at a pinch to sustain life, such as the seeds of the

bamboo, tamarind, &c., the pith of the aloe plant, and certain jungle leaves like the *Sethiæ Indica*.

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

The actual wage receipts of a family of man, wife, and four children, on the old and amended new scale of wages is given below :—

Ordinary Scale.

		Rs.	A. P.
Man - - - - -	6 days at 2 annas	0	12 2
Woman - - - - -	„ 1½ „	0	9 0
Two children - - - - -	„ 1 „	0	12 0
Two children under 7 years of age			—
Total per week - - -		2	1 0

Sir Richard Temple's Amended Scale.

		Rs.	A. P.
Man - - - - -	7 days at 1½ annas	0	10 6
Woman - - - - -	„ 1¼ „	0	8 9
Two children - - - - -	„ ¾ „	0	10 6
Two children below 7 years, relief grant	¼ „	0	3 6
Total per week - - -		2	1 3

From this comparison it will be seen that in the case of a man with a family of four children, two of whom are workers and two non-workers, he is actually better off by 3 pie per week under Sir Richard Temple's modified reduced wage than he was when working six days in the week for ordinary wages. Mr. West, C.E., in charge of the Cheyar Embankment Works, informs me that to meet the views of the district authorities and to avoid the appearance of competition in the labour market, he has reduced his rates from the ordinary 2 annas to the modified scale of Sir Richard Temple's, and paid for the Sundays, and that practically his disbursements per head average just the same as before.

The great financial saving therefore of over so many lakhs of rupees is not likely to accrue from the introduction of the new scale of wage. It has given intense dissatisfaction to the labouring people, who could not, or would not, comprehend its terms ; it has opened the door for abuses of various kinds, and it has not tended to economy in disbursements.

In some gangs near Cuddapah the other day I saw several women labourers encumbered by three or four children under age, who had been brought to secure the pittance granted under the recent modification of the rules. These children are of course much exposed all day, and distract the mother's attention from her work. The present system can be good neither for the mother nor the children, nor is it economical to the Government, according to the experience of Mr. West, who has tried both systems, and according to the typical case I have given.

Sir Richard Temple asks if I will admit that a pound of grain a day is sufficient to maintain an adult Native of India in a " state of rest." In reply, I have to state that I do not know of any cereal grain which would give a sufficiency of albuminous matter in a pound weight to replace the daily waste of nitrogen from the adult Native body, and consequently I am unable to admit any such proposition. The " evidence " adduced by Sir Richard Temple in regard to this matter is in reality no evidence at all. Sir Richard says that in the Vellore relief camp Dr. Fox and Captain Harris were agreed that men had so improved on 1 lb. of grain, but when I came to inquire into this matter I found that the " evidence " rested on general impressions, and not on periodical weighing and individual record of weight from time to time.

Even in the " weight test " some caution is necessary, for many of the people who come into camps appear to be filling out and fattening, when in reality they are getting dropsical and in a fair way to die. I can easily understand that the people in the Vellore camp did better on 1 lb. of grain per diem than they did on 12 ounces, which was the scale in use until a few weeks ago, when Dr. Fox urged an increase.

I have thought it safer and more prudent in this matter to fall back on our experience in dieting non-labouring prisoners, and to recommend 20 ounces or 1¼ lbs. of cereal grain besides dhall, vegetables, condiments, &c. for adults fed in relief camps, and this allowance is now sanctioned by Government, and should be, I think, a minimum allowance, considering how much tissue these poor creatures have to repair before they can be brought into a state to do a day's work.

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

In a paper recently brought to my notice by Surgeon-General G. Smith, I find that at Nellore, Surgeon-Major A. M. Ross has been weighing coolies on relief works, and that their average weight is below that of average "under trial" prisoners in jail. Thus—

In Jail.

Men.	Women.	Children.
109·1 lbs.	92·3 lbs.	70 lbs.

Relief Works.

94·3 lbs.	77·6 lbs.	46 lbs.

These weights appear to indicate much wasting, but the weighings will be continued and reported on from week to week.

In the last paragraph of his minute of the 7th March, Sir Richard Temple states his belief that the labouring poor in Madras in rural localities can hardly get more than 1 lb. of grain a day for a male adult in ordinary times. The inquiries on which this belief is founded were made, I apprehend, by Sir Richard Temple himself in the course of his rapid journeys through the country.

But I would submit to any impartial person whether inquiries made in this way to satisfy a foregone conclusion can be compared in value with the careful statistical inquiry undertaken calmly and deliberately in the years 1862 and 1863, and which inquiry furnished the basis for all our subsequent arrangements in the dieting of the people under circumstances where they cannot have any voice in the choice of their own food. Most people in India are acquainted with the sort of answers a high official personage will get in reply to leading questions, and if Sir Richard Temple thinks he has got at the truth in this matter, I can assure him, after a close practical study of the food of the people of Southern India for the last 15 years, that he is utterly and entirely mistaken, and that so far from the labouring adults living upon a pound a day, they eat on the average nearly double.

The following is what I wrote on this subject 15 years ago. With my great opportunities of inquiry in regard to the civil population, jails, hospitals, soldiers' rations, &c., during the past 15 years, I have nothing to add or alter.

"A free labourer, if he has the means, will use from 32 to 40 ounces of cereal grain (cholum, cumboo, ragi, or rice), about 2 or 3 ounces of dhall, a similar quantity of meat, or fish, and fruits or vegetables in addition.

"From numerous personal inquiries I should be inclined to reckon the average consumption of cereal grain per diem of an adult labouring man is rather under than above 30 ounces.

"The greater variety of food and its more liberal use by the free population depends very much upon the means of the individual, as well as upon the supply of food in the district. In times of famine and drought, after repeated failure of crops, the quantities of grain given as the probable daily consumption of a healthy man would be very much reduced, and in such seasons the jail diet would be superior to that of the greater number of the labouring poor. This is still too often the case. In years of scarcity grain robberies and petty thefts are very prevalent, and many of these offences are committed with the express object of securing the jail rations as a remedy against starvation. At such times the want of due nourishment is painfully evident in the attenuated bodies of the poor. Many die from the immediate effects of starvation, while the great bulk of those who live to struggle against famine have the vital powers so reduced that they are predisposed to suffer from the ravages of cholera and fever. The connexion between famine and pestilence, the following of the latter in the wake of the former, has received many a practical illustration in the 'records of Indian history within the present century.'"—(*Cornish on Food and Prison Dietaries, Madras Medical Journal, Vol. VIII., page* 83.)

I now come to the consideration of Sir Richard Temple's second minute of the 14th March, in which he enters upon the scientific questions involved in my objections to his diet scale.

In this minute Sir Richard Temple observes, paragraph 6:—"The opinion that one "pound a day of grain might suffice for a relief labourer, together with some allowance "for condiments and the like, or some nutritious substance, was not indeed based on "scientific theory. It was founded rather on probabilities practically deduced from the "condition of the poorer classes in ordinary times, and on the results of general "experience."

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

I think it would have been more to the point if Sir Richard Temple had given something a little more precise than the vague term "general experience." I may ask, in return, whose experience? Not Sir Richard Temple's, surely; for in 1874 he assures us that the people in Bengal habitually use from 1 to 2 seers of grain (2 to 4 lbs.) per adult, and that even the people in relief houses, doing no work, got $\frac{2}{3}$ of a seer ($1\frac{1}{2}$ lbs.). Sir Richard Temple records nothing of his travels in Bombay showing that the people on relief works there lived on a pound of grain a day. It was only on his arrival in the Bellary district that he evolved this strange doctrine, that a Madrasee could do what the people in no other part of India can,—thrive on 16 ozs. of cereal grain a day.

I know of no other "general experience" bearing on this question and favourable to Sir Richard Temple's view. Sir Richard Temple appears to consider Sir Robert Christison's opinion to be entitled to a respectful hearing, and I may therefore be allowed to make a further quotation from that venerable and accomplished author's remarks on the diet of the British soldier during the Crimean war.

"Experience has shown that the most successful dietaries for bodies of men, deduced from practical observation, contain carboniferous nitrogenous food in the proportion of about three of the former to one of the latter by weight. During 22 years that my attention has been turned to the present subject, not a single exception has occurred to me.

"Hence it is obvious that the least weight of food in the rough state will be required, first, when there is the least moisture and cellulose tissue in it, and, secondly, when the carboniferous and nitrogenous principles are nearest the proportion of three to one.

"Of the various nutritive principles belonging to each set, some may replace one another; some are better than others; some are probably essential.

"Two things, however, are certain, that nitrogenous may replace carboniferous food for supporting respiration, though at a great loss, but that carboniferous food (without nitrogen) *cannot replace nitrogenous food for repairing textural waste.*

"Dietaries are never to be estimated by the rough weight of their constituents, without distinct reference to the real nutriment in them as determined by physiological and chemical inquiry."

Keeping these principles in view, and with the help of a simple table it is not difficult to fix the dietary advisable for any body of men, according to their occupation. It is also, in general, easy to detect the source of error in unsuccessful dietaries. For example, any scientific person conversant with the present subject could have foretold as a certain consequence sooner or later of their dietary, that the British troops would have fallen into the calamitous state of health which befel them during their last winter in the Crimea.*

Remarks of this nature, from so eminent an authority as Sir R. Christison, ought to make unskilled constructors of dietaries in famine times somewhat modest in respect to their knowledge. It should make them especially cautious in the enunciation of new and strange doctrines, such as "that the amount of nitrogen required by Natives must be "much less than that required by Europeans" (paragraph II. of minute).

This is really the crucial test of the whole question, and I am afraid it cannot be definitely settled on the *ipse dixit* of Sir Richard Temple. In the scientific world we are accustomed to ask that any one bringing forward a new theory shall state the facts on which his theory is based; and in this case it would be quite fair to ask Sir Richard Temple whether by himself, or with professional aid, he has endeavoured to test his theory by estimating and measuring the amount of nitrogen which Natives of ordinary size and weight eliminate from their bodies. The investigation is one of, by no means, a difficult character, and no one has any right to bring forward such a theory in proof of the sufficiency of a scale of food without first ascertaining, by repeated investigation and experiment, that the nitrogen excreted by Natives is proportionately less than in Europeans. The consequences of our accepting such a theory, without the clearest and plainest proof, might be most disastrous, and the *onus probandi* remains with the originator of the theory.

I almost wish, in regard to Sir Richard Temple's reputation as a gentleman of many and varied accomplishments, that he had spared me the difficulty of dealing with his "crucial tests" in paragraphs 11 and 12, as regards the alleged discrepancies in theory and practice as to the amount of nitrogen necessary to a successful dietary. It is not a pleasant thing for one in my position to point out errors of comprehension on Sir Richard Temple's part; but however painful the operation, it must be done. Sir Richard Temple quotes from the *Madras Manual of Hygiene*, a work of admitted excellence, by

* Observations on a report by Sir J. McNeill, relative to rations for soldiers.

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

Surgeon-Major H. King, M.B., the composition of a scale of rations allowed to Native soldiers on foreign service. He points out very truly that these rations while yielding an abundance of carboniferous food (32 ounces of rice), are very defective in nitrogenous principles, the whole weight of food in fact yielding only 178 grains of nitrogen per diem. "According to this theory," observes Sir Richard Temple, "the Madras sepoy "would be undergoing starvation at the hands of the Government. But, in fact, he is "not so reduced physically, nor does he fail the Government when it calls upon him "for exertion. This case, I submit, makes very strongly against Dr. Cornish's theory."

I have no excuse to make for this dietary of our Native soldiers on foreign service. I gave it up 15 years ago, and recorded my opinion of it in the following terms:—

"The deficiency of animal food in the diet, and the excess of carboniferous material, is undoubtedly a fertile source of the prevalence of sickness in Native troops on foreign service. The mortality of Madras troops on this diet in Burma is more than double what occurs in Indian stations, where they find their own food."*

The foreign service "ration" in fact is a "survival" from the time of the first Burmese war. It was framed in times long before sanitary commissioners or chemists learned in food composition existed; and at the present time it is no more to be regarded as a typical "diet" than are the buttons on the backs of our dress coats to be regarded as a device for supporting a sword-belt. The ration is simply an "aid" to the soldiers employed in a foreign country, and the men are put under no stoppages whatever on account of it, but draw the full pay of their rank, just as if they had to find every particle of food out of their pay. If the relief coolies in whose behalf I have protested had seven or nine rupees a month in addition to the pound of grain, I should have made no objections to the insufficiency of their rations.

The Government expect, in these settled times, with the Burmese markets well supplied with poultry, eggs, fish, and flesh, that the sepoy can buy his nitrogenous food for himself, and practically he does so to such an extent that of late years the troops stationed in Burma have been almost as healthy as when in Southern India.

But there are and have been exceptions. I need not go back to the very terrible mortality of Native troops from bowel complaints in the first and second Burmese wars. These things are matters of history, but no later than the year 1872 a detachment of Native troops was sent from Burma to occupy posts on the Arracan River in co-operation with the Lushai Expedition.

In this locality the men had no market at hand in which to buy animal food, and in attempting to live on their "rations," they sickened and died in large numbers. The proportions are given in the margin.

Strength	- 184
Hospital admissions	901
Deaths - -	27, 12 from "dropsy," 5 "debility."

Ratios of Sick to Strength per Mille.	Deaths.
4896·7	146·7

In this case, and in all others demanding active service away from markets of supply, the Native soldier on foreign service *does*, in fact, "fail to do what the Government want of him," and simply because his "rations" are unfitted of themselves to support his health and strength. The fact is acknowledged and admitted by every officer who has commanded in Burma, and I did not at all overstate the case 15 years ago when I reported to Government as follows:—

"I have not entered into the question as to the propriety of revising the ration list of sepoys on foreign service, or of effecting changes in civil hospital diets, or of the sufficiency of the food laid down by law for emigrants from British India to the Colonies, all of which dietaries are unscientific in composition, and there need be little hesitation in stating, unfitted to support life. The whole of these dietaries require revision."†

Then again the "rations" of the European soldier do not, as Sir Richard Temple supposes, constitute his whole food.

Every commanding officer knows that the British soldier habitually buys extra meat from the bazaar out of his ample pay, and there is no regiment in the country which has not a provision shop of its own in which anything, from a Yarmouth bloater to a truffled sausage, may be bought. The rations on the whole are very fairly adapted for the British soldier, although there is no doubt that he eats more meat than the quantity contained in the ration.

In the calculation of the component parts of this dietary in the Madras Manual of Hygiene, I see that the nutritive value of the 1 lb. of vegetables has been put down as if all the vegetables were of the cabbage or soft kind, "whereas potatoes form usually one "half of the vegetable ration of the soldier."

---

* Madras Medical Journal, Volume VIII., page 30.

† Madras Medical Journal, Food and Prison Dietaries, Volume VIII., page 56.

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

No calculation, moreover, has been made of the nutritive value of the malt liquor or spirit he consumes.

The proportions of albuminous to carboniferous food in the official ration are about one to four.

Sir Richard Temple has made a mistake as to soldiers "in garrison" receiving a "reduced diet."

They do nothing of the kind, but European soldiers "in prison" do receive, when sentenced for short periods, a punitive diet which has no bearing whatever on the question of the insufficiency of albuminous food in a pound of grain to keep an adult Native in health.

I must confess that I was a little staggered by Sir Richard Temple's quotation of the scale of food allowed to "European soldiers on board ship." I was travelling at the time of receiving the minute, and away from all books of reference, so that I could not verify the composition of the diet, as given in the *Madras Manual of Hygiene*, but I knew that this diet had been framed under the advice of scientific men, and that it was not likely to err in the direction of giving too little nitrogenous food, and I was quite satisfied that some error had crept into the calculations, and that Sir Richard Temple had pitched upon this "crucial instance" without thought of the possible inaccuracy of the figures.

The explanation of the calculated quantity of nitrogen in this diet being only 155 grains per day is very simple. The diets which are valued in the appendix to the *Madras Manual of Hygiene* are all taken from the Madras Medical Code. The quantities of this particular diet will be found in the Code, page 133, Vol. II. The transcriber instead of entering 4 lbs. or 64 oz. "fresh bread" for a week's ration, has made the mistake of entering 4 oz., and, as a consequence, all the calculations of albuminous and carboniferous food are below the actual truth.

There is also another error. The calculator of the nutritive values has assumed that "salt meat" contains less albumen than fresh, and has put down a less proportion of nitrogen for the salt meat; but this is not really the case, though in salt meat the albuminous matter may be less easily digested. The effect of salting meat is to harden the albuminous tissues, and to cause the watery juices of the meat to enter the brine; consequently salt meat has more albumen in a given weight than fresh, or preserved, meat.

On the whole, I consider the ship-board dietary of the European soldier, containing as it does, according to my calculation, from 200 to 240 grains of nitrogen per diem, very well suited for a class of people who have nothing whatever to do.

Sir Richard Temple says the British soldier is not reduced by a diet containing 155 grains of nitrogen, and the answer to this statement is that the British soldier is never put on any such diet, and that the figures on which Sir Richard Temple rest his "crucial instance" are wholly wrong, partly from a clerical error of the transcriber and partly from the mistake in estimating the albuminous matter in the salt meat of the ship-board ration.

It follows, therefore, that all Sir Richard Temple's surmises on the hypothesis that 155 grains of nitrogen is enough for a British soldier fall to the ground, and this part of the question need scarcely be noticed further.

I feel bound, however, to protest against the line of argument advanced by Sir Richard Temple that, as the British soldier only needs so much nitrogenous food, the Native of India can do with two-thirds of that amount or less. We have no grounds whatever for admitting so dangerous a theory, and all our practical experience tells just the other way.

In the *Indian Annals of Medical Science*, Vol. III., 1855, Mr. Strong gives some very remarkable tables showing the influence of a change of diet in the Alipore jail. A Magistrate in charge *thought* that the prisoners were being too well treated, and so abandoned a scale of food, which had been sanctioned by the Medical Board, and which had kept the prisoners in health, for a dietary of his own devising. The change consisted chiefly in knocking off the meat, reducing the grain allowance, and obliging the prisoners to consume what they had in a single meal. The result of this amateur tampering with the food of the people was an increase in mortality from an average of 42·4 per thousand to 117·5 per thousand in the three years during which the "experiment" was in force. The constituents of this dietary gave about 19 parts of carboniferous food to $1\frac{1}{2}$ of nitrogenous!

The late Mr. Bedford of the Bengal Medical Service records a similar increase of mortality dependent on a change of food in the Rajshaye jail in 1852–53. In this case several months elapsed before the bowel sickness began to appear, but the result was a trebling of the annual mortality.

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

The effect of improving the standard of diets in the Madras jails in 1867, so as to raise the amount of albuminous food equal to from 200 to 240 grains of nitrogen per diem, has been to diminish the mean annual death-rate from 107 to about 22 per thousand for the eight years in which the new dietaries have been in force.*

This ought to be fairly convincing testimony, but there is more behind. A few years ago, a jail superintendent, who had been admonished by Government for over much flogging, was requested to adopt some other mode of punishment, and the punishment book showed, in the course of a few months, some hundreds of entries to this effect: "Half "rations until he completes his task." The result was great increase of sickness and mortality from the diseases such as now fill our famine camps, viz., sloughing ulcers, bowel complaints, dropsy, and impoverished blood. On discontinuing the food punishment the mortality began slowly to subside to its normal proportions. So close is the connexion in fact between a sufficiency of nitrogenous food and health of the prisoners, that I never now hear of an increase of bowel disorders and dropsies in a jail, without at once suspecting tampering with the food, or privation in the district furnishing prisoners. In talking the matter over with the Inspector-General of Prisons, I find that he has arrived at precisely the same conclusion. After the Bengal famine I see it noted that the rate of mortality in the Julpigori jail was 27 per cent. chiefly from "bowel complaints." In Rungpore 17·6 per cent. In Gya, Tirhoot, and Chumparun the mortality was 17, 10, and 15 per cent. respectively. "Dysentery was the most fatal disease." The precis-writer who compiles the sanitary statistics of the India Office does not appear to have had a notion of the connexion of the undue jail mortality with the famine, but notes that a "special report has been called for" to explain it.† Reading between the lines I can at once tell him that it was a mortality from starvation diseases.

With all these facts before me I think myself quite justified in having given early warning of the danger of reducing wages to the basis of 1 lb. of cereal grain a day, even admitting that my remonstrance was, as Sir Richard Temple states, "strongly worded." It saves time to state in plain terms one's actual meaning, and my meaning was quite evident when I showed that Sir Richard Temple's proposals were out of harmony with the experience of the Bengal famine, and with our actual knowledge of the effects of insufficient food.

There remains yet one more point to be noticed with reference to differences of opinion in regard to the present condition of the labouring poor. On this point Sir Richard Temple states: — "Having carefully inspected during my tour in this presidency "thousands of relief labourers, I give it as my opinion that with very few exceptions, "which are not as a rule traceable to insufficient wages, the general physical condition "of the labourers is as good now as in ordinary years."

This is Sir Richard Temple's opinion, but not mine. I too have seen a considerable number of relief labourers, and have taken some pains to find out where the distress really is, and my experience is this, that if I want to see the darkest side of the famine picture, I must look for it elsewhere than amongst the ranks of those who have still strength enough left them to work. Consequently I make a point of examining, wherever I can, the condition of the people fed in relief houses, lungerkhanas, and by private charity. I try to ascertain the condition of the poor who frequent the public bazaars and markets; and I pay special attention to the condition of the old and the young, whom I find almost invariably to be the earliest victims to distress. It is in this respect probably that my estimate of the effects of the famine on the health of the lower classes differs so widely from Sir Richard Temple's. My view is briefly this, that the famine is pressing with peculiar severity upon certain sections of the labouring classes who average from 20 to 30 per cent. of the population of the several districts, that amongst these classes there has been already a very large mortality, primarily due to bad and insufficient feeding, and that the condition of the survivors is in many cases critical in the extreme, as shown by the rapidly increasing proportion of persons who are unfit to work, and who have to be fed entirely at Government expense to keep the feeble vitality they have from being altogether extinguished.

Immediately the condition of a people becomes so low that they cannot work, the question of saving life becomes enormously complicated, and in plain language the time has then passed by when Government relief can do more than attempt to rescue a few possessed of the strongest constitutions. What has been our experience in this respect in the Madras relief camps, and in the camps now being established throughout the

---

† Report of Sanitary Measures in India, Volume VIII., page 10.

country? Sir Richard Temple, I observe, in his numerous minutes has passed by this subject of the actual mortality of the famine stricken, but as a public health official I am bound to take notice of it.

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

The following figures show the mortality amongst this class of the population in the Madras camps for 10 weeks ending 31st March :—

Mean strength.	Total deaths.	Annual ratio per mille.
11,005	1,971	930·8

This enormous mortality simply means an annual death-rate equivalent to 930·8 per mille of the population constantly under observation, and, in fact, is a death-rate which wipes out nearly the whole of the living within a year. The excessive death-rate going on in Madras is going on in every relief camp in the country. I find but little difference in the proportion of deaths, whether in North Arcot, Cuddapah, or Madras. And it must not be supposed that this excessive death-rate is due to cholera or small-pox, for the Madras camps have been singularly free of the former, and by means of vaccination the small-pox epidemic has been controlled. The deaths are almost entirely due to diseases which invariably, in India, attack under-fed and starved people, viz., extreme wasting of tissue, and destruction of the lining membrane of the lower bowel. This is a simple statement of fact. Thanks to the assistance of Surgeon-General G. Smith and his able medical staff in Madras, this question of the nature of the famine disease has been abundantly verified by post-mortem examinations. Surgeon-Major Porter informs me that the average weight of bodies of full grown men he has examined has varied from 57 to 85 lbs., and it is enough to record this fact to show the extreme wasting going on during life.

But if the condition of the labouring classes is so generally satisfactory to Sir Richard Temple, how is it, I may ask, that the death returns of the famine districts are so much above what is usual? I have not as yet received the returns for February, but those for December and January are available for comparison with the average results of the previous five years. I must, however, note with respect to these district death returns that from personal investigation in the districts, I know they very much understate the real mortality of the last few months. The truth is, the famine has disorganised our village establishments to such an extent that the actual numbers who have already perished will never be known. Hundreds and thousands of people have died away from their homes, have fallen down by the roadsides, and their bodies have been left to be eaten by dogs and jackals. Mr. Gribble, the Sub-Collector of Cuddapah, in the course of a morning's ride of 14 miles, came upon eight unburied bodies, and at Royachoti in January last Mr. Supervisor Mathews informed me that after an outbreak of cholera 53 dead bodies lay for days exposed in the dry bed of a river, near the works the relief coolies were engaged on. Walking over this ground two months after the event, the numerous skulls and human bones scattered on the surface convinced me that the statement was founded on fact.

With our village establishments panic-stricken and the village messengers away at relief works, it is quite certain that the death registration has been most incomplete. At Maddanapully I found that the deaths in the civil hospital had exceeded those borne on the village register for certain months, and at Royachoti the deaths amongst the starving people sent in to the relief shed in March had exceeded the registered mortality for the whole town. It is obvious therefore that the figures I now give do not represent the real truth of our losses; they are at the best approximative only.

The reduced scale of wages. Dr. Cornish in reply to Sir Richard Temple.

Even these figures, which we know to be under the truth, show an appalling mortality in the famine districts during December and January. I have no reason to suppose that the state of things here indicated has much improved in February and March. But in our municipal towns, or in some of them at least within the famine area, death registration is more efficiently managed, and the following figures will tend to show the gravity of famine, as exemplified in an abnormal death-rate. In Bellary I have long had reason to suppose that the registration was not properly done, and the returns of some of the Bellary municipalities are obviously imperfect. The first thing that attracted my attention in connexion with the famine, on returning to duty in the end of January, was the abnormal death-rate amongst certain classes and certain localities of the presidency town, and I lost no time in drawing the attention of Government to the condition of the people, and suggesting measures for combating the great destruction of life then going on. While the mortality of the presidency town was exaggerated by the influx of starving immigrants, the experience of other municipalities shows that throughout the famine tract the death rate has risen out of all proportion to its normal condition.

The famine so far has already fallen very heavily on the old, the weakly constitutioned, and young children. It is still "weeding out" from our labouring classes a large number of victims, and in consideration of the fact that diseased conditions dependent on sufficient food *follow many months after the cause has passed away*, I apprehend that a heavy and unusual mortality will continue even after the period of drought and dearth of food has ended.

The survivors of the famine will be the strongest and best fitted of their race to continue the species, and when plenty again blesses the land they will produce a vigorous race of descendants; but I think there can be no reasonable doubt that this food deficiency has fallen very heavily upon the ordinary agricultural labouring poor, and that many years must elapse before they will have made up the numbers who have fallen, and are still falling, victims to the combined famine and pestilence now in our midst. I have in former reports called attention to the fact that the children born of famine-stricken mothers are nothing but skin and bone. My recent experience goes to show that the birth-rate is seriously diminishing, and that pregnancy amongst the distressed women is becoming a rare condition.

It is on these grounds that I cannot subscribe to the pleasing and hopeful telegrams in which Sir Richard Temple summarises the weekly progress of events for the benefit of the Home Government and the English people. There are two sides to every picture. Sir Richard Temple, like a skilful general commanding in battle, naturally fixes his attention on the main points of attack and defence, and so long as these are safe, his main work is accomplished.

I on the other hand as a public health official, whose special duty it is to preserve life, am bound to listen to the cries of the wounded, and to note in what way the combatants suffer, and I should be wanting in my duty to myself, and to the Government I serve, if I failed to state the facts coming to my knowledge, and the deduction drawn from those facts.

No. 210.

No. 172, dated Bangalore, 7th April 1877. No. 221.

From the Secretary to Sir Richard Temple to the Additional Secretary to the Government of India.

By direction of Sir Richard Temple, I have the honour to submit copy of the paper marginally noted, regarding the supply of grain from Central India to the northern districts of Madras. No. 193.

Memorandum by Captain Bisset on his visit to Bombay and the Nagpore district of the Great Indian Peninsula Railway.

Grain supply from Central India to Madras.

2. From Captain Bisset's narrative Sir Richard Temple learns that there is no reason to anticipate failure of the grain supplies from Nagpore and the Berars; that much of the grain from those quarters is at present despatched to Bombay, probably for shipment to the western ports; and that an increase in the despatches to the Deccan and to the ceded districts of Madras will occur as soon as a change in prices shows the need for a larger supply.

3. I am to express Sir Richard Temple's satisfaction with the promised provision of Great Indian Peninsula waggons to expedite the movement of grain to the south. He anticipates that, with the facilities thus given, the supplies to the chief grain markets of the ceded districts will be fully equal to the demands from the interior.

No. 211.

Extract from a Letter from the Acting Secretary to Great Indian Peninsula Railway Company to the Consulting Engineer for Railways, No. 4,245, dated 7th April 1877. Nos. 250. 256.

The following extract from the "Times of India" for the 7th March, giving extracts from the proceedings at a meeting of the Port Trustees, held in Bombay on the 1st March 1877, has reference to the statement that the dealers at Cawnpore were encouraged to send traffic to Howrah rather than to Bombay, viz.:— Traffic arrangements of East Indian Railway detrimental to grain traffic.

> Submitted report by Traffic Manager, dated 6th February, on his visit to Delhi, Cawnpore, Lucknow, and other places, made in order to draw additional grain traffic to the Port Trust sidings. * * The report having been circulated to the Trustees, it was further suggested by some of them that the Traffic Manager's statement that Calcutta merchants get waggons for their goods on the East Indian line more easily than Bombay merchants, should be communicated to the Chamber of Commerce.

I have no doubt that the East Indian have had many difficulties to contend with in dealing with the unusual and sudden increase of traffic on their line, but in the interest not only of the Great Indian Peninsula Railway, but also of the public, I have felt it only right to protest against the stoppage of through booking.

* * * * * *

In continuation of the letter above quoted, Mr. Conder, under date 6th instant, writes to the Acting Agent as follows:—

"With reference to paragraph 7 of my lettter, No. 1,047, of the 4th instant, I have since that letter was written received a letter of the same date from Mr. Lang, of Messrs. Finlay, Scott, and Company, in which the following statement is made, being an extract from a letter dated the 2nd April, written by Mr. Fernly, the agent of that firm at Jubbulpore, namely,—

"'Both Mr. Batchelor and Mr. Carter gave me distinctly to understand that they would never put themselves out to furnish vehicles for Bombay from stations like Kutni, the distance, 56 miles, before reaching the Great Indian Peninsula, 56 miles being too small to benefit their line much.'

"I have again to lay my plan before you of sending goods to Calcutta. From Sutna to Calcutta I could send 10,000 bags away in a month easily. At present I have considerable stock there. The gates are closed and likely to be for some time as far as Great Indian Peninsula traffic is concerned."

I think these statements show that the East Indian are encouraging traffic for Calcutta rather than dealing with all traffic in the strictly impartial way which is claimed for them, or at least mentioned as being maintained by them, in Lieutenant Scott's note to which the letter quoted above is a reply.

And they involve serious loss to this Company by diversion of traffic.

No. 212.

No. 221. XCVIII.—MINUTE by SIR RICHARD TEMPLE on the administration of relief works by Public Works Department officers in the Salem district, dated Salem, the 10th April 1877.

Administration of relief work in Salem district by Public Works Department.

In my minute dated the 29th March I invited the consideration of the Madras Government to the desirability of employing in the Bellary and Kurnool districts a certain proportion of the relief labourers on works supervised and directed by Public Works Department officers, who could exact from the labourers adequate tasks. And I indicated certain works on which this plan might at once be tried.

2. On revisiting the Salem district, I find that the procedure which I recommended for Bellary and Kurnool had already been adopted in Salem. Out of the 47,000 relief labourers in the district of Salem, about 25,000 are employed on 398 large and small works under the Public Works Department. Most of these works are irrigation tanks, which must be repaired sooner or later, and on which much excellent work will have been done this year. The labourers are employed on piece-works, at a rate of 2 annas per cubic yard, as compared with $1\frac{3}{4}$ annas which is paid in ordinary years. Mr. Norfor, Range officer, finds that on some of his works the people earned at these rates—

In the month of February.				In the month of March.		
0	2	2	for each adult man - - -	0	1	10
0	1	4	for each woman - - -	0	1	2
0	0	9	for each child - - - -	0	0	8

3. The Engineer officers do not seem to have succeeded in opening so many works in the more distressed taluk of Dharampooree as elsewhere. All labourers are admitted to the Public Works Department undertakings, who are willing to work at the present rates; and no inquiry is made as to the applicants being in absolute need. Relief labourers moreover are not, save in the case of about 6,000 labourers on works in December last, handed over by the Civil officers to the Engineering officers, as recommended should be done in Bellary and Kurnool. But there is apparently no reason to fear that relief is being given unnecessarily on the Engineers' works; for the officers in charge report that the condition of the labourers is generally poor when they come on the works. And there is no risk of the Civil and Engineering officers competing with each other for labour, as no Civil relief works are opened in the neighbourhoods served by the works under Engineering supervision.

4. I lay this account of Salem relief works before the Madras Government, because the system, which works well in Salem, would succeed in Bellary and Kurnool, where professionally supervised works are most urgently required.

No. 213.

No. 264. No. 20 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, the 12th April 1877.

Owing to the pressure of legislative business in the week before last, and the movement of the Government to this place during last week, we have been unable during the last fortnight to send to your Lordship the usual weekly Despatch regarding the famine in the Presidencies of Madras and Bombay. We have, however, kept you informed by telegraph of the principal facts which have come under our notice during the period in question.

2. We now enclose copies of minutes recorded by Sir Richard Temple on the following subjects:—

No. 176. 1st. The present condition of relief operations in Kurnool.

No. 178. 2nd. The expediency of repairing the Begum Talao, a tank near the ruined city of Beejapoor in the Kaládgi district of the Bombay Presidency.

Nos. 182-6. 3rd. The recent course and present state of relief operations in the Bombay Presidency, as ascertained on the occasion of Sir Richard Temple's late visit to that Presidency.

No. 187. 4th. The physical condition of the gangs inspected by Sir Richard Temple in the districts of Sholapur, Kaládgi, Poona, and Ahmednagar.

5th. The question of suspending, instead of wholly remitting, the demand for land revenue on unirrigated land in the distressed districts of the Madras Presidency with reference to an observation contained in Sir Richard Temple's minute of the 6th March on this subject. No. 191.

6th. The expediency of further utilising the agency of the Department of Public Works in exacting task-work from the relief labourers employed in the distressed districts of the Madras Presidency. No. 192.

3. Copies of the following papers are also enclosed:—

A letter from Mr. Bernard, Secretary to Sir Richard Temple, regarding a misapprehension which appears to have been entertained with reference to the views of the Collector of the Chingleput district on the subject of remissions of land revenue. Nos. 130. 160. 173. 189.

A memorandum by Dr. Harvey, lately employed as medical officer on Sir Richard Temple's staff, on the physical condition of the people in the distressed districts of the Madras and Bombay Presidencies. No. 188.

Two telegrams from Sir Richard Temple, dated the 4th and 6th instant, already embodied in the weekly telegraphic summaries. Nos. 198. 202.

4. The improvement which has taken place in the management of the relief operations in the district of Kurnool is satisfactory, but that district still contrasts unfavourably, both as to the number on the relief works, and as to the number of persons charitably relieved by the State, with the somewhat similarly circumstanced district of Sholapur.

5. We desire to draw your Lordship's attention to the observations contained in Sir Richard Temple's minute of the 24th ultimo, on the relief operations in the Bombay Presidency, and to the results which have followed from the closing of large numbers of village works and the enforcement of task-work on the larger public works under professional supervision. Between the 12th January and the 20th March the number of relief labourers had, owing to these measures, been reduced from 331,447 to 209,000. The mode in which this reduction was effected is set forth in the following paragraphs of the minute in question, which also contains an explanation of the circumstances under which the strike occurred, which attracted a good deal of public attention some weeks ago:— Relief operations in Bombay Presidency.

"Although the tendency of our measures has been to transfer large numbers to the public works, still even on these works there has actually been a decrease. This has arisen from the enforcement of the task-work previously ordered. Many persons came to work on task so long as they found it easy, but absented themselves when they found it becoming harder. On the Civil works the manner in which the reduction of numbers occurred was in this wise. The Public Works Department (including its general branch and its special irrigation branch) has been strongly organised with a staff of officers and of trained subordinates in the distressed districts. Professional preparations for public works on a sufficiently large scale, consisting partly of main roads, but chiefly of irrigation reservoirs (tanks), were got ready. To these all applicants (save and except those who appeared to be able to sustain themselves, for a time at least, without Government aid) were admitted. To these also all the labourers who had previously been on village works were drafted, except those who from age, infirmity, or other good cause were unable to go. The able-bodied were informed that they could no longer be employed on the village works; but that employment was available for them on the larger public works; to every person some such work at a reasonable distance was indicated; he was also informed, however, that in event of his refusing this offer he would not be otherwise employed. Very many did in fact refuse, and by so doing virtually discharged themselves from Government relief, thereby affording proof that they were not in real distress and could afford to stay away. Many, however, accepted the offer and are still serving on the public works, proving by their industry and discipline that they really need the support thus obtained.

"The number who discharged themselves from Government relief in the manner above described were about 102,000.* They did, indeed, at first show signs of some method and system in their proceedings. They liked the village works with a lax system from which they had been discharged. They disliked the public works with a strict system to which it was proposed to transfer them. They imagined that by throwing themselves suddenly out of employ, they virtually offered a passive resistance to the orders of Government. Many of them endured more or less of inconvenience and privation in furtherance of a plan whereby they hoped ultimately to regain their position on the easy-going village works. For so favourable an object they deemed that some suffering might be borne. They counted somewhat on exciting the compassion of the

* *i.e.*, difference between 136,000 on 12th January and 34,000 on 12th March as above stated.

Relief operations in Bombay Presidency.

authorities, and still more on arousing fears lest some accidents to human life should occur. They wandered about in bands and crowds seeking for sympathy. They probably did meet with sympathy, indirectly at least, in various quarters. They certainly had leaders both from among their own body and from among the employés, whose vocation had ceased from the contraction or cessation of the village works. Moreover, the village headmen (patels) are, as a class, much opposed to any system of relief works which takes the people away from their homes. This feeling may be natural on their part, but it cannot receive attention when it militates against so important a principle as the application of a definite test to a relief system in time of famine.

"The Local Government, however, did not yield, though it did report the matter to the Government of India, apparently with a view to strengthening the position by eliciting further authoritative declarations. The Government of India, on two occasions, declared in effect that undue concessions must not be made to combinations of workpeople formed with sinister or self-interested objects; and that, although Government was bound to do its utmost to save people from death by starvation, it could not always undertake to save them from death owing to their own obstinacy or misconduct. These views have doubtless helped to guide the thoughts of the people, and to subdue any unreasonable hopes which may have been engendered.

"Of those who thus deserted the relief works some returned to labour when they found resistance unavailing. But many, after wandering about for a short time, settled quietly in their own villages, where they still are (as I have myself seen them in several places) in a condition which, if not good, is yet not reduced. Of these it is thought that many must, ere long, be constrained to apply for relief.

"On the other hand, while severity is deserved by those who try to resist the just efforts for reform and economy in the administration of relief, there are many poor ignorant persons misled by designing leaders. No exertion is spared to induce these misguided persons to accept the reasonable sort of relief which they are believed to need. To the village works only those are admitted who cannot be expected to perform the tasks set on the larger works. It was thought that these works would be more largely attended than they are. The authorities are ready to receive many more if they come, either on existing works, or upon other works which could be immediately opened. These works being of the simplest character can always be opened without any preparation. The gangs which I have inspected are exactly those whom we might expect to find; that is, they are people evidently needing assistance, strong enough to do light work near home, but not strong enough to perform the tasks of the public works.

"For the larger works, as already stated, preparation is always needed. And this preparation has been made in case there should be any accession or influx of numbers as the season advances. After consulting the Public Works authorities, I find that the works now open can accommodate 75,000 additional persons at the shortest notice. Here again, however, the rolls of the workmen do not fill as fast as was expected. Evidently the comparatively strictness of system is acting as a deterrent to keep away all save those who are truly in want."

Credit due to Bombay Government.

6. We consider the Government of Bombay to be entitled to great credit for the firmness and care with which they have dealt with this matter. It is evident that while a very material reduction of expenditure has been effected by the exclusion from the relief works of persons not really in need of relief, every precaution has been and is being taken to afford relief to those who require it. Sir Richard Temple considers that the poorest classes not on relief are generally in tolerable condition, and that while there is much scope for incessant vigilance, every effort has been made to secure it.

"All village headmen have been warned of their duty in this matter; they frequently do give temporary relief on their own responsibility pending orders of relief officers. Lists have been made out in every village of persons likely to come within this category. European officers are posted in each one of the many subdivisions (talukas) of the distressed districts; and they, together with their Native subordinates, are constantly patrolling the villages and seeing whether the village headmen really do bring forward every deserving case or not. In every subdivision (taluka) of every distressed district there is a relief centre for the reception of these cases. The number on charitable relief is large indeed; but looking to the circumstances of the country, I should be glad to see it larger. It is, however, remarkable that many of the destitute poor are reluctant to resort to the poor-house from a feeling of self-respect which is creditable to them.* Here and there, however, I have discovered persons who ought apparently to have come

* Mr. Bernard mentions the case of a woman in the Poona district in the receipt of charitable relief whose son, on his return home at once, and of his own motion, repaid to Government the full amount spent on the relief of his mother during his absence.

under the operations of these rules, and I think that the local officers cannot be too often reminded of these excellent orders."

7. With reference to the allegations which have frequently been made of the occurrence of deaths from starvation, Sir Richard Temple writes as follows:—

"I have not received any trustworthy evidence whatever that any death from starvation occurs or is in danger of occurring in these districts. But I have received much excellent evidence to the effect that nobody is dying or likely to die of this cause. Statements of an opposite description are sometimes made, but they are merely general in their terms, and are manifestly advanced in support of the view that easier terms of relief should be offered to the people. I am unable, however, to discover upon what foundation any statements that the people are starving can possibly rest. If any instance has happened within the last two months, it must be very exceptional. If any instance happens now, it must be owing to some extraordinary conduct on the part of the person concerned, certainly not to any want of means of relief at hand."

The reduced scale of wages.

8. As your Lordship is aware, there has been much discussion and difference of opinion as to the sufficiency of the rate of wages now allowed on the relief works. It will be seen from Sir Richard Temple's telegram of the 6th instant, the text of which was communicated in our last weekly telegram, that Dr. Townsend, the Sanitary Commissioner with the Government of India, who has recently inspected 34,000 relief labourers in the distressed districts of Bombay and Madras, considers that the reduced rate is sufficient to support the labourers in fair condition, provided that care is taken that the individual recipient is the only person supported on it. The opinion formed by Dr. Harvey, though expressed in less positive terms, is to the same effect. The reports made by Dr. Cornish, the Madras Sanitary Commissioner, on his inspection of the north-western portions of the district of North Arcot and of Madanapalli in the subdivision of the district of Cuddapah, to which reference is made in the Despatch addressed by the Madras Government to your Lordship under date the 31st ultimo, and which apparently contain a repetition of the adverse opinion already expressed by Dr. Cornish as to the sufficiency of the reduced rate of wage, have not yet reached us. On the evidence at present before us we are not satisfied that an increase is necessary, provided that due care be taken that the whole of the reduced rate is available for the support of the individual recipient, other arrangements being made for the relief of those members of his family who are unable to work.

9. The following telegram, dated yesterday from Trichinopoly, has been received this day from Sir Richard Temple:—

"Have visited part of Salem district. Am now *en route* to Negapatam to inquire concerning grain traffic thence, which is still very slack. Proceed to North Madura. Good spring showers fallen in Mysore Province, Salem district, and parts of Trichinopoly, Coimbatore, and Tinnevelly. The Cauvery and other rivers in flood. Ploughing in progress wherever rain has fallen, and numbers on relief decreasing in that neighbourhood. Condition of Madura uncertain. In districts above Ghâts number decreasing, Bellary and Cuddapah. This is to be expected as season advances. Import grain trade in that quarter diminishing, which indicates sufficiency of local stocks. Mortality from sickness still continues in some districts. Numbers on charitable relief increasing, and among these persons many are found wretched. If present prospect of showers is realised, there will be no increase of distress in Southern India. Mortality at relief camps near Madras and in the city still continues. General aspect of affairs in whole Presidency more favourable than anticipation for middle of April."

10. In the Madras Presidency there has been a further increase in the numbers on the relief works, namely, from 663,997 to 693,761. The numbers charitably relieved have also risen from 105,067 to 114,782. The rapid increase under charitable relief appears to be principally attributable to the grant of an allowance for children under seven years of age.

In Mysore also considerable increases have occurred, the number of persons on works being now 75,417, and of charitably relieved 52,471, which is 11,460 above the preceding week.

Regarding Bombay, we have no later statistics than those communicated to your Lordship in our telegram of the 7th instant.

We have the honour to be, &c.

No. 214.

Nos. 242. 262.

MINUTE by SIR RICHARD TEMPLE, dated Madura district, the 14th April 1877, being a General Report on his Mission to the Madras Presidency.

Sir Richard Temple's report on his mission to Madras.

By the resolution of the Government of India, dated 5th January 1877, I was deputed on a special mission to the presidencies of Madras and Bombay to inspect the distressed districts, to communicate personally with the two Governments regarding the measures which were being carried out, and which would have to be carried out, for the relief of distress, and to offer for their consideration such suggestions as might be deemed suitable.

By the Despatch of the Government of India, dated the 16th of the same month, general instructions were conveyed to me for conducting the work of the mission.

I have accordingly visited all the distressed districts of the Madras Presidency, and the principal of the distressed districts of the Bombay Presidency, and have forwarded from time to time to the several Local Governments full minutes of all suggestions that occurred to me; of all which minutes copies have been submitted regularly to the Government of India. Being now, with the permission of the Government of India, about to relinquish the work of the mission, I have to make a general report regarding the Madras Presidency. In respect to the proceedings of the mission in the Bombay Presidency, I would ask the Government of India to refer to my minute of the 23rd March, to which nothing need now be added under existing circumstances.

This report then will refer to the Madras Presidency alone. It will be divided into the following parts:—

1st. The extent of the drought, the failure of the harvests, and the effect of these disasters upon the fortunes and the physical condition of the people.

2nd. The measures adopted by Government to help the people in meeting or bearing up against these misfortunes.

3rd. The several points towards which the proceedings of the mission have been principally directed.

4th. The state of affairs at the present time of writing.

5th. The lessons to be deduced from all the circumstances which have yet occurred in connexion with these affairs.

In the following narrative and observations I shall have to deal with many matters on which controversy has been or may be raised respecting fact and inference, and with many questions regarding which there may be difference of opinion. I can only set forth the case as it presented itself to me after inquiry on the spot, and relate the impressions left on my mind by all that I have seen, heard, and read. It has not been any part of my duty to formally take or record evidence. Nor would space admit of my adducing proof of all the facts which may have to be stated.

PART I.

In regard to the extent of the droughts, the failure of the harvests, and the effect of these disasters upon the fortunes and the physical condition of the people, it is necessary to recall the fact that in 1876 throughout the greater part of the Madras Presidency the south-west monsoon or the summer rains were very deficient, and that the north-east monsoon or autumnal rains failed still more disastrously. In the northern portion only of the presidency, that is, in the littoral tract south of Orissa and in the deltas of the Godavery and the Kistna, was the rainfall ordinarily propitious. In the rest of the presidency comprising the peninsula of Southern India, the rainfall of the year ranged from 3 to 20 inches, in many large tracts of the worst districts it ranged from 6 to 10 inches. Whereas the average annual rainfall in this region may be taken to range from 20 to 40 inches. Even on the western or Malabar coast where, if anywhere, the rains are expected to be unfailing, the rainfall was measured at only 87 inches, compared with an usual annual average of 126 inches.

The misfortune which, threatening first in July, and becoming more pronounced month by month, settled down upon the Madras Presidency during November, was aggravated by the similar misfortune which had befallen the Deccan districts of the Bombay Presidency, the greater part of the Mysore territory, and a portion of the Nizam's dominions.

The drought began in the north, a little below the River Taptee in Khandesh. In the Bombay Deccan it became severe in the districts of Ahmednagar, Poona, Sattara,

Sholapur, and Kaladgi. It was milder in the South Mahratta Country near Belgaum and Dharwar, and in the Nizam's territories around Goolburga and Raichore; but some parts of Dharwar suffered severely. Towards the Madras Presidency it reached the line of the Toongabhadra (or Toombadra) River which joins the Kistna below Kurnool, and followed the line of the Kistna to the eastern coast. In this latitude (16°) it stretched, with more or less intensity, almost from sea to sea.

Sir Richard Temple's report on his mission to Madras.

Within the Madras Presidency on the right or southern bank of the Toongabhadra the drought developed all its most destructive agencies, and showed its greatest force all along the frontier, covering the whole of the districts of Bellary and Kurnool and the greater part of Cuddapah, and comprising in desolation all the country above the Ghât mountains. Across the mountains it visited the greater part of the districts of Nellore, Chingleput (including the city of Madras), North Arcot, Salem, Coimbatore, and Trichinopoly. It caused the Kistna and its affluents to roll down in such a diminished volume that the canal from the Toongabhadra near Kurnool, and the great irrigation works of the Masulipatam delta were stinted in their supply. It made the freshes and floods of the Penair descend in such shrunken proportions that the reservoir and channels of Nellore were nearly deprived of water. It stopped the supply of the Cauverypauk lake near Arcot, and rendered the dam across the Palar inoperative. It rested for some time on the districts of South Arcot, Tanjore, and Trichinopoly, and threatened them with evil; they were, however, saved, South Arcot mainly by some later rains, and Tanjore and Trichinopoly partly by the same rains but chiefly by their canals. It extended itself with havoc throughout the southern peninsula, laying waste the districts of Madura and Tinnevelly right down to the sea-shore near Cape Comorin; the tracts irrigated from the Tambrapoornee, near Tinnevelly, alone escaping destruction. Though it failed to dry up the harvest of the rich tracts of Malabar and Travancore, or to prevent the Cauvery from filling the canals of the Tanjore delta, yet it rendered them powerless to send the succour that might otherwise have been expected.

Thus were injured, more or less seriously, ten large districts of the Madras Presidency, containing a total area of 74,000 square miles, and a population of 16,000,000 of souls. The whole of the area and of the population did not suffer in an equal degree. It may be stated approximately that 11,000,000 of people were distressed in a greater, and 5,000,000 in a lesser, degree.

In the devastated tracts there are two harvests in the year, one depending on the summer rains, the other upon the autumnal rains, the edible grains consisting of the rice and several kinds of millet. Of the whole cultivated area a small part (technically termed "wet") is watered from artificial tanks which often rise to the proportions of lakes; the remainder (technically termed "dry") is watered in some parts from wells, but for the most part from rainfall. The proportion of wet lands varies greatly in the several districts, being largest in Chingleput where it exceeds one-half of the whole cultivation, and smallest in Bellary where it is only one-twentieth.

The failure was worst in the "wet" lands. The tanks, having their catchment areas in undulating plains or low hills on which but little rain descended, were left almost dry. What are usually splendid sheets of water became scorched dusty plains, appearing as huge black patches with cracked and fissured soil. The sluices, the distributing channels, and all the apparatus of irrigation lay useless. Such an universal drying up of the tanks, for which the districts below the Ghât mountains are so celebrated, has hardly been witnessed within the memory of living men.

The "dry" lands fared somewhat better. Whatever rain fell, did cause something, however scanty, to spring up in them. But, even then, fertile expanses of champaign which ought to be clothed with crops looked bare and arid, being little better than a desert. The wells retained some of their supply; though even in them the water fell lower and lower, and sometimes disappeared altogether. Of the more valuable crops, the sugar-cane, the tobacco, the garden produce, were in part preserved. But the cotton crop of Bellary and Adoni yielded nothing. The factories are closed and the machinery is silent. Though the cultivators fell short of doing all they might have done, yet in countless instances they made a brave fight to save their crops. They excavated their failing wells, deeper and deeper in the rocky strata; they dug pits in their fields, searching for moisture; they sunk wells with wicker work. They delved for springs and under-currents of water in the sandy beds of the dry rivers, and there indeed their toil was often rewarded, miles and miles of well filled watercourses being led off to recusitate the withering crops. These practices, which on this occasion stood the people in such

NOTE.—The Kistna district has been reckoned among the distressed districts; but I have not so regarded it, as only a small portion of it suffered.

Sir Richard Temple's Report on his mission to Madras.

good stead, are known to them in ordinary times, but were resorted to very largely during this year. The Government wisely exhorted the cultivators to deepen the old wells and to excavate new wells; and offered them advances of money for these purposes, relaxing somewhat the rules and conditions under which such advances are ordinarily made. In many hundreds of instances they availed themselves of these advantages.

The failure was not uniform in degree throughout any of the distressed districts. It would be tedious here to give the particulars for the several subdivisions of each district. Suffice it to state that out of a full crop there were in the agricultural year 1876–77 only the fractions shown in the following statement, in a parallel column of which there is given the population of each district, so as to convey some idea of the gravity of the misfortune resulting from the loss of crops.

	Crop in 1876–77.	Population.
Bellary - -	one-sixteenth of an average good crop	- 1,688,000
Kurnool - -	one-sixteenth ,, ,,	- 960,000
Cuddapah - -	three-sixteenths ,, ,,	- 1,351,000
Nellore - -	one-quarter ,, ,,	- 1,377,000
Chingleput (inclusive of Madras city) -	three-sixteenths ,, ,,	- 1,336,000
North Arcot -	one-quarter ,, ,,	- 2,015,000
Salem - -	one-third ,, ,,	- 1,967,000
Coimbatore - -	one-quarter ,, ,,	- 1,763,000
Madura - -	one-quarter ,, ,,	- 2,267,000
Tinnevelly - -	six-sixteenths ,, ,,	- 1,694,000

Experience has shown that the difficulty of dealing with famine is aggravated if the population is dense, and lessened if it is sparse. The following statement shows the average incidence of the population on the square mile in each district. As compared with some parts of India the most distressed districts are thinly peopled; and those tracts which are more thickly peopled are, fortunately, less distressed:—

Bellary has a population of	- - - -	151
Kurnool	- - - - -	130
Cuddapah	- - - - -	161
Nellore	- - - - -	162
Chingleput (exclusive of Madras city)	- - -	340
North Arcot	- - - - -	282
Salem	- - - - -	262
Coimbatore	- - - - -	237
Madura	- - - - -	238
Tinnevelly	- - - - -	327

} persons to the square mile.

The consequences of such a failure in 1876 are affected for better or for worse by the results of previous years. The year 1874 was generally good, and left a reserve of surplus grain. But 1875 was in many places unpropitious; and failure of crops in Mysore drained off supplies towards that province. In Bellary and in some parts of Kurnool, 1875 had been unfortunate in its seasons; and in Bellary 1874 had also been unfavourable. These circumstances caused the drought of 1876 to be felt with more intensity in Bellary than anywhere.

Inasmuch as the consequences of a scarcity in one region of India are mitigated or aggravated by the condition of other regions, it is to be remembered that from no part of the Madras Presidency could any surplus produce worth reckoning be drawn in aid of the distressed districts; that in the Mysore territories out of a population of 5,000,000 nearly 4,000,000 were also distressed; that in the Bombay Presidency some 5,000,000 of people were equally afflicted; that from the Nizam's dominions no considerable importation of grain could be anticipated, inasmuch as there also distress existed in some places. On the other hand—a fact of immense value—there was a good harvest in British Burma, in Guzerat, in the Central Provinces, in Malwa, in Northern India, and especially in Bengal, Behar, and Orissa.

This consideration leads us to the effect of these disasters upon the fortunes and the physical condition of the people. There was surplus grain enough and to spare within the limits of British India. But anxious minds immediately reflected whether the communications by sea and land would enable it to reach the distressed districts of the Madras Presidency. There was communication by sea from Calcutta to Madras, to Negapatam, to Tuticorin; and from Bombay to Beypore. From each of these ports

there was railway communication to every one of the distressed districts, save Nellore and Kurnool; even in the case of Kurnool the rail ran up to the western border of that district. But on these railways was laid the additional task of carrying grain to Bangalore, the entrepôt for the grain trade of the Mysore Province. The railway from the direction of Bombay pierced the Toongabhadra frontier, the very quarter where, as we have seen, the drought lay heaviest. The ships could bring, as was well known, much more grain to the ports than the railways could carry away. But the railways, with their combined power, could, it was calculated, carry 2,700 tons of food a day to the distressed districts. They who have seen what it is to contend with famine in Orissa, or North Bengal, or Behar, or Northern India, or Rajpootana—these know what priceless advantages are implied in the possession of transport by ships and by railways. What an amount of trouble, pain, and cost has been borne for want of complete communication during the famines in other parts of India, and has been saved by the possession of such communication during the famine in the Madras Presidency!

Sir Richard Temple's report on his mission to Madras.

While in the Madras Presidency prices rose to one rupee for six, seven, or eight seers (12, 14, or 16 lbs.) of common edible grains, tantamount to prices three times as dear as those of ordinary years—the prices in the Bengal Presidency were comparatively cheap; they ranged, for instance, at Calcutta, the most important place, at one rupee for 16 seers (32 lbs.). Thus there was a considerable difference between the prices at the places of demand and the places of supply, which afforded a fair margin of profit on importation into the distressed districts by trade, and encouraged the hope that private enterprise would surely seize the opportunity.

Though the area of the distressed districts is very extensive and thinly peopled, also much divided by hills and mountainous ranges, still the Madras Presidency is (for India) more than ordinarily well provided with good cart roads. The foresight of successive governors and administrators has caused the hills to be traversed in all directions by well aligned passes. Amidst the pasturage and the grazing grounds in these hilly regions there has been reared a race of hardy and long enduring draught-cattle. The carts are among the best constructed in all British India. The European merchants with characteristic vigour enter into the grain trade of the interior of the presidency. The Native grain dealers are resourceful and enterprising. If, then, the grain brought by rail from distant provinces should reach the several railway stations in time, there was little doubt of the power of the people to carry it on to their villages, at least during the earlier months of the scarcity. There was indeed much fear lest the draught-cattle should become stinted in their fodder and gradually exhausted as the season wore on and the heat raged fiercer.

There then arose that question which, however often it may be asked, can never be answered, as to whether the people had large or sufficient stocks of grain. There was a strong, though undefined, belief that they really had. For agricultural trouble of some sort, coming too in opposite forms—at one time drought and pestilence, at another time rainstorm and flood—has for some generations been so chronic in the Madras Presidency that probably the people, with an instinct of self-help against the evil day, habitually keep stores of grain. One season of propitious rain causes an immense productiveness in this comparatively inexhaustible soil, much beyond the current needs of the year for a population sparse upon the land. The people may thus be able to put by something for use in the years to ensue, which, as experience teaches them, are likely to be chequered by mishaps.

Even if the draught-cattle and some of the best animals in every village could be sustained through the troublous time—what, people would anxiously ask, will be the fate of the innumerable head of cattle used for ploughing and for other husbandry? They would be driven off in vast herds to the neighbouring mountains, the Eastern Ghâts, the Western Ghâts, the Central Ranges which form the backbone of the peninsula—where even in this year of scanty rainfall there is still some pasture. But then, with all the cattle upon a thousand hills, the scarce grass would be eaten up, perhaps, before the drought ends; and if so, then death must overtake them at last.

Lastly, there were some classes of the population regarding whom hope might be entertained and others for whom fear would be felt.

The Telugu and Tamil ryots* of the ryotwari settlements are the peasant proprietors of Southern India. They have a beneficiary interest in the lands they occupy. They pay a moderate and equitable land tax, assessed after a professional field survey in some districts, or settled after careful revision of the original assessment in other districts. They have had every motive to save something out of their yearly profits and to hoard

* There are Canarese ryots also in Southern India, but they are not numerous in the distressed districts.

Sir Richard Temple's report on his mission to Madras.

a little capital. They are formed into village communities headed by men holding hereditary offices; nowhere in India is the primitive village organisation better preserved than here. They are generally able to maintain themselves at least in any passing adversity. They are reputed to be poor; but poverty is a relative term. They are, indeed, a peasantry whom any Government might be proud to reckon among its subjects. They are prone to live beyond their humble income and to incur debt; notwithstanding this they have an unfailing credit with the village bankers who are also grain dealers. Under the ryots are the farm labourers, often holding some fields of their own, but adding to their livelihood by labouring in the fields of their neighbours. They form a large class having interests bound up with those of the superior ryots. They together with their wives and growing children are strong to labour. But now their vocation is gone for a time. There is no weeding or tending wanted for the withered crops. There is no harvesting to be done. The fields cannot be tilled for lack of moisture. The plough is unemployed. The oxen are straying in quest of fodder. Those men of this class, then, who possess any fields of their own may have some small stores of grain to live on. Those who are in the permanent employ of the village headmen or of the more substantial ryots, constitute a part of the capital of these little estates, and will be supported for a time by their employers. The rest must languish from the cessation of rural employment. These agricultural classes, both ryots and field labourers, have sturdy well-nourished frames. Among them may be seen large numbers with a stature and a stoutness hardly to be surpassed among the peasantry in any country.

Below these, in all the villages there are low-caste or caste-less people in a very varying condition—often in tolerably good case, often again living in squalor and degradation, continuing in scarceness at the best of times, and subsisting within the narrowest margin of existence in bad seasons. It was to be feared that from these outcasts of the social system charitable sympathy would be withheld by the better classes. There are also various gipsy clans habitually gathering the wild fruits of the forests, and eking out a precarious subsistence by disposing of jungle produce and doing chance work in the villages. On behalf of these poor untameable wanderers anxiety would be excited lest both the wild produce and the work should fail in a year like this.

Again, in some of the distressed districts there are many places, sacred to all *Hindu* nationalities, and frequented by pilgrims, by humble visitors, by religious mendicants, and by beggars of all sorts, from remote parts of India. If these people reached the holy spots they would doubtless be cared for by the religious establishments. But on the way they might find their travelling purse exhausted by the increased cost of food, and they might faint on the roadside or sink never to rise again.

It is remarkable that several of the most drought-stricken tracts belong to zemindars who, though possessing much rank and status, are not men of substance and capacity like the zemindars in some of the zemindari provinces elsewhere, but are either absent or involved in debt, or otherwise unfit to cope with the consequences of scarcity. These estates are sure to teem with instances of unmitigated misery.

In every town, almost in every large village, there are guilds of weavers, some making the finer, others the coarser fabrics. In many places there are shady groves of trees, serving as factories for this industry, and alive with the bustle of manufactures. But the demand for cloths has ceased for a time. The groves are no longer peopled, the spindles are hung up, and the looms idle. The weavers, thus thrown out of work, generally have means to last them for a time, but as they become gradually pinched and straitened they are unwilling to seek assistance from Government, which can be given only in return for labour unsuited to their sedentary habits.

Such then, in its character and in its effects upon the people, was the drought of 1876. Though some of the symptoms were extremely grave, there were many grounds on which to found the hope of a successful issue. Still the conjuncture was manifestly such as to call forth all the wisdom and firmness of the Government and all the devotion and ability of its officers.

Part II.

The second topic relates to the measures adopted by Government to help the people in meeting or bearing up against these misfortunes. It is necessary to insert a slight sketch of them—as they appeared to me—in order to explain the subsequent work of my own mission.

During the summer of 1876 small relief works were opened in Bellary, in Kurnool, and in other distressed districts. These operations increased as the months went on. It was hoped that they would be temporary only, and would cease if the north-east or

autumnal rains should be propitious. Up to the end of October, that is, to the close of the period during which hope of the autumnal rains remained, the number of persons thus admitted to relief was not large. The authorities who were then present on the spot must be supposed to have been able to judge of the necessity of affording relief. In the case of Bellary there was the consideration that the season of the preceding year 1875 had been unfavourable. The price of food, too, was dear throughout the greater part of the Presidency, having risen fast after the summer rains had begun to fail.

Sir Richard Temple's report on his mission to Madras.

Later in the autumn the state of the grain trade throughout the Presidency attracted the anxious attention of the Government. The failure of the autumn rains made it certain that a very large supply of food grain would have to be imported by some agency, commercial or other. Naturally the trade might be expected to bring in this supply. But if the trade should unfortunately be unable to do this, then it might in extreme resort become necessary for the Government to intervene in order to prevent the people perishing from want of food. The Madras Government seem to have doubted whether the trade would be able to meet such great requirements. In reality, however, during August, September, and October 5,637 tons of grain were imported into Madras from places beyond the Madras Presidency; further, 38,000 tons were imported into Madras port from various ports subordinate to the Madras Presidency; and 20,446 tons were carried by rail from Madras into the drought-stricken districts. Such facts occurring during these three months indicated considerable movements of trade and as much activity as could be expected at the outset of trouble; and the consideration set forth already in Part. I. of this minute regarding high prices in Madras compared with cheaper prices and abundant harvests in Bengal might have caused an anticipation of what actually happened afterwards, namely, large importation by sea during the winter months when Indian trade is always in full play. Still the Madras Government felt anxiety. Though there were no positive signs of the grain markets being anywhere empty, yet the grain trade was in many places sensitive and excitable. At some places there were grain riots. At Kurnool the trouble was so far serious that troops were sent there. In several districts grain robberies became daring and frequent, amounting to quite an outbreak of crime against property. In November and December numbers of famishing people came from the neighbouring districts into the city of Madras to beg for food. Public attention was painfully turned to these incidents, and inferences were probably drawn therefrom regarding the possible prevalence of famine in the interior of the country. Inquiry subsequently showed that no such widespread distress had broken out, or that, if it had anywhere broken out, it was being arrested by the action of the local authorities. Meanwhile a strong impression was made on the minds of many thoughtful persons at the Presidency.

Looking to all the circumstances of the time the Government of Madras determined on purchasing and did purchase, secretly and confidentially through a local firm, 30,000 tons of grain from places beyond the Presidency. This grain was to be held as a reserve, or to be sent to any place in the interior of the country where there might be any dangerous deficiency of grain. It was also decided that in the event of relief labour being employed to a great extent, the labourers should be paid in grain wherever this mode of payment might be deemed convenient. For this purpose additional quantities of grain were to be purchased within the Presidency. Thus were purchased about 13,000 tons, making up the total to 43,000 tons. The possibility of more purchases was contemplated, perhaps to a very large amount, according to the view which might be taken by Government of the requirements of the case, or according as events might unfold themselves.

The position of the markets in the more remote tracts situate near the Mysore frontier on the one side, and within the Eastern Ghât mountains on the other side, attracted attention. It was apprehended that Native traders would in some cases combine to keep prices abnormally dear, and would in other cases prove unequal to the task of supplying the local markets. By degrees the policy of the Government was developed further. Circumstances were foreseen under which it might be necessary for Government to throw grain into various places, not only to pay its own relief labourers, but also to influence the grain markets in favour of the people in the event of their being unable to purchase food, to frustrate combinations among the traders, and to prevent prices rising in any excessive degree. A transport agency on the part of Government was established for the distressed districts above the Ghât mountains with its head-quarters at Bellary. It was to ascertain from each local officer how much grain would be wanted either for paying relief labour or for other purposes. It was to engage carriage accordingly, that is, to make contracts for the supply of carts and bullocks to carry grain to such places as might be settled in concert with the local authorities under the direction of Government. It

Sir Richard Temple's report on his mission to Madras.

was to receive for transport all grain which might be received. It accordingly began to engage carriage, and by an early date carting contracts were made for 30,000 tons in all. It received quantities of grain which were despatched daily by rail and consigned to its care. Some consignments were sent to places close to the line of railway and some to places at a greater distance. The contracts were well and carefully made. The carriage thus engaged was efficient. And the executive arrangements were creditable to the officers concerned. The agency was capable of expanding into considerable dimensions until it should give to the Government an effective hold and check upon the grain trade in the districts above the Ghât mountains—Bellary, Kurnool, and Cuddapah—so that the State might either assist private enterprise in making the food supply reach the people, or prevent its being withheld from them, or import food by direct means according as the exigencies of the coming time might dictate.

It has been already seen that a system of relief on a small scale had been set on foot in the distressed districts before the end of October. When in November the failure of the autumn monsoon became certain, the prospect of widespread distress caused the Government and its officers to undertake the expansion of relief works. Some relief works of a larger kind were thought of. But in the main it was deemed necessary to open small relief works in every part of the distressed districts, in the heart of the drought-stricken area and among the villages, so as to be easily within reach of all who might need relief. These works were accordingly opened everywhere in numbers fully sufficient, according to this view of the necessity. The works were kept under the management of the Civil officers. The District Engineers and other establishments belonging to the Public Works Department were to advise and assist the Civil officers to align roads, to furnish designs, to help in professionally measuring up the work performed by the relief gangs. But they were not placed in actual command of any of the works or of the relief labour, nor was the tasking of the labour entrusted to them. All officers within the Presidency whose services could be obtained were despatched to the distressed districts. It was arranged to obtain the services of officers from other parts of India, especially Engineer officers and Civil Engineers. But little or no assistance of this kind had actually arrived up to the end of December.

The relief works were very largely resorted to. The progress of the number of relief labourers, men, women, and children, up to the first week in January, when the highest number was reached, may be thus seen :—

	Number of Persons.
1st November - - - - - -	160,000
1st December - - - - - -	310,000
15th „ - - - - - -	656,000
31st „ - - - - - -	982,000
7th January - - - - - -	1,066,000
14th „ - - - - - -	1,055,000

and the last-named number was increased to 1,165,000 persons by the addition of 110,000 persons on gratuitous relief.

The relief wages were at first fixed at 2½ annas per diem for a man, the wages of women and children being proportionally less. In some places they exceeded this rate, and were as high as 3 annas. By the beginning of January they were reduced to 2 annas. Task-work was ordered, and the Civil officers did their best to enforce it. But to enforce it properly was, under the circumstances—that is, with fast coming crowds of labourers, and without any adequate professional agency—quite impossible. In only few places was it in any degree insisted upon. In most places it was quite easy. In many places it was nominal.

These operations certainly maintained the agricultural classes in unimpaired condition physically, and kept them in contentment and in immunity from trouble. And so far the famine was, at the outset, held thoroughly in check.

It was not deemed expedient to prescribe any test of admission, or to vest the Civil officers with any discretion to reject applicants for relief on any such ground as this, that they seemed able to support themselves, for a time, at least. It was thought that the wages offered were low in reference to the high prices, that persons who for the sake of such remuneration came on the works must be really in want, and that none save those in such need would come. There probably was, towards the close of 1876, much alarm in the minds of the agricultural classes towards the northern side of the Presidency, in the districts of Bellary and Kurnool especially, which feeling may be supposed to have naturally spread to the local authorities when they beheld the wide waste of lands once cultivated, and found a desert instead of rising crops.

It was up to that time, as I understood, the belief of the authorities that the Government should charge itself with the duty, not only of preventing mortality from starvation, but also of alleviating all suffering and relieving general distress during the period of the scarcity. How far this view could be sustained in reference to the intention and policy of the Government of India will be seen hereafter. But at the outset it considerably affected the character of the relief measures which were undertaken. Nothing could exceed the humane solicitude of the Madras Government and its officers on behalf of the people, as regards life and health and physical welfare. And the proceedings taken by them had a comprehensive scope, commensurate with the benevolence of the policy adopted.

Sir Richard Temple's report on his mission to Madras.

Consideration was given to the commencement of large public works on which relief labour might be concentrated under professional supervision. The projected railway from Bellary towards the South Mahratta Country was proposed for commencement, but on reference to the Government of India difficulties were found to exist. The vigorous prosecution of the excavation of the canal (already in progress) which is to be carried along the East Coast from the Pulicat Lake to the River Kistna, was ordered. Efforts were made, with a moderate degree of success, to obtain relief labourers from a distance for this work. Also the junction of this canal with the South Coast Canal below Madras was undertaken.

In the city of Madras and its neighbourhood the Government organised standing camps on a very large scale for the reception of the sufferers from famine. To this city there came thousands of wanderers, seekers for employment, and beggars of all sorts, who in Southern India are accustomed to roam from town to town, imagining that the larger and the more distant a place is, the more likely is it to afford a haven for the miserable. These poor people hoped to find work in the city of Madras, or to share in the private charities which, according to common rumour, were being bountifully dispensed by the rich Natives there. The famishing wayfarers were gathered from all the thoroughfares leading from the country to the capital. Excellent medical attendance was provided; but despite of it many died after being received into the camps. Similar camps were ordered to be formed near Arcot, near Vellore, and other towns in the interior.

The local authorities in the distant districts were instructed to establish centres of charitable relief, or to assist any effort which might be made by benevolent persons in this direction. Private charity was everywhere invoked and largely responded to the call. Many Native gentlemen honourably distinguished themselves in this good cause.

Up to this time, the end of December 1876, the Madras Government expended—

	£
On relief - - - -	372,500
On purchase of grain - - -	302,400
	£674,900

There were other items, such as transport agency and local purchases of grain, which brought up the total to nearly three quarters of a million sterling.

The members of the Revenue Board were deputed to visit the most distressed districts, and to make reports to Government of all that they ascertained.

In every part of the distressed districts, the Civil officers of all grades exerted themselves with the utmost zeal, devotion, and humanity, and in a manner entirely worthy of the urgency and magnitude of the occasion.

Part III.

The third topic relates to the proceedings of the mission on which I have been engaged since the 14th January, the date on which I entered the Madras Presidency. At that time I was fully acquainted with the views of the Government of India, having had the advantage of learning them before starting on the mission. These views were immediately followed by me in anticipation of the official instructions which were expected to come very soon. The instructions dated the 16th January were received in the Madras Presidency on the 23rd.

The points to which attention was by these instructions authoritatively drawn may be summarised thus—

Every effort is to be made for the prevention of deaths by famine.

Sir Richard Temple's report on his mission to Madras.

Severe economy in relief should be practised. Indiscriminate charity on the part of individuals is admitted to be bad, but on the part of a Government is worse. A Government has no better right in a time of scarcity than at other times to attempt the task of preventing all suffering and of giving general relief to the poorer classes of the community.

The numbers on relief works are so great that there is reason to fear that many persons must be employed who without such relief could sustain themselves, for a time, at least.

The collection of such numbers should be restricted on works where labour is not exacted, where supervision is wanting, and where people can obtain, for the asking and in return for next to no work at all, wages in money or in grain.

No time should be lost in giving to the people, to the greatest extent practicable, the means of employment on large public works, which need not always be in the distressed districts or near the homes of the people.

The Government may be driven to set up petty relief works near the homes of the people, but not until distress becomes extreme, or a state of famine has been reached.

There is great advantage in paying relief labour in money (not in grain) wherever and so long as this mode of payment is practicable. But if money payment is not practicable, there is no more objection to Government purchasing grain for payment than there is to its making purchases through the commissariat for the troops.

There is to be no interference of any kind on the part of Government with the object of reducing the price of food.

Inquiry should be made as to how far private trade, if unfettered, can supply the wants of the country.

In certain localities remote from railways and large markets which private trade is unable to reach, it may become necessary for Government to intervene.

The transport of grain by the trade, by railways, by roads in the interior, and by the sea ports, should be carefully observed.

A question shortly arose as to what degree of distress was to be prevented by Government. I understood from the first that practically there would be two principal degrees of distress. Firstly, there might be distress which, however sore and lamentable, can yet be borne without physical health being impaired, or bodily power being disabled, or life being imperilled; and this the Government could not undertake to prevent or alleviate. Secondly, there might be distress which, increasing slowly, perhaps, but surely, must lead to extremity which would sooner or later end in death; and this the Government would, to the utmost of its means and ability, prevent. It was necessary, by the best diagnosis which could be made, to discriminate between the one kind of distress and the other; and if there should be a doubt whether any person or persons come within the first or the second category, then to give the people the benefit of that doubt. These principles were fully borne in mind in the discussions and conferences of the third week of January, in Bellary, Kurnool, and Cuddapah. Shortly afterwards similar principles were enunciated by the Government of India in reply to some references which had been made.

Such being the purport of my instructions, it became necessary to consider—what, indeed, I had been already considering from the moment of entering the Madras territory on the 14th January—the application of the principles as above laid down by the Government of India to the actual state of affairs in the Madras Presidency.

Among the most urgent of the many questions which presented themselves was the question relating to the purchasing, transporting, and storing of grain by Government. The proceedings of the Government of Madras in this important matter have been already described in this minute. Before starting on the mission, I had clearly understood that the purchasing of grain by Government from places beyond the Presidency was not approved by the Government of India; that doubt was felt as to the need of purchasing grain for Government within the Presidency; that the business of the transport agency should be reconsidered with a view to possible restriction. Proceeding from the north towards the Presidency I found quantities of grain being imported thither from the direction of Bombay and the countries beyond, and from the Nizam's dominions. Entering the Presidency I found the railway carrying grain to the utmost extent of its power. The local markets were everywhere seen to be well supplied. The traders—European and Native—seemed confident that the grain would be forthcoming from distant places, and that they could import it even to the remote parts of the interior of the country. The fears entertained by some regarding these remote parts did not appear to be shared by the trade. There was no sign of country carriage and draught cattle failing. Reports were received of the seaboard at Madras being piled up with

masses of grain brought by the ships. But I perceived, or thought I perceived, an apprehension in the minds of the trade lest the grain transactions of Government and its transport agency should have a dispiriting effect on private enterprise. There was no need whatever for Government to buy stores or transport grain for the payment of relief labour when the labourers if paid in cash could purchase food on the spot. All this was immediately represented to the Madras Government. The purchasing of grain for Government has subsequently ceased. The relief labourers are paid generally in cash. The transport agency has been restricted to the transporting of a limited quantity of grain (previously purchased by Government) to certain selected places, there to be held till further orders, and to certain limited engagements with contractors to supply carriage if required. The private grain trade has continued to be extraordinarily active.

Sir Richard Temple's report on his mission to Madras.

Having observed at various railway stations "blocks" or accumulations of grain destined for the distressed districts, and desiring to ascertain how far the several railways could be relied upon to carry the quantities necessary to supply these districts, I obtained from the Government of India the services of an Engineer officer belonging to the Railway Department. He was of great use in getting these accumulations cleared away, and in promoting efficiency in the joint working of the two railways. With his help I ascertained that the quantity then estimated to be required for the whole of the distressed districts and including the territory of Mysore, amounting to 2,700 tons a day, could with extreme exertions be carried by the two lines (that is, the Madras Railway and the Great Indian Peninsula Railway from Bombay). The railway from the Bombay side worked satisfactorily. But the working system of the Madras Railway, though cheap and sufficient for the light traffic of ordinary times, was hardly able to bear up against the pressure of the heavy traffic in a time like this. The Traffic Department of the Madras Railway, however, exerted itself most commendably under all these difficulties. The engine power on the Great Indian Peninsula Railway was found insufficient, and on the Madras Railway was quite unequal to such an occasion as this. In order to afford some remedy for this very serious want, additional engines were obtained from other parts of India. And in order to relieve the pressure, I recommended, with the full concurrence of the Madras Government, the doubling of the line as far as Arconum, which recommendation was accepted by the Government of India. Subsequently, in order to lessen the strain caused by the grain traffic to Mysore, the Madras Government desired that the Mysore traders should receive a part of their consignments through the port of Negapatam instead of through Madras, and reduced the rates on grain destined for Bangalore. When visiting Bangalore I pressed this matter on the consideration of the Native merchants there. And the Madras Government ordered additional measures to facilitate the landing of grain at Negapatam.

The question whether the three railways, namely, the Great Indian Peninsula Railway, bringing grain from the north-west to Bellary and Kurnool; the Madras Railway with its two branches, one towards Bellary and Kurnool, the other across the Peninsula to Beypore; the South of India Railway, leading from Negapatam to Trichinopoly and thence to Madura and Tuticorin opposite Ceylon,—could, or could not, at the worst season carry all the grain required for the distressed districts including Mysore, lay at the foundation of all our plans for a successful contest with the famine. Therefore, calculations bearing upon this point were repeatedly made and re-made. The results seemed to justify the expectation that the railways, in combination, would be able to perform this task. And, as yet, this expectation has been verified by the event. Such indeed have been the fluctuations in demand, that never yet have all these lines been simultaneously worked to the aggregate of their power.

An inspection of the country south of the right bank of the Toongabhadra (with its narrow fringe of unfailing cultivation watered by channels from the river) showed that the reality of the drought and its consequences equalled the worst reports. The Irrigation Company's canal, which can irrigate 250,000 acres of autumn crop lands, had given water to about 72,000 acres in the Kurnool and Cuddapah districts and so far proved to be a timely resource. But in some cases the ryots took the water too late to save their crops. The people have not as yet made use of the canal water in any adequate degree; for, in previous years only 9,000 acres have on the average been irrigated, whereas the canal has water enough for many times that area of autumn crop lands. It may be hoped that present experience will impart a stimulus to irrigation from this canal in future.

Among the questions which forced themselves on my mind at that time, 14th to 21st of January, in the most distressed districts, were these:—

Are the measures of relief sufficient to meet the trouble?

Sir Richard Temple's report on his mission to Madras.

Are they more than sufficient in reference to the principle that the people should not be encouraged to resort unduly to State assistance and that all expenditure in excess of the actual necessities of the case should be prevented?

Are they in any degree open to the general objections set forth by the Government of India? If they are, then what steps by way of rectification ought to be recommended?

There could be no doubt that, on the whole, the grave consequences with which the people had been threatened by the drought were being successfully averted. In the interior of the Presidency, and especially in the most distressed districts above the Ghât mountains, there was no information of any mortality or even of any deaths of individuals from starvation. There was indeed information to the effect that nothing of the kind had occurred or was likely to occur. There was no sign of distress. Whatever distress had been threatened was being thoroughly relieved. Irrespectively then of cost, present or prospective, irrespectively also of any possible demoralising influences on the people, there was no doubt that the famine was being completely subdued.

It has been stated above that the consequences of the drought had on the whole been averted, because there was a defective point on which they had not been fully averted, namely this, that in some of the districts near Madras (as already mentioned) there was some unrelieved distress. This distress extended over nearly the whole of certain large zemindari estates,* which were not under the direct management of Government officers as the ordinary ryotwari districts are. It extended also over some of the lower castes in parts of the districts of Chingleput and North Arcot, and it seriously affected many individuals in various classes. When the half-starved persons came forward at the centres of authority, or were picked up in public places, or were found lying about, they were fully cared for. But these occurrences might have been in some degree prevented had a proper system of village inspection and relief been ordered in the beginning. Even when events gave warning of the necessity of such a system, its introduction was too long delayed. But these defects, however grave, did not, when compared with the magnitude of the affairs in their totality, detract from the general result, which certainly amounted to this, that by the beginning of January the serious distress which threatened to rise in the Madras Presidency during December was effectually kept down.

Kalastri.
Karvetnagar.

But then there followed these several questions, namely:—

Whether the relief measures were more than sufficient?

Whether they encouraged the people to resort unduly to State assistance?

Whether they were involving an excessive expenditure beyond the actual necessities of the case?

Now, without at all disparaging the humane foresight, thoughtfulness, and anxiety of the Government, or the zeal, devotion, and benevolence of its officers, or the many difficulties and uncertainties with which this great and difficult affair was beset, I am constrained to answer these several questions in the affirmative.

But I would add in explanation, as already stated, that all those who were charged with the conduct of relief affairs, had up to this time thought themselves bound not only to save life but also to relieve to the utmost all suffering and general distress caused by the scarcity. And this understanding went somewhat beyond the intention of the Government of India as explained in the instructions just cited.

It has been already stated that on behalf of the Madras Government, one Member of the Board of Revenue after another had visited temporarily the most distressed districts, had consulted with the local officers, and had made reports to the Government, which had been very useful so far as they went. But these high officials did not always possess authority to give orders or instructions on the spot. Whatever authority they indirectly exercised was in its nature undefined, and was insufficient for conducting urgent and critical affairs. Each of them stayed but a short time and then returned to Madras. There was no superior authority resident in the scene of trouble, vested with power, and imbued with that sense of personal responsibility which conduces to forceful and thoughtful administration. Consequently there was no policy laid down in adaptation to local circumstances. The District Collectors had not enough of guidance under circumstances transcending their ordinary experience. And junior Civil officers in out-stations and in remote subdivisions were sometimes obliged to confront extraordinary difficulties, to incur large expense, and to commit the Government to important decisions, without having received any definite instructions.

Another difficulty consisted of the great size and area of the jurisdictions under each District Collector. The Collectorates of Bellary, Kurnool, and Cuddapah had extensive

and remote subdivisions, which had urgent affairs in progress, which were in the charge of officers full of zeal but comparatively young in experience, and which were removed by distance from the immediate cognizance of the Collectors.

Sir Richard Temple's report on his mission to Madras.

If, at the outset of the affair, some trusted official, who could have been empowered to issue orders on behalf of Government, and who would have been directly in communication with the Government, had been deputed to the most distressed districts, the Government of Madras would probably have succeeded earlier in systematising relief operations, and in securing economical administration.

As already seen, there were in the second week of January 1,165,000 persons on relief, of whom 1,008,000 belonged to the three districts of Bellary, Kurnool, and Cuddapah, and the remaining 157,000 persons belonged to the districts of Nellore, Chingleput, North Arcot, Salem, Coimbatore, and one or two others. In the last-named districts the numbers were not large enough to raise any important issue. But in Bellary, Kurnool, and Cuddapah, the numbers could not fail to arouse the gravest reflections.

The numbers on relief (relief works and gratuitous relief being taken together) in these three districts might be thus compared with the total population :—

——	Population.	Total Number on Relief.	Per-centage on Population.
Bellary - - -	1,688,000	460,000	27
Kurnool - - -	960,000	337,000	35
Cuddapah - -	1,351,000	211,000	16

On examination of local details it was found that in several subdivisions of the districts of Bellary and Kurnool there were 50 to 60 per cent. of the population on relief works. It seemed possible that at the then rate of progression, the entire rural population in some parts of these districts would, with the exception of comparatively few individuals, be ultimately wishing to resort to State relief.

In Bellary there were, in addition, a large number of persons (upwards of 40,000) employed in the repairing of the roads and tanks and in the ordinary public works of the district, who were not reckoned as relief labourers at all, though they belonged to the labouring classes.

In the Deccan districts of the Bombay Presidency, which districts were afflicted by the same drought, the number stood thus for the same period :—.

——	Population.	Total Number on Relief.	Per-centage of Population.
Sholapur - -	718,000	93,000	13
Kaladgi - - -	816,000	27,000	3
Part of Poona - -	318,000	47,000	11

The analogy of these equally afflicted districts pointed to the conclusion that there must be some excess in the relief administered in Bellary and Kurnool.

Again, these excessive numbers on relief in the districts of Bellary, Kurnool, and Cuddapah were found in the second week of January. According to the experience of all former famines in India, the numbers in January would be surpassed by the numbers of the succeeding months ; indeed they would go on rising month by month till May, or till the south-west monsoon (expected in June) should arrive. If then these districts showed a million of recipients of relief in January, what it was anxiously asked would they be showing in March, or still more, what would be the enormous muster roll of April or May ?

In January and February 1874, the worst districts of North Bengal and Behar hardly showed more than a few thousand recipients of relief. The numbers remained low till the middle of March. Then they rose rapidly, but did not reach their culminating point before the middle of April. No doubt there is a difference of at least one month in season between Behar or Bengal and the Madras Presidency, which might cause famine to declare itself a month earlier in the latter presidency. Still this would not account for the remarkable haste with which the famine seemed to be striding onwards

Sir Richard Temple's Report on his mission to Madras.

in Bellary, Kurnool, and Cuddapah. And this consideration alone would have necessitated a review of the situation in these districts, to see whether there were not any artificial as well as natural causes working to precipitate a crisis.

The question then was whether any preventible causes existed to maintain the numbers on relief at such an excessively high rate in these districts? A sojourn of a few days in the districts of Bellary and Kurnool and a visit to Cuddapah, a careful inspection person by person of relief labourers, in gangs scattered over various parts of the country, an examination of some of the relief works, and much conversation with the local officers, European and Native, served to convince me that such causes actually existed. They were—

Offering of work close to the homes of the people;

Rendering the work light and easy;

Making the wages worth having irrespective of bare subsistence;

Admitting all comers without any question as to whether they could sustain themselves for a time;

Allowing all applications for employment without exception.

These several concessions offered considerable advantages in the eyes of a rural community. At that time a rustic family could earn on the relief works Rs. 10 a month; or Rs. 40 if the period of relief should last for four months. They will not perhaps seize the opportunity if the work be hard and a long way off; but they will do so if it be easy and close at hand. Thus a temptation is presented not only to the lower classes and to the field labourers, but even to the ryots and peasant proprietors who pay land tax to Government. A man and his family are not in actual want; they are not prepared to interrupt their domestic arrangements or to bivouac out or to work hard all day under the burning sun. But they find the times hard; their ordinary work is slack. They would be glad to make a little money. And this is exactly what the relief works enabled them to do, and what was actually done by tens of thousands of persons at that time. But manifestly this was not within the legitimate scope of relief operations. And undoubtedly some sort of demoralisation was beginning to creep over the rural community.

	Rs.
*Man	3¾
Wife	2¾
Two elder children	3½

As already stated, the wages were, at the outset, supposed to be low relatively to the dear prices of food. But they were not really low, when every member of the family was able to earn them close at home. The monthly earnings of a poor family, at this time on the relief works, was equal to the salary in ordinary times of the lowest paid classes who can read and write.

These circumstances had not, however, lasted long; they were only in their inception; there was ample time within which they could be remedied. Under the best arrangements it is not always possible to avoid faults in such extraordinary affairs as these; it is more profitable to gird ourselves to set things right than to regret what may have gone wrong for a time, especially if that time has been but short.

In the first place, then, I addressed myself to the enforcement of task-work, and found from inquiry on the spot that at the outset there had been no sufficient progress made in this direction, but that subsequently the Madras Government had ordered task-work to be introduced. In most places these orders did some little good; in few places only were they acted up to. In fact, the numbers of relief labourers had swelled so rapidly that it would have been almost impossible to regulate properly the proceedings of undisciplined crowds, even if a strong regulating establishment had existed. But such an establishment did not exist. Those officers in Civil employ within the presidency who could be spared had, as already stated, been employed. It was held that officers from the Madras army could not be spared. Some officers from the Bengal army and from the Bengal Public Works Department had been sent for, but had not arrived. The European relief officers and the District Engineers, being few in number, did what they could, but were obliged to trust in the main to their Native subordinates. These latter consisted chiefly of Native Deputy Collectors, tehsildars, and Revenue Inspectors. Without any disparagement of the merits of these Native officials in the ordinary duties for which they had been trained, and with all acknowledgment of the good service rendered by some among them even on this trying occasion, I am obliged to state that they were generally deficient in aptitude for supervising relief work. They were appalled at the drought which had befallen the people and they shared in the most exaggerated fears as to its consequences. They admitted all comers, however well-to-do, without let, hindrance, or inquiry, and they permitted the people to freely indulge the hope that the State would feed everybody for the mere asking. There was nothing for it but to wait

the arrival of the addiitonal officers expected to arrive, and meanwhile to press and urge the enforcement of such a degree of task-work as might be practicable.

Sir Richard Temple's report on his mission to Madras.

At the same time I made careful inquiries in every direction regarding projects for large public works which could be undertaken with relief labour under professional supervision, and on which task-work could be exacted or piece-work established. The districts of Bellary, Kurnool, and Cuddapah were not fortunately situated in this respect. The project of a high level channel from the Toongabhadra was impracticable. The commencement of the railway from Bellary towards Dharwar had been negatived. The extension of the canal between Kurnool and Cuddapah was difficult in the state of the relations between the Government and the Irrigation Company. However, several main lines of road and several large tanks or lakes were proposed.

I duly remembered that in inviting projects for such public works in order to employ relief labour, there is the danger that proposals may be made for executing projects previously rejected on general grounds, to which projects labourers not absolutely in need might be attracted,—and that if this were to be allowed, the occasion of relief would be made use of in order to carry out unnecessary works, whereby extra and needless expense would be incurred. But this objection is obviated if those only are admitted who really need relief, who must be assisted on some work or other by reason of their distress, and if the strictest regard be paid to the selection of projects. Although the danger is real and has to be guarded against, it can with care be avoided. And this consideration does not at all counteract the advantages of insisting on relief labourers being drafted off to large public works wherever such can be found.

Although it seemed impossible at the time (though it afterwards became quite possible) to prevent the greater part of the works remaining under the care of officers whose tasking would probably be easy, still there were three things which could be done even by the unprofessional Civil establishments, firstly, moving the gangs to a little distance from their homes and concentrating them on works where some supervision might be managed; secondly, stopping the influx of new applicants who had been flocking in by tens of thousands week by week from some time past; thirdly, the eliminating from the ranks of the gangs those persons who were manifestly able to sustain themselves and whose presence constituted an abuse of the State charity. The numbers picked out to be discharged might not indeed be great enough to cause any appreciable saving of cost, but their discharge would have a gradual effect on the public mind, as showing that the Government would not suffer itself to be imposed upon.

I represented verbally without an hour's delay to the local authorities these various considerations, which I understood to be in the mind and intention of the Government of India. I avoided giving them any absolute instructions, for which indeed they were to look to the Madras Government. I conferred with them, and explained to them, for their consideration, the principles of relief policy and the results of experience. In most cases they seemed from their own experience to be prepared for these views, and often proceeded to give effect thereto, under the responsibility vested in them by their own Government. The general effect was an instant cessation of increase in the rolls of relief labourers, and the commencement of decrease almost day by day. The flow of the tide was arrested and the ebb set in.

I understood that the Madras Government, being satisfied that the approach of the famine had been withstood and repelled, was quite prepared to adopt further measures for systematising relief operations. On the 21st of January I laid before them, in addition to the enforcement of task-work already ordered, proposals for—

Stopping all fresh admissions to relief works in Bellary, Kurnool, and Cuddapah, save under an order from some responsible official;

Examining every gang person by person with the view of discharging for the present every one not in absolute need of State relief;

Reducing the relief wage for men from 2 annas to 1½ annas per diem; the wage for women and children to be adjusted accordingly.

It was shown that at the price of common grain then prevailing and likely to prevail (namely, one rupee for eight seers or 16 lbs.) during the time of distress, the 1½ annas rate would enable a man to buy 1 lb. of grain per diem, and to have a margin for buying vegetables and condiments. Besides the financial saving, which would be considerable, the foregoing narrative will have shown the importance of lowering the relief wage to the standard of subsistence, of sustaining life in ordinary health, and nothing more.

These views were generally accepted by the Madras Government on the 31st January, and orders were issued by them accordingly to all the distressed districts. Instead of the wage of 1½ annas per diem as proposed by me, the Madras Government ordered that

Sir Richard Temple's report on his mission to Madras.

the wage should be fixed for all relief labourers, not under professional supervision, at an amount representing the price of 1 lb. a day of grain plus ½ anna for vegetables and condiments. This rate was as economical as mine, but it had this disadvantage, that doubts would arise in different districts as to what kind of grain was meant, that time would be lost in discussion, and that, in the midst of doubts, the reduction of wage would in some localities fail to take effect. All this actually happened. The reduction did not take effect till nearly the end of February, and in many places it settled itself into the 1½ annas rate, the very rate first recommended.

For those relief labourers who were employed by the Public Works Department under the departmental rules of work, or who, though supervised by other agency, might be working up to the departmental standard, a rate of 2 annas per diem was allowed.

While in Madras at this time, I named, at the request of the Madras Government, a number of covenanted Civil servants of the Bengal Presidency who had experience in the famine of 1874. The Government of India was pleased to despatch these officers for service in the distressed districts of the Madras Presidency. They arrived at their posts in the interior of the country with the least possible delay.

Subsequently I recommended that European officers of the Madras Army should, if they could possibly be spared, be employed in the relief operations. I also invited consideration to the advantage of employing the Native officers of all grades in the army, and also selected sepoys in the supervision of relief gangs and in the exaction of task-work; this plan having been tried with signal advantage in the famine of 1874, when numbers of Native officers and soldiers of the Bengal Army served throughout the famine relief, in a manner worthy of the great profession to which they belonged. By these means a trustworthy and comparatively inexpensive agency is obtained at a time of emergent demand for establishments of this description.

On or about the 24th of January the instructions of the Government of India, already described, were published throughout the Madras Presidency. Their appearance, of course, imparted authoritative weight and solidity to all the proceedings which had been taken to reduce the relief operations to system, and to prevent the waste of money, and strengthened all the representations which might be made with these objects to the Local Government and to its officers.

At the same time it was most important to provide for the inspection of the poorer classes in the distressed districts from village to village, from house to house, in the highways and byeways, in every place where men either congregate or wander. The orders of the Madras Government were that relief camps for the reception of destitute persons should be formed at all the principal places, and that the residuum of such persons should be relieved by the village headmen under the supervision of the district authorities. These orders were doubtless excellent so far as they went. But being general in their terms they needed to be followed up with more specific directions. On the 16th January I caused a detailed memorandum to be drawn up of the manner in which the Kurnool district might be divided into circles and sub-circles for the inspection of every house in every village, for the purpose of searching out cases of destitution, which memorandum was immediately transmitted to the Madras Government. On the 19th January I drew attention to the importance of impressing upon the headmen of every village their responsibility for bringing before the nearest authority every case of dangerous distress. On the 8th February I formally represented to the Madras Government the general importance of the subject, observing that, however comprehensive the relief measures might be, still experience showed that individuals or families might be suffering in silence, and might compose themselves for death without complaining. For this there was one, and only one, remedy, namely, inspecting the villages house to house, and bringing forward for relief every destitute or famishing person who could be found. I pointed out the remarkable advantages which the ryotwari system—with its staff of officials, tehsildars, and Revenue Inspectors in each of the many subdivisions into which every district was divided, and with the hereditary headmen and accountants in every village—offered for carrying out such a plan; concluding with a recommendation that, although the local authorities had a general understanding of the subject, they should be more specifically instructed in its details.

My next care was to visit rapidly the distressed districts below the Ghât mountains. As already seen, some parts of those districts were much distressed. And if the ideas which had for a time prevailed in the districts above the Ghât mountains (Bellary, Kurnool, Cuddapah) should take possession of the people below them, the crowding of large numbers on relief works might become very embarrassing. I therefore passed through parts of Chingleput, North Arcot, Salem, Coimbatore, Trichinopoly, Madura, and Tinnevelly. This visit was decidedly re-assuring. The failure of the autumn and

winter harvests had been less; the promise of the spring harvest was better; the resources of the people were in several respects greater. Nothing like indiscriminate relief had prevailed; the local officers had been cautious and thrifty; the people had been taught the lesson of self-control under threatening circumstances. The recipients of relief were comparatively few, and their number did not seem likely to increase largely.

Sir Richard Temple's report on his mission to Madras.

At this time, the end of January, it became necessary for me to estimate the cost of the famine in the Madras Presidency. In December 1876 the Revenue Board had made an approximate estimate, which showed an expenditure of nearly 3½ millions sterling, 3,410,000*l.*, exclusive of losses of revenue. But the Government did not accept this, as it was formed on very rough data only. But now, 5th February, it seemed proper for me to submit to the Government of India a preliminary estimate of the possible cost of the famine in the Madras Presidency. This was accordingly done. The main factor in the estimate was the probable number of relief labourers. This was ascertained from the Collector of each district, allowance being made for the restrictive measures which had been discussed, as already described in this minute. The numbers still seemed very high, and I was hopeful of seeing them reduced. But it was not thought prudent to deviate from the authoritative opinions of the several Collectors until further facts should be developed. And as these numbers were high, it seemed advisable to prepare the Government of India for all financial eventualities. On the data then furnished by local authority, the number assumed for February was 1,228,000 persons, for March 1,480,000, for April 1,840,000, for May 1,530,000. After that month it was calculated that the numbers would fall to 795,000 in June and 310,000 in July, Besides these numbers on relief works, it was thought advisable to provide for large numbers of persons coming on gratuitous relief, which numbers might gradually rise to 700,000 in the month of June. The result was a total estimated cost of 2,920,000*l.*, being 490,000*l.* or half a million less than the first rough estimate. The cost might under certain contingencies come out greater. But there was hope that if economy could be successfully introduced the expense might be kept much within this estimate, in which case a revision of the estimate would have to be made.

As measures of additional control came to be adopted, it was apprehended that local questions would arise which could not be promptly settled without some officer being present on the spot with plenary power. Further, with measures of relief spread over so large an area and affecting so many classes, it would be difficult to secure that uniformity of system, which is necessary to be maintained, even after allowing for all local peculiarities, unless there be some authority at hand to whom all officers must defer. I therefore recommended that some officer be appointed to reside in the most distressed districts and be vested with power, subject immediately to the Government of Madras, to direct and control all the relief operations. No particular action was taken upon this recommendation.

I visited the Mysore Province for a few days at this time. The proceedings taken there, which were useful for comparing the standard of relief adopted in this neighbouring province with that prevailing in the Madras Presidency, need not be described now.

It then became desirable for me to return to the districts above the Ghât mountains, Bellary, Kurnool, and Cuddapah, to see whether the Madras Government orders regarding the systematisation of relief were being fully carried out. This second visit lasted from the beginning of February to the end of that month. During this time I visited many localities in the interior of the country, examined the various relief works, inspected numerous relief gangs, myself examining upwards of one hundred thousand relief labourers in all of both sexes and all ages, conferred with most of the relief officers, European and Native, and saw as much as possible of the middle and humbler classes who were not upon relief. Once more I impressed upon all concerned the principles set forth in the instructions of the Government of India, superadding this time, however, exhortation founded on the orders of the Government of Madras issued, as already explained, on the 31st January. By this time too the European officers, military and other, from distant parts of India, and especially the Civil servants experienced in the famine of 1874 (who have been already alluded to), were beginning to arrive. Their presence greatly strengthened the supervision and control. The local officers, despite much difficulty, exerted themselves most loyally to restrict relief to those who absolutely needed it; to reject those who were making a convenience of the State bounty; while they extended discriminating charity to all cases of real misery. Many persons were discharged as being manifestly without claim to support from Government. This doubtless discouraged applicants who knew themselves unworthy. To such persons the reduction of the relief wage served as a further discouragement. This tended to keep.

Sir Richard Temple's report on his mission to Madras.

the numbers down. As might be expected, the increased supervision brought to light the various sorts of frauds, malpractices, and false returns, which are sure to be found on these occasions everywhere. The returning of persons who never existed is expressively termed in these districts the "counting of crows in the air and entering them in a roll." Sometimes outbreaks of small-pox or cholera or other sickness, sometimes also holidays and festivals, would cause gangs to break up, and not to re-assemble. Again, the relief works were systematically re-arranged in order to take the relief labourers to some reasonable distance from their homes, and to make the tasks in some degree irksome, so as to apply some test and trial of the reality of their need. The manner in which the gangs thinned their ranks, when required to move away, to perform a day's march, to render a fixed tale of work, to bivouac or encamp in the open fields, was quite remarkable. Then it was that tens of thousands proved by their own behaviour that they had been taking State wages for gain or convenience, and not for the support of life. More than this, many gangs, on receiving orders which would have been obeyed unhesitatingly by persons really in need, struck work, hoping to make terms with the authorities. Finding themselves unable to dictate their own terms, some would come back after remaining for a while on strike, but many stayed away altogether. Instance after instance occurred of gangs, some thousands strong, disappearing from muster on being told that the road running through the middle of their villages to which they had sauntered leisurely day by day for weeks past was now finished, and that they would be assembled at another road, one day or two days' march off. Other gangs equally large, on being set to do an augmented task, would cease working and run off, shouting that this new burden was unjust, and that Government, having let them become accustomed to easy work, should allow them to continue in ease to the end. The effect of all this was to bring down the numbers week by week. In Bellary, Kurnool, and Cuddapah the highest total in January of persons on relief works amounted to 950,000. It fell to 540,000 by the end of February and to 490,000 by the middle of March. And the decrease is the more remarkable, inasmuch as the season was advancing during which the distress was expected. In this part of the country the process of rejecting from the gangs those who are well-to-do and retaining those who are poor is described by an expressive phrase "shroffing," in allusion to the manner by which a "shroff" or money-changer tests the intrinsic value of the coins presented to him. Thus the majority of the people who left the works had "shroffed" themselves. In this part of the country there was no symptom of distress among these people after their departure. In some instances the prices of common things, grass, firewood, and the like, fell after their departure from the works, proving that they had reverted to regular occupations, and that their presence on the works had for a time actually interrupted rural business.

Inquiry was made as to what the relief labourers were doing with their wages. In many places it was understood that they were not devoting these earnings entirely to the purchase of food grain. The sales of grain at the shops or bazaars established near the gangs on the works appeared often to be less than the cash disbursements in relief wages. It was thence inferred that the labourers were hoarding a part of their wages. There was some information to the effect that they were exchanging the small copper coins for small silver coins.

Again, in some gangs there were large numbers of women whose husbands or relatives were not on the works, but were at home following some pursuits of their own. In such cases it was to be inferred that, while the husbands were following their ordinary professions, the wives were labouring on the relief works in order to eke out the little income of the family.

These and other indications seemed to show that, even after all the reductions in numbers, there must still be many who attended the relief works for gain and convenience rather than from necessity. Still the great majority of those now on the works, though maintained in good condition, would have rapidly deteriorated without State assistance. Thus the relief measures when duly restricted, were really necessary to prevent a section of the population from perishing or being disabled.

It was satisfactory to find that the robberies and thefts which had been so rife from November to January had to a great extent ceased, and that the state of crime against property was not much above its ordinary level. To this remark some places such as the frontier of Kurnool, near the Kistna, certain parts of Salem, and perhaps other localities formed exceptions.

During this visit I inquired most carefully as to whether the prescribed system of village inspection and relief was being carried out. It was found that much was being done in this direction; that the village headmen had received strict injunctions to inspect, report, or relieve; that they had in many cases received small advances of funds, so that they

would be without excuse for failing to afford relief in emergency; that circles had been formed each containing a few villages only, there being a special relief centre in the midst of each circle; that there was a larger relief centre at the head-quarters of each subdivision comprising a cluster of circles. But still here and there among the villages, and sometimes among the gangs of sturdy and vigorous relief labourers, I found weakly or wretched individuals. And sometimes inquiry into these miserable cases showed that the poor people were sharing their wages with infirm people at home. Such infirm persons ought, of course, to have been sought out and brought forward for succour under the system of village inspection and relief. These and other circumstances induced me again to address the Madras Government, reiterating the recommendation made on the 8th February, and suggesting the issue of more definite and detailed orders, compelling all village headmen to pay thorough attention to this part of their duties, and ensuring an effective watch over the headmen on the part of relief officers and officials of all grades.

Sir Richard Temple's report on his mission to Madras.

Wherever I went sickness and mortality, either just past or actually present, were found showing their sad effects. Everywhere cholera and small-pox met our view, and were mainly to be accounted for by unwholesome drinking water and insanitary habits. In some cases the sickness began with dysentery arising from bad food, and ended in cholera. But at that time, and in that part of the country, those who succumbed under insufficient nourishment, perished—if any really thus perished—through their own default, for everywhere was relief proffered, and was close at hand.

Having regard to the urgent need of large public works on which relief labourers could be professionally tasked, I recommended (with the entire approval of the Madras Government) that the earth-work on the projected railway from Bellary towards Dharwar, and on the branch connecting Chingleput near Madras with Conjeveram, should be taken in hand for employing relief labourers, on the understanding that the Government should not be thereby pledged in respect to the time and manner of completing the lines. To this recommendation the Government of India were pleased to accede.

I next proceeded (on the 27th February) to the Nellore district, and was much struck by the general excellence of the East Coast Canal, and its special suitableness for the extensive employment of relief labour under professional supervision and with complete sanitary control. But, whereas the canal could employ 90,000 labourers, only 30,000 were then employed, and 60,000 were wanted. The orders of the Madras Government for sending to this canal relief labour from a distance had received attention, and some labourers had arrived, but their number was not very considerable. Notwithstanding this, in the very district of Nellore and at short distances from the canal, there were 55,000 persons employed on petty works under the Civil officers. These people were, as a rule, quite unwilling to exchange their comfortable work for labour on the canal. This is an instance of the sort of demoralisation which must arise when people are admitted to easy work at home while they might be drafted to larger public works. I urged the Collector to consider this. He arranged to draft 20,000 selected persons from his village works to the canal. I then represented to the Madras Government the expediency of drafting 40,000 persons from the relief gangs in Bellary and Kurnool, and orders to that effect were issued.

I also asked the consideration of the Madras Government to the suitableness of the "Sungum" irrigation project in this district for employment of relief labour, for which project professional plans and estimates were ready.

Apart from the defect above noticed, the administration of relief in this district seemed to have been more careful and economical than in the districts above the Ghât mountains; but there were reasons to fear that the village inspection and relief was not sufficiently carried out.

Returning from Nellore, I again visited the North Arcot district, that being the quarter where—notwithstanding all the precautions which had been taken by the local authorities—individual cases of severe distress were most likely to be found scattered about the country. I found that, although the relief measures were sufficient in most parts of the district, still in some of the large zemindari estates (mentioned in a previous part of this minute) much unrelieved distress still existed, for the remedying of which full suggestions were offered by me to the district officers.

After this, on the 4th March, I was required by the Government of India to submit a revised estimate of the cost of the famine in the Madras Presidency. It has been already seen that the numbers of persons on relief had been steadily falling, especially in the most distressed districts, since the middle of January. It was therefore necessary to reduce the amount of the preliminary estimate submitted during the first week of

Sir Richard Temple's report on his mission to Madras.

February. Instead of the total of 1,200,000 relief labourers for February which I had then taken on the authority of the local officers, the latest returns for that month showed only 713,000. Instead of 100,000 which had been estimated as the number of persons on gratuitous relief during February, the actual number was 50,000. The result was that the revised estimate showed a total expenditure of 2,176,000*l.* instead of 2,920,000*l.* the total of the preliminary estimate. But it was explained that the revised estimate assumed the strict maintenance of all the economical checks which had been introduced, the coming of the ordinary showers in April, and the propitiousness of the coming summer monsoon. It was stated that if there should be failure in any of these respects, the estimate would be disturbed.

As favourable reports had been received regarding the districts of Madura and Tinnevelly, it did not seem necessary for me to revisit them. But as events had fully developed themselves in the districts of Salem and Coimbatore, it was desirable to examine the relief operations there, and to see whether system and order had been fully observed. On visiting these districts I found that carefulness and economy, consistently with a due regard to the condition of the people, had been practised there from the first, and had been steadily maintained.

I examined the large relief camps in this part of the country, as well as in the neighbourhood of Madras. Their internal economy was excellent. But though largely attended, they somehow were unpopular with the poorest classes, and were sometimes avoided by even destitute persons. One cause seemed to be the insufficient provision for the separation of the better castes from the caste-less people, and for other social customs which even the humblest hold dear. This was immediately represented to the Madras Government. Some improvement has been already effected.

It was found that while some of the weavers habituated to make the coarser fabrics could labour on the relief works, those weavers who wove the finer stuffs with delicate handiwork could not handle the implements of rough labour. I therefore suggested that for the weavers of finer fabrics, who were often suffering severe privations, some light and suitable relief work should be provided. The Madras Government approved and acted upon this view.

I had to report to the Madras Government the information gathered regarding unrelieved distress in the three large zemindaris already mentioned in this minute, and regarding the failure on the part of the zemindars to do that which is elsewhere acknowledged to be the duty of landlords towards their tenantry and dependants. Suitable admonitions to those concerned have been issued by Government.

In some places I found private charity on a large scale being dispensed by benevolent Native gentlemen to all comers without discrimination as to whether they were deserving or undeserving objects. I therefore suggested to the local authorities the expediency of representing to the charitable donors that it would be preferable for them to contribute to some public institution of which the organisation is such as to admit of due discrimination being conveniently exercised.

I then proceeded to Madras to confer with the Government regarding the sufficiency or otherwise of the reduced relief wage. The Sanitary Commissioner of Madras had raised objections to the reduced scale of wages for relief labour, based on theoretical and scientific grounds, and supported by his previous experience of the people in Southern India. It was thought by him and by some others that the wage ought to be raised to the rate at which it had stood in the beginning of January. I, however, represented to the Government of Madras that the reduced wage had not received any proper trial, and that it ought, in justice to the public interest, to be fully tried. This view was accepted. It was at the same time ordered that any person in the relief gangs who might be found in a condition below par should be specially treated, either by extra allowance or by diminution of task.

It was arranged that, when relief labourers brought to the work children of tender ages unfit for labour, such children should receive a special allowance. This concession, on which the Madras Government laid great stress, obviated a risk which might otherwise have been run, when the relief wage was reduced.

Besides the advantage of economy, which is considerable, there are obvious reasons for keeping the wage down to the lowest rate compatible with the health of the relief labourers. The people are less tempted to resort to relief except under necessity, as they are known to be much influenced by the rise or fall of the relief wage. The margin for illicit practices on the part of ministerial officials is narrowed. If the wage is liberal, a part of it is sure to be absorded by these officials; if it be just enough and no more, then the labourers cannot afford to give anything to the officials. The question whether the wage representing 1 lb. of grain a day, and $\frac{1}{2}$ anna for extras, is sufficient, can be

decided by experience. There is reason to infer from the rates of wages in ordinary times—not of trained labourers or of persons employed in central places or on special work—but of the labouring poor among the villages, and from the ordinary prices of food grains, that a man of this class can hardly get more than 1 lb. a day besides extras. If that be so, it becomes important to establish a relief wage on this basis. It may be that somewhat more liberal terms have been allowed on former occasions. But that is no reason why these more economical terms should not be now introduced if experience proves them to be feasible. And although some instances to the contrary were adduced, still at that time, the middle of March, large gangs of labourers in Bellary and Kurnool were known to have been working for some little time on the reduced wage without physical detriment. Opinion at Madras was apparently affected by the wretched condition of the wanderers who strayed into the capital or its suburbs, in quest of food, and who doubtless may need generous sustenance for a time. But these were cases of special distress and were quite apart from the mass of relief labourers in the interior of the country, who had been employed before they could lapse into wretchedness, and had since been maintained in good case.

Sir Richard Temple's report on his mission to Madras.

It was necessary next to proceed on the 15th March to the Bombay Presidency to carry on the work of my mission there.

I returned to the Madras Presidency on the 25th March, entering the district of Bellary. I found both in that district and in Kurnool that the engineering and professional establishments were still far from being adequately employed in the supervision of relief works and on the exaction of task-work. As herein there seemed to be a waste of power, and consequent detriment of the relief operations, I submitted to the Madras Government a detailed scheme, prepared on the spot in concert with the local authorities whereby certain selected works might in each of these districts be taken up by the Engineer officers—to which works the Civil officers might draft off all the strongest labourers of both sexes from the ordinary relief works. The persons thus drafted off would be really subjected to task. A precise statement was submitted of the works to which this scheme would apply; they were chiefly trunk roads running through these districts. I also tried to assist in expediting the selection of able-bodied men to be drafted from the relief works in these districts to the East Coast Canal and to the railway from Bellary towards Dharwar. The relief labourers, however, evinced much unwillingness to be transferred from the easy village works to these larger public works.

I also again examined the progress made with village inspection and relief. Much improvement in this respect was perceptible. Those destitute persons who could move were resorting to relief centres, established amidst the circles of inspection into which the villages had been grouped. Those who could not move were being specially treated in their villages by the village headmen. I was unable to hear of any death occurring or being likely to occur from starvation.

On this occasion I was accompanied by Dr. S. Townsend, the Sanitary Commissioner to the Government of India, whose assistance had been asked for to enable me to judge of the physical condition of the relief labourers, and to estimate under professional advice the objections raised by the Sanitary Commissioner of Madras. After inspecting nearly 40,000 of these people in different parts of the country, Dr. Townsend stated his deliberate opinion that their physical condition was fairly good, and that there were no grounds perceptible for raising the wages. This opinion I duly reported to the Government of Madras.

The Sanitary Commissioner of Madras has, however, admitted that, with the special allowance given to the little children of relief labourers, perhaps also with the allowance of wages on Sundays, the reduced wage is about equal to that which he himself recommended.

Still in some quarters it seems to be supposed that there is some connexion between the mortality among the recipients of gratuitous relief and the reduced relief wages; if persons die at the gratuitous relief camps, or are picked up in a famishing state on the roads or elsewhere, that is imagined by some to be a proof that the relief wages must be too low. But evidently there is no connexion whatever between the two cases. Those who are found starving (with exceptions so rare as to prove the rule) are not, and have never been relief labourers at all, and have not been earning any wages. Most of them are not accustomed or are not able to work; and this is mainly the reason why they have been admitted to gratuitous relief. How, therefore, can the rate of relief wages possibly affect them? Any inference drawn from these conditions would be wholly irrelevant if applied to relief labourers. These poor people have sunk into danger, either because they themselves failed to apply for charitable aid, or because those who ought to have brought them forward for gratuitous relief failed to do so. But that is a matter quite

Sir Richard Temple's Report on his mission to Madras.

separate from the question of relief wages, which refers to a totally different class of persons.

Even though the reduced wage may, as now stated by the Sanitary Commissioner of Madras, be much the same as that which he recommends, and may so far have the support of his authority, still its effect ought to be carefully watched; and if any signs of real deterioration in the physique of the relief labourers should hereafter appear, there need not be any difficulty in raising it.

I then returned for a time to the Mysore Province, and again compared the relief system there with that in the Madras Presidency.

Thence I re-visited the Salem district, in parts of which severe distress existed following two successive years of drought, and where the village inspection and relief required further examination. Then travelling by Trichinopoly I proceeded to Negapatam, where the activity of the grain trade is producing much result, and to the Madura district, which is passing through a critical period of the drought. In these districts there have been showers, some heavy, some light, falling here and there on limited areas, and causing husbandry to revive wherever they fall. In the southern peninsula relief is afforded by the temporary emigration of abnormally large numbers to the coffee plantations and the labour markets of Ceylon; where they are still able to find remunerative employment.

I am now proceeding towards Madras, and I hope to visit South Arcot, in parts of which some distress is apprehended, and to pass through the Bellary and Kurnool districts once more, before leaving the presidency.

The mission has lasted from the third week in January (1877) to the fourth week of April. Within the Madras Presidency 10 districts, 46 "taluks" or local divisions of districts, and five large zemindaris, have been visited. 132,500 relief labourers of both sexes have been passed in review person by person, of whom 65,000 were found to be good in physical condition, 47,000 middling, 16,700 indifferent, and 3,800 bad. 5,300 miles have been travelled over, of which 4,420 were by rail and 880 by other means of travelling. These proceedings are irrespective of my tours in the Bombay Presidency and in the Mysore Province within the above-mentioned time.

Before concluding this part, it may be well to mention another question into which I inquired, namely, how far it might be absolutely necessary to remit the land revenue due from ryots whose crops had wholly or partially failed. In the Bengal Presidency the theory of the land revenue settlement is that the landholder bears any loss in bad years, for he enjoys all the profits of good harvests or high prices. In years of grievous failure of harvest it is customary to suspend collection of a part of the land revenue until the next good season comes. And in temporarily settled tracts some remission is often granted where all the crops have been lost. The theory of the Madras revenue system is somewhat different. In the districts under regular settlement the rule is that, if the water supply to any "wet" lands (that is, lands irrigated from tanks or rivers) wholly fails, then the land revenue on such lands is remitted in full, but not otherwise. For either it is a part of the implied understanding between Government and the ryot, or else it has been the practice, that water shall be provided to irrigate "wet" lands. On "dry" lands (that is, lands not irrigated at all, or irrigated only from wells) a reduction of 20 per cent. is made on the Government demand to meet vicissitudes of season; and on these lands no remission is granted save under very exceptional circumstances. In the districts not under regular settlement, remission of land remenue is granted on account of partial failure on "wet" lands, and it is also allowed more freely for loss of crop on "dry" lands.

The present season of scarcity deepening into famine is indeed very exceptional; and the Madras revenue authorities considered that very large remissions of revenue would be required; while they regarded it as inexpedient to hold in suspense over the ryots any part of the land revenue that could not with fairness be collected this year.

It seemed to me that the policy of Government in this matter might properly be reconsidered. The plan of spending very large sums of public money on saving life from famine had crystallised into a broad and important policy. But the cost of famine relief would be indefinitely augmented if the public treasury were to be consumed, as it were, at both ends, by great expenditure on relief and by large remissions of land revenue. The Madras land revenue has been moderately assessed, and falls comparatively light on "dry" lands; and an ordinary ryot might well afford to pay the arrear land revenue of a bad year out of his profits, if the succeeding two years shall be good. The circumstance that lands irrigated from wells are taxed at "dry" or unirrigated rates of land revenue, greatly strengthens the position of ryots on "dry" lands; for crops irrigated by wells yield an out-turn on which the assessment falls with very light

incidence. On the other hand, a considerable portion of the whole land is held by very petty ryots, whose standard of living is low, and who might be unable to pay up the arrears of their land tax in full. I estimated, however, that perhaps two-thirds of the land revenue, which could not fairly be collected this year, might be paid by the ryots during the two succeeding years, if the seasons should be propitious. And I recommended that the arrear land revenue of the present year should be kept in suspense, and that no remission should at present be promised on "dry" lands, in order that the public treasury might have a chance of recovering part of the arrears, if the future seasons shall be favourable. If the people should be found hereafter unable to pay the revenue for this year, which by settlement or other arrangement they had engaged to pay, neither I nor any one else would recommend their being unduly pressed. There will doubtless be under any circumstances a disposition to show to the ryot all the consideration which could be claimed under a just and lenient view of the obligations between him and the State. Also in the administration of such a branch of the revenue as the land revenue, due regard must always be paid to old-established practice, so that whatever proceedings are taken may be such as would naturally connect themselves with the existing system. But if fortunately the ryots should hereafter prove able to pay, then they ought to pay whatever may be due from them under settlement or other engagements; and there seems to be no reason why, by any premature remission, we should preclude ourselves from the chances of making such recoveries. If this principle be deemed novel in the Madras Presidency (it is not novel in other parts of India), there is on the other hand, the consideration that the public expenditure now going on, which is mainly for the sustenance of the lower agricultural classes, is without precedent in Southern India.

Sir Richard Temple's report on his mission to Madras.

The Government of Madras held that this view could not be accepted, and that the practice of Northern India is not applicable to the different circumstances of Madras. In Bombay, where, as in Madras, the land is held on ryotwari (petty proprietary) tenure, the Government after consideration accepted this view, so far that the arrears of the present year in the famine tracts of Bombay are in part "remitted," and in part "suspended" for collection in future years if seasons permit. The Government of India decided that the question of remitting or suspending the land revenue should be left to the discretion of the Local Governments. And the latest estimate of the Madras Board of Revenue is that 143 lakhs of rupees (1,430,000*l.*) of land revenue must be remitted on account of the recent failure of harvests. I see reason to hope that the total remissions, which will not be precisely known till August next, will fall below this estimate; for the board has inculcated and enforced on Collectors carefulness and regard for the public treasury, within the broad lines laid down for the settlement of the affair. The decision of the Government of Madras is taking effect, so far as the present trouble is concerned. But the question has so important a bearing on the Imperial finance of future famines, that I may have to submit to the Government of India a further account of the matter in a separate paper.

Part IV.

The state of affairs at the present time of writing may be summarised thus. The numbers on relief were according to the returns for the third week in March—

	Persons.
On relief works - - - -	664,000
On gratuitous relief - - - -	97,000
Total -	761,000

By 1st April these numbers rose to—

On relief works - - - -	695,000
On gratuitous relief - - - -	115,000
Total -	810,000

The total is moderate as compared with the total which was shown upon the data given me by the local authorities in the beginning of February, after they had made many abatements in the direction of restrictive economy.

Sir Richard Temple's Report on his mission to Madras.

But with the advance of the season the numbers may be expected to rise.

In respect to those upon the works, the great majority do really need and deserve this relief. There doubtless are still among them many thousands of persons who are not absolutely in want and who would certainly leave the works, if only severe task-work could be enforced, or if they could be drafted to large public works under professional control. I still think that something more might be done towards this very salutary end.

The exaction of task-work is probably as good as can be expected in works under Civil officers and unprofessional establishments. In some of the districts below the Ghât mountains it has been enforced with a strictness most creditable to the local authorities.

It must be admitted that the plan of employing relief labourers on large public works has in a considerable degree failed in the Madras Presidency. More might have been, and might still be done in this respect. The engineering and professional establishments of the Public Works Department have not, I think, been directly utilised enough for conducting the relief operations. This defect ought, apparently, to be remediable. Again, the impression produced on the minds of the people by the liberal manner in which petty works among the villages were opened in the beginning, intensified the distaste of the relief labourers for large public works. This also overwhelmed the authorities with unmanageable crowds of persons demanding instant attention, and distracting the thoughts of all the officers from the business of systematisation and organisation.

But even if the Public Works establishments had been perfectly brought into play, if the fullest restrictiveness and abstinence had been practised in respect to petty Civil works, if the officers had been able to concentrate their energies on sytematisation, still it must be allowed that the distressed districts and the presidency generally were unfortunate in having so few large practicable projects suited for the employment of relief labour. It is but just to remember this, when the poverty of result in this respect is reviewed; though, perhaps, the utmost may not always have been made of the few works which did exist.

The total of those on gratuitous relief amounts now to 115,000 persons. *It is in some* degree swollen by little children whose parents are on the relief works. Excluding these children, I am sure that the total is not larger than it ought to be. Indeed I fear that it is not large enough. Despite the persistent efforts which have been made, the system of village relief and house-to-house inspection is far from perfect. Disappointment may reasonably be felt at the shortcomings in this matter under a ryotwari system which offers such advantages in this behalf. Much was to be expected from the hereditary headmen and the hereditary accountants in the villages, who represent ancient institutions which have been studiously fostered by the Madras Government for generations. These men may yet do well, and are doing better than they did, but at first they were backward in their duty.

The following statement shows the per-centage of the total number on relief (relief works and charitable relief together) on the population of each district :—

Distressed Districts.	Total Numbers on Relief Works and on gratuitous Relief during the First Week of April.	Per-centage of Persons receiving Relief of both kinds on the Total Population of the District.
Bellary - - -	269,000	17 per cent.
Kurnool - - -	236,000	24½ „
Cuddapah - - -	80,000	6 „
Nellore - - -	69,000	5 „
Chingleput (inclusive of Madras city).	29,000	2 „
North Arcot - - -	32,000	1½ „
Salem - - - -	58,000	3 „
Coimbatore - - -	27,000	1⅔ „
Madura - - -	12,000	½ „
Tinnevelly - - -	3,000	⅕ „

I have again drawn attention, with suitable suggestions, to the unduly high per-centage which, after all the reductions which have been made, still prevails in Kurnool.

A corresponding statement for the distressed districts of the Bombay Presidency, which have been already adverted to in this minute, stands thus :—

—	Total Numbers on Relief Works and on gratuitous Relief during the Third Week of March.	Per-centage of Persons receiving Relief of both kinds on the Total Population of the District.
Sholapur - - -	49,955	7 per cent.
Kaladgi - - -	27,120	3½ „
Part of Poona - -	57,691	6⅓ „

The physical condition of the people in the distressed districts of the Madras Presidency is fairly good; better decidedly than it was expected to be. An impression (which I quite share) seems to be gaining acceptance that the agricultural classes have more self-sustaining power, more life-supporting resources than was originally anticipated. There is reason to think that the relief wages earned by so many thousands have not been entirely spent in buying food, but have in part been hoarded. This circumstance may be expected to facilitate the discharge of these people as soon as the season shall improve. There is still some lamentable mortality in or about Madras itself, and in some other central places below the Ghât mountains, which, though immediately caused by disease, is in part traceable to insufficient nourishment. The death-rate among the people received into the relief camps in and about the city of Madras continues extraordinarily high. These occurrences, happening at or near the capital, naturally make a painful impression on the public mind. Elsewhere the physical condition of the peasantry is in the main satisfactory, although to a broad and important statement of this kind there are, and must be, some exceptions. On the whole the consequences of the drought are being well subdued.

However successful the physical results may be in saving life and in preserving the bodily strength of the people from deteriorating, the moral effect of the relief operations cannot be overlooked. These operations must bind the people to the Government by ties of gratitude and respect. But there remains the question whether anything like demoralisation, or disposition to rely unduly on the State, or indisposition to practise self-help among the people has grown out of these affairs. While admitting the efforts made by the cultivators generally to save their crops, I have received an impression that in many cases they have failed or omitted to do all that they might have done to retrieve their misfortunes, or to extemporise the means of raising some crops despite the destruction of the ordinary harvests. The almost constant recurrence of scarcity in some part or other in the Madras Presidency, and the quickening of the sense of responsibility on the part of Government during recent years, may have taught and are teaching the people to regard the State as a beneficent power on which they may, in the last resort, rely for sustenance, whether they do their best for themselves or not. If there be any such feeling in their minds, it must have been evoked by the liberal manner in which relief operations were commenced in Bellary, Kurnool, and Cuddapah towards the end of 1876. Some demoralisation did, I think, begin to creep not only into the labouring classes but into the peasant proprietary, and threatened to spread. It was but narrowly avoided, if, indeed, it was avoided altogether. However, the measures subsequently taken have kept the proprietary classes comparatively free from such depressing influences. But there is fear lest the sense of the duty of being independently industrious should become lowered among the labouring classes.

The spring harvest in all the distressed districts, save Bellary and Kurnool, has been tolerably good. With a larger yield probably than was expected, it has tended to keep down prices, and to bring out stocks to market. It has added something most opportunely to the food-supply of the year. Its productiveness is mainly due to the wells. While most of the tanks or lakes, which ordinarily fertilise the best lands, have remained empty during this drought, the wells have been the means of drawing water from those subterranean reservoirs which the granitic formations and the various rocky strata retain, preserving the moisture of previous times. It is noteworthy in most parts of the Madras Presidency that wells, if deepened, will still produce springs of water, despite a drought, certainly of one year, and probably of two years. One of the best prophylactics against famine, then, is to encourage the excavation of wells more and more. The experience of 1876 and 1877 has, as already mentioned, imparted much impetus to the sinking of wells throughout the country. It is to be hoped that the Government will be able to maintain this impetus in years to come. And the circumstances of 1877 vindicate the policy whereby the Madras revenue system imposes no additional land tax on fields watered by wells which the ryots themselves have dug.

It is of course to be regretted that the elaborate system of tanks or lakes, on which so

Sir Richard Temple's report on his mission to Madras.

much of skilled labour and capital has been expended for so many generations, should be almost entirely exhausted by one year of drought, that most of these noble reservoirs should not hold more than one year's supply of water, and that so few of them are efficiently protected against the disastrous floods which periodically recur. Whether many of them could be made to hold (as some few probably are holding) a quantity of water that would outlast a drought of one or two years' duration, is an engineering question of some difficulty. In the Madras Presidency, hydraulic engineering has been pursued with such signal success that all practicable expedients may be presumed to have already been tried. Still this particular point is proved by the experience of 1877 to be so important that a notice of it cannot be out of place or inopportune.

There was in the beginning some fear lest the drinking water should prove very deficient in some parts of the country. As yet, however, there has not been any such deficiency, though often the drinking water has deteriorated during the drought; and wherever this has happened, the people have suffered.

The activity of the grain trade has been most healthy, from the seaports to the central marts, from the railways to the roads, from the markets and depôts to the village booths. This activity was more vigorously exhibited during the early months of 1877, and to it must be attributed the steadiness of prices and their tendency to fall rather than to rise as the season of trouble has advanced. But during the last half of March and the first half of April the importation or grain by sea to Madras, and by rail to the northern frontier, has somewhat declined. The accumulated bags of grain, housed in barns near the Madras beach seemed so unmanageable in quantity, that men wondered whether the railway would be able to carry away such an amount within the allotted time. But there is little fear of its not all being soon cleared away, now that the hitherto constant influx has subsided. The quantity of grain required from without for the distressed districts could never, of course, be estimated beforehand with any certainty. But various calculations on different series of data concurred in pointing to 2,700 tons a day as the quantity for which carrying power should be provided. And every effort was put forth to secure provision accordingly, with a fair prospect of sufficient success. But now the average quantity carried daily is under 2,000 tons. Notwithstanding this, the markets—great and small—the entrepôts and depôts, in the interior of the country continue well supplied with grain. Nor is any apprehension expressed by the traders. The inference necessarily is that the stocks of grain within the Madras Presidency, and the internal resources of the country, must be greater than the original anticipation.

From the beginning of the present trouble down to the end of March 1877, the quantities of food grain brought into the distressed districts of the Madras Presidency amounted to about 535,000 tons. This great supply was drawn from several sources, thus,—

By sea into Madras, Tuticorin, and other East Coast ports from Bengal, Burma, Orissa, and Ganjam	356,000 tons.
By sea into Beypore and other West Coast ports	118,000 „
By the Great Indian Peninsula Railway from Northern and Central India into the Madras Presidency	61,000 „

The pressure of the scarcity was felt in the interior of the country before imported grain began to arrive from distant provinces. And the earliest movement of the grain trade was the transport of grain by rail from old stocks on the coast into the interior. Considerable importations from without began in November, and the imports went on increasing till they culminated in January with a total of 101,000 tons. The imports slackened somewhat in February, when the total was 80,000 tons; and they were still less during the month of March.

Only 30,000 tons of all this quantity were imported on Government account; the rest, 505,000 tons in all, were brought into the country by private trade. The imported grain was distributed by the Madras railways into the interior of the country, thus,—

Bellary, Cuddapah, and Kurnool received	147,000 tons.
The Mysore province received	81,000 „
The districts of North Arcot, Salem, Coimbatore received	73,000 „
The districts of Chingleput and Malabar received	10,000 „
	311,000 „

Of this total, some was sent into the Nizam's territory, and the remainder has either been distributed by the South India Railway, by cart or by canal boat through the coast districts, or is still awaiting means of railway carriage into the interior. There were some considerable grain imports by cart from the southern ports of the Bombay

Presidency, and much grain was carted from Raichore and other places in the Nizam's territory into Kurnool. Sir Richard Temple's report on his mission to Madras.

If the period from August to October 1876 be included, the total imports into the Madras Presidency will be seen to be as follows:—

IMPORT of FOOD GRAINS into the PRESIDENCY of MADRAS.

Madras received in	From Ports beyond the Presidency or non-subordinate Ports.	From subordinate Ports.	Total.
	Tons.	Tons.	Tons.
August 1876	1,769		
September ,,	875	38,000	43,637
October ,,	2,993		
November ,,	26,792	30,000	85,466
December ,,	28,674		
January 1877	72,985		
February ,,	57,421	36,000	201,852
March ,,	35,446		
Total	226,955	104,000	330,955
Other East Coast ports received from all sources			25,000
Grand total Madras and East Coast			355,955
Beypore and Calicut received from all sources			63,000
Other West Coast ports ditto ditto			55,000
Grand total of West Coast ports			118,000
The Northern districts received by rail from Great Indian Peninsula Railway			61,000
The above figures abstracted show the total imports as follows:—			
By sea from Bengal, Burma, Orissa, and Ganjam to Madras, Tuticorin, &c.			356,000
By sea into Beypore and other West Coast ports			118,000
By Great Indian Peninsula Railway from Northern and Central India into the Madras Presidency.			61,000
Grand total			535,000

If, as is probably the case, imported grain did not come generally into consumption before the month of November, then the grain which was carried by rail into the interior of the country before the end of March will suffice to feed $3\frac{3}{4}$ millions of people for six months, that is to say, it will support 25 per cent. of the population of the more distressed tracts of Madras and Mysore from the 1st November down to the end of April. These grain importations, distributed as they have been by railway and by cart over the length and breadth of the country, have sufficiently supplied all requirements. And the price of common food grain at the larger marts has since the 1st January last usually been cheaper than 8 seers (16 lbs.) per rupee; while even at the lesser marts of the interior prices have rarely been so dear as 7 seers (14 lbs.) per rupee.

Passing from the present to the thought of the future, we cannot but reflect whether the uncertainty of season which often proves so disastrous in Southern India is not becoming worse and worse, whether there may not be some physical causes at work to render the rainfall precarious, and whether such causes can be ascertained or obviated. It is hard to conceive a question more practically important than this. The discussion of it would be beyond the scope of this minute.

But, connected with it, there is one particular matter which may be mentioned forcibly though briefly. The southern peninsula of India has been or is being denuded, not only of its forests but also of its jungles, its brushwood, its groves, its trees. The denudation has been, as I understand, going on near the sources and the upper courses of the many rivers which water the country. This perhaps is being in some degree checked. But with the progress of coffee planting, and with the assertion of communal rights on behalf of the people, the utmost vigilance will be needed to keep it within bounds. If it were to proceed unchecked, there would be imminent danger of the rivers running dry by reason of the catchment basins and the drainage areas near their sources being rainless. And as these rivers supply the great canal systems, this danger has only to be mentioned in order to be felt. The same argument applies in a lesser degree to the tanks or lakes which are second only to the canals in usefulness for irrigation. It has

Sir Richard Temple's report on his mission to Madras.

already been seen how precarious is the position of these reservoirs even with one year's drought. The progress of the country causes the price of timber and of firewood to rise. The introduction of railways has, in the absence of any local coal mines, greatly augmented the demand for fuel. Strong temptations are thus inevitably offered to the people at large to fell, cut, and lop recklessly, to bring every log, stump, and stick to market, to dig out the very roots of the jungle, so stopping any chance of reproduction, without thought for the future. There are stories to be heard everywhere of groves and hedgerows and scattered trees being cut for sale. In the midst of cultivated tracts there are to be seen bare sterile hillsides, said to have been forest-clad within living memory. In such localities the climate is supposed to have changed for the worse. Beyond the Ghât mountains, in Bellary and Kurnool, the treeless, shrubless aspect of the country is as wonderful as it is melancholy. These are the very districts where famine has been occasionally epidemic, and where scarcity is almost endemic. Any thoughtful spectator must perceive that according to all meteorological experience, and to the almost certain teaching of proved facts, these fine districts were not destined by nature to be the prey and sport of famine or scarcity, but have been rendered subject to these calamities by the thoughtless action of man. Even the numerous groves planted in the last generation by the great Collector, Mr. Robertson, whose name is still a household word, were made over many years ago to the villagers, and have been mostly cut down. Trees, jungle, and forests must, indeed, be thinned and cut for the use of man; but they need never be exhausted, and something might always be left for re-production. There is, of course, a department of forest conservancy in the Presidency, and much good is done thereby. Whether its functions and proceedings are fully sufficient for the wants of the country is a question not to be discussed here. At all events there is reason to hope that the waste lands in hill and dale, which are in this Presidency so extensive, might be kept much more thickly wooded than they are, and that large areas now quite naked and devoid of vegetation would, if reserved and guarded, become again covered with trees or brushwood as they were in former ages. And the successful efforts of individual officers in the past prove what may yet be effected in the way of planting. If the necessity be duly recognised, then there is no doubt of the possibility of devising remedies.

Before this part of the minute is concluded it is necessary to advert to the estimate of the cost of the famine. It has been already shown that the first approximate estimate by the Revenue Board showed a total of 3,410,000*l.* But the estimate of relief expenditure made by me in the beginning of February on data obtained from the local officers during January showed 2,920,000*l.* In that estimate it was necessary to follow the local estimates of the numbers to come upon relief works, the total of which came to 1,800,000 persons in the worst season between the middle of April and the middle of May, there being actually 1,066,000 in the beginning of January. But finding that system and economy had brought down the actual number to 713,000 by the end of February, I presented a revised estimate of 2,176,000*l.* on the 6th March, in which the highest number on relief works at the worst season was assumed at less than 1,200,000. There was great hope, however, that even this reduced number might prove to be in excess of the reality, if the system which had proved so successful in February could be kept up through March, and due effort was to be made to keep it up. The result for March has been even better than that for February—when the difference of season is remembered—and has been better still, relatively, for the first half of April. If system and economy be maintained, and if no new adversity of season shall happen, it is thought that the highest number will not exceed 800,000 persons on relief works, and may be even less than that. My latest estimate now shows 2,050,000*l.* of expenditure.

This estimate, as my former estimates, is exclusive of losses of revenue.

Part V.

There are yet to be considered the lessons to be deduced from all the circumstances which have yet occurred in connexion with these affairs. It seems to me that from these events we forcibly and positively learn—

To determine beforehand, as soon as any forecast of the coming distress can be made, the large public works upon which relief labour can be employed, and upon which task-work can be exacted, or piece-work established, under professional supervision;

To notify generally and to intimate to all concerned, especially to the Civil officers, the particular public works to which the relief labourers in each distressed district are to be drafted;

Sir Richard Temple's report on his mission to Madras.

To organise an engineering staff in readiness for undertaking vigorously these particular public works when the time for active operations shall arrive, and to prepare for devoting to this purpose all the professional establishments which can be obtained;

To prohibit absolutely, in the beginning of the distress, the opening of petty works under Civil officers or non-professional establishments among the villages close to the homes of the people;

To refuse relief to strong able-bodied persons of both sexes in any form, save employment on the large public works;

To allow petty village works to be opened only when severe and widespread distress has declared itself at a comparatively advanced stage in any district or part of a district, and even then to reject all, save those who cannot reasonably be expected to proceed to the large public works,—in short to reserve these petty works for the weakly, the sickly, the advanced in life, and for those who have any just claim for indulgence;

To insist upon a systematic inspection by responsible Civil officers of all relief gangs, person by person, and from time to time, in order to see whether they are all in need of or deserving of State assistance, and to note whether their physical condition improves or deteriorates, and whether their wages are too much or too little;

To reject every applicant for, or recipient of relief, whether on a public work or on other works, who can be shown to be able to support himself for a time without State assistance;

To take care that such establishments in various grades are provided beforehand as may be able to exact tasks on the petty works near the villages;

To keep the wages on relief works at the lowest rate compatible with the health of the labourers, this being necessary, not only in the interests of economy, but also to prevent demoralisation of the people;

To insist on inspection being instituted from village to village in the distressed districts for the discovery and treatment of the casual cases of dangerous distress which are likely to occur, this inspection of villages, house to house, to be made stricter and stricter as the season of distress advances, full use being made of existing rural institutions (hereditary headmen, accountants, and the like), or, if these do not exist, such arrangements being improvised as may prove adequate;

To organise relief camps on a sufficient scale near large towns, at central spots where high roads converge and the like, for the reception of destitute persons who should be compelled to live there temporarily as a proof of the sincerity of their appeal for help; and to adapt the internal arrangements of these camps as much as possible to the caste feelings and other social habits of the people;

To encourage private charity to the utmost, but to explain to benevolent persons that they can best serve the public by making their contribution to some public organised institutions, where relief can be restricted to the deserving, rather than by dispensing charity to all comers, among whom there are sure to be many undeserving;

To allow and encourage smaller relief centres in the interior of the districts as the season of distress advances, to which all recipients of gratuitous relief must resort who can move;

To provide for those who are destitute and unable to move being cared for in the villages;

To arrange relief charges territorially in compact and manageable areas, so that no jurisdiction shall be too large or too remote for the supervision either of the District Collector, or of an officer of the experience and status of a Collector;

To depute, either to the whole distressed territory, or to the most distressed districts, some officer, with full instructions as to the policy to be pursued in relief, and with power to direct and control on the spot the relief operations, subject to the direct orders of the Government itself;

To postpone relief operations as long as may be safely possible, while maintaining full preparedness against any emergency that may arise, and, by annexing to all forms of relief such conditions as the people can reasonably bear, to teach them that State support is not a matter of course for the alleviation of general distress, but is only permissible to prevent extreme distress and to save life;

To make forecasts of the State expenditure required for relief, but to revise them at short intervals from time to time, being mindful that the questions relating to the effect of scarcity upon the condition of the people are recondite; that the event may be worse than the anticipation, and more often perhaps may be better;

Sir Richard Temple's report on his mission to Madras.

To watch carefully the rising of prices in the beginning of scarcity to rates even three times as dear as ordinary rates, to withstand the alarms which are likely to be excited among the people by such symptoms, in the confidence that, so long as prices are cheaper elsewhere, the dearness constitutes a remedy provided by the economy of nature, for attracting supplies through private trade;

To contemplate purchases by Government of grain in distant markets only under absolute necessity when there is no prospect of supply on the spot, but to be ready, if need arises, to buy grain from local or other dealers who will deliver it at the places where it may be required to pay relief labourers or to feed destitute paupers;

To reject all proposals for placing Government grain in any positions within easy reach of railways or other main lines of communication;

To pay relief labour in cash so long as the labourers can buy food with their wages, and to postpone paying in grain as long as possible, because any purchases of grain by Government, however unobjectionable otherwise, tend to disconcert private trade if it exists in the locality, and to raise undefined apprehensions;

To contemplate the possibility of being obliged to organise Government transport establishments in the event of emergency arising, but to avoid as long as possible calling them into action or placing them in the field, lest misappreheusion should be caused in the trade;

To publish from week to week, while the scarcity lasts, information regarding the current prices, the importation of grain from without, the varying state of the distressed districts, the carrying power of the railways, or other transport agencies;

To maintain on the great railway lines a moderate, though adequate reserve of engine power, so as to enable the railways to meet emergent requirements such as must arise in a year of famine:

To consider the possibility (so far as engineering considerations may permit) of ensuring in the irrigation tanks enough water for at least two years;

To stimulate the ryots to sink wells more and more, and to assist the people with advances of money for this purpose so far as funds may allow;

To diligently inquire whether the failure of seasons, so chronic in Southern India, can be traced in any degree to preventible causes;

To conserve existing forests and woods, however small or scattered, to study the reproduction of extinct jungle, to preserve the groves, to make plantations, to encourage the spontaneous growth not only of timber trees but also of brushwood wherever possible;

To jealously watch and guard the forests near the sources and the incipient streams of all the rivers.

Doubtless all the points which have been mentioned above are well known to the Government, and most of them have received practical consideration. But as their importance has been brought home to us by the experience of the Madras famine, it has seemed proper to specify them here, as they may be useful for reference on future occasions.

In conclusion, it is not required of me to express any general opinion regarding the treatment of the famine in the Madras Presidency, which famine, indeed, is not yet over. But I must declare my cordial thanks to the Madras Government and its principal officers for all the kindness and consideration received from them during my mission. And though the Goverument is doubtless well aware of the merits and services of its officers throughout this trying time, yet I must state my sense of, and add my testimony to, the excellent conduct of the local officers, the Collectors, Sub-Collectors, Assistants, and other Civil and Military officers employed on relief. Having travelled, worked, and lived among them for three months of strenuous exertion, I have unsurpassed means of knowing how unremittingly they have toiled, how thoughtfully they have planned, and how anxiously they have striven in the service of the Government and for the good of the people.

My thankful acknowledgments are due to the members of my staff—Mr. C. E. Buckland, C.S., Captain S. Rivett-Carnac, and Dr. R. Harvey—for their zealous and useful assistance in the work of the mission; also to Captain W. S. S. Bisset, R.E., for his vigilant attention to all affairs connected with the grain traffic on the railways.

From my Secretary, Mr. C. E. Bernard, C.S.I., I have received valuable aid and counsel in every branch of the work, and I would represent his good service and his administrative ability for the favourable consideration of the Government of India.

No. 215.

The total population of the district is in round numbers two millions. On the 9th April the district had— Relief in Salem district.

	No.
On relief works—	
Under Civil officers - - - -	24,527
,, Public Works Department officers -	26,861
Total - - -	51,388
On gratuitous relief - - - -	17,249

During the last fortnight there have been partial showers, nowhere exceeding $1\frac{1}{4}$ inches, and in most places much less. The people have ploughed a good deal of land where the rain has exceeded half an inch. As yet the rain has not sufficed to raise fodder for the cattle.

2. The relief labourers are for the most part paid by piece-work; and the rates are from 50 to 100 per cent. dearer (that is, more favourable to the workman) than in ordinary years. Some weeks ago the rates were harder, but they were lightened by the Collector, who considered that the people were becoming reduced in condition. An adult male labourer earns at piece-work from $2\frac{1}{2}$ to 2 annas a day; women and children make proportionate earnings. Some few light labour gangs in every taluk are on a daily wage of $1\frac{1}{2}$ annas a day for men, and $1\frac{1}{4}$ annas for women. Infants who cannot work get 3 pie a day, whether their parents belong to piece-work or light labour gangs.

3. Though the whole district is distressed, yet some parts are much worse than others. The Dhurumpooree taluk (population 186,000) is the worst of all; next comes the Ootengiri taluk (population 170,000); and there is some severe distress in and around the town of Salem, and in the taluk of Trichurgode.

4. It is ascertained from Mr. Dawes, Deputy Collector, that in his two taluks, Ootengiri and Tripettore, there were—

8,100 on relief works under Public Works Department officers.
2,800 on relief works under Civil officers.
1,000 on gratuitous relief in three relief camps and at villages.

The village relief system established by the Collector in January, but stopped by the Board's orders after a few weeks' trial, is now being revived. Under this system a list of the helpless poor in every village is made out and checked, and then a cash allowance, 12 to 15 pie a day, is made to each one of these destitute people through the village headman; children get only 10 pie. The success of this system depends entirely on the supervising staff; and the Collector has 8 to 14 circles in each taluk with a sufficiently paid inspector over each. These inspectors acting under the tahsildar and relief officer, see that the gratuitous allowance really reaches the needy people.

5. Nearly all the relief labourers in these two taluks are employed on piece-work at rates which are double (that is, twice as dear as) the rates of ordinary years. All the work done is useful work, and most of it is on tanks. No public works undertakings are going on, or ever have gone on in the Salem district, side by side with and in competition with the relief works. Both Mr. Dawes and the Tahsildar of Ootengiri were confident that deaths do not now occur in these two taluks from starvation, unless in the case of some of the wanderers whom it is so difficult to control. Cholera keeps constantly appearing here and there among the villages. Cattle are dying in great numbers; to this fact the enormous number of hides constantly brought to market testifies. People have driven their cattle down off the Shevaroy and other hills because of the want of water there. In the low lands there is no absolute dearth of water either for man or beast.

6. At Dhurumpooree 2,300 labourers were inspected, of whom about 200 were on daily wages at the $1\frac{1}{2}$ anna rate; and the rest were on piece-work, earning about two annas for each male adult. Most of these people had been employed for three or four months. About two-fifths of them belonged to Pariah, and three-fifths to other castes. Among them were some 400 men and women who were remarkably stout and strong; these sturdy gangs have to do 20 per cent. more work for the rupee than the other gangs, and they are going to be drafted on to tank work elsewhere. The rest of these workpeople were in fair (but not first-rate) physical condition; some few were below par. There was only one really emaciated person, and he had been at work for three months; *but*

Relief in Salem district.

he had been supporting two sick relations at home out of his wage. The children were, as a rule, in very fair condition. The tahsildar and a pensioned Rajpoot Subadar, who lives in Dhurumpooree, considered that the people in these gangs were decidedly below the physical condition of such people in ordinary years, but if we could, by our relief operations, keep the suffering poor up to the standard of these gangs till the end of the famine, we should be very successful.

7. Some 400 applicants for work were inspected. Most of these people have till very lately been on other relief works, and their condition was on the whole fair.

8. On inquiry into the causes of the depressed condition of the labourers as reported by the Relief Officer and Collector several weeks ago, it appeared that the relief wage had been kept at 1 anna 6 pie for adults, even when food was selling at 11 and 12 lbs. per rupee. Under the Madras Government orders of the 30th January, the man's wage ought to have been about 1 anna 10 pie or 1 anna 11 pie when the price of food was so dear. Prices in Dhurumpooree are now much cheaper, ranging at 16 or 17 lbs. per rupee for rice in the Dhurumpooree bar, and 15 or 15½ lbs. in the outlying villages.

9. The aspect of the relief camp made it clear that we have not succeeded in keeping the condition of all the suffering poor of this taluk nearly up to the standard of the labour gangs of the Dhurumpooree Fort. There were 930 inmates, and among the children there were many, nearly 10 per cent., very emaciated little creatures. Most of these little things had been two or three months in the relief camp, and they had not picked up at all. Side by side with them were fat, happy little creatures, who got no larger allowance than the thin ones. The explanation given by the Relief Officer and the Native doctor is that some of the children came into the camp in very bad condition, and that they cannot assimilate the rice and rice broth. The Native doctor said that these poor little things passed their food in an undigested state, they had been tried with ragi, with rice and with cholum, and some of them had been treated in hospital with sago, but nothing would bring them round. Among the adults, too, were some people who had been in the camp for months, and yet were still very emaciated. The death-rate was for weeks six per diem in this camp.

10. The ration of rice in the camp has recently been raised from 16 ounces to 20 ounces per diem for adults, and the results of this change remain to be seen. But when the greater number of inmates, adults and children, flourish on the ration, the circumstance that a per-centage fail to recover condition does not by itself prove the ration to be insufficient. Probably the only way of getting these poor creatures into good condition will be to send them back gradually to their homes, with sufficient care for their maintenance on the road, and then to bring them upon the village relief now organised by the Collector. The change home, with assured hope of food while the trouble lasts, would give these poor people a chance of recovering. There seems to be something in the air or circumstances of the camp that prevents some of the people from picking up strength. Not that the camp is badly organised,—much otherwise,—the sheds are well ventilated and clean; and the camp is locally more popular than any other of the relief camps yet visited in the interior of the presidency.

11. It may not be possible to send some of the famine babies and their mothers home just yet; and for them the Relief Officer is, under the Collector's instructions, arranging some kind of nursery apart from the camp for the children which do not recover under present circumstances.

12. On some of the roads round Dhurumpooree and in the town were to be seen a certain number of emaciated people, women and young men, whose physical condition showed them to be in real need of relief. The village relief now being organised will, it is to be hoped, suffice to save such people from the risk in which they are now. In and round Dhurumpooree indeed are now to be seen more pronounced signs of famine than have been noticed anywhere outside the Madras camps.

No. 216.

No. 237. XCIX.—Minute by Sir Richard Temple, regarding Relief Operations in the most distressed parts of the Salem District, dated Raneepet, the 17th April 1877.

Relief in Salem district.

In forwarding the accompanying memorandum regarding the most distressed parts of the Salem district, I have a few remarks to record.

2. The taluks above the Ghât range adjoining the Mysore plateau are among the most distressed tracts in the whole of the Madras Presidency. Some parts of these taluks have not had crops for two years. The endurance of the inhabitants and the relieving zeal of the officers are being tasked to the utmost.

3. On further examination the system of relief works in this district is found to merit all the praise bestowed upon it in my minute of the 12th March. As regards strict tasking by the Civil officers, utilising of the Public Works establishments, discharging relief labourers wherever showers enable the people to plough, preserving the relief labourers in sufficiently good condition without offering any undue temptation, selecting useful and beneficial works for the employment of relief labour, there is little left to be desired. And the management of the whole affair by the Collector, Mr. Longley, is entirely worthy of confidence. Relief in Salem district.

4. The relief camp at Dhurumpooree, in the midst of the scene of the greatest distress, is comparatively popular. The camp at Salem is not unpopular, or at least is fairly well attended. There is some light suitable work afforded, or about to be afforded, to the weavers of the finer fabrics in that city.

5. The system of village relief and visitation is being carried out all over the district and nowhere is it more needed than here. In some of the worst tracts it was probably not commenced soon enough in full force. I trust that it is now going on rightly. At first there was some difference of opinion between the Collector and the Board of Revenue. The Board seem to have rightly deemed the Collector's proposals too large for the commencement, as indeed they were. But although the Collector could not carry out his own proposals in their integrity, he could fall back upon the general orders of Government to collect in large camps all those destitute persons who could be collected, and to sustain in the villages those who could not be so collected; and he doubtless did so. This plan is being carried out fully, as I understand, in the worst tracts.

6. There is one tract however where the system was not being carried out at the time of my visit, the 7th and 8th April, and where it is much wanted, namely, the low hills and valleys and jungly places in and about the Shevaroy hills inhabited by various Malayali tribes. Many wretched persons were met with going up to Yercand (the settlement on the Shevaroy hills), and some equally miserable were on a relief work at Yercand. Information reached me to the effect that others, in equally bad case, might be lingering in the huts and hamlets among these hills. I was glad to see that the subject was attracting the attention of the authorities on the spot. It certainly seemed to me that some special official ought to be deputed to examine immediately all the inhabitants of that group of hills. And I have been glad to hear that the Collector has since taken steps to effect such examination.

No. 217.

CI.—Minute by Sir Richard Temple, regarding the Need for Improved Relief Arrangements in the Kalustri Zemindari. No. 245.

Raneepet, 17th April 1877.

I have again inspected the relief camp at Arcot (Raneepet), and have inquired further into the circumstances of the inmates. The number is now just about 800. Fresh admissions are constantly being made; or rather fresh persons are daily being sent in, having been picked up or found on the roads or in the villages of the interior. But then there are desertions going on just as constantly, and so the numbers are not progressive. Indeed they are rather retrogressive, for recently there were, I understand, 1,200 inmates. If this be so, it would seem to follow that some hundreds of persons sent in by the local authorities in consequence of destitution must have deserted the camp and reverted to a most precarious existence. This necessarily causes grave apprehension, and suggests the necessity of re-doubled precautions for village inspection and relief. It might have been expected that many of the most wretched of them come from the zemindaris of Kalustri and Kárvetnagar, and this has led me to inquire further into the system of village inspection specially recommended for these tracts in my minute of the 5th March. It is the more necessary to pursue the subject, inasmuch as the distress is becoming more and more severe as the season advances. Kalustri Zemindari need for improved relief.

2. The local authorities appear to have given the requisite orders in these very distressed tracts, that is to say, Government officials are sent round to inspect the villages, to cause those who cannot move to be relieved in their homes and those who can move to be sent to the relief centres, and some relief centres are in working order, though my impression is that the number of these centres might be increased with advantage. Taking the cases which I have just seen together with what I hear, I am under the impression that, however excellent the local arrangements may be in these two zemindaris, especially in Kalustri, they require to be further strengthened by European supervision of a superior kind. There ought to be the means of knowing whether the Native officials are really and faithfully performing that which must be a toilsome and irksome duty, on the due performance of which very many human lives may depend.

Otherwise I fear that many deaths from starvation may occur in Kalustri before the season of distress is over. I bear in mind that many destitute persons from the Madhoo Pauk portion of Kalustri resort to the camps at or near Madras, which are nearer than Kalustri, the head-quarters of the zemindari. Still I should apprehend that even this part needs more of trained and competent inspection than it now receives. And this remark is still more applicable to the more distant parts of the zemindari. I know that the Collector has not at his disposal any European officer for the work of such inspection. But the Government might be able to send an officer for this purpose.

3. I would therefore most earnestly and urgently recommend for the consideration of the Madras Government that a selected European officer of smartness and ability be deputed to Kalustri to reside there, and under the direction of the Collector to see that the village inspection and relief is thoroughly carried out, for the general carrying out of which he would feel himself responsible. He would understand that no destitute person is to be permitted to perish of hunger; that every destitute person who can move must be sent to a relief centre, where relief can be dispensed without compulsory residence in camp, and that every destitute person who cannot move (of whom there may be one or more in every village) must be fed at home. He might reside at Kalustri where there is good accommodation. And Kárvetnagar might be included in his jurisdiction.

No. 218.

No. 245.

CII.—Minute by Sir Richard Temple, respecting passages in the Report of the Sanitary Commissioner of Madras.

Cuddalore, the 18th April 1877.

The reduced scale of wages. Sir Richard Temple in reply to Dr. Cornish.

It is necessary for me to make a few brief remarks upon the minute of the 6th April by the Sanitary Commissioner of Madras regarding the reduced wage for the relief labourers of Madras, inasmuch as this minute refers to some of my own previous minutes on the subject. Having regard to the importance of the subject, I refrain from making the objections which might ordinarily be made to the tone of some parts of the Sanitary Commissioner's minute as an official paper.

2. In order to show the uncertainty of medico-chemical dicta regarding such a matter as relief wages, I pointed out certain discrepancies between the Sanitary Commissioner's opinion and the Madras Manual of Hygiene on a particular point. The Sanitary Commissioner now says that the Manual of Hygiene is wrong on this point. Very possibly it is.

3. It is not necessary, however, to pursue this point, or any such like points, because I understand that the medico-chemical theories upon which the Sanitary Commissioner seems still to rely are not implicitly accepted by the highest sanitary authorities in India, and do not entirely coincide with the newest development of scientific thought regarding the carbonaceous and nitrogenous elements necessary for the nutrition of the human frame. Nor is it practically necessary to discuss further the Sanitary Commissioner's opinion regarding the sufficiency or otherwise of the reduced wages, because in his present minute he admits that, as now applied, it is sufficient. His previous objections appear to have been diminished by the granting of the wage on Sundays as well as week-days, and by the granting of a small allowance for the support of the young children of persons employed on the works.

4. I had myself always contemplated that the reduced wage should be allowed on Sundays. As regards the very young children, their case did not at first suggest itself for consideration, as all children of seven years and upwards were admitted to relief. But as soon as the case of the children under seven years of age was brought to my notice, I recommended that they also should receive a small allowance. I found, however, that this had been already ordered by the Madras Government.

5. Though I do not undertake to pronounce any opinion upon a medico-chemical point, yet I do undertake to say whether thousands of relief labourers inspected by me are physically in fair working condition or not. And I adhere to the opinion previously expressed that the many gangs which I inspected working on the reduced wage were in such condition, regard being had to the condition of such persons in ordinary times. In this opinion I was confirmed by the experienced medical officer on my staff, who had seen the realities of famine in other parts of India. But in order that no doubt might remain upon the point, I asked for and obtained the opinion of the Sanitary Commissioner with the Government of India. And after inspecting in different parts of the country some 35,000 relief labourers, he pronounced them to be, with some individual exceptions, in fair physical condition. This then is the true test of the sufficiency or otherwise of the reduced wage to which I have always appealed and still appeal. According to this test the wage appears to be sufficient at present. If at any time any

marked deterioration of the physical condition were to indicate that the reduced wage is insufficient, then I shall be the first to make a revised recommendation. The reduced scale of wages.

6. But I must advert for a moment to certain parts of the argument of the Sanitary Commissioner of Madras which seem to amount to this, that because there is mortality among the recipients of gratuitous relief, who are admitted to particular relief camps, therefore the wages of relief labourers must be insufficient. Whether the Sanitary Commissioner intends to convey this idea I know not, but something of the sort would, I apprehend, be gathered by ordinary readers of that which he has written. Therefore I have to explain that there is no connexion whatever between recipients of gratuitous relief on the one hand and the recipients of relief wages on the other. The gratuitous rations allowed to the inmates of relief camps have nothing whatever to do with the wages paid on relief works. The inmates of these camps who are admitted there as being unable to work are a class totally different from those who are admitted to the relief works as being able to work. Inferences deduced from the condition of the recipients of gratuitous relief are wholly irrelevant if attempted to be applied to the condition of relief labourers. If unhappily there be mortality among the inmates of relief camps, it by no means follows that there is any mortality among relief labourers. In point of fact there is no mortality among relief labourers except from cholera, small-pox, or other diseases, and when sometimes cholera has stricken and dispersed large gangs of relief labourers, there has never been any reason to suppose that the scourge arose from want of food. Again, if notwithstanding scientifically arranged diet, the condition of the inmates of relief camps continues bad, no amelioration whatever could be afforded by raising the wage of relief labourers who are a totally different class. These poor inmates have never gone to relief works at all. Indeed the very reason of their admission to the relief camps is this, that they are incapable of going to relief works. They are diseased or infirm, or being indisposed to work have wandered about, or passing by means of relief close at home have wandered to a distance. Sir Richard Temple in reply to Dr. Cornish.

7. Being thus helpless for one reason or another they are picked up and taken care of, but when picked up they are often beyond the reach of human aid. No analogy therefore drawn from these persons can possibly be applicable to relief labourers, and to mention the two cases with any sort of parallelism and in any kind of connexion would be to produce confusion of ideas and other misapprehension.

8. If indeed persons who were pale on being admitted to relief works were to become thinner and thinner and weaker and weaker till at last they had to be drafted off to gratuitous relief camps as unfit to work, then that would be a reason for reconsidering the wage, but this is just what has not occurred, and is not occurring. If I saw or knew any signs of it occurring, then I should be the first to move. Many relief labourers indeed have left the works of their own accord, not so much however because the wage was reduced, but rather because task-work was enforced, or because the scene of labour was removed to a distance from their homes.

9. How it happens that so many of the destitute poor sank so low before being taken up for gratuitous relief is a question which need not be discussed in this minute. I may reiterate however that the proper remedy lies in the institution of house-to-house visitation throughout the distressed districts, and from the time of entering the Madras Presidency I have never ceased to urge upon the Government and the local authorities the necessity of such a visitation. And indeed this visitation has generally been instituted. But that it has not always been perfectly carried out is proved by the mortality which has occurred, or still occurs, in some of the relief camps.

No. 219.

CIII.—Minute by Sir Richard Temple, dated 18th April 1877, regarding the present condition of Relief Affairs in the District of Madura. No. 245.

I have paid a second visit (13th to 16th April) to the Madura district to see the Collector, Mr. MacQuhae, and some of his officers, because, as already stated in the memorandum of the 24th January, the month of April is likely to be a critical season in determining whether there is to be distress or not in that season. By the 15th of April some of the ordinary spring showers had fallen, causing some partial revival of agriculture, but except in one place (Periakolum, at foot of the Pulnee Hills), there had not been enough rain to place the district or any part of the district beyond the reach of distress in May. Madura district,

2. The grain markets continue to be well stocked; the main source of supply is the port of Negapatam, though supplies come also from Tuticorin. In fact, it is the strong

demand in Madura that attracts the grain which might otherwise have gone from Negapatam to Mysore. At present the grain goes in the Mysore direction as far as Trichinopoly, and is thence diverted to the Madura district.

3. Meanwhile, the proprietary ryots seem to be bearing up well against the consequences of the long-continued drought. Either they have material resources of their own, or they possess credit whereby they can obtain such resources. Field labourers, notwithstanding the want of labour in the fields, appear to receive some support from their employers; but doubtless one great means of support for this class is emigration to Ceylon, which appears to have attained during this year nearly double its ordinary proportions. I could not learn that the excess number who had gone to Ceylon are faring badly, though perhaps they are not receiving so much remuneration as would have been given had the numbers been less. There is, of course, the usual proportion of the poorest classes, but it is understood that they are receiving some support from private charity.

Relief afforded by emigration to Ceylon.

4. The relief labourers are as yet but few in number. Care has been exercised by the Collector to prevent the number increasing unnecessarily, and the task-work is being strictly exacted. It would have been better, perhaps, if the works had been placed altogether under the Public Works Department. The assistance of that Department, however, is used for measuring up the task-work. Arrangements are made for giving all the gratuitous relief that is really needed, though happily the amount needed is as yet but little. Relief centres in sufficient number have been established. On the whole, I should think that the consequences of the drought are being prudently and firmly dealt with by the Collector, and at present I have nothing further to suggest.

No. 220.

No. 245. CIV.—Minute by Sir Richard Temple, dated Cuddalore, 18th April 1877, suggesting the Use of Coal on the Madras Railways as some check against the Destruction of Forests of the Madras Presidency.

Rainfall affected by destruction of forests.

There is a point connected with the supply of fuel to the several railways of the Madras Presidency which has a bearing upon the rainfall and the prospects of future harvests, and which I desire to represent to the Madras Government as follows:—

2. The failure of the periodical rains, and the consequent loss of crops, seem to be becoming more frequent in Southern India. This circumstance is attributed by many, with much show of probability, to the gradual denudation of the forests with which the country used to abound. The effects are felt throughout the Presidency generally, but more particularly in those tracts which adjoin the sources or upper courses of some of the rivers, upon which irrigation works, great or small, depend. One potential cause of this denudation has been, and still is, the demand of fuel for the consumption of the locomotives on the several railways.

3. As an instance out of a great many, I would mention that at this moment there is understood to be a contract between the Madras Railway Company and a Native contractor for the supply of a very large quantity of wood fuel—a quantity large enough to cause a heavy drain, if not an utter exhaustion, of the particular forests from which the supplies are drawn. It unfortunately happens that these forests lie, as I understand, near the upper course of the Palar River. Their destruction doubtless tends to aggravate the uncertainty which hangs more and more over the water-supply of this river. And such uncertainty is peculiarly unfortunate, inasmuch as from this river are drawn the channels which fill an extensive series of tanks for irrigation in the districts of North Arcot and Chingleput. Seldom does this river descend in seasonable and propitious floods. One year it will come down with violent inundation demolishing its dams, tearing up its channels, breaching its tanks; another year it will leave them all high and dry. I merely adduce this as a type of what is going on too often and in too many parts of the country, and which is in part at least attributable to denudation of forests.

4. Of course there are difficulties arising out of private rights with reference to the preservation of forests. There are also many means of overcoming those difficulties. I am now addressing myself to one measure only for mitigating the evil, viz., the diminution of the demand which is at present so greatly stimulated by the railway requirements for wood fuel.

5. The question immediately arises, why should not the Madras railways burn coal in the same way as do the East Indian Railway, the Eastern Bengal Railway, the Great Indian Peninsula Railway, the Oudh and Rohilkhund Railway, and various of the State railways? The Madras Railway, it is true, does not pass through the heart of a rich

coal basin as the East Indian Railway does, nor does it touch a coal-field at any of its extremities, as the Great Indian Peninsula Railway does; but compared with any other of the railways mentioned it is favourably situated. It touches the sea-coast at Madras and Beypore, and at either of these ports it can land English and Australian coal at the same rate per ton as the Great Indian Peninsula Railway Company does at Bombay, or as both the southern lines do at Madras and Negapatam or Tuticorin. And although from a commercial company trading at its own risk, grave objections might be offered to a course which will undoubtedly at first increase its expenditure on fuel, I have to repeat that this is a case* where present economy may, and in the opinion of most thoughtful men undoubtedly will, aggravate the calamity of famine in future.

* NOTE.—And I cite the Madras Railway Company as a sample.

6. The increased cost, as far as the Madras Railway Company is concerned, is likely, for many years to come, to fall upon the Government, and it may be possible to form an approximate estimate of its amount.

7. The cost of working 2,400,000 train miles per annum would, I am informed by Captain Bisset, be approximately Rs. 8,00,000 at the present cost of fuel to the Madras Railway Company. Considering the advantages of the two ports, it may fairly be estimated that the cost of working the same number of train miles with coal fuel only will not much exceed Rs. 9,00,000. And when local enterprise enters into the business of carrying coal from the fields of Bengal to the coast ports of Madras, it is not unreasonable to expect that the cost of Indian coal delivered at these ports (which is at the present time quoted at Rs. 22 per ton, or from Rs. 2 to Rs. 4 higher than English coal of rather higher cash value at the pit's mouth) will be so far reduced as to make coal fuel even less expensive to the Madras Railway than wood fuel is at the present time.

8. There are some minor advantages in the use of coal fuel which are too well known to require mention in this minute, although they are of some importance to economical working. And I conclude by reiterating my opinion that the interests of the Madras districts require a more careful guarding of the forests, especially the hill forests, from destruction, and that one practical way of checking this destruction would be to burn coal instead of wood on all the Madras Railway lines, and so stop entirely a heavy and constant drain on the forests and undergrowth of the hill-sides of the Madras country.

No. 221.

No. 21 of 1877. No. 263

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, the 19th April 1877.

Our latest information from the famine districts is contained in the following telegram from Sir Richard Temple, despatched from Arcot on the 17th instant, but referring exclusively to the Presidency of Madras.

"After telegraphing to Government India account of Negapatam trade, I visited Madura district. Situation of Southern Peninsula, including Madura and Tinnevelly, is as follows:—Rain has begun falling in most parts, especially under Ghât mountains. Emigration to Ceylon affords relief. Agricultural classes possess resources. No general distress yet, but some slight scattered distress relieved with discrimination. Markets filled with grain from ports of Negapatam and Tuticorin. Neighbouring parts of Tanjore and Trichinopoly almost free from distress, but rain has recently ceased, and until it falls sufficiently, situation somewhat critical. In Salem and North Arcot considerable scattered distress relieved by village visitation. Central relief camps still unpopular, this aggravates necessity for village relief. In districts near Madras wanderers and stray beggars still going about in bad condition. Whenever found they are relieved, but despite medical treatment they often die, and these cases affect public mind. Agriculture partly reviving after recent showers. In Bellary rain has fallen, but situation not likely to improve in that quarter at present. Relief labourers generally keep well. Better success beginning in despatch of relief labourers to Nellore Canal and Railway from Bellary towards Dharwar. Failure to utilise Public Works Department in relief works generally continues, and is to be regretted."

2. We enclose several papers received from Sir Richard Temple during the present week, of which the most important is the report made by Dr. Townsend,* Officiating Sanitary Commissioner with the Government of India, regarding the physical condition of the labourers employed on the relief works, with reference to the alleged insufficiency of the reduced rate of wages. In our Despatch of the 12th instant, we stated the

* No. 196. Question of the sufficiency of the reduced scale of wages.

As to sufficiency of reduced scale of wages.

conclusion at which Dr. Townsend had arrived, as communicated to us by telegraph, viz., that the reduced rate is sufficient to support the labourers in fair condition, provided that care is taken that the individual recipient is the only person supported on it. The grounds of this conclusion are fully stated in Dr. Townsend's report. It is based on an inspection of gangs containing some 32,000 persons (34,000 was the number erroneously given in our last Despatch, owing to some error in the telegram) in the districts of Sholapur, Bellary, Cuddapah, and North Arcôt.

At Sholapur the labourers employed under the Public Works Department were in good condition, men, women, and children, and there was no doubt on the part of the officers superintending the works that the wage was quite sufficient for the support of the labourers in health. The labourers on the Civil works were in a less satisfactory condition; but a large proportion of them were above middle age, and they had come on the works in January in an enfeebled state. Dr. Townsend thinks it probable that at the best of times they were below the average physique.

At Adoni, in the Bellary district, the labourers, as a rule, were in fair condition, and, in the opinion of the relief officers, they had not deteriorated since the reduced rate of wage had been in force. There were here and there weakly and feeble people; but these exceptions consisted of persons who had never been in good health or condition, or it was found on inquiry that they shared their wages with a child or other relative.

At Bellary, where task-work was exacted, the great majority were receiving less than the reduced rate; but there was no sickness among them, and the relief officers stated that these gangs had improved greatly in appearance since the works were established, and they certainly had not fallen off since the reduced rate of wage had come into force.

At Cuddapah, where Dr. Townsend inspected two bodies of labourers, one close to the town, which he visited in company with Dr. Cornish, the Madras Sanitary Commissioner, and on which the women greatly outnumbered the men, the people were in appearance little, if at all, below the standard of health common in the town populations of this country. In the other gang, composed chiefly of the agricultural population of the surrounding villages, the appearance of the people "was very good." A very large number of the men and women were as stout and healthy looking as they could be in the best of times. Here and there thin and weakly persons were observed; but on inquiry it did not appear that their weakly condition was attributable to want of food. The relief officer stated that when the people received the higher rate of wages, they did not spend more on food than they do now, but saved the difference, and they have not deteriorated in condition since the wage was reduced.

At Vellore, in a relief gang consisting of 1,600 people, who had been for a time on the reduced rate of wages, which apparently had been recently raised, the people were in fair condition, and, as far as Dr. Townsend had been able to ascertain, "they did not "deteriorate or show signs of weakness during the five or six weeks that they were on "the reduced rate of wages."

3. The facts stated in the foregoing extracts from Dr. Townsend's report appear to us to justify the conclusion at which he has arrived, that there are not yet any sufficient grounds for any general raising of the relief wage rates in the Madras Presidency. The Madras Government have very properly directed, as Sir Richard Temple points out in the 5th paragraph of his minute, that relief officers shall treat specially all cases of relief labourers who from any cause have fallen into a reduced condition of body. They have also directed that the relief wages shall be paid daily. If these instructions be duly enforced, and if care be taken to carry out a systematic house-to-house visitation in the villages, and to search out wanderers on the high roads, as has been frequently suggested by Sir Richard Temple, and ordered by the Government of Madras, we see no reason to doubt that the objects which the Government have in view, viz., the saving of life and the prevention of severe suffering, may be accomplished without any general raising of relief wages. At the same time we do not overlook the fact that the recent reports of the Madras Sanitary Commissioner contain very lamentable descriptions of the condition of the people at some of the places visited by him. We have requested the Madras Government to communicate to us the result of the inquiry directed in their orders* on Dr. Cornish's report, with reference to the unsatisfactory physical condition of many of the relief labourers at Maddanapalli, where the reduced rate of wages had not been introduced.

4. With reference to the remarks made in the 7th paragraph of the Despatch addressed by the Madras Government to your Lordship, under date the 7th instant, to the effect that no communication had been made to them regarding Dr. Townsend's

* Reported to Secretary of State in Madras Despatch of 7th April, No. 25.

deputation, we have explained to that Government that Dr. Townsend not having been sent on an independent mission, but merely having been placed under the orders of Sir Richard Temple to aid him in conducting certain inquiries which he desired to institute in the two Presidencies, it was not deemed necessary to make any communication to either Government on the subject of Dr. Townsend's deputation.

5. The prospect of the supply of grain to the ceded districts from the north, as explained in Captain Bisset's memorandum of the 31st ultimo, appears to be satisfactory.

Difficulty in devising large works in Madras.

6. Reference has more than once been made, in the correspondence regarding the famine in Madras, to the difficulty which appeared to be experienced in that Presidency in devising large works on which the relief labourers could be employed. The only works of magnitude which have been proposed are the East Coal Canal, the railway from Bellary towards Hubli, and the extension of the railway from Conjeveram to Chingleput. To these may perhaps be added the doubling of the railway line from Madras to Arconum. Recently, on a suggestion from our Public Works Department, we asked Sir Richard Temple for his opinion as to the expediency of employing relief labour on the earth-work of three short branch railways which were proposed some years ago for connecting the Madras Railway with the towns of Arcot, Vellore, and Salem. His reply, which is contained in his minute of the 6th instant (No. XCVII.), is adverse to the proposition. He does not consider these lines to be adapted as relief works. The amount of earth-work and ballast is not considerable. It is doubtful whether the work could be begun before the first week in May, and if good rain falls in that month, it is probable that relief labour would not suffice to finish even the banks and ballast; nor does Sir Richard Temple consider that it would be practicable to organise large gangs of skilled relief labourers (such as stone-cutters of the Waddah caste) for employment on these lines in time enough to do any considerable quantity of work before the rainy season begins. These objections appear to us to be conclusive against the adoption of the works in question as relief works, at all events, at the present. Should the famine unhappily last longer than we at present anticipate, the question may have to be reconsidered.

Mysore relief administration.

*No. 206.

7. Sir Richard Temple in his short minute on the present condition of Mysore (No. XCV.),* repeats the favourable opinion expressed by him on the 14th February last, regarding the progress of relief administration in that province. The labourers on relief works are all employed on piece-work at rates somewhat cheaper than the piece-work rates of the Public Works Department in ordinary years. They can earn in this way enough to support themselves, and are in fairly good physical condition. Villages are really visited, and patels (village headmen) are kept up to their duty by responsible officers, whose weekly diaries show what is being done, and how useful the village relief is.

No. 161.

8. In connexion with Mysore, we enclose a correspondence which has passed between the Chief Commissioner and the Government of Madras, regarding the incidence of certain charges incurred in affording relief to inhabitants of Mysore who had migrated into the adjoining Madras districts, together with a minute recorded on the subject by Sir Richard Temple. We have not received any communication on the subject from the Government of Madras, and at present no orders appear to be required.

9. The following extract from our telegram of the 14th instant gives the numbers of persons on the relief works, and on the receipt of charitable relief according to the latest returns :—

"In Madras Presidency relief labourers increased to 693,000, and charitably relieved to 114,000; latter increase chiefly young children. In Mysore 75,000 on works, and 52,000 charitably relieved. In Bombay further increase to 256,000 on works; 62,000 charitably relieved."

We have the honour to be, &c.
(Signed) F. P. HAINES.
ALEX. J. ARBUTHNOT.

No. 222.

Revenue, No. 32.

From the SECRETARY OF STATE to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 19th April 1877.

No. 133.

Para. 1. The Despatch of your Excellency in Council, dated 2nd March, No. 13, of 1877, giving a summary of the matters which had engaged the attention of your Government in connexion with the famine in Southern and Western India during the week ending 27th February, has been considered by me in Council.

2. I approve of your resolution to sanction the earth-work of the railway from Bellary to Hubli as a relief work, on the understanding that your Government is not pledged to carry on the line to Karwar.

3. The equalisation of the through rate for grain from the port of Negapatam, in Tanjore, to Bangalore, and the suspension of port dues at Negapatam in the case of vessels importing grain equal to a quarter of their whole cargo, will, I trust, greatly diminish the difficulties now experienced in carrying grain into the interior. Such also will be the effect of doubling the line from Ambatur to Arconum. It is also to be hoped that some of the grain now sent from Calcutta, Burma, and elsewhere to Madras may be shipped to Negapatam, and thus find its way to the distressed districts in the south of the Madras Presidency.

4. The intelligence received from Sir R. Temple relative to Nellore, Bellary, and Tinnevelly, and also to the spring crops in Cuddapah and North Arcot, is, on the whole, satisfactory.

5. I have already, in my Despatches of the 15th March and 6th April, Nos. 24 and 28 of 1877, expressed my opinion that, while the utmost efforts are made to preserve life, Government relief should be accompanied by such conditions as to prevent it being accepted by any but the really destitute. I concur, therefore, with the principles which have guided you in your instructions upon this subject to the Government of Bombay.

I have the honour to be, &c.
(Signed) SALISBURY.

No. 375, dated Simla, 19th April 1877.

From the Additional Secretary to the Government of India to the Additional Secretary to the Government of Madras, Revenue Department.

The deputation of Dr. Townsend.

With reference to the remarks made in paragraph 7 of the Despatch addressed by the Madras Government to the Secretary of State under date the 7th instant, No. 25 (Miscellaneous), to the effect that no communication had been made to them regarding Dr. Townsend's deputation, I am directed to explain that Dr. Townsend not having been sent on an independent mission, but having merely been placed under the orders of Sir R. Temple to aid him in conducting certain inquiries which he desired to institute in the two presidencies, it was not deemed necessary to make any communication to either Government on the subject.

No. 224.

Nos. 225. 245.

Memorandum by Mr. C. Bernard respecting the Condition of Affairs in the South Arcot District and Cuddalore, 19th April.

South Arcot and Cuddalore.

Sir Richard Temple met in the South Arcot district the Collector Mr. Hughesdon, the Sub-Collector Mr. Wallace, the Head Assistant Mr. Thomson, as well as the Collectorate Sheristadar and other Native officials.

2. Sir Richard Temple also visited Pondicherry, and learnt that severe drought had afflicted the French territory, and that gratuitous relief was being distributed to a considerable number of persons. He did not understand that relief works had been opened.

3. The taluks of South Arcot, in parts of which there is risk of severe distress being felt, are—

Trinomalai,
Tindevenum,
Kallukoorchy,
Tricaloor,
Vridacheilum,

where the rainfall last year failed, where there is comparatively little "wet" cultivation, and where the crops were extremely short. As yet there has been no severe distress, but if the rain holds off till the end of May trouble must arise. Relief works were opened in parts of Tindevenum, Trinomalai, and Vellapoorum about the end of January, but people would not come readily to work, so very little was done, and during the last two weeks there has been small demand for relief employment. One relief centre was opened for distributing gratuitous relief in Trinomalai. Some little relief was also given

about a month ago in Villapoorum by private charity. But this has since stopped as the demand slackened; now that the late rice, the ragi, and ground-nut is being harvested. A good deal of work is being given by the South Indian Railway to people in the Vellapoorum, Cuddalore, and Chellumbrum taluks; a very little is being given in Tindevenum. All this helps to support the labouring poor. South Arcot and Cuddalore.

4. The Public Works Department has projects, namely, repairs of tank, dams, and irrigation channels on hand to do. The grant for the whole year for the district is about one lakh of rupees. Of this perhaps Rs. 15,000 would, under ordinary circumstances, be spent during May. The work is done by contract; but the village headmen are usually the people to whom contracts of this kind are let. The Public Works Department could undertake and supervise works costing much more than this sum of Rs. 15,000, provided only that certain restrictions were foregone, which compel the range officer to inspect and pay for every work himself.

5. There is plenty of food in the district, and the dealers have stores of imported rice. Prices are high. But there has not hitherto been any starvation or any famine anywhere. The jumabundi (annual verification of cultivated holdings) is now going on everywhere; Revenue Inspectors and higher Revenue Officers are seeing a great deal of the people at their villages; and the district officers are satisfied that there is not at present anything worse than distress in any part of the district. So far as they can judge, the best way of preventing increase of distress would be for the Public Works Department to push on at once its works in the worst taluks, and to keep sufficient works going until the rain sets in. If the grants made to the District Engineer from ordinary sources should be nearly exhausted, then more grants might be given, debitable to famine. Under this system, if adopted, relief labour would be utilised to the utmost on necessary district works. The work would be done by petty contract, but the people needing relief would get the work, and at present the people are strong enough to do such work at ordinary contract rates.

6. Major Mead, District Engineer, considers that he could, without additional engineering establishment, do all that may at present be needed. If further grants were made, he could spend them most usefully on much needed irrigation repairs. But he would require discretion to relax the present rules as to completion certificate for works costing less than Rs. 1,000 a piece. And also he would want to have temporarily in abeyance the order which forbids the District Engineer and Collector to sanction any petty irrigation repairs for which the estimate exceeds the average annual revenue from the work. The District Engineer would of course be careful in acting upon the additional discretion allowed him. But unless it be granted, there is risk that, if much relief employment is suddenly wanted, we may have to drift, in South Arcot as elsewhere, into the practice of leaving the relief works to be managed by professionally unskilled and (at time of jumabundi) hard-worked Civil officials.

No. 225.

CV.—Minute by Sir Richard Temple, respecting the condition of Affairs in the South Arcot District. No. 245.

20th April 1877.

In forwarding the accompanying memorandum regarding my recent visit to the district of South Arcot, I have to record some few brief remarks. South Arcot district.

2. Though the south-west monsoon of 1876 failed here as elsewhere, still there was a good fall of rain at the end of the north-east monsoon in the south-east part of the district, and saved especially the taluks of Cuddalore, Vellaporum, and Chellumbrum. The south-western and the central parts of the district received but little rain on this occasion. Being near to the coast taluks which received rain and to the Coleroon and Cauvery basin where the crops have been good, these parts have not yet suffered distress. And hope was entertained that if the April showers should prove propitious, distress might be staved off until the next monsoon. As yet however (20th April) these showers (which have fallen favourably to the westwards) have held off in this district, one taluk only (Kallukoorchy in the south-west) having received any rain during the spring season. They may yet come; of course if they do, trouble will be averted. But if they do not come by the middle of May, and if the south-west monsoon should be late, and it is usually late in this quarter, not arriving till July, then some severe distress can hardly be avoided in certain parts of this district.

3. As yet the district authorities have prudently refrained from giving any encouragement to the agricultural classes to resort to relief. In some taluks satisfactory reports

are heard of the efforts made by the people themselves to save their crops by digging wells. That they had the means of sustaining themselves during the winter months is proved by the fact that, when some small relief works were opened tentatively, they did not avail themselves of the opportunity.

4. If relief works have to be opened at all, I would earnestly recommend that this be not done through the Civil officers who have so much else to attend to, but should be entrusted to the regular Public Works Department, which in this district is strongly represented by the Irrigation Engineers. There is much work for them to do by way of repairing and improving the tanks, and if they undertake this they will be able to afford all the relief that is needed for the able-bodied, who will be thus employed on works not scattered but concentrated and under professional supervision.

5. To the Civil officers would then be left what may be described as their legitimate work, that is, visiting the villages in search of destitute and helpless persons, affording gratuitous relief to some, and assigning light work to others, who though weakly can yet do something.

6. We need not yet, however, abandon the hope that seasonable showers may yet ward off the threatened distress.

No. 226.

No. 245. **CVI.—Minute by Sir Richard Temple, respecting the Management of Relief Works in the North Arcot District through the Public Works Department Agency.**

Madras, 20th April 1877.

North Arcot relief works. In continuation of my minutes of the 29th March regarding Bellary and Kurnool, and of the 10th April regarding Salem, the purport of which was to represent the expediency of placing relief works as much as possible under the regular Public Works Department, I desire to submit a similar representation regarding the district of North Arcot, which I have passed through once more, visiting the anicut over the Palar and the Cauvery Pauk Lake.

2. In reference to the apprehensions which arose during February or March regarding distress breaking out here and there in this district, relief works have been opened (not under professional officers, but such Civil officials as can be obtained for the occasion) in many and various places, and doubtless have done good so far as they have gone. But while appreciating the reasons which induced the local authorities to take these proceedings, I must yet represent that these numerous petty and scattered works are very much open to all the objections which have been elsewhere urged against relief works of this description, except that the wage having been reduced the temptation is so far lessened. But even now there are, I fear, hundreds, perhaps thousands, of instances of persons who avail themselves of these works, not exactly to keep off distress, but slightly to enlarge their narrow income,—for instance, men who still have some employment of their own at home, send their wives and elder children to the relief works close at hand, in order to make just a little money for the family. Besides this, the season is advancing, the spring harvest has been partly reaped, the demand for relief employment is slightly increasing. On the other hand there is still some spring harvest to be reaped. The spring showers have caused ploughing to be commenced in most parts of the district. And the spring harvest itself, which owing to the wells in which the district abounds is proving to be fairly good, will afford a considerable augmentation of the food supply. Notwithstanding all this, the numbers on relief works about 40,000, according to the latest information, have been mounting up and may mount higher still; thus the aggregate is becoming sufficiently large and serious to necessitate the consideration of the introduction of some further checks.

Should be under control of Public Works Department. 3. The obvious check is, of course, the placing of the relief works under the regular Public Works Department.

4. Already the Madras Government have ordered that petty relief works, within easy reach of the operations for the doubling of the railway line to Arconum, should be closed. This order will doubtless have the beneficial effect of compelling many able-bodied persons seeking relief to place themselves under the professional supervision of the railway engineers.

5. Similarly, I believe that the Government intend to order the closing of any petty relief works which exist near the railway line from Chingleput to Conjeveram, of which the earth-work is about to be commenced. Although this work pertains to the Chingleput district, possibly some able-bodied persons might be sent to this work from North Arcot district.

6. But in North Arcot the main point is this :—The Government, as I understand, have signified a wish that the irrigation works, repairs and improvement of tanks, and the like, should be pressed on as much as possible, and that the available funds appropriated to irrigation for the year should be made use of, as soon as possible, for purposes of relief, under the engineering establishments. There can be no doubt of the excellence of this policy. The only precaution necessary would be to provide that none should be thus employed save those able-bodied persons who are in need of relief. The Engineers might be directed to fill their rolls in the first instances with able-bodied persons selected from the Civil relief works. In that case it would be very desirable to instruct the Collector to draft off to the irrigation works under the Engineers all able-bodied persons who are now on the petty relief works. If any such persons, on being ordered, refuse to go, they might be discharged altogether, as evidently being not in need of relief. The effect of this would be excellent. And then the petty relief works would have but those who are weakly and who have from any reason a claim to indulgence, and the apprehension which now arises from the recent augmentation of numbers on these works would be mitigated. I believe the Collector understands this already, and he may be perhaps acting on this principle. Still it might be well to order this explicitly.

Nos. 253. 256.

From C. BERNARD, Esq., C.S.I., Secretary to Sir Richard Temple, to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

Deputation of Dr. Townsend.

At paragraph 9 of the Madras Government Despatch (No. 28 of the 14th April) to Her Majesty's Secretary of State for India, allusion is made to Dr. Townsend, the Sanitary Commissioner's visit to the Madras Presidency. And Sir Richard Temple directs me to lay before the Government of India certain explanations relating thereto.

2. Dr. Townsend was deputed by the Government of India to advise Sir Richard Temple concerning the sufficiency of the reduced relief wage and its effect on the condition of the people. Dr. Townsend joined the mission when Sir Richard Temple was in the Bombay Presidency; and he inspected gangs of labourers at and near Sholapore. The long railway journey from Calcutta to Sholapore in the heat had, however, brought on an attack of dysentery, and Dr. Townsend was unable to do as much as he wished.

3. On the day Dr. Townsend entered the Madras Presidency, Sir Richard Temple wrote and informed his Grace the Governor of Dr. Townsend's coming and of the work he was to do in connexion with the mission. On the same day I informed Mr. Garstin, the Secretary to the Madras Government, of Dr. Townsend's arrival and of the inspections he hoped to make.

4. Dr. Townsend inspected some 30,000 labourers, and then drew up a report of what he had seen, and of the impressions he had received. A copy of that report with a minute recorded by Sir Richard Temple was immediately forwarded to the Government of Madras. And Sir Richard Temple arranged with his Grace the Governor that Dr. Townsend, whose early return to ordinary duty with the Government of India was much desired, should visit Madras and wait upon his Grace.

5. Meanwhile, Dr. Townsend had gone southwards to inspect certain Coimbatore gangs, regarding the physical condition of which there had been doubt. He was to have visited Madras according to the appointment already made on his way back from Coimbatore. But at that place he was again attacked by the same complaint which had afflicted him previously. And as the complaint did not at first yield to treatment, he decided not to go into Madras, but to return to Bombay at once. He at once intimated to his Grace the Governors's Private Secretary the reasons which had, to his regret, compelled him to leave the Madras Presidency without waiting upon his Excellency. And afterwards I explained more at length to Mr. Garstin, the Famine Secretary, the circumstances of Dr. Townsend's departure. Sir Richard Temple also explained to his Excellency the Governor the sickness which prevented Dr. Townsend from presenting himself at Madras.

6. Sir Richard Temple regrets much that Dr. Townsend should thus have been unavoidably prevented from waiting on his Grace the Governor of Madras, and laying before his Excellency the impressions he had received from his inspections of relief labourers in the Bombay and Madras Presidencies.

7. Dr. Townsend had, however, the advantage of meeting at Cuddapah, by special appointment and arrangement, the Sanitary Commissioner of Madras.

EXTRACT, paragraph 9, from the MADRAS GOVERNMENT DESPATCH No. 28 of 14th April 1877, to the SECRETARY OF STATE FOR INDIA.

Para. 9.—We have not been favoured with any intimation from the Supreme Government of the outline of the instructions given to Dr. Townsend, the Sanitary Commissioner with the Government of India, who left the presidency without having reported to us his arrival in it, or made any other communication with us. He did not visit the city of Madras or the camps in its neighbourhood.

Nos. 230. 45.

CIX.—MEMORANDUM by Mr. C BERNARD, regarding the PRESENT STATE of RELIEF AFFAIRS in the CUDDAPAH DISTRICT, dated Tadputri, 21st April 1877.

State of relief in Cuddapah.

Mr. Benson, one of the relief officers of the Cuddapah district, met Sir Richard Temple at Tadputri on the railway line; he brought with him the Serishtadar who was acquainted with the relief statistics of the whole district.

2. There was good rain (averaging about one inch) over the whole district in the middle of last month (March), and there have been partial light showers since. One result has been that a certain small quantity of fodder has come up, and the cattle are not dying at the same rate as before, but many of the weakly animals have previously been carried off.

3. The numbers on relief for the second week of April are—

On relief works - - - - -	80,000
On gratuitous relief - - - -	30,000

About 5,000 labourers in all have gone off to the Nellore Canal. Twelve annas a head (8 annas to the labourer and 4 annas to the recruiter) is paid under Government orders for every adult man who reaches the canal work; and he gets rations for himself and his family on the road. In the Palampett taluk one half of the labourers are working under the Public Works Department,* and effort is being made to hand still more labourers over to professional officers. In Sidhout all the labourers are supervised by a Public Works Department overseer, who is now serving directly under Mr. Benson. Payments to these labourers are, however, made by the revenue officials on certificates furnished by the Public Works Department officers. On the Civil works some task is exacted; but the majority of people do their full task, the deductions for short work, amounting to barely two per cent. of the total wage. No figures are here available to show the proportion of labourers under Public Works Department's supervision in other taluks.

* NOTE.—This includes the labourers on the Cheyair embankment under Mr. West, the railway engineer.

4. Regarding the condition of his labourers, Mr. Benson says that the men and women on the works seem to him to be generally in fair condition. But among the small children (on 3 pie per diem) he finds, especially at Kodoor, a considerable number of emaciated little creatures. Many of these were found on inquiry to have come on the 3 pie allowance within the last few days only. Perhaps they will come round on the 3 pie; meanwhile those who were very reduced have been handed over to the village headmen (reddies) to be fed at home. On the Cheyair embankment the labourers were till recently on the 2 annas scale, but they were reduced to the $1\frac{1}{2}$ annas rate about 20 days ago. Since the reduction took place, Mr. Benson has visited them twice, and he did not observe any sensible reduction in their condition. But then though the wages are reduced, these labourers now get the Sunday's wage, and also get the 3 pie allowance for children, whereas previously they enjoyed neither of these advantages.

5. Out of the number on gratuitous relief (30,000), nearly one-half are the 3-pie children on the works. For the rest there is a relief camp (in the Madanpally division, one of several centres for outdoor relief) at the head-quarters of each taluk. Additional relief camps are being erected in Mr. Benson's taluks. There is a first class relief camp at Cuddapah itself, where over 330 inmates are fed. The smaller camps are to hold 250 a piece; but as yet none of Mr. Benson's camps have more than 80 inmates, as they have only just been completed. A certain number of people, who cannot be brought into the relief camps, are being relieved through the village headmen in their villages.

6. The village relief is supervised by inspectors, of whom there are two to four to each taluk. But Mr. Benson fears that it is only very recently that the village headmen are fulfilling their duties. They are and always were prompt enough to relieve ryots and people of the middle class. But it is very difficult to make them look after and relieve the pariahs, although they are fully repaid for all their expenses, and though each reddy has an advance of Government money to meet such charges. The duty of the reddy is

to relieve on the spot the helpless, to relieve and send into the nearest camp such paupers as can be moved, and to send in weekly accounts of their expenditure. The inspectors, with their peons, go round and enforce these duties on the reddies. Each inspector has from 30,000 to 50,000 people in his circle. Mr. Benson has been on tour for ten weeks and has inspected many villages. He found in many places, especially in the larger villages, a small number of people of pariah caste who were much reduced by want. Such cases are, he hopes, being gradually picked up and relieved. But the most emaciated cases he has seen anywhere were the 3-pie children newly brought upon the works, to which reference has been made at paragraph 4.

State of relief in Cuddapah.

No. 229.

No. 245.

CVII.—Minute by Sir Richard Temple, regarding the discharge of Paupers from the Relief Camps.

Gooty, 22nd April 1877.

There is one suggestion which I wish to lay before the Government of Madras, respecting the treatment and retention of paupers in the large relief camps. At the beginning of the distress it was no doubt quite necessary to confine wandering paupers and other non-labouring poor in relief camps, because the restrictions accompanying indoor relief are irksome, and prevent persons who are not absolutely in need from seeking (and even from accepting) admission to the camps. Moreover, the village relief system, which is still in many places incomplete, was not begun; and so there was little hope of the indigent poor being relieved anywhere except on relief works or at relief camps. And, as we know, there were in January, and are still, many thousands who seem to prefer the chances of wandering and begging to the moderate certainty of the relief wage.

The very helpless should be removed from the relief camps to their own homes.

2. In most of the relief camps which I have visited, and notably in the relief camps round Madras, all that humane care and medical skill could, within reasonable limits, desire, has been done to improve the condition of the inmates of relief camps. In many cases there is marked improvement in the physical condition of the older inmates of these camps. But still the fact remains that the death-rate among the inmates of camps is terribly high; that such diseases as are engendered among gatherings of poor people often appear and reappear, and that the air and surroundings of these camps are very depressing. For the little children especially the life must be very depressing indeed. Some of these troubles will, I fear, be aggravated when rain and cold come on, and make relief camp life even less endurable than it now is.

3. When I thus point out the evils of relief camp life, I would not be understood to find any fault whatever with the humane and diligent officers who manage these camps. The experience of relief camps in Orissa during 1866 was the same. And I should anticipate that some of the very best of the relief camp officers feel how difficult it is for the poor creatures under their care to recover health and strength under the conditions of the relief camps.

4. The question then arises what remedy can be suggested. It seems to me that a remedy may be applied on this wise. Able-bodied people are drafted on to the works, and regarding them nothing further need be said. But the old, the cripples, the women burdened with children, and the children, cannot be drafted to the works. I would recommend that such people, when they are able to move, should be sent under proper arrangements to their homes, to be brought upon the village relief lists there.

5. At the homes of some of the inmates of the Madras relief camps, such as those who live in the Kalustri or Karvetnagar zemindaris, full reliance cannot yet be placed on the village relief arrangements which have been or are being organised; and people from these tracts cannot yet be sent home. But in the Chingleput district, in most parts of Nellore and Cuddapah, and in many parts of North Arcot such reliance may be placed on the organisation of relief circles, and on relief inspectors who enforce their duties on the village headmen (reddies or moonsiffs). And people belonging to these tracts might safely be sent home from the relief camps near Madras, and in the same way people might gradually be sent home from other relief camps, such as the Vellore, the Dhurmpuri, the Salem, and the Cuddapah relief camps.

6. The poor people could not be sent away suddenly or in large numbers. But the plan might be begun gradually; the inmates of the camps might be sent away a few at a time under care of a camp servant; and they could be made over to the relief inspector* of this circle, whose duty it would be to see that the poor people were brought upon the village relief lists.

* Note.—In all the worst districts the taluks are divided into circles containing 15,000 to 20,000 inhabitants each. And the inspector of each of these circles has more or less close relations with the village headman of his circle.

7. The District Collector and his officials would work in unison with the relief camp officer. And in this way the inmates of the camps would gradually be conveyed to their homes and would be cared for there. Eventually the survivors of the camps must be so sent back, and provided the village relief system is efficient, the sooner they go the better it will be for them. And it will also be to the advantage of the public treasury; for inmates of relief camps probably cost, all told, from 3 annas a head at the relief camps of Madras to $1\frac{1}{2}$ annas a head at the cheaper relief camps in the interior; whereas the village relief allowance proposed by the Board for Salem is only 1 anna per diem, while in no district it is more than $1\frac{1}{4}$ or $1\frac{1}{2}$ annas a day for adult men.

8. I recommend, therefore, that an attempt be made, on some such plan as is here suggested, to gradually draft, not only the able-bodied but the infirm and helpless poor from the relief camps to their homes. In regard to orphan children difficulty may arise; but this difficulty will have to be met under any circumstances; and the longer the parents are kept in relief camps, the larger the number of orphans is likely to become.

No. 230.

No. 245. CVIII.—Minute by Sir Richard Temple, dated Gooty, 22nd April 1877.

State of relief in Cuddapah.

Passing through the Cuddapah district, I had the advantage of once more considering the returns of relief labourers and recipients of gratuitous relief, as presented by Mr. Benson, the Head Assistant Collector, and by the Collectorate Serishtadar.

2. The present number of relief labourers is 80,000, the lowest number was 67,000, the highest number in January was 204,000. In no district since January last has stricter care been exercised in preventing relief being given to those who do not need it, or in confining relief to those who really are in need. The vigilance and discrimination exercised in this respect seem to me to be very creditable to the Collector (Mr. Price). Considering, however, the comparatively good spring harvest which has been and is still being reaped in this district, and the fall of rain, timely though moderate, which has fallen in this quarter, I should think that much caution ought to be exercised in permitting the number of relief labourers to rise materially, unless indeed from the rain holding off, or from other cause, matters should take a turn for the worse.

3. On the other hand, my impression is that the numbers on gratuitous relief in the interior of the district (some 30,000 persons*) is probably not large enough, and that the system of village inspection and relief is still incomplete. I fail to gather favourable accounts of the conduct of the village headmen in this respect. As the staff of European officers is now so strong, there ought to be no difficulty in seeing that the village headmen do their duty. This seems to me more necessary in the Maddanpally subdivision of the district than anywhere, from which quarter accounts of distressed individuals scattered here and there are received.

* The majority of whom are little children.

4. An examination of the return of relief work makes me apprehend that they are too numerous in some parts of the district, especially in the north-western taluks; if they could in such places be more concentrated that would facilitate check and control.

5. Some of the relief works are really under the control of Public Works officers, but most of the works are not so. In the latter works, which constitute the great majority, the Public Works Department merely helps and advises, but does not take actual charge of the works. This is, as it seems to me, to be regretted, especially as there are three ranges or executive divisions in the district in each of which there is a professional establishment. I would recommend that this establishment be utilised by being ordered to take charge of as many of the relief works as possible.

No. 231.

No. 245. CX.—Minute by Sir Richard Temple after Inspection of certain Relief Gangs at Gooty and Goondakal.

Bellary District, 24th April 1877.

Relief gangs of Gooty and Goondakal.

Having again paid a brief visit to a part of the Bellary district, I have to submit the following remarks:—

2. One gang (500 strong) of relief labourers employed on the railway at Gooty under professional supervision, on reduced wage and good tasks, were found by me to be in very fair condition. Another large gang (1,000 strong) inspected by me at Goondakal consisted of 800 women and children in fair condition (with some few exceptions), and

of 200 men of whom one-third were in indifferent condition, some even in bad condition, most of these latter being new arrivals. From information received from Bellary and Adoni, I learn that in several gangs there are found some persons in weakly condition. These points will doubtless cause some to think that the relief wage ought to be raised. Looking, however, to Dr. Townsend's recent evidence as to the good condition of the able-bodied labourers on the reduced wage, which is again confirmed by my own recent observation, and to the importance of not holding out any temptation to able-bodied men to come on relief who might be otherwise able to sustain themselves, I would still strongly deprecate raising of the wage to the able-bodied.

3. In some places the Sunday wage is not allowed, as no work is done on that day. It is in these cases supposed that the men have some other slight means of support besides their relief wage. If, however, there be any doubt on this point, then the Sunday wage might be allowed on the ground that the subsistence afforded by the wage is as much needed on Sundays as on week-days. But as it is inconvenient to pay the wage on Sundays ($1\frac{1}{2}$ annas), then in commutation $\frac{1}{4}$ of anna might be paid on each week-day, raising the wage to $1\frac{3}{4}$ annas.

4. If any person now in the gangs fall into bad health, or come on to the works in a low state, the existing orders amply provide for their being specially treated either by extra special allowance or by nominal work.

5. But it is very important at this season to avoid offering more than $1\frac{1}{2}$ annas a day to the able-bodied people outside, who are possibly considering in their own minds as the season advances whether they will or will not come on to the works.

6. The number of persons who are unable to work and who are seeking for food is increasing fast. I believe that the system of relief centres and village relief is being fairly well worked in this district. But the subject is so important that I must be excused for making reiterated mention of it.

No. 232.

CXI.—Minute by Sir Richard Temple, bringing to Notice the State of Affairs on the Bellary-Dharwar Railway. No. 245.

Bellary District, 24th April 1877.

Having had a share in recommending the commencement of the earth-worth of the railway from Bellary towards Dharwar, and having inquired much during my visit to Bellary (on the 26th March) as to the possibility of making a speedy commencement, I deem it my duty to report to the Madras Government that, from what I learn while passing through the district, the commencement is apparently not being made with the expected rapidity by the local Engineers. I am under the impression that the Civil officers have got, or could immediately get, from 10,000 to 12,000 relief labourers ready for this work, and the expectation was that at least this number would be employed. Whereas not more than 3,000 persons are actually being employed. This is excellent so far as it goes; but as much more is needed, it would seem to follow either that some further instructions from Government to the local Engineers, or else that, if such instructions have been given to these officers, they have not yet been sufficiently followed. As so much stress was laid by the Madras Government on the undertaking of this work as a means of employing and tasking relief labour under professional officers, I trust I shall be excused in bringing this subject again to notice. Bellary-Dharwar Railway.

2. It is the more necessary to press the point, as this is the only large work in the district where relief labour can be professionally tasked, no action having apparently been taken on my minute of the 10th April recommending that relief labourers be drafted on to certain selected public works,—a suggestion which I would still commend to the consideration of the Government of Madras.

No. 233.

CXII.—Minute by Sir Richard Temple, suggesting the deputation of an experienced European Officer to the Western Taluks of the Bellary District. No. 245.

Bellary District, 24th April 1877.

My last visit to the Bellary district brought to recollection a point which I have often heard discussed namely, the need of some European officer being deputed to inspect the relief operations in the western taluks of that district, namely, Harpanhally, Havind-Hudgully, and Kudlegi. These operations are no doubt under able Native officers, and European officer required for western taluks.

the distress is not very bad apparently in that quarter. Still the work would be all the better for a visit from an experienced European officer vested in the principles and practice of relief. It is probable that such an officer would effect good as regards the discharge of persons not fit objects of relief, the tasking of the relief labourers, and the prevention of waste or fraud. All the other parts of the district have the advantage of European supervision save these western taluks. I would represent to the Madras Government the expediency of despatching thither such an officer if he could be spared, as someone might probably be spared for a time at least. I understand that the Collector, who has been for some time past in camp, intended to visit the taluks, but he has not (I believe) done so yet.

No. 234.

No. 245. CXIII.—Minute by Sir Richard Temple, comparing the per-centage of relief recipients in Kurnool with those in the Bombay Deccan, and suggesting the concentration of relief works under Public Works officers.

Goondakal (Bellary District), the 24th April 1877.

Large number receiving relief in Kurnool district.

Having again paid a brief visit to a part of the Kurnool district, I find the numbers of persons on relief wages and gratuitous relief together to be so high, that I must invite the consideration of the Madras Government to the points set forth in my minutes of the 17th March and of the 29th March. These points are doubtless well known to the Madras Government, and they certainly have been brought to the notice of the local authorities. But as there is no change in those respects perceptible, I must again represent the case.

2. The per-centage of recipients of relief of both kinds in the Kurnool district may be compared thus with the per-centages in other districts of the Madras and the Bombay Presidencies :—

	Distressed Districts.	Total Numbers on Relief Works and on gratuitous Relief during the First Week of April.	Per-centage of Persons receiving Relief of both kinds on the Total Population of the District.
Madras Presidency	Kurnool	236,000	24½ per cent.
	Bellary	269,000	17 ,,
	Cuddapah	80,000	6 ,,
	Nellore	69,000	5 ,,
	Chingleput (inclusive of Madras city)	29,000	2 ,,
	North Arcot	32,000	1½ ,,
	Salem	58,000	3 ,,
	Coimbatore	27,000	1⅔ ,,
	Madura	12,000	½ ,,
	Tinnevelly	3,000	⅕ ,,
Bombay Presidency	Sholapur	49,955	7 ,,
	Kaladgi	27,120	3½ ,,
	Part of Poona	57,691	6⅛ ,,

3. Many of the Madras districts have been so economically managed from the first that it is difficult to make a comparison. But Kurnool may be fairly compared with Bellary, in which the failure of harvests has been worse, and in which there was quite as much liberality of relief at the outset as in Kurnool. There cannot be any good reason why the per-centage should be 24 in Kurnool, while it is only 17 per cent. in Bellary. Indeed, if the per-centage (17) in Bellary he deemed reasonable, the per-centage in Kurnool ought to be under 15.

4. The contrast with the Bombay Deccan is still more striking. It is, I believe, impossible to account for the difference in the extent of relief save by assuming that there is a difference in system. And what is that systematic difference? Why! just this, that in the Bombay Deccan the relief labourers are systematically tasked by engineering establishments and under professional supervision, while in Kurnool they are not so tasked. I have been unable to ascertain the precise value of the work done by the Kurnool relief gangs, but I understand that it costs many times as much as it would in ordinary times under the Department of Public Works, and that the tasks are very light.

In the Bombay Deccan the Department of Public Works has real control over the relief labourers, while in Kurnool it has not. This matter was represented to the Madras Government by my minute of the 29th March. I do not know exactly how far the recommendations therein submitted have been approved.

Large number receiving relief in Kurnool district.

5. The per-centage of relief recipients to the whole population in the Kurnool district may be better seen from the details of the "taluks" or divisions into which the district is divided:—

Taluks.	Population according to Census of 1871.	Number of Persons		Total.	Per-centage of Relief Recipients to Population.
		On Relief Works.	On gratuitous Relief.		
Ramalkota - - -	146,195	40,391	16,060	56,451	$38\frac{1}{2}$
Nandikotkur - - -	101,866	12,330	2,205	14,535	$14\frac{1}{4}$
Nandial - - - -	107,320	31,103	5,750	36,853	$34\frac{1}{3}$
Sirwell - - - -	71,066	16,449	2,776	19,225	27
Koilkuntla - - -	98,844	32,679	5,409	38,088	$38\frac{3}{5}$
Pattikonda - - -	173,434	26,289	10,652	36,941	$27\frac{1}{4}$
Cumbum - - - -	123,042	46,346	3,172	49,518	$40\frac{1}{5}$
Markapur - - - -	92,665	11,178	817	11,995	$12\frac{4}{5}$
	914,432	216,765	46,841	263,606	$28\frac{3}{4}$

6. The numbers on gratuitous relief are probably not too high; the excess must be in the numbers on relief works, which is specially apparent in the "taluks" of Cumbum, Koilkuntla, and of Nandial. Perhaps in Ramalkota the apparent excess may be accounted for by the Kurnool city being situate therein; otherwise there also the per-centage is very high.

7. The measure primarily to be suggested is the concentration of the gangs on public works (specified in the minutes of the 17th and 29th March) under Public Works officers. Then they will be sent to some longer distance from their homes than at present, and will be better tasked that at present. The effect of this on the numbers of the labourers would, I am sanguine, be soon apparent.

8. In submitting these remarks I am far from being forgetful of the efforts made by the Collector and his officers to enforce system and economy; but it is impossible to overlook the statistical facts which show that some further efforts are still necessary.

No. 235.

CXIV.—Minute by Sir Richard Temple, comparing the system of tasking relief labourers in the Madras and Bombay Presidencies, and suggesting the utilisation of the Public Works officers in Madras on relief works in certain districts. No. 245.

Bellary District, the 24th April 1877.

Public Works officers should superintend relief works in Madras.

Before quitting the Madras Presidency, I would beg to represent to the Madras Government one remarkable difference between the system heretofore pursued in that presidency and the system followed from the first in the Bombay Presidency, and which is being followed there more and more. Though the point has previously been brought by me to the notice of the Madras Government, it is so important that I may be excused representing it once more.

2. There will doubtless be no question as to the superiority of the plan whereby relief labourers are tasked under a settled departmental system by professional establishments specially trained for the business, over the plan by which they are tasked by Civil officers not trained to the business. In the former case the tasking will be strict and hard and will be endured only by those who are in need; in the latter case it will often (though not always) be either light or nominal, and will be undergone by many who are not in need.

3. In the Bombay Presidency the plan has been so advanced that now almost all the relief labourers are under the Public Works Department. Out of 287,760 persons in all, 259,057 are under that department, and only 28,703 are under Civil officers.

4. In the Madras Presidency, out of 716,507 in all, there are not more than 83,000* under the Public Works Department, the remainder, 633,507, being under Civil officers. Out of this latter number it may be admitted that 24,140 in Coimbatore, 28,000 in Salem, 13,626 in Madura, in all 65,766, are well and fully tasked. The remainder, 568,741, are (with the exception of a certain number in Cuddapah, which I cannot state precisely) under the Civil officers, and are for the most part lightly tasked. It is especially remarkable that in the two districts showing the largest numbers, Bellary and Kurnool, having both together 422,784 persons, the whole are under Civil officers, and lightly tasked, with the exception of the 3,000 on the railway from Bellary towards Dharwar.

*East Coast Canal - - -	40,000
Arconum doubling - - -	15,000
Bellary-Dharwar Railway - -	3,000
Salem district - - -	25,000
Total -	83,000

Some may be very shortly expected on the Chingleput Railway, and some also on the irrigation works of North Arcot.

5. I am sure that this difference in system is the main cause of the difference in the proportion of relief labourers to the whole population between these two districts on the one hand, and the Bombay Deccan on the other hand. The per-centage of relief labourers on the whole population is in Bellary 12¾ per cent. and in Kurnool 21¼; while (Bombay Presidency) in Sholápur it is only 6·69, in Kaládgi 4·8, and in the distressed part of Poona 10·5.

6. There is no want of engineering and professional establishments in the districts of Bellary, Kurnool, and Cuddapah; on the contrary each District is under a district Engineer, whose executive charge is divided into so many "ranges," in each of which there is an Engineer officer. But, as shown by me in former minutes, these excellent and competent establishments only help in a general way, and have no actual charge of any relief work. They might be utilised fully for this important purpose at any moment the Madras Government may see fit.

7. The same remarks apply equally to North Arcot, and would similarly apply to South Arcot if any relief works shall have to be opened there. They apply too in a considerable degree to Nellore.

MEMORANDUM by CAPTAIN W. S. S. BISSET, R.E., on Special Duty, dated Dhond, the 25th April 1877.

Movements of food grains in Madras.

The three accompanying statements abstracted from returns furnished, at Sir Richard Temple's request, by the officers of the Madras Railway Company, contain statistics of considerable interest to the mercantile world.

The first exhibits the movements of food grains on the Madras Railway for March 1877, the second shows month by month the quantity of food grain delivered by rail into each district, and the third exhibits the total quantities received in each district from the 1st August to the 31st March, as well as the source from which the supplies have been drawn. In Statement No. II. the last column professes to show the total delivery of each month by the Madras Railway, but it is necessary to explain that a considerable portion of the grain invoiced from Northern India in December 1876 and January 1877 was not actually delivered in the Madras Presidency till the month of February.

The best month's work out of Madras has been that of March, when nearly 35,000 tons of grain were despatched; the best month's work from Beypore that of January, when over 10,000 tons of grain were carried; and the best month's work from the northern end that of February, when the actual quantity of grain sent southwards from Raichore was approximately 18,000 tons.

Up to the end of March there was no effective increase to the engine power, for although the additional engines were in the hands of the Madras Railway Company, the drivers for these engines had not reached their posts till the first week of April.

With the increased demand which is just beginning to be felt in the ceded districts of Madras, and which, in my humble opinion, is likely to grow daily till the rains fall, the additional engine power will be fully engaged; and it may be worthy of notice that, while the despatches of grain from Madras cannot be largely increased without suspension of the ordinary traffic, there is even now train room for many more grain waggons from the north.

Movements of food grains.

W. S. S. BISSET.

No. 237.

No. 22 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, the 26th April 1877.

Nos. 215. 216. Bad report from Madras.

We enclose a minute by Sir Richard Temple regarding the condition of the upland taluks in the district of Salem, which he describes as being among the most distressed tracts in the whole of the Madras Presidency. Some parts of these taluks have not had crops for two years. One of them, Utangiri, was one of the taluks which suffered most severely in the scarcity of 1866. The relief operations appear to be conducted with care and judgment.

2. Yesterday we received the following telegram from Sir Richard Temple :—

"Since last weekly telegram I have visited South Arcot, revisited districts North Arcot, Cuddapah, Kurnool, Bellary. In Southern India situation changed slightly for worse contrary to expectation, because showers ceased middle April; any moment rain might alter whole case, otherwise distress must gradually increase. Near Madras, on East Coast, no rain at all; country there quite parched. Northwards, above Ghâts, in Bellary and Kurnool, situation worse, according to previous expectation. Season of trouble approaching. Agricultural and able-bodied classes still sustain themselves; but famine beginning to seize lower classes. Numbers on gratuitous relief rising. Many come to relief works in reduced state. Village inspection and relief being better developed but still not complete everywhere; I have again urged its full development. Those who cannot work becoming badly distressed; in relief gangs able-bodied still healthy, but weaker ones sometimes fall into low condition. A sort of scurvy appearing; many think reduced wage should be raised. I deprecate raising wages for able-bodied, fearing influx of persons to work who could otherwise support themselves; but I have recommended special allowance for all who are found reduced, also concession Sunday wage. Efforts with some success to send labourers to Nellore Canal; but earth-work slowly and feebly begun on railway from Bellary towards Dharwar. Active markets supplied. Draught cattle sustained. Inferior animals languishing or perishing in large numbers. Imports to Madras steady, but from Bombay direction increasing. No actual want of drinking water. I have just quitted Madras Presidency."

From the facts stated in this telegram it is evident that, unless rain falls within the next week or so, there will be a very great increase in the numbers of persons needing relief, and also in the loss of cattle, already, it is to be feared, very grievous. Your Lordship will have learnt from our telegram of the 21st instant that the number in receipt of relief in the Madras Presidency had then reached very nearly a million, which, however, is still considerably below the estimate for April submitted by the Madras Board of Revenue in December last, according to which the numbers likely to require relief in April were put down at 1,405,000. The greatest increase is perceptible in the number in receipt of gratuitous relief, which amounted to 241,000 persons; and from Sir Richard Temple's allusion in his present telegram to the insufficient development of the system of village inspection, we may look for a still further increase in the numbers requiring State relief in this form.

3. The situation is serious and critical; but the trade in grain is active, and there is, we trust, no reason for apprehending any deficiency in the supply in any of the districts. Sir Richard Temple, who is now on his way to Bombay to assume the Government of that Presidency, is about to furnish us with a comprehensive report on his mission, which will doubtless embody his latest impressions on the present aspect of the famine, and which we shall lose no time in forwarding to your Lordship.

4. The following is an extract from our telegram of the 21st instant regarding the numbers on the relief works and in the receipt of charitable relief according to the latest returns :—

"In Madras 726,000 on relief works, and 241,000 charitably relieved. In Bombay 270,000 on works, and 66,000 charitably relieved. In Mysore 64,000 on works, and 59,000 charitably relieved."

5. Since the above was written we have received the following supplementary telegram from Sir Richard Temple, despatched yesterday from Dhond in the Poona district, the point from which the railway starts which is to connect the Northern and Southern

sections of the Great Indian Peninsula Railway, and which has been commenced as a relief work :—

"I have seen some local officers, districts Sholapur, Poona, and Ahmednagar, have inspected 3,500 relief labourers, person by person, on Dhond and Munmar Railway, found them doing well on new wage. General situation of Bombay Deccan appears thus: Pressure becoming harder everywhere, numbers on relief works slightly increasing, system steady. Vast majority of relief labourers under professional officers, task-works well enforced, numbers on gratuitous relief increasing fast, village inspection developed. Prices slightly rising. Trade active. Markets well supplied. Draught cattle sustained, but numbers of other cattle perishing. Fate of animals sent to Ghât mountains for grazing uncertain. Many dying there. Anxiety about bullocks for future ploughing. Showers have fallen, but do not effect material good. I found water in rivers Tungabadra and Krishna increased in volume since last visit. Drinking water scarce occasionally, but failure averted by excavating wells.

We have the honour to be, &c.

WHITLEY STOKES.

No. 238.

Revenue No. 33.

From the SECRETARY OF STATE to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 26th April 1877.

Para. 1. The Despatch of your Excellency in Council, dated 9th March, No. 14 of 1877, relative to the famine in the Presidencies of Madras and Bombay, has been considered by me in Council. No. 147.

2. The insufficiency of the means at present available for the transport of grain from Madras to the interior, and especially to the ceded districts and Kurnool, must reasonably have caused much anxiety. The efforts hitherto made to increase the carrying power of the railway have been met by unforeseen difficulties, but as the subject is now engaging the earnest attention of your Excellency's Government and that of Madras, I trust that means will be devised for overcoming the present obstacles.

3. Your instructions to the Government of Madras relative to the necessity of removing the misapprehensions which exist in the public mind as to the relations between the Government and the firm of Arbuthnot and Co. have my approval. If, after consultation with the Madras Government, your suggestion for the sale of the Government reserve stock be acted upon, I trust that the periods of sale and quantities sold may be so arranged as not to disturb the ordinary operations of trade.

4. I trust that the local authorities in Nellore, the ceded districts, and Kurnool, will succeed in carrying into execution the plan suggested by Sir R. Temple of drafting labourers from the relief works in those districts to the great work of the East coast Navigation Canal. The end to be attained is so important, that I trust no exertions will be spared to make use of the present opportunity for the completion of this useful work.

5. I shall await the result of your deliberations on the subject to which the Sanitary Commissioner of the Madras Government has drawn attention, of the alleged insufficiency of the reduced rate of wages lately prescribed for the relief works in that Presidency.

6. I fully concur in the views expressed in the Resolution of your Excellency's Government on the returns received from the Chief Commissioner of Mysore relative to the scarcity in that province. The Chief Commissioner and the officers of the Administration appear to have well deserved the praise bestowed on them by your Excellency in

Council for the zeal, judgment, and humanity which have characterised their arrangements and exertions to meet the great calamity which has fallen on the province.

7. I concur with your Excellency in the emphatic recognition which you record of the value of Sir R. Temple's labours.

I have the honour to be, &c.
(Signed) SALISBURY.

No. 239.

Revenue, No. 36.

From the SECRETARY OF STATE to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 26th April 1877.

No. 170. Para. 1. The Despatch of your Excellency in Council, dated 16th March, No. 15 of 1877, relative to the famine in the Presidencies of Bombay and Madras, has been considered by me in Council.

2. I will await the result of the deliberations of your Excellency in Council, after full communication with the Government of Madras, on the Sangam project. As a reproductive work, it is well worthy of consideration at such a crisis as that which now engages your attention.

3. I am glad to learn that the conclusions at which Sir R. Temple arrived, after his repeated visits to North Arcot, are, on the whole, favourable, and that he considers everything has been done which ought to have been done in respect to measures of relief by the local authorities.

4. Sir Richard Temple has discussed with ability the views stated by Dr. Cornish, the Sanitary Commissioner at Madras, as to the scale of rations for labourers on relief works. The question at issue is, without doubt, one of great difficulty, and one on which it would be unwise to lay down an inflexible rule. I am confident that the humane principles already laid down by your Excellency will be scrupulously carried out by the officers of the Government, and that no scale of rations will be maintained which is not adequate to the sustenance of the labourer.

5. It is very satisfactory that progress has been made towards enabling the Madras Railway Company to carry 1,400 tons a day, twice the amount which it has hitherto been able to carry.

6. The statement that the number of persons on the relief works in the two presidencies has, during the week under review, been reduced by 49,266, is satisfactory.

7. I feel it my duty to record my approbation of the discrimination and judgment with which the calamity before you has been met by your Excellency in Council, by Sir Richard Temple, by the Governments of Madras and Bombay, and by the local authorities in those presidencies.

I have the honour to be, &c.
(Signed) SALISBURY.

No. 240.

Nos. 241. 256. MEMORANDUM by CAPTAIN W. S. S. BISSET, R.E., on Special Duty, dated Bombay, the 28th April 1877.

Imports of food grains. The following notes are based upon returns which have just been obtained from Madras. The very extensive importation into Madras of grain from the subordinate ports during the months of August, September, and October 1876 had escaped my notice, and I have to express my thanks to Captain Coaker, R.E., Deputy Consulting Engineer, and to Mr. H. E. Church, Traffic Manager of the Madras Railway, for having called attention to the matter and for having assisted me in obtaining the additional statistics now presented.

For the months of August, September, and October 1876, the published statements of the Madras Board of Revenue show the import of food grains into the port of Madras at a total of 5,637 tons. During the same period the Madras Railway alone carried out of Madras 20,446 tons of grain, and the question arose where this supply came from.

The figures thus published are found to be the imports from non-subordinate ports only, the imports of food grains from the ports subordinate to the Madras Presidency

during these months having actually amounted to 38,000 tons in addition to the 5,637 tons above mentioned. Imports of food grains into Madras.

During November and December 1876, 55,466 tons were delivered in Madras from beyond the presidency, and 30,000 tons from the subordinate ports, while during the first three months of 1877 the imports of food grains into the port of Madras amounted to 165,852 tons from ports beyond, and 36,000 tons from other ports within the jurisdiction of the Local Government. The imports into the port of Madras commencing in August with a total of 15,000 tons steadily rose up to January 1877, when the total imports from all sources into Madras alone exceeded 80,000 tons.

The total food supply made available in Madras from August 1876 to the end of March was therefore—

	Tons.
From subordinate ports - - - - -	104,000
From non-subordinate ports - - - -	227,000
Total - - -	331,000

Of this vast supply, the Madras Railway forwarded from Madras over 146,000 tons, its maximum despatches having amounted to 35,000 tons during the month of March.

Up to the end of March the minor East Coast ports of Negapatam, Tuticorin, and others imported 25,000 tons of grain, and this supply enabled Southern India to send to the more distressed districts served by the Madras Railway over 15,000 tons of food grain; Mysore taking over 8,000 tons of this amount.

During the same period, Beypore and Calicut received approximately 63,000 tons of food grains. Of this, over 35,000 tons was sent up by rail, nearly all to Coimbatore, Salem, and Mysore. The Malabar district probably received much of this by land, for it sent away by rail 5,000 tons of grain more than it received.

The other ports on the West Coast are said to have received 52,750* tons up to the end of February, and this large supply has all been distributed by cart.

* The total up to the end of March has been assumed at 55,000 tons.

If the period from August to October 1876 be included, the total imports into the Madras Presidency will be seen to be as follows :—

IMPORT of FOOD GRAINS into the PRESIDENCY of MADRAS.

Madras received in	From Ports beyond the Presidency or Non-Subordinate Ports.	From Subordinate Ports.	Total.
	tons.	tons.	tons.
August 1876 - - - -	1,769

The Northern districts received by rail from Great Indian Peninsula Railway - - - - - - - - -	61,000

Imports of food grains into Madras.

The above figures abstracted show the total imports as follows :—

	Tons.
By sea from Bengal, Burma, Orissa, and Ganjam to Madras, Tuticorin, &c.	356,000
By sea into Beypore and other West Coast ports	118,000
By Great Indian Peninsula Railway from Northern and Central India into the Madras Presidency	61,000
Grand total	535,000

No. 241.

No. 256.

CXV.—Minute by Sir Richard Temple, on the subject of the Imports of Grain into the Presidency of Madras and its Transport by the Madras Railway.

Bombay, the 28th April 1877.

Later information makes it desirable to state finally the statistics of the imports of food grains into the Presidency of Madras since the commencement of the scarcity of 1876–77. Copies of certain notes and memoranda by Captain Bisset are forwarded.

2. It was assumed originally on the published data of the Madras Board of Revenue that the imports before the month of November were altogether inconsiderable. The despatches of grain by rail from Madras were, however, during the months of August, September, and October so much in excess of the total imports thus shown that it was doubted whether the Board's statements were complete. And on further inquiry it was ascertained that the 5,637 tons shown as imported during August, September, and October from beyond the presidency were supplemented by an import amounting to 38,000 tons from ports known by the Madras Board of Revenue as "subordinate ports."

3. Thus before November, the month previously recognised by me as the beginning of heavy imports, there were delivered into Madras a total of 44,000 tons of food grains. Some corrections have been made in the returns for the period from November onwards, the estimated imports for March having been very much exceeded by the actuals both at Madras and at the minor ports on the East and West Coasts, and the whole supply taken by the Presidency has to be stated at 535,000 tons.

4. The following is the abstract of importations in the Presidency of Madras :—

	Tons.
By sea from Bengal, Burma, Orissa, and Ganjam to Madras and other East Coast ports	356,000
To Beypore	118,000
By the Great Indian Peninsula Railway	61,000
Grand total	535,000

5. The following is an abstract of the quantities of grain which were carried away by rail from Madras into the interior :—

	Tons.
To Chingleput district	514
„ North Arcot	22,316
„ Mysore territory	45,542
„ Salem district	5,486
„ Coimbatore and Malabar	1,878
„ Cuddapah district	33,045
„ Bellary and Kurnool	37,335
Total	146,454

6. The despatches of grain from Madras from 3,000 tons in August rose to over 10,000 tons in October, and to more than 13,000 tons in November, from which time the despatches have been limited only by the carrying powers of the Madras Railway.

7. Hence it is apparent that there was a very great activity in the grain trade of Madras during the autumn, a fact very material to the estimate which was formed of the conjuncture arising at that period.

No. 242.

No. 214, dated Bombay, the 28th April 1877.

From the PRIVATE SECRETARY to SIR RICHARD TEMPLE to the ADDITIONAL SECRETARY to the GOVERNMENT of INDIA. No. 262.

I am directed by Sir Richard Temple to submit a printed copy of his minute, dated 14th April, being a general report on his late mission to the distressed districts of the Madras Presidency. This report being submitted for the information or consideration of the Government of India, no copy has as yet been sent by Sir Richard Temple to the Government of Madras, as he deemed that perhaps the Government of India would prefer communicating the report to the Local Government. Forwarding Sir Richard Temple's report on his mission. No. .

2. The report will, it is hoped, be found to be drawn up in sufficient detail to speak for itself. But it had, by reason of Sir Richard Temple's approaching departure from the Presidency, to be completed and sent to press on the 14th April, which date represents a critical point in the season, when a change for the better or for the worse was to be expected. Therefore Sir Richard Temple desires to add that during the ten days subsequent to the 14th April, say up to the 25th April, when he left the Madras Presidency, the season declared itself adversely. The expected change came indeed, but it was for the worse. Consequently the position of affairs on the 25th April was somewhat more unfavourable than that described in Part IV. of the Report, which applied to the period ending on 14th April. The cause is the cessation of the usual spring showers of Southern India, which fell propitiously until the middle of April, and then ceased. To this, however, the country on the east coast around Madras itself formed an exception, having received no rain at all, great drought therefore prevailed in the Chingleput district up to the 25th April. The mortality in the relief camps near Madras was as bad as, if not worse than, ever; and the need was becoming apparent of sending to their homes, to be relieved there, all those inmates of the camps who could possibly be moved. Distress was certainly becoming worse in Madura, perhaps was arising in Tinnevelly, and was to be shortly expected in South Arcot. Affairs were somewhat better in Coimbatore, Salem, North Arcot, and Nellore; but if rain should be withheld for a few days longer in those districts, then some aggravation of trouble was to be feared. In Cuddapah and Kurnool matters were going on according to expectation, save that in one subdivision of Cuddapah (Mudanapulli) there seemed to be some degree of administrative failure. In Bellary the famine seemed to be making some strides onwards. The applications for gratuitous relief were fast increasing. And in the relief labourer gangs working upon the reduced wage the proportion of persons needing special concessions was rising. Subsequent change for the worse.

3. Even now a timely fall of rain (which is ordinarily to be expected at this season in Southern India) would change the whole face of affairs. But if there be no more showers until the coming of the south-west monsoon, then the unfavourable features indicated in this letter will become aggravated gradually, week by week, almost day by day.

4. I am to add that the grain trade continued active as ever, and the carrying power of the several railways was still sufficient for the conveyance of the grain supplies. But if, as is possible, there should be a rapid influx of grain during the month of May, then Sir Richard Temple apprehends that additional engines will be much wanted. Activity of grain trade.

No. 243.

NOTIFICATION by the GOVERNMENT of INDIA. No. 245.

Simla, April 30, 1877.

The Hon. Sir Richard Temple, Bart., K.C.S.I., being about to assume the office of Governor of Bombay, to which he has been appointed by Her Majesty, and being in consequence under the necessity of closing the special mission on which he has been employed since the beginning of January in the Presidencies of Madras and Bombay, and in the territories of his Highness the Maharaja of Mysore, his Excellency the Viceroy and Governor-General in Council desires to give public expression to the high sense which the Government of India entertain of Sir Richard Temple's services on this occasion. Acknowledgement of Sir Richard Temple's services.

When in January last it was deemed expedient that a high officer fully acquainted with the views of the Government of India should visit the Presidencies of Madras and Bombay for the purpose of inspecting the districts afflicted with scarcity, and communicating personally with the two Governments regarding the measures which were being carried out for the relief of distress, the choice of the Government of India at once fell upon Sir Richard Temple as the officer whose experience, ability, and energy pointed him out to be specially qualified for the duty. At a considerable sacrifice of personal comfort and convenience, Sir Richard Temple promptly responded to the call made upon him, and has conducted his arduous and delicate mission with signal ability and success.

The energy and devotion which have enabled him to undergo an amount of physical exertion which few could have accomplished are not more remarkable than the thoroughness of his inquiries and the judgment and tact which have characterised his communications with the Local Governments and their officers. To the Government of India Sir Richard Temple has rendered invaluable assistance at this trying juncture, in enabling it by his clear and lucid reports to appreciate the actual facts of the situation; and his Excellency in Council is persuaded that the Government to which he was accredited must recognise the advantage of his practical suggestions for the relief of distress and for promoting a judicious economy in the heavy expenditure which is being necessarily incurred.

The Governor-General in Council has no doubt that if life and health be spared to him in the high office which he is about to assume, Sir Richard Temple will add fresh and important services to those which he has already rendered to the State during his long and distinguished career. In entering upon his new duties he carries with him the best wishes of the Government of India.

No. 244.

Revenue, No. 39.

From the SECRETARY OF STATE to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 3rd May 1877.

No. 181. Para. 1. The Despatch of your Excellency in Council, dated 23rd March, No. 16 of 1877, relative to the famine in the Presidencies of Madras and Bombay, has been considered by me in Council.

2. With your Despatch you have transmitted 12 minutes and memoranda by Sir Richard Temple on various questions connected with the famine. The views therein expressed will doubtless receive every attention from the Government of Madras, but they do not at the present time demand remarks from me.

3. Your judgment in determining that relief operations should be so conducted as not to interfere with private trade was sound, and has been fully justified by the event. All doubt as to the manner in which the grain in the hands of the Madras Government will be employed has been set at rest by the public declaration of that Government that the grain shall be retained in reserve to meet future emergencies, and will not be utilised so long as private trade meets the requirements of the distressed districts. Under these circumstances, and with this reservation, I am of opinion that the movement and utilisation of the reserve may be left to the discretion of the Madras Government.

4. The intelligence that there has been a good fall of rain in Bellary, Cuddapah, Kurnool, Nellore, Trichinopoly, Tinnevelly, and other of the afflicted districts, is very satisfactory.

5. The small increase of 2,608 persons on the relief works in the two presidencies may also be deemed satisfactory, when the period of the year is taken into consideration.

I have, &c.

No. 245.

No. 23 of 1877. No. 265.

GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, the 3rd May 1877.

We enclose several minutes written by Sir Richard Temple during the last fortnight of his stay in the Madras Presidency, referring to various questions connected with the administration of famine relief.

2. The most important questions discussed in these papers are—

1st. The expediency of utilising the officers of the Public Works Department in the superintendence of the relief works. No. 235.

2nd. The sufficiency of the rate of relief wages. No. 218.

3rd. The expediency of gradually reducing and eventually abolishing the relief camps, by drafting able-bodied persons to the works, and sending the infirm and helpless poor to their homes, as the system of village relief becomes sufficiently organised. No. 229.

4th. The substitution of coal fuel for wood on the Madras Railway lines, with the object of preventing the destruction of the forests, and especially the hill forests, the gradual denudation of which has a prejudicial effect on the regularity of the rainfall. No. 220.

The last of these "proposals will require to be carefully examined; and while we fully recognise its importance, we are not at present in a position to offer any definite opinion as to its feasibility.

3. The question of more effectively utilising the large public works establishments in the Madras Presidency, on the duty of superintending the relief works, has been repeatedly pressed by Sir Richard Temple upon the attention of the Madras Government, not only in the minutes now sent, but in other minutes which have been already laid before your Lordship. In his minute of the 29th March* (No. LXXXVII.), adverting to the defects in the exaction of task-work, which characterised many of the relief works in Madras, Sir Richard Temple remarked that the main cause of the failure consisted in this, "that the Public Works Department in each of the distressed districts "is not sufficiently employed (indeed is sometimes hardly employed at all) in the "tasking,—an affair which is of all affairs the very one which it is most competent to "manage, and which can be thoroughly managed by it alone." In most of the districts, and especially in Bellary and Kurnool, the number of the relief works under the department of public works is very small, while the majority of the relief works are under civil officers. The result is that the tasking is at the best but light, and when the supervision is Native only, the tasking is too often nominal. The subject is referred to in several of the minutes enclosed in this Despatch, and more particularly in that of the 24th ultimo, written on the eve of Sir Richard Temple's departure from the Madras Presidency, wherein he points out that, while in the Bombay Presidency the plan of tasking the relief labourers under a settled departmental system by professional establishments, specially trained for the business, has been so advanced, that out of 287,760 persons on the relief works in that presidency, 259,057 are worked under the Public Works Department, and only 28,703 are under civil officers; in the Madras Presidency, out of 716,507 in all, there are not more than 83,000 under the Public Works Department, the remainder, 633,507, being under civil officers—

On question of relief works being placed under control of Public Works Department. *No. 192.

"Out of this latter number it may be admitted that 24,140 in Coimbatore, 28,000 in Salem, 13,626 in Madura, in all 65,766, are well and fully tasked. The remainder, 568,741, are (with the exception of a certain number in Cuddapah which I cannot state precisely) under the civil officers, and are for the most part lightly tasked. It is especially remarkable that in the two districts showing the largest numbers, Bellary and Kurnool, having both together 422,784 persons, the whole are under civil officers, and lightly tasked, with the exception of the 3,000 on the railway from Bellary towards Dharwar."

This difference in system, in Sir Richard Temple's opinion, is the main cause of the difference in the proportion of relief labourers to the whole population between these two districts, on the one hand, and the Bombay Deccan, on the other hand. The percentage of relief labourers on the whole population is in Bellary 12·75 per cent., and in Kurnool 21·25; while in Sholapur, in the Bombay Presidency, it is only 6·69, in Kaladgi 4·8, and in the distressed part of Poona 3·7. Making every allowance for

the greater intensity of the famine in the Madras Presidency, these facts appear to us to afford strong presumptive evidence of the superiority of the Bombay system, and of the expediency of adopting it in Madras. Another consideration which is adverted to in Sir Richard Temple's minute of the 20th ultimo, regarding the South Arcot district, is that, if this plan were adopted, the civil officers would then have more leisure for effectively superintending the system of village relief. We are about to address the Madras Government on this subject, with reference to the remarks contained in the 8th paragraph of their despatch to your Lordship, under date the 7th ultimo, No. 25, and also regarding the proposal contained in Sir Richard Temple's minute of the 22nd ultimo, for the gradual abolition of the relief camps.

The question of the sufficiency of the reduced scale of wages.

* No. 218.

4. The remarks recorded in Sir Richard Temple's minute of the 18th ultimo* appear to us fully to dispose of the objections advanced by the Sanitary Commissioner of Madras to the reduced rate of wage. We would draw your Lordship's particular attention to the following passages in the minute:—

"I must advert for a moment to certain parts of the argument of the Sanitary Commissioner of Madras, which seem to amount to this, that because there is mortality among the recipients of gratuitous relief, who are admitted to particular relief camps, therefore the wages of relief labourers must be insufficient. Whether the Sanitary Commissioner intends to convey this idea I know not, but something of the sort would, I apprehend, be gathered by ordinary readers of that which he has written. Therefore, I have to explain that there is no connexion whatever between recipients of gratuitous relief on the one hand, and the recipients of relief wages on the other. The gratuitous rations allowed to the inmates of relief camps have nothing whatever to do with the wages paid on relief works. The inmates of these camps who are admitted there as being unable to work are a class totally different from those who are admitted to the relief works as being able to work. Inferences deduced from the condition of the recipients of gratuitous relief are wholly irrelevant if attempted to be applied to the condition of relief labourers. If unhappily there be mortality among the inmates of relief camps, it by no means follows that there is any mortality among relief labourers. In point of fact, there is no mortality among relief labourers except from cholera, small-pox, or other diseases, and when sometimes cholera has stricken and dispersed large gangs of relief labourers, there has never been any reason to suppose that the scourge arose from want of food. Again, if, notwithstanding scientifically arranged diet, the condition of the inmates of relief camps continues bad, no amelioration whatever could be afforded by raising the wage of relief labourers; who are a totally different class. These poor inmates have never gone to relief works at all. Indeed, the very reason of their admission to the relief camps is this, that they are incapable of going to relief works. They are diseased or infirm, or being indisposed to work have wandered about, or passing by means of relief close at home have wandered to a distance.

"Being thus helpless for one reason or another they are picked up and taken care of, but when picked up they are often beyond the reach of human aid. No analogy, therefore, drawn from these persons can possibly be applicable to relief labourers, and to mention the two cases with any sort of parallelism and in any kind of connexion, would be to produce confusion of ideas and other misapprehension.

"If, indeed, persons who were pale on being admitted to relief works were to become thinner and thinner and weaker and weaker till at last they had to be drafted off to gratuitous relief camps as unfit to work, then that would be a reason for reconsidering the wage, but this is just what has not occurred, and is not occurring. If I saw or knew any signs of its occurring, then I should be the first to move. Many relief labourers indeed have left the works of their own accord, not so much, however, because the wage was reduced, but rather because task-work was enforced, or because the scene of labour was removed to a distance from their homes.

"How it happens that so many of the destitute poor sank so low before being taken up for gratuitous relief is a question which need not be discussed in this minute. I may reiterate, however, that the proper remedy lies in the institution of house-to-house visitation throughout the distressed districts, and from the time of entering the Madras Presidency I have never ceased to urge upon the Government and the local authorities the necessity of such a visitation. And, indeed, this visitation has generally been instituted. But that it has not always been perfectly carried out is proved by the mortality which has occurred, or still occurs, in some of the relief camps."

5. Regarding the condition of the Bombay Presidency, Sir Richard Temple telegraphed as follows on the 1st instant:—

"Situation of Bombay Deccan same as described in my telegram of 25th. Recent showers in Konkan and South Mahratta country have encouraged people, improved

water supply, and benefited cattle. Poona and Sholapur plough cattle suffering severely, but draught cattle sustained, and trade active. Great Indian Peninsula Railway continues doing well. Emigrants who left Deccan districts beginning to return home to resume agriculture. Movement discouraged as premature. Number on relief works slightly reduced, and on gratuitous relief increased. This was expected. General condition of the people fairly good. Special concessions allowed to return emigrants in South Mahratta Country. Similar allowance authorised in individual cases of need everywhere; but relief labourers on reduced wages are sustained in fair health. One pound grain per diem still thought sufficient if work light. Endeavours made to render village relief efficient as pressure on poorest classes increases. In Bombay city much sickness, and death-rate high, due to fever attacking all classes alike. Causes not connected at all with famine. Those who come from interior find employment in city."

6. According to the latest returns which have reached us, the numbers in the receipt of relief were as follows:—

In Madras	- - -	702,923 on relief works. 299,325 charitably relieved.
In Bombay	- -	311,000 on relief works. 77,700 charitably relieved.
In Mysore	- -	59,701 on relief works. 68,641 charitably relieved.

7. Last week's season reports showed that there had been a good fall of rain in parts of Bellary, Madura, and Tinnevelly, and showers in Kurnool, Tanjore, Coimbatore, and Salem, and in most of the Bombay districts, as well as in the western districts of Mysore.

8. We enclose copy of a notification* which we issued on the 1st instant, giving public expression to the high sense which we entertain of Sir Richard Temple's services in the difficult and delicate mission on which he has been employed since January last. We shall advert to this subject more fully in our review of Sir Richard Temple's final report, which we expect to receive in the course of a few days. *No. 243.

We have, &c.

No. 246.

EXTRACT from the Proceedings of the Government of India, in the Department of Revenue, Agriculture, and Commerce, dated Simla, the 5th May 1877. No. 256.

RESOLUTION.

In the month of January 1876, some remarks in the weekly "season and crops" telegram from the Government of Madras, referring to the unsatisfactory prospects of certain districts in that presidency, attracted the attention of the Government of India, and the Local Government were requested to give further information on the subject. From some papers then submitted, and subsequently from a more comprehensive report received in the month of July, it appeared that, in consequence of the deficiency of the north-east monsoon, failure of crops had taken place in parts of four districts. In Bellary and Cuddapah there had been a considerable decrease of cultivation, and some remissions would be required, but prices were steady, and the condition of the labouring classes did not appear to call for the interference of the State. In North and South Arcot the loss of crops had been rather more severe, larger remissions were needed, and a general want of drinking water and pasturage was complained of. At the same time, slight falls of rain had taken place in all the districts, and while nothing could be safely predicted as to the coming south-west monsoon, the Government of Madras reported that they had taken every precaution for guarding against the serious effects of famine which its failure would occasion, and had sanctioned relief works for execution in the event of the provision of labour for the poorer classes becoming indispensable. In the month of August 1876 the Madras Government applied for a grant of Rs. 41,000 from Imperial revenues for relief purposes, but it was not until the receipt of telegrams, dated October the 24th and 27th, that the Government of India became aware that the condition of Bellary, Kurnool, and Cuddapah was very serious, and that if the north-east

Review of Madras returns.

Review of Madras returns.

monsoon should not set in favourably within fifteen days, the gravest results were to be apprehended in those districts.

2. In accordance with the experience of the past, as summarised in paragraphs 9 and 11 of the Resolution of the Government of India on the Bengal famine of 1873–74, dated February 13th, 1875, the Madras Government were on October the 25th requested by telegraph to supply detailed information on various important points with reference to the distressed districts. The replies to this call being incomplete in essential particulars, such as the extent of failure of crops and of relief works organised, it was followed on the 2nd December by a request for a complete review and forecast of all distressed districts, like that which had been required from the Government of Bombay on the 30th of November, to be submitted to the Government of India by the 15th of January. The Chief Commissioner of Mysore also was, on the same date, directed to submit similar information.

3. The reports of the Bombay local officers were sent in to their immediate superiors, in a generally complete state, about the close of the year, and, together with the views of the Government of Bombay, were received by the Government of India in time to be considered and summarised, with orders thereon, in the "Gazette of India" of the 23rd February last. The reports from Mysore, though not quite so complete or trustworthy as those from Bombay, were similarly dealt with by the 10th of March. His Excellency the Governor-General in Council regrets to observe that the reports of the local officers in the distressed districts of the Madras Presidency have not, with some notable exceptions, been characterised by the same punctuality, accuracy, or completeness. Their various deficiencies in important particulars have been sufficiently commented on by the Madras Board of Revenue, and have been to a great extent supplemented by the series of elaborate and able reviews of the several districts by the Board itself which have accompanied them. His Excellency in Council is willing to make the most ample allowance for the irksomeness and difficulty which must have been felt in submitting detailed statistics by officers who were labouring under the practical difficulties of organising relief for clamorous and starving multitudes, but is constrained to observe that had they more generally grasped the imperative need of temperate and thorough diagnosis of the condition of affairs around them at a very early stage of famine, the exaggerated impressions which were in many instances received, and the excessive and uncalled for relief which was consequently given, might have been alike avoided, and the general policy of Government might have been, in important particulars, different from what it was. While thus commenting on a general tendency which has had a not unimportant influence upon the conduct of affairs, his Excellency the Governor-General in Council cannot withhold a tribute of admiration to the energy, ability, and self-devotion which the local officers of the Madras Presidency, of all grades, have uniformly displayed, to the humanity by which their measures, even if at times in excess of the occasion, have been prompted, and the loyalty with which they have accepted and endeavoured to carry out the famine policy of the Government of India, as set forth in the instructions of the 16th of January last, and personally explained by Sir Richard Temple in the course of his mission.

4. The delay which has taken place in submitting the review and forecast which was due on the 15th of January last has necessarily altered its character and diminished its use. The detailed information supplied is in some cases, and not in others, brought down to much later periods than that originally intended, and it is no longer possible by its aid to view, from a fixed standpoint, either the facts of the past or the prospects of the future. Fortunately, there is no longer the same necessity for doing so, as the progress of events, together with the mission of Sir Richard Temple, has solved many problems which, before the close of the year, presented themselves for earnest consideration. At the same time, his Excellency in Council is of opinion that the information which has now been collected, although in some instances incomplete in matters of calculation, and in others incongruous in point of time, may not prove to be devoid of value as a record of the earlier stage of a great famine, and of the attempt to deal with it on a basis of actual facts.

5. The area of the Madras Presidency, exclusive of Native States and of the city of Madras, is 138,291 square miles, and the total population 30,883,625. This tract is divided into 20 districts, of which Ganjam, Vizagapatam and Godavery on the extreme north, South Arcot and Tanjore towards the east centre, and South Canara, Malabar, and Nilgiris, on the west, have escaped any approach to actual famine, though the distress in parts of some of them, owing to high prices induced by partial failure of crops or extensive exportation, has not been inconsiderable. The remaining 12 districts have been subjected throughout to varied, but still severe pressure, which in parts of

many of them has reached the extremities of famine. The 12 districts comprise 121 separate taluks or subdivisions (of which 13 are zemindars' estates), and for each of these separate information has now been submitted by the local officers, and reviewed by the Madras Board of Revenue. The total area and population of the 12 districts, and the area and population actually affected by famine, on the basis of considering as affected all taluks in which the crop saved amounts to less than one-half, are shown in the margin. If, however, taluks in which the crop saved amounts to one-half be included, the affected area and population will be raised to 71,849 and 15,432,393 respectively. Considering that the quantity of land not cultivated at all has in many instances been omitted by the Madras local officers from their calculations of failure, these latter figures probably afford, in the case of Madras, a juster estimate than the former. The extent of the famine in Madras is contrasted in the subjoined table with that in the Presidency of Bombay and the Province of Mysore :—

Review of Madras returns.

	Total.	Affected.
Area in square miles -	81,852	63,910
Population - -	18,592,534	13,713,307

	Bombay.			Mysore.			Madras.		
	Total.	Affected.		Total.	Affected.		Total.	Affected.	
		Including half crops.	Excluding half crops.		Including half crops.	Excluding half crops.		Including half crops.	Excluding half crops.
Area in square miles	54,355	41,254	33,873	27,077	16,160	14,479	81,892	71,849	63,910
Population - -	7,963,927	6,180,209	4,981,616	5,055,412	3,141,747	2,849,329	18,592,534	15,432,393	13,713,307

6. Proceeding on the more favourable course of excluding taluks with half crops saved, it will be found that in Bombay the affected area and population are 62 per cent. of the total area of the districts concerned, in Mysore they are 53 and 56 per cent. only, while in Madras they reach 78 and 74 per cent. respectively. If taluks with half crops saved be included, the results are almost the same: Bombay appears somewhat less favourably, Mysore more so, but Madras still considerably exceeds the others. These facts, together with the large excess of the affected area and population in Madras over that of Bombay and Mysore combined, are sufficient evidence both of the magnitude of the calamity which has overtaken that presidency, and the difficulties with which the Local Government and its subordinates of all grades are called upon to contend.

7. The total rainfall during the past season, as reported up to the close of the year, or to dates since which no appreciable increase has occurred, is shown in the margin for 112 taluks. For the other nine, which are zemindari, no returns are available. The results, as thus shown, are less favourable, though not greatly so, than those ascertained regarding Bombay, which, again, held a lower place than those for Mysore. In order, however, fully to appreciate the severity of the failure of rain which has fallen upon the Madras Presidency, the fact must be remembered that the latter is dependent upon two monsoons instead of one, in proportions which vary greatly but rarely exceed two-thirds of one to one-third of the other. A fair supply during one monsoon, though it helps materially to raise the general proportion, is therefore no compensation for extensive failure during the other. This will be more fully understood from the accompanying statement :—

Proportion.	Number of Taluks.
Full or nearly so - -	9
Three-fourths - -	12
Two-thirds - -	23
One-half - - -	31
One-third - - -	24

North Arcot -	25·6	16·0	11·3	2·5	Tinnevelly -	6·3	4·3	11·6	6·3

The later rains were, in all cases, of great importance, but in some their failure alone produced the severity of famine.

Review of Madras returns.

8. The obscurity involving the estimates of the proportion of crops saved, in consequence of omission to take into account land left uncultivated, failure of later crops, or other particulars, has been in several instances pointed out by the Board of Revenue. The marginal table gives such a summary as can be made, but it probably shows matters somewhat better than they really are. It does not, moreover, show fully the actual relative pressure of famine, as some districts which have lost more are, from previous good seasons or other circumstances, better off than others which have saved a larger proportion of their crops. Contrasting this table with the similar ones relating to Bombay and Mysore which have already been made public, the following results are obtained:—The failure has been total, or nearly so, in 21 taluks of Bombay, 18 of Mysore, and 35 of Madras, or 22½, 26½, and 29 per cent. respectively; the taluks which have lost from one-sixth to one-half, both inclusive, are 48, 25, and 68, or 51½, 36½, and 56 per cent. in the three cases; while, finally, those which lost less than one-half are 24, 25, and 18, or 26, 37, and 15 per cent. The Madras losses, even on the figures now obtainable, which have been described above as probably unduly favourable, are consequently heavier in every instance than those experienced by either Bombay or Mysore.

9. The estimates of probable remissions submitted by the local officers amount to Rs. 1,24,33,758, or about one crore and a quarter of rupees. The Board of Revenue, in their reviews, make reductions in the case of Coimbatore, Kistna, Kurnool, Madura, and Nellore, which reduce this amount to about one crore, and express their belief that further large reductions are practicable in Cuddapah, Salem, and Tinnevelly. The question of remissions of land revenue has been the subject of a special correspondence with the Governor of Madras, in consequence of suggestions submitted to them by Sir Richard Temple for suspension of portion of the demand with a view to its recovery in future years. His Excellency the Governor-General in Council decided to leave the matter in the hands of the Government of Madras, on the understanding that the local officers would be warned against too free remissions, and authorised to hold balances in suspense in cases in which it appeared likely that the landholder would be able, without undue pressure, to pay up next season. It is satisfactory to find that the remissions now stand at a lower figure than the previous estimate, and that the Board of Revenue consider further considerable reductions to be practicable.

10. The condition of the cattle and agricultural stock has occupied in all districts that attention which its importance deserves. According to the Administration Report of 1874–5, the numbers of cattle and sheep in the 12 affected districts were as shown in the margin. The fact that these numbers, compared with the population, betoken a wealth in this respect inferior to that of the affected districts of Bombay, enhances both the severity of losses and the urgency of reducing them to a minimum. According to the local reports, the condition of the cattle appears to be good in 46 taluks, indifferent in 38, and bad in 37. In some districts the mortality has already been extremely heavy. In Bellary the Madras Board of Revenue consider it unlikely that more than 25 per cent. of non-agricultural cattle, and from 60 to 70 per cent. of the agricultural cattle, will survive; Cuddapah and Kurnool have likewise suffered severely, while the heavy losses which have befallen the well-known breed in Nellore will be felt, for years to come, far beyond the limits of the district itself. Such relief as was practicable, by means of throwing open reserves and digging wells, has already been resorted to, and it may be hoped that the showers which have begun to fall may tend to freshen the pastures, and to diminish the further mortality which is so generally apprehended.

Cattle	5,323,000
Sheep	5,894,000
Total	11,217,000

11. The means of water-supply do not appear to have been so extensively impaired as might have been expected, and as has been the case in Mysore. The condition of 45 taluks is considered to be good, of 48 indifferent, and of 28 bad, but though the inconvenience caused by scarcity will be in many instances extreme, no actual calamity is anywhere anticipated. Already the rains, partial though they have been, have brought relief, and difficulties in this particular are not now likely to be prolonged.

12. Regarding the course of prices, the only remarks which may be made are that the rise appears mostly to have commenced at a very early date, so that the rates at the beginning of October were abnormally high; that the increase appears to have been continuous, though in some cases more sudden than in others, until the close of the year; and that staple grains were at that period generally dearer than in the Bombay Presidency. Review of Madras returns.

13. The extent of the local stocks is a point at all times most difficult to ascertain, and the practice of hoarding until the nature of the coming season is assured tends to defeat any attempt at exact calculation. In districts such as Cuddapah, Kurnool, Madura, and Nellore, which had suffered from previous bad seasons, the supplies in hand were undoubtedly low, and in others, where they were originally fair, they were drawn forth for exportation by the high prices obtainable elsewhere. The Madras Presidency enjoys, however, in its system of railways, penetrating almost every one of the distressed districts, and conveying supplies both from Northern India and the Coast, as also in its extensive seaboard, lying open to the trade of Bengal and Burma, exceptional advantages for supplementing deficiencies in its food supply. The experience of the past four months has amply demonstrated that it has at its command, both within and beyond its limits, a body of merchants both competent and ready to utilise these advantages to the utmost, in accordance with the ordinary laws of supply and demand, and that any attempts to supplement their operations are entirely unnecessary, and cannot but prove prejudicial.

14. The condition of the mass of the people in the distressed districts, with the exception, perhaps, of Tinnevelly, is poor. There are, however, in certain districts, large zemindari estates of a nature nowhere to be found in Bombay and Mysore, the owners of which ought to be in a position to assist their tenants, but exhibit, with a few noteworthy exceptions, no disposition to do so. The proportion of agriculturists generally exceeds considerably that of other classes, and there can be no doubt that the population as a whole, after exhausting what little accumulated means individuals may possess, are dependent, on an emergency like the present, upon such aid as the State can afford.

15. The emigration reported amounts to only 174,925, or 1·3 per cent. of the total affected population, but some persons, whose numbers are unascertained, have probably left other taluks. The principal known emigration has occurred in the districts named in the margin. From Bellary, Kurnool, and Cuddapah persons have resorted to the adjacent territories of the Nizam and to Mysore, as well as to British districts, but their movement is altogether abnormal, and they have probably already returned in large numbers. In the southern districts it is difficult to distinguish the emigration to Ceylon and the coffee plantations of the western range of Ghâts which has been caused by famine, as the population annually use to a great extent these outlets for their labour. Practically, the difficulties of the famine have, in the Madras Presidency, been but little affected by the movement of the people. It may be added, in connection with this subject, that the Government of India have recently approved of proposals submitted by the Chief Commissioner of British Burma for encouraging, by means of advances, the emigration of 20,000 labourers to that province.

Tinnevelly	49,511
Salem	38,831
Bellary	21,316
Cuddapah	19,000
Madura	17,171
Kurnool	15,746

16. Relief works on an extensive scale had been started before the close of the year in Bellary, Kurnool, and Cuddapah, and to a less, though still considerable, extent in Nellore. In Kistna, Coimbatore, North Arcot, Chingleput, and Salem a commencement had been made, while in Madura, Trichinopoly, and Tinnevelly the necessity for relief had barely made itself felt, and local funds were mostly supplying what little could be said to be necessary. In the two last-named districts, indeed, actual distress has continued to be so limited that even up to April 14th only Rs. 18,857 had been expended. The works undertaken were, and have on the whole continued to be, what may be termed small and local, with the exception of the East Coast Canal, the Junction Canal, the Penair Embankment, and one or two minor undertakings. The construction and repair of roads, repair of tanks, and their supply channels, digging or deepening wells, and village improvements of a petty nature have been generally resorted to. This material difference between the nature of the Madras works and those undertaken in Bombay is attributed by Sir Richard Temple, in his minute of the 10th of February, to the alleged fact that the facilities in the Madras Presidency for large projects are remarkably few. The Madras works also differ from those of Bombay in another important particular—that they have been, and are, conducted mainly by Civil officers, without taking, to a greater extent than about 11½ per cent., advantage of the more strict and disciplined organisation of the Public Works Department.

Review of Madras returns.

17. The numbers in receipt of gratuitous relief at the end of the year were 56,042, of whom 36,342 were in Bellary, and 10,512 in Nellore, other districts contributing the remainder in figures mostly quite insignificant. The system was mostly that of giving cooked food at central points to the aged or infirm, and authorising the village officers to relieve destitute travellers or other special cases of distress. The organisation of house-to-house visitation, and the admission of the children of labourers on the works to a charitable allowance of three pies per diem, are measures of recent origin, and not yet universally in force, but their effect has been apparent in the increase of the number gratuitously relieved, which on April 24th had reached 295,256. The operations of the Government in this respect have been materially aided by conspicuous efforts of private charity.

18. In the case of Madras, as in that of Bombay, three estimates, which are shown in the margin, have been framed of the numbers likely to be on relief works at various periods. The first was submitted by the Board of Revenue to the Government of Madras on the 19th of December 1876; the second is for the 1st of March, May, and July only, and is the total of the estimates of local officers contained in the reports now under review; the last is that contained in Sir Richard Temple's minute of February 5th, 1877, and based, as shown by the remarks on its reverse, on information obtained, in almost all cases, from the local officers, at a time when, on the one hand famine had assumed, in some districts, a severer aspect than before, while, on the other, the policy to be followed in dealing with it had been defined and generally made known.

Months.	Board of Revenue, December 19th.	District Reports, Christmas.	Sir Richard Temple, February 5th.	Actual Monthly Average.
December -	577,000	—	—	—
January -	820,000	—	1,089,000	1,025,025
February -	1,095,000	—	1,228,000	821,357
March - -	1,290,000	1,646,189	1,480,000	640,117
April - -	1,405,000	—	1,840,000	702,076
May - -	1,355,000	1,857,245	1,530,000	—
June - -	1,140,000	—	795,000	—
July - -	780,000	1,804,196	316,000	—
August - -	405,000	—	—	—
September -	100,000	—	—	—
	8,967,000	—	8,222,000	—

For the numbers on charitable relief no separate estimate is offered by the Board of Revenue in their letter above referred to, but the local reports, and Sir Richard Temple's minute based on later local information, afford the results shown in the margin. The measures adopted for more thorough relief of this description, which have been already alluded to, will, no doubt, cause a large access to the numbers in receipt of it in the months of pressure which are yet to come.

Months.	District Reports, Christmas.	Sir Richard Temple, February 5th.	Annual Monthly Average.
January -	—	50,000	81,219
February -	—	100,000	44,850
March -	176,064	250,000	62,282
April - -	—	500,000	209,860
May - -	213,471	600,000	—
June - -	—	700,000	—
July - -	225,782	500,000	—
August -	—	160,000	—
	—	2,860,000	—

The actual numbers relieved according to the latest accounts, both by the works and charitably, have been placed in juxtaposition with the estimates, and his Excellency the Governor-General in Council is glad to observe that, severe as is the amount of suffering which they disclose, it has fallen far short of the most careful estimates which circumstances permitted to be made.

19. In conclusion, his Excellency the Governor-General in Council, while recording his deep concern at the calamity which has befallen so large a portion of British India as the Presidency of Madras, would add the expression of his warm sympathy with the extraordinary exertions which are being put forth by the officers of Government in all departments for the mitigation of the suffering by which they are surrounded, and his confidence that their judgment and caution will be alike successful in the preservation of life and the watchful husbandry of the resources of the State.

ORDER.—Ordered, that copies of this Resolution be communicated to the Secretary of State for India, the Governments of Madras and Bombay, Sir Richard Temple, and the Chief Commissioner of Mysore, and that it be published in the "Gazette of India."

No. 262.

No. 247.

EXTRACT from the PROCEEDINGS of the MADRAS GOVERNMENT, PUBLIC WORKS DEPARTMENT, No. 14 I., dated 7th May 1877.

ORDER by the GOVERNMENT of MADRAS.

The Sungum project.

To enable Government to address the Government of India further on the subject of the Sungum project, His Grace the Governor in Council considers it desirable that the question of returns should be further considered in the Revenue Department, particularly

as regards the probable growth of revenue, and the time within which it may be expected that the ultimate revenue will be reached.

2. To furnish the information asked for by the Government of India as to the nature of the repairs and improvements which will require to be carried out to existing tanks and channels, should the Sangam project be abandoned, and as to the cost of such work, a special investigation would be required which would occupy a considerable time, and cost a good deal of money, but the district engineer, Nellore, will furnish such information as may be available as to the probable outlay which will be required to render the existing works fairly efficient. He will also, with reference to paragraph 4 of the letter from the Government of India, state whether any and what drainage works consequent on the completion of the Sangam project are likely to be required, and in support of any opinion which he may express on this point, he should show generally what the present drainage arrangements, natural or artificial, of this tract of country are.

Nos. 252, 256.

MEMORANDUM by Surgeon-Major I. B. LYON, F.C.S., Chemical Analyser to Government.

Bombay, 7th May 1877.

Sufficiency of the reduced scale of wages.

During the year 1876, 534 Native prisoners (all on hard labour) were discharged from the Bombay House of Correction. Their average weight on admission was 105 lbs. = 7 stone 7 lbs. On discharge they were found to have gained in weight on an average 1 lb. 10¼ oz. each. Their daily diet, while in jail, is shown at (*a.*) Table I., its value in nitrogen and carbon, calculated by the factors given in Table II., is, as shown (Table III. *a*), nitrogen 201·6 grains, carbon 4,011 grains daily.

These quantities of nitrogen and carbon are very much less than the quantities laid down by authorities as requisite for a European of average weight in moderate work. Thus many authorities estimate the quantities required by a European, of average weight in moderate work, at about nitrogen 300 grains, carbon 4,850 grains daily (*see* Table IV., 1 and 2). Letheby, taking a mean calculated from the researches of various physiologists, estimates the quantities required by a European male adult of average weight on ordinary labour as nitrogen 307 grains, carbon 5,688 grains (Table IV., 3). The hard labour diet of English convicts contains nitrogen 281 grains, carbon 5,140 grains per diem (*see* Table IV., 10).

The experience of the Bombay House of Correction that Native prisoners at hard labour gain weight on a diet containing less nitrogen and carbon than the quantities laid down by authorities as requisite for European adults of average weight in moderate work, is confirmed by the experience of the jails of the Hyderabad Assigned Districts. The hard labour diet of these jails is shown in Table I. (*b'*), and its value, nitrogen 230·5 grains, carbon 4,600 at Table III. (*b'.*). On this diet, the lowest, except the Bombay House of Correction diet, of the hard labour diets of the Indian jails, the prisoners are found to be "very healthy." Again, the new scale for all Indian jails proposed by the Jail Conference recently assembled at Calcutta (Table I. (*c.*)), values (*see* Table III. (*c.*)) nitrogen 213·2 grains, carbon 4,454 grains.

Considering together the experience of the Bombay House of Correction and the experience of the Hyderabad Assigned District jails, and considering also this proposal of the Jail Conference which, it may be presumed, is founded on the experience of officers well qualified to judge of the requirements of native prisoners, there seems to be no doubt but that hard labour prisoners in Indian jails require a diet containing less carbon and nitrogen than the amounts laid down by authorities as required by Europeans of average weight in moderate work. There thus appears to be a difference between Indian experience and European authorities.

If, however, the weight of Natives of India as compared with Europeans is taken into account, this apparent difference practically disappears, for taking the Bombay House of Correction diet, shown by experience to suffice for labouring prisoners averaging 105 lbs. in weight and raising its value in the proportion of 105 to 150, the quantities become nitrogen 288 grains, carbon 5,730 grains, quantities not greatly different from—1, Letheby's estimate for ordinary labour (Table IV., 3), viz., nitrogen 307 grains, carbon 5,688 grains, and 2, the value of the hard labour diet of English convicts (Table IV., 10), viz., nitrogen 281 grains, carbon 5,140 grains. The proportion 105 to 150 is employed, because, while the average weight of the prisoners discharged from the Bombay House of Correction in 1876 was on admission 105 lbs., the average weight of a European male adult is given by most authorities as 150 lbs.

On the sufficiency of the reduced scale of wages.

There certainly appears to be no theoretical objection to the proposition that the quantity of food required by adults is proportionate to their weight; provided, of course, always that the quantity of work expected from them is likewise proportioned to their weight. In order, however, to place the three diet scales I now propose (*see* Tables V. to IX.) as much as possible on the basis of experiences, I take as the foundation of the scales the experience of the Bombay House of Correction, viz., that Native prisoners averaging 105 lbs. in weight did well at jail labour on a daily diet, containing nitrogen 201·6 grains, carbon 4,011 grains. From this I derive the three proposed scales as follows:—

1. *Scale No.* 1.—The labour scale is simply the Bombay House of Correction scale, raised and lowered proportionally to the weight of the individuals to be fed.
2. *Scale No.* 2.—The light labour scale is scale No. 1, reduced in the same proportion that the light labour diet of English convicts (Table IV., 12) is lower than English convict hard labour diet (Table IV., 10).
3. *Scale No.* 3.—The bare sustenance scale is scale No. 1, reduced in the same proportion that a mean between Edwin Smith's and Letheby's estimates for bare sustenance (Table IV., 16 and 17) is lower than English convict hard labour diet (Table IV., 10).

On these three scales the quantities of nitrogen and carbon required daily by men averaging 105 lbs. in weight is in grains (Table V.):—

	Nitrogen.	Carbon.
On Scale No. 1, Labour - - - -	201·6	4,011
On Scale No. 2, Light labour - - -	173·6	3,528
On Scale No. 3, Bare sustenance - - -	136·7	3,195

These quantities are represented respectively by the following weights in ounces (*a*) of jowari and pulse; (*b*) of bajri and pulse, plus in each case half an ounce of fat:—

	Jowari.	Pulse.	Total.
(*a.*)—Scale 1, Table VII., columns 3 and 6 -	16·98	5·62	22·60
„ 2, „ VIII., „ „ -	15·08	4·68	19·76
„ 3, „ IX., „ „ -	15·23	2·56	17·79

	Bajri.	Pulse.	Total.
(*b.*)—Scale 1, Table VII., columns 3 and 9 -	18·60	4·00	22·60
„ 2, „ VIII. „ „ -	16·50	3·26	19·76
„ 3, „ IX., „ „ -	16·67	1·12	17·79

TABLE I.

DAILY ALLOWANCE (exclusive of salt and condiments) of certain INDIAN JAILS.

(*a.*) *Bombay House of Correction* (*for Labouring Prisoners*).

	Ounces.
Rice - - - - - - - - - -	8·0
Wheat - - - - - - - - -	4·57
Bájri - - - - - - - - -	3·43
Dhall - - - - - - - - -	5·0
Vegetables - - - - - - - -	8·0
Fat - - - - - - - - -	·5

On this diet 534 Native prisoners, all on hard labour, discharged during 1876, gained in weight on an average 1 lb. 10¼ oz. each. The average weight of the prisoners on admission was 7 stone 7 lbs. Of the 534 discharged during the year:—

295 gained in weight on an average - - - -	4 lbs. 3 oz. each.
102 lost in weight on an average - - - -	3 lbs. 8 oz. each.
137 neither gained nor lost weight.	
534	

Of these prisoners—

130 had been under 3 months in jail.
89 had been over 3 and under 6 months in jail.
217 had been over 6 and under 12 months in jail.
71 had been over 12 and under 24 months in jail.
27 had been 2 years in jail.

534

The non-labour diet of the Common Jail, Bombay, is the same as the above, less daily—

Notes to Table IV.

1. For a male European adult of average height and weight (5 feet 6 inches to 5 feet 10 inches, and 140 to 160 lbs.), in moderate work.

2. Average weight (154 lbs., Church) and moderate work.

3. Mean calculated from researches of various physiologists for adult males.

5. Soldiers during war.

6. Calculated from amount of food consumed by 495 men of the Royal Engineers at work at Chatham.

7. Mean of English, French, Austrian, and Prussian soldiers during peace.

16. Average representing the daily diet of an adult man during periods of idleness.

17. Mean calculated from researches of various physiologists, representing the amount required by an adult man during idleness.

18. Mean of diet of needle-women in London, certain prison dietaries, common dietary for convalescents, Edinburgh Infirmary, average diet during cotton famine of 1862 in Lancashire.

The three diet scales now given (*see* Tables V. to IX.) are calculated as follows:—

Diet Scale No. 1.—This is the Bombay House of Correction diet ([*a.*] Tables I. and III.) raised and lowered in proportion to weight. The average weight of the prisoners on admission into the House of Correction being 105 lbs., nitrogen 201·6 grains, carbon 4,011 grains (the value in nitrogen and carbon of the House of Correction diet) is placed opposite the weight, 105 lbs. For every 5 lbs. in weight over or under 105 lbs. $\frac{1}{21}$ of these quantities of nitrogen or carbon is added or deducted as the case may be. It will be observed that at weight 150 lbs., the quantities of nitrogen and carbon become respectively 288 and 5,730 grains. At 150 lbs., therefore, the nitrogen is very slightly above the nitrogen of the English convict hard labour diet (Table IV., 10), viz., 281 grains; the carbon, however, is considerably higher than the carbon of the English convict hard labour diet, viz., 5,730, as compared with 5,140 grains, or 11·47 per cent. higher. Letheby's mean estimate for ordinary labour (Table IV., 3), viz., nitrogen, 307 grains, carbon, 5,688 grains, comes as regards carbon very near diet scale No. 1, at weight 150 lbs. The quantity of nitrogen in Letheby's estimate, however, is higher, viz., 307, as compared with 288 grains.

Diet Scale No. 2.—This is (Diet Scale No. 1) lowered in the same proportion as English convict light labour diet (Table IV., 12) is lower than English convict hard labour diet, *i.e.*, as 281 is to 242 for the nitrogen, and as 5,140 is to 4,250 for the carbon. Lowered in this proportion, the quantities become—

At 105 lbs., nitrogen 173·6 grains, carbon 3,528 grains.
At 150 lbs., „ 248·0 „ „ 5,039 „

At 105 lbs., therefore, Diet Scale No. 2, is very similar in value to the non-labour diet of the Common Jail, Bombay (Table III. [*d.*]), and somewhat better than the Oudh Jails non-labour diet (Table III. [*f.*]) at 150 lbs. Diet Scale No. 2 is better than the average diet of low-fed English operatives, as estimated by Edwin Smith (Table IV., 15); it is, of course, also better than the light labour diet of English convict establishments in the same proportion that Diet Scale No. 1 is better than the hard labour diet of the same establishments.

Diet Scale No. 3.—This is calculated as follows:—Of the three estimates for bare sustenance diet the mean of the two highest (Edwin Smith's and Letheby's Table IV., 16 and 17) is nitrogen 190·5, carbon 4,094 grains; both these estimates are for average adult males. Playfair's estimate, (Table IV., 18), which is considerably lower than the other two, is excluded, as it does not wholly refer to adult males. Raising this mean in the same proportion as diet scale No. 1 at 150 lbs., exceeds

English convict hard labour diet, the figures become nitrogen 195·3 grains, carbon 4,564 grains. These quantities placed opposite weight 150 lbs. form the foundation of diet Scale No. 3. For the other weights shown in the table, the quantities are proportionally reduced. Comparing diet Scale No. 3 with Playfair's estimate for bare sustenance (Table IV., 18), it will be seen that the nitrogen of the scale does not run below Playfair's estimate until after weight 125 lbs. is reached, and, similarly, it is only when the weight runs below 105 lbs. that the amount of carbon becomes lower than that given in Playfair's estimate.

On the sufficiency of the reduced scale of wages.

TABLE V.

SHOWING the quantity of NITROGEN and CARBON required daily on each of three scales, viz.:—

Scale 1. A labour scale, the Bombay House of Correction diet raised and lowered in proportion to weight.

Scale 2. A light labour scale, Scale No. 1 reduced in the same proportion that English convict light labour diet bears to English convict hard labour diet.

Scale 3. A bare sustenance scale, Scale No. 1 reduced in same proportion that a mean bare sustenance estimate for Europeans (mean of 16 and 17, Table IV.) bears to English convict hard labour diet.

Weight—lbs.	Scale No. 1, daily.		Scale No. 2, daily.		Scale No. 3, daily.	
	Nitrogen, grains.	Carbon, grains.	Nitrogen, grains.	Carbon, grains.	Nitrogen, grains.	Carbon, grains.

145	31·59	27·65	24·95
150	32·71	28·64	25·85

The three tables which now follow, viz., Tables VII., VIII. and IX., show in what proportions each of the eight cereals—rice, barley, jowári, common millet, bájri, maize, oats, and wheat—must respectively be mixed with pulse in order to furnish the quantities of nitrogen and carbon shown on each of the three scales of Table V.

In Tables VII., VIII. and IX. the first two columns give average weights of persons to be fed, and the third column the total quantity in ounces of mixed cereal and pulse which, plus half an ounce of fat,

On the sufficiency of the reduced scale of wages.

will furnish the necessary carbon. The remaining eight columns, each headed by the name of a cereal, give the quantities in ounces of the cereal, which must be abstracted from the total quantity shown in column 3, and replaced (in order to furnish the required nitrogen) by an equal weight of pulse. The examples at the end of the tables show how they may be employed, all three tables are subject to the general remarks following the examples.

TABLE VII.

Diet Scale No. 1.—Labour Scale.

1. For the weight shown in columns 1, 2, take the quantity (plus always half an ounce of fat) of mixed cereal and pulse shown in column 3.

2. Opposite the quantities shown in column 3, under the name of each cereal, is a number representing the number of ounces of the quantity shown in column 3, which must consist of pulse, the remainder to consist of the cereal heading the column. (*See* Examples.)

150	10·10	25·85	5·03	3·74	3·45	2·60	1·48	1·32	—3·23	—4·70

Examples illustrating the method of employing Tables VII., VIII., and IX.

Average weight of individuals to be fed say 105 lbs. (= 7 stone 7 lbs. (Table V. shows that—for this weight, the amount of nitrogen and carbon daily required is in grains—

	Nitrogen.	Carbon.
On Scale 1.—The labour scale	201·6	4,011
On Scale 2.—Light labour scale	173·6	3,528
On Scale 3.—Bare sustenance scale	136·7	3,195

Table VI. shows that these quantities of nitrogen and carbon may be supplied by the following quantities of mixed cereal and pulse plus half an ounce of fat, *e.g.*, ghee or oil, viz.: —

For Scale No. 1	22·60 ounces.
For Scale No. 2	19·76 „
For Scale No. 3	17·79 „

The proportions which the cereal and pulse should bear to one another in the 22·60 ounces required by Scale No. 1 are shown for each of 8 cereal grains in Table VII. Tables VIII. and IX. show similarly the proportions which the cereal and pulse should bear to one another in respectively the 19·76 ounces required on Scale 2, and the 17·79 ounces required on Scale 3.

One or two examples will serve to show how from the tables these proportions can be ascertained. Take for example the 22·60 ounces of cereal and pulse required for men averaging 105 lbs. in weight on Scale No. 1. A reference to Table VII. shows, opposite 105 lbs. in the column headed Rice (column No. 4), the number 6·81; this means that if rice is the cereal given 6·81 ounces out of the 22·60 ounces of mixed cereal and pulse must consist of pulse and the remainder 15·70 ounces of rice. These quantities, plus half an ounce of fat, will supply the amount of nitrogen and carbon required. The calculation may be proved by employing the factors given in Table II., thus—

Rice	15·79 × 5·07 =	Nitrogen grains	80·0
Pulse	6·81 × 17·86 =	ditto	121·6
	22·60 oz. mixed rice and pulse =		201·6
	Calculation for carbon 22·60 × 170 =		3,842 grains
	plus for half an ounce fat		172 „
	= Total carbon grains		4,015

or if instead of rice the cereal employed is bájri, in column 9, Table VII. under bájri, opposite 105 lbs., is the number 4·00. Hence of the 22·60 ounces of mixed cereal and pulse (column 3, Table VII.) 4·00 ounces must be pulse if bájri is the cereal used.

Proof.

Bájri	18·60 × 7·00 =	Nitrogen grains	130·20
Pulse	4·00 × 17·86 =	ditto	71·44
	22·60 oz. mixed bájri and pulse =		201·64

Calculation for carbon as in previous example.

On the sufficiency of the reduced scale of wages.

Where, as in column 11, Tables VII., VIII., and IX., and in column 10, Table IX., and the last portion of column 10, Table VIII., the figures of the column are preceded by a minus sign, no pulse need be employed ; the number of ounces of the cereal heading the column shown opposite the weight containing more than the required quantity of nitrogen,—*e.g.*, the 22·60 ounces required on Scale 1, for men averaging 105 lbs. in weight contain in the case of wheat $22{\cdot}60 \times 9{\cdot}22 = 208{\cdot}37$ grains of nitrogen, a quantity slightly in excess of that (201·6) required by the scale. These minus figures come into use when mixed cereals are employed, as will be seen by the following examples :—

1. Men, averaging 120 lbs., require on Scale 1 (*see* Table V.) nitrogen 230·4 grains, carbon 4,584 grains daily. The number of ounces of cereal and pulse necessary (*see* Table VI.) is 25·97. If the cereals available are rice and bájri in about equal proportions the calculation becomes—

Rice -	- 25·97 − 7·72 (*see* Table VII., col. 4) = 18·25 ÷ 2 =	9·12 oz.
Bájri -	- 25·97 − 4·48 (*see* Table VII., col. 9) = 21·49 ÷ 2 =	10·75 „
Pulse -	- 7·72 + 4·48 = 12·20 ÷ 2 =	6·10 „

Proof.

Rice	-	9·12 × 5·07 =	Nitrogen grains	-	- 46·24
Bájri	-	10·75 × 7·00 =	do.	-	- 75·25
Pulse	-	6·10 × 17·86 =	do.	-	- 108·95
		25·97 oz. mixed cereal and pulse =		-	- 230·44

Calculation for carbon 25·97 × 170 = 4,415 grains.
Plus for ½ an oz. fat - - 172 „
= Total carbon - - 4,587 „

2. If, however, the cereals to be used are rice and wheat, then the use of the minus figures under wheat is shown as follows :—

Rice -	- 25·97 − 7·72 (*see* Table VII., col. 4) = 18·25 ÷ 2 =	9·12 oz.
Wheat	- 25·97 + 1·05 (*see* Table VII., col. 11) = 27·02 ÷ 2 =	13·51 „
Pulse -	- 7·72 − 1·05 = 6·67 ÷ 2 =	3·34 „

Proof.

Rice	-	9·12 × 5·07 =	Nitrogen grains	-	- 46·24
Wheat	-	13·51 × 9·92 =	do.	-	- 124·56
Pulse	-	3·34 × 17·86 =	do.	-	- 59·65
		25·97 oz. mixed cereals and pulse =		-	- 230·45

Calculation for carbon as in previous example.

It will be observed that in this last example the minus figures of the wheat column are added to the wheat and deducted from the pulse, and are employed in fact in exactly the reverse way to that in which the figures unpreceded by a minus sign are employed.

General Remarks applicable to all Three Scales.

1. It of course must be understood that the weights for which these scales are calculated are weights of individuals fairly nourished, not weights of individuals reduced by disease or famine below the normal condition.

2. The Tables VII., VIII., and IX. are based on the supposition that grains fairly clean and fairly free from husk are employed. Should this not be the case a proportionate allowance must be made. Taking all circumstances into consideration, it seems to me that (save in very exceptional cases) an increase of 5 per cent. on the quantities of grain shown in the tables would fairly suffice as compensation for husk.

3. Where a cereal is so deficient in nitrogen that a large proportion of it requires to be replaced by pulse, it is desirable to mix it with a more nitrogenous cereal, so that a smaller quantity of pulse may suffice, *e.g.*, rice, especially on Scale 1, and in a less degree on Scale 2, (*see* Tables VII. and VIII., column 4), may advantageously be mixed with wheat or bájri.

4. Where a cereal is so rich in nitrogen that according to the tables little or no pulse is required to be mixed with it, no objection exists to replacing a larger proportion of it by pulse than is by the tables shown to be necessary, provided always that the total quantity of pulse given is kept within reasonable limits, say under 4 to 5 ounces.

5. If on any of the scales the quantity of fat given is raised from ½ an ounce to 1 ounce, a withdrawal of 1½ ounces of cereal and an addition of ½ an ounce of pulse serves to compensate for the change.

Note in regard to the Limits of Error of the Tables.

It will be observed that the amount of carbon required regulates the aggregate quantity of cereal and pulse, while the amount of nitrogen required regulates the proportion which pulse ought to bear to cereal.

In calculating the value of the Bombay House of Correction diet and in constructing Tables VI. to IX., all cereals and pulses have been assumed to contain 170 grains per ounce of carbon.

The probable limits of error due to this assumption of a uniform carbon value for all cereals and pulses may be stated as follows.

On the sufficiency of the reduced scale of wages.

It will be observed that the three scales of Tables V. to IX., are comparable (weight for weight) with certain European scales, viz. :—

Scale No. 1 with English convict hard labour diet.

Scale No. 2 with English convict light labour diet.

Scale No. 3 with a mean bare sustenance estimate for male European adults.

And that as regards carbon the three scales of the tables are just 11·5 per cent. richer than the corresponding European scales.

Now suppose that the cereals and pulse supplied to the Bombay House of Correction were exceptionally rich in carbon and contained 175 instead of 170 grains of carbon per ounce, then in order to keep up the correspondence of the three scales with the amended value of the Bombay House of Correction diet, the quantities of carbon shown in Table V. would have to be raised from 11·5 to 14·4 per cent. above the quantities of carbon contained in the corresponding European scales.

Taking an extreme case the other way, suppose that in any particular instance the cereals and pulse available for food-supply happen to be so exceptionally poor in carbon as to contain only 155 instead of 170 grains per ounce,—then the amounts of carbon yielded by the quantities of cereal and pulse laid down in the tables for the three scales would only be 1·9 per cent. higher than the quantities contained in the corresponding European scales.

Hence, even with the cereals and pulses exceptionally poor in carbon, the quantities of cereal and pulse provided by the three scales would still yield 1·9 per cent. more carbon than is contained in the corresponding European scales ;

Hence also, even with cereals and pulse exceptionally poor in carbon, an increase of ten per cent. on the quantities laid down in Tables VI. to IX., would raise the carbon value of the three scales to that shown in Table V. ;

Hence also, even supposing that the cereals and pulse supplied to the Bombay House of Correction were exceptionally rich in carbon and the cereals and pulse available for food-supply happen to be exceptionally poor in carbon, an increase of 12½ per cent. on the quantities of cereals and pulse, laid down in Tables VI. to IX., would bring the carbon value of the three scales into correspondence with the carbon value of the Bombay House of Correction diet, and would raise the carbon value of the same scales to 14·4 per cent. above that of the corresponding European dietaries.

The possible nitrogen error of the scales is more difficult to estimate. An error due to over-estimation of the quantity of nitrogen in a cereal or pulse would be always to some extent met by any increase (as allowance for deficient carbon [*see* above]) of the aggregate quantity of cereal and pulse laid down in Table VI. Any minus nitrogen error not met in this way must be met by increased replacement of pulse for cereal.

I. B. LYON, F.C.S., Surgeon,
Chemical Analyser to Government, Bombay.

No. 256.

No. 249.

No. 423, dated Simla, 8th May 1877.

From the Additional Secretary to the Government of India to the Additional Secretary to the Government of Madras.

On the large employment of Public Works agency in Madras.

His Excellency the Governor-General in Council having had under his consideration the subject of the larger employment of Public Works agency in the Madras Presidency, I am directed to communicate the following observations.

2. Sir Richard Temple has made to the Government of Madras, on the dates specified in the margin, various representations on this important subject. While admitting that in many of the Madras districts relief has been economically managed from the first, he points out that in others the numbers in receipt of relief are apparently excessive compared with equally distressed localities elsewhere, that the number of relief labourers in the Madras Presidency under Public Works agency is only $11\frac{1}{2}$ per cent. of the total number on the works, and that the utilisation of such agency in the Salem district has been attended with the most beneficial results. He also dwells on the advantage of the Civil officers being so relieved as to give more time to village inspection.

February 10th.
March 18th.
„ 29th.
April 10th.
„ 17th.
„ 20th.
„ 24th (two).

3. The Madras Government, in paragraph 8 of their Despatch to the Secretary of State, No. 25 of the 7th ultimo, while recognising the advantages of Public Works agency, apparently consider its employment to a greater extent than at present not practicable owing to the insufficiency of large works in the presidency generally, and the impossibility of devising them in certain districts.

4. There would appear, I am directed to observe, to be some misapprehension arising from different applications of the term "large works." In so far as it extends to undertakings of primary magnitude, such as the East Coast Canal and other irrigational projects, there may be, as indicated in Sir Richard Temple's own minute of February 10th, some difficulty in devising them in the Madras Presidency, or at any rate in doing so in time to be of use in the present juncture. But the term would appear to be used by Sir Richard Temple in his minutes above referred to in the more limited sense of works capable of employing about 1,200 to 1,500 labourers and upwards. This is the sense in which the term is used in the Bombay Presidency, and a reference to paragraph 9 of the Bombay Weekly Statement No. XXIV. ("Gazette of India," May 5th) will show that of the large works upon which the Public Works agency is found to be so advantageous 15 have less than 2,000 labourers, and only 16 more than 5,000, employed upon them. And of large works, using the term in the same sense. there would appear to be no lack in the Madras Presidency, for it appears from the proceedings of the Board of Revenue, No. 1,817 of the 20th ultimo, paragraph 9, that 66 per cent. of the total number of labourers are employed upon works having 1,500 and upwards, and that the average number per work is no less than 4,591.

5. His Excellency the Governor-General in Council has observed with satisfaction that the Madras Government have, in their proceedings No. 1,331 (Revenue Department), dated the 4th ultimo, invited the opinions of the Collectors and the Public Works Department upon the question of further utilisation of the latter, but trusts that in view of the explanations above given and the success of the system in Bombay after ample trial, his Grace the Governor in Council will be able at an early date to authorise its introduction, especially in Bellary and Kurnool, where the numbers on relief works are apparently the most excessive.

No. 250. No. 256.

No. 1,384 R., dated 9th May 1877.

From the Secretary to the Government of India, Public Works Department, to the Consulting Engineer to the Government of India.

I am directed to acknowledge the receipt of your letters Nos. 915 and 929, dated the 17th and 19th April 1877 respectively, the former forwarding a comparative statement of the goods lying at stations on the East Indian Railway, and the latter a statement showing the accumulations of grain at stations on the Jubbulpore line on the 1st and 28th March, and the quantities despatched between these dates. Railway grain traffic.

2. From the latter statement it is observed that between the 1st and 28th March 136,528 maunds, about 5,000 tons, were removed, 500 waggons in 28 days, or say 18 waggons daily, and the accumulations were reduced from 49,485 to 39,700 maunds, *i.e.*, by 10,000 maunds=360 tons, but the figures given in the first-named statement show that the accumulation increased during the month of March by 900 tons. I am to invite your attention to this apparent discrepancy.

3. On the whole the Government of India accepts the work done, and considers the clearances on the main line satisfactory,

4. I am to take this opportunity to forward, for the purpose of being placed before the Agent, East Indian Railway, for any observations he may desire to make, extracts from a communication from the Agent, Great Indian Peninsula Railway Company, written after perusal of Lieutenant Scott's note dated 13th February 1877, on the accumulation of grain at stations on the East Indian Railway.

5. I am to add that the Government of India is of opinion that on the whole more good may probably be done by the managements of the two Companies looking the difficulty fairly in the face and endeavouring to meet it by mutual concessions and friendly co-operation than by indulging in charges and counter-charges. The traffic, it cannot be denied, on these two principal railways, notably on the Great Indian Peninsula Railway, is more than can be dealt with by existing means and appliances, but the agreement for through traffic which, as it stands, and during the present pressure, is inconvenient for the East Indian Railway Company, cannot be ignored.

No. 251.

From the SECRETARY OF STATE to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

Revenue, No. 43.

India Office, London, 10th May 1877.

Para. 1. I have to inform your Excellency in Council that, on the 3rd of May, the following message was addressed by me to your Lordship:—

"*Secretary of State to Viceroy.*

On the sufficiency of the reduced scale of wages.

"Accounts reach me from many quarters expressing serious fear that insufficiency of relief food on famine works, especially in Madras, is producing diseases of exhaustion, and will end in great mortality. Matter requires extreme vigilance, and if there is any real cause for apprehension, it will be better not to place too much restriction on Local Government. Our medical authorities are alarmed by accounts, official and other."

2. To this telegram I have received your reply, dated 6th May, and returned by telegraph the following message on the 8th:—

"I think, if it has not already been done, that my telegram of the 3rd, and yours in reply, should be communicated to the Government of Madras."

I have, &c.
(Signed) SALISBURY.

No. 252.

No. 340 E.—1098, dated 11th May 1877.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to the SECRETARY TO THE GOVERNMENT OF INDIA.

No. 248.

I am directed by his Excellency the Governor in Council to forward, for the information of the Government of India, a memorandum, prepared by Surgeon-Major Lyon, chemical analyser to Government, and to observe that this able and interesting paper appears to throw light on the question recently raised, and still under discussion, as to the sufficiency of a ration based on 1 lb. of grain a day for a relief labourer.

2. The calculations by Dr. Lyon, which are deduced from actual experience, and are not purely theoretical, seem to show that a ration based on 1 lb. of grain is sufficient for the sustenance of persons not performing severe labour.

No. 256.

No. 253.

Telegram dated 12th May 1877.

From REVENUE ADDITIONAL SECRETARY, Simla, to SECRETARY OF STATE, London.

The deputation of Dr. Townsend.

Paragraphs 7 and 9 of Madras Government's Despatches to your Lordship, dated 7th and 14th ultimo. We have explained to that Government that Dr. Townsend, our

Sanitary Commissioner, was not sent on an independent mission, but merely placed under Temple at his request to aid him in conducting certain inquiries which he desired to institute in Madras and Bombay Presidencies, and that for this reason we did not deem it necessary to make any communication to either Government on the subject. We have since received a letter from Temple drawing attention to passage of Madras Despatch above referred to, and explaining that Townsend's early departure from Madras Presidency was imperative, owing to ill-health.

No. 254. No. 256.

No. 441, dated Simla, 12th May 1877.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF MADRAS, Revenue Department.

His Excellency the Governor General in Council has had under his consideration Sir Richard Temple's Minute of the 22nd ultimo, in which, after recognising the humane care and the skill with which the large relief camps are conducted, he remarks as follows :— No. 229.

"But still the fact remains that the death-rate among the inmates of camps is terribly high; that such diseases as are engendered among gatherings of poor people appear and re-appear, and that the air and surroundings of these camps are very depressing. For the little children especially the life must be very depressing indeed. Some of these troubles will, I fear, be aggravated when rain and cold come on, and make relief camp life even less endurable than it now is." On the removal of the very helpless from relief camps to their own homes.

The remedy which Sir Richard Temple suggests is the gradual drafting off of the inmates of these camps to their own homes, to be there cared for under the system of house-to-house visitation and village relief.

2. His Excellency the Governor-General in Council considers Sir Richard Temple's suggestion to be deserving of consideration, especially in view of the approach of the rainy season, and would be glad to be informed of the views of his Grace the Governor in Council on the subject. It is obvious that, in order that the measure proposed may be safely carried out, considerable efficiency in the system of village relief is indispensable. The system has now, it is believed, been organised in most of the distressed districts, but his Excellency the Governor-General would wish that no pains or expense should be spared to render it thoroughly efficient, while confining, of course, its action to those only who are not able-bodied and capable of being drafted on to the works. There seems every reason to hope that this end would be materially furthered if the civil officers were enabled by the larger employment of Public Works agency, as suggested in my letter No. 423 of the 8th instant, to give more of their time and attention to the subject.

No. 255. No. 262.

MEMORANDUM by Dr. J. B. LYON, Chemical Analyser to Government, as to the Dynamic Value of the task exacted from Labourers on Relief Works.

Bombay, May 12, 1877.

Parkes' (Manual of Hygiene, page 389) states :—"It would, therefore seem certain "that an amount of work equal to 500 tons lifted one foot is an extremely hard day's "work, which, perhaps, few men could continue to do. 400 tons lifted a foot is a hard "day's work, and 300 tons lifted a foot is an average day's work, for a healthy strong "adult." The Dynamic value of the task demanded from relief labourers.

"The Reverend Professor Haughton, M.D., has shown that walking on a level surface is equivalent to raising $\frac{1}{10}$ part of the weight of the body through the distance walked. * * * The formula is $\frac{(W+W')\times D}{20\times 2240}$., where W is the weight of the person, W' the weight carried, D the distance walked in feet, 20 the coefficient of traction, and 2,240 the number of pounds in a ton, the result is the number of tons raised one foot" (Parkes *loc cit*).

The Dynamic value of the task demanded from relief labourers.

Taking 105 lbs. as the weight of a native labourer, and reducing Parkes' estimate of an average day's work in proportion to this weight as compared with 150 lbs. (the weight of an average male European adult), we have as 150 : 105 : : 300 : 210. 210 tons lifted a foot is, therefore, Parkes' estimate of an average day's work, reduced proportionally to weight.

Using Haughton's formula, we find that a man weighing 105 lbs. and carrying 10 lbs., walking on a level, does work equal to lifting 13·51 tons one foot for each mile walked; for $(105+10)\times 5280\div 20 = 30{,}260$ foot pounds $\div 2{,}240 = 13{\cdot}509$ foot-tons.

Also $210 \div 13{\cdot}51 = 15{\cdot}55$. Hence, a man weighing 105 lbs. and carrying 10 lbs. in walking on a level 15·55 miles, does work equal to raising 210 tons one foot, *i.e.*, an average day's work of 300 foot-tons reduced proportionally to his weight.

"The basis of the task system upon irrigation works is that in ordinary times, when the lift does not exceed 4 feet, and the lead does not exceed 50 feet, 100 cubic feet of black or red soil can be excavated and disposed of by one man, one woman, and one child, and therefore at the present time 75 cubic feet only is to be exacted * * * I am therefore of opinion that under the existing orders of Government the present task set by Colonel Finch is too high, and should be reduced to 75 cubic feet for Public Works Department, and to 50 cubic feet for Civil Agency Works."—(Colonel Merriman, R.E., Chief Engineer for Irrigation, Bombay. No. 1,516, dated 5th March 1877, para. 3.)

Estimation of the Dynamic Value of a task of excavating and disposing of 75 cubic feet of black or red soil with a 4 foot lift and 50 feet lead, the task demanded on relief works under Public Works superintendence from a man, woman, and child.

For the purpose of calculation, the above task may be stated something in the following way :—

1. Excavation and filling baskets, say 3 baskets to a cubic foot.

2. Lifting the baskets on to the heads of the carriers, say 5 feet 6 inches; say 80 lbs. to the cubic foot; allow 2 lbs. for weight of basket.

3. Carrying away the earth and returning with the empty baskets.

1. *Excavating and filling baskets.*—A rather low estimate of a day's work for an English labourer employed in excavating earth and filling wheelbarrows is 270 cubic feet. Taking the dynamic value of this to be 350 foot-tons, 75 cubic feet = 97·2 foot-tons.

2. *Lifting the baskets on to the heads of the carriers.*—$86 \times 75 \times \frac{1}{2} = 35{,}745$ foot-lbs. $\div 2{,}240 = 15{\cdot}84$ foot-tons.

3. *Carrying.*—Take for this $75\times 3=225$ trips. The work of each trip consists of *a'*. 105 lbs. (weight of body) + 5 lbs. (for clothes and baskets) + 26·66 lbs. (=80÷3 or weight of earth) lifted 4 feet + 50 ÷ 20 (for lead) = total lift $6\frac{1}{2}$ feet = 136·66 lbs. × 6·5 feet = 888·3 foot lbs.; *b'*. Return with empty basket $110 \times 2{\cdot}5 = 275$ foot-lbs. —Hence $888{\cdot}3 + 275 \times 225 \div 2{,}240 = 116{\cdot}85$ foot-tons.

Hence, supposing the whole task to be done by a man weighing 105 lbs., its dynamic value is 97·2 + 15·84 + 116·85 = say 230 foot-tons. This, however, is the whole task demanded from a man, woman, and child. Taking the man's work at half of this, we have 115 foot-tons as the dynamic value of the day's work of a man weighing 105 lbs. employed on relief works under Public Works superintendence.

Again; on relief works under Civil Agency two thirds only of the above task is required = $153\frac{1}{3}$ foot-tons for the whole task of a man, woman, and child; and taking, as before, half of this to be the proportion done by the man, we have $76\frac{2}{3}$ foot-tons as the dynamic value of the task demanded from men weighing 105 lbs. employed on relief works under Civil Agency.

Hence, taking 210 foot-tons as an average day's work for a man weighing 105 lbs. (see *ante*) the task of 115 foot-tons demanded from a man (weight assumed as 105 lbs.) on relief works under Public Works superintendence amounts only to 54·75 per cent. of an average day's work. Similarly, $76\frac{2}{3}$ foot-tons, the task demanded on relief-works under Civil Agency from a man (assumed weight 105 lbs.) amounts only to 36·6 per cent. of 210 foot-tons, *i.e.*, 36·6 per cent. of an average day's work.

Stated in another way :—it has already been shown that a man weighing 105 lbs. and carrying 10 lbs. walking on level ground does work = 13·51 foot-tons for every mile

walked. Hence, as $115 \div 13{\cdot}51 = 8{\cdot}52$, and as $76\frac{2}{3} \div 13{\cdot}51 = 5{\cdot}68$, the task demanded from a man weighing 105 lbs. on relief works under Public Works superintendence is just equal to the work which he would do in walking 8·52 miles on level ground carrying 10 lbs. Similarly, the work demanded from a man weighing 105 lbs. on relief works under Civil agency is just equivalent to the work which the same man would do in walking 5·68 miles on level ground, carrying 10 lbs. The Dynamic value of the task demanded from relief labourers.

To show now that Natives of India are capable of doing work in proportion to their weight, reckoning 300 foot-tons as an average day's work for a man weighing 150 lbs., I cite the two following instances :—

1. An ordinary day's work for 12 palkee bearers is to carry a palkee down from Matheran to Narel and bring it back from Narel to Matheran with a person inside. The distance from Narel to Matheran is 7 miles; the height of Matheran above Narel is 2,377 feet. One of the palkees was found to weigh 195 lbs., and the average weight of the bearers was found to be 117 lbs. as they stood, say, 115 lbs.+2 lbs. for clothes. Taking the up-journey only, and supposing the individual inside the palkee to weigh 125 lbs., the load of each bearer $= 195 + 125 \div 12 = 26{\cdot}66$ lbs; and $26{\cdot}66 + 117 = 143{\cdot}66$ lbs. lift 2,377 feet; +for the seven miles carried $5{,}280 \times 7 \div 20 = 1{,}848$ feet; $143{\cdot}66 \times (2{,}377 + 1{,}848) \div 2{,}240 = 270{\cdot}96$ foot-tons. The work, therefore, of the up-journey only $= 270{\cdot}96$ foot-tons, considerably above 230 foot-tons, *i.e.*, 300 foot-tons reduced in the proportion 150 to 115.

2. The recognised load for a Narel coolie is 40 lbs. This, although brought up to the same height, is carried generally a part of the way by short cuts, reducing the distance walked to about 5 miles. Hence, $117 + 40 = 157$ lbs. lifted 2,377 feet+for the five miles $5{,}280 \times 5 \div 20 = 1{,}320$ feet, and $157 \times (2{,}377 + 1320) \div 2{,}240 = 259$ foot-tons. Taking no account of the walk back unloaded, this is also considerably above 230 foot-tons, *i.e.* 300 foot-tons, reduced in the proportion 150 to 115.

No. 256.

No. 24 of 1877.

GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, the 17th May 1877.

By the last mail your Lordship will have received, in an extra supplement of the "Gazette of India," our proceedings of the 5th instant,* reviewing the returns received from the Government of Madras in reply to our calls of the 25th October and 2nd December last. Review of Madras returns.

*No. 246.

2. We have felt it our duty not to pass by without comment the great delay in submission, and the inaccuracy and incompleteness, which are, with some exceptions, characteristic of the reports of the local officers, because we feel assured that a careful and temperate inquiry into the real facts of the case at a very early stage is essential to the successful combating of famine, and that had any such inquiry taken place in the instance of the Presidency of Madras, the general policy of the Government would probably have been different in some important respects from what it actually has been. The inaccuracy and incompleteness of the reports had, indeed, been already noticed by the Madras Board of Revenue, who have recorded in various instances, with reference to particular items, that they have "not been estimated on any uniform principle," "are based on no careful calculation," "are decidedly wrong," and have more than once pointed out that errors arose from the omission of some important and obvious element in the calculations or the returns. While noticing these defects, which have impaired the value of a public record, and prevented its use at the time and in the manner which we had contemplated, we have had great pleasure in bearing testimony to the individual zeal, humanity, and loyalty, which have been exhibited by the local officers of the Madras Presidency under the very difficult and exceptional circumstances by which they were surrounded.

3. The returns embrace particulars of 121 taluks or subdivisions of districts, with an area of 81,852 square miles, and a population of 18,592,534 souls. Considering as affected by famine all taluks in which the crop saved has reached but has not exceeded one-half, a proportion which we think the most appropriate because the returns tend from various causes to make matters seem better than they are, the actually affected area is 71,849 square miles, and the affected population 15,432,393. The affected area and population thus exceed considerably the similar figures for Bombay and Mysore

Review of Madras returns.

combined, and the proportion affected to the total similarly preponderates. The statistics of rainfall give results only slightly more unfavourable than those of the Bombay Presidency, but the peculiarity that Madras depends, in varying proportions, upon two monsoons instead of one, renders any totals of little value for comparison, since failure at one particular period may suffice to produce severe distress. The local officers estimate the probable remissions at Rs. 1,24,33,758, but the Board of Revenue reduce this amount to about a crore of rupees, and express their belief that even less than this may eventually be remitted. Among the cattle and agricultural stock, the mortality has already been very heavy, especially in Nellore, Cuddapah, and Kurnool, but such relief as was attainable by digging and improving wells has been freely resorted to, and it is believed that recent showers have in many places freshened the pastures and checked the further severe loss which was apprehended. The water supply has not, on the whole, proved so deficient as was anticipated.

4. The extent of local stocks must always be greatly a matter of conjecture, but it seems probable that in all districts which had already suffered from preceding bad seasons it was not considerable, and that in others it was reduced at an early stage by the temptation of higher prices elsewhere. Ample evidence is, however, afforded by the reports to show that the advantages possessed by the Madras Presidency in railway and road communications, and in an active and intelligent body of merchants, rendered superfluous and prejudicial all attempts on the part of Government at interference with the grain trade. In connexion with this subject we would invite attention to a minute by Sir Richard Temple, dated the 28th ultimo, and its accompanying memoranda and notes by Captain Bisset, which we forward herewith. These papers show that importation by sea of food grains in response to the demand occasioned by impending famine were considerable as early as August, September, and October, during which months they reached 44,000 tons. The imports subsequently rose largely, and culminated in January, since which date they have been gradually declining. The total imported by all routes between the beginning of August and the end of March amounted to 535,000 tons. The decline in imports which has just been alluded to is probably attributable to several causes combined. The various railway companies appear to have made creditable exertions to grapple with the vast access of traffic thrown upon them, and Captain Bisset states in his memorandum of the 25th ultimo, that there is now train-room for more waggons from the north into the ceded districts. At the same time there appears to be little room for doubt that the traffic on our great railways is more than can be dealt with by existing means and appliances, and that there is no sufficient reserve of rolling-stock to meet any sudden or unusual increase. The difficulties which have occurred between the East Indian and Great Indian Peninsula Railways with reference to the accumulations of grain at various stations, are illustrated by a correspondence with the Government of India in the Public Works Department, of which copies† are enclosed.

† Nos. 194, 211, 250.

5. In continuation of our notice of the Madras returns, we may remark that owners of large zemindari estates are not a very numerous or influential class in that presidency, and that little assistance appears to have been obtainable from them. The emigration has on the whole been quite insignificant, and amounts to little more than a somewhat larger resort than usual to the ordinary labour outlets of Ceylon and the Nilgiri hills. Regarding the estimates of the local officers of the numbers who were likely to be on relief works and in receipt of charitable relief on the 1st of March, 1st of May, and 1st of July, little more need now be said than that at the close of the year, when 1,030,592 persons were employed, there appeared to be every prospect of their being verified, but that the introduction of a more stringent and discriminating system than then prevailed has led to a divergence between the estimates and the actuals even more remarkable than in the case of Bombay.

6. With reference to the differences of opinion which have arisen as to the sufficiency of a 1 lb. ration, we enclose an able and interesting paper by Dr. Lyon, the Chemical Analyser to the Government of Bombay, based upon actual experience in the jails of the presidency town. The Government of Bombay remark that "the calculations "by Dr. Lyon, which are deduced from actual experience, and are not purely theoretical, "seem to show that a ration based on 1 lb. of grain is sufficient for the sustenance of "persons not performing severe labour."

* Nos. 249, 254.

7. We enclose copies of letters * which we have addressed to the Madras Government, in accordance with the intention expressed in paragraph 3 of our Despatch of the 3rd instant, regarding the larger utilisation of the Public Works Department in superintending relief works, and the gradual abolition of the larger relief camps. On

the former subject we have pointed out that there is probably some misapprehension as to the meaning of the term "large works." The Madras Government appear to understand it only in the sense of undertakings of the first magnitude, such as the East Coast Canal, and in this sense there may be a difficulty, arising from paucity of such works, in extensively employing the Public Works Department. But Sir Richard Temple employs the term, as the Bombay Government do, to denote works on which from 1,200 to 1,500 labourers and upwards are engaged, and it is on such works that the supervision of the Public Works Department has in the Bombay Presidency been found so highly beneficial. The proceedings of the Madras Board of Revenue of the 20th ultimo show that 66 per cent. of the relief labourers in Madras are employed upon such works, and that the average per work is 4,591. We observe from the Despatch of the Madras Government to Your Lordship, No. 34 of the 5th instant, that they have recently stated in detail their reasons for not having yet adopted the course he advocates and for believing that course to be unadvisable, but as their proceedings on the subject have not yet reached us, we will, on the present occasion, only express our hope that the explanation which has been suggested, and the experience of the sister presidency, will lead them to an early change of policy in this respect. Upon Sir Richard Temple's suggestion for the gradual abolition of large relief camps we have invited the opinion of the Government of Madras, pointing out the connexion of the subject with the improvement of house-to-house visitation and the relief of civil officers by means of the Public Works Department. Review of Madras returns.

8. We have to mention with deep regret the deaths of Messrs. Cotton, Caldwell, and Waining of the Bengal Department of Public Works, in the energetic and efficient discharge of their duties in connexion with relief works in the Cuddapah and Salem districts, to which they had been deputed. Two of them have left widows and children, for whom passages to their respective homes have been provided by the Madras Government.

9. With reference to our telegram to Your Lordship of the 12th instant, and to paragraphs 7 and 9 of the Despatches of the Madras Government to Your Lordship of the 7th and 14th ultimo, regarding the deputation of Dr. Townsend, we enclose copies of a letter which we have received from the Secretary to Sir R. Temple, and of one which we have addressed to the Madras Government. As Dr. Townsend was not sent on an independent mission, but merely placed temporarily under the orders of Sir R. Temple to conduct certain inquiries in the Madras and Bombay Presidencies, no intimation on the subject to either Government was considered necessary. Nos. 223, 227, 253.

10. We have lately received what are technically known as the "approximate actuals" of the accounts of the Madras and Bombay Presidencies. A comparison with the regular estimate gives the following results. In Madras the collections of land revenue and stamps are Rs. 20,76,000 worse, and those of excise Rs. 1,29,000 better, while famine-relief expenditure is Rs. 29,97,000 worse, thus giving a net loss compared with the regular estimate of Rs. 49,44,000. This result was unexpected, considering the great decrease in relief labourers which took place, and we have requested the Madras Government to afford a full explanation of the causes to which it is attributable. In Bombay, on the other hand, we are glad to be able to state that the revenue collections have been Rs. 9,53,000 more, and the famine relief expenditure Rs. 12,77,000 less than the "regular estimate," thus giving a total improvement of Rs. 22,30,000.

11. According to the latest returns which we have received, the numbers in receipt of relief were as follows:—

In Madras - - -	670,851	on relief works.
	328,732	charitably relieved.
In Bombay - - -	296,094	on relief works.
	92,153	charitably relieved.
In Mysore - - -	63,253	on relief works.
	87,693	charitably relieved.

There have thus been increases in Bombay and Mysore under both heads during the week, which amount to 13,037 and 10,217 respectively, while in Madras the reduction of 29,923 on relief works is only apparent, being due to incomplete returns, and there has been an increase of 43,749 in the numbers charitably relieved. We regret to observe the continued increase in the numbers receiving charitable relief in Mysore, which now considerably exceed those of relief labourers, and shall address the Chief Commissioner regarding the very severe distress which the fact betokens.

12. The prospects of the season in Madras appear so far to fulfil what might be deemed reasonable expectations, and the rainfall, though somewhat fitful, is on the whole

Review of Madras returns

up to the average. Regarding the condition of the Bombay Presidency, Sir Richard Temple telegraphed as follows on the 15th instant:—

"Good rain fallen Dharwar, Belgaum, Kaládgi; showers elsewhere. Onica growing crops sown considerable breadth Dharwar, Belgaum. People southern districts good spirits, situation central eastern districts more stringent increase this week. On works 33,000 caused by improved working village inspection, which sends people to work who would otherwise need charitable relief or suffer great distress at home. Increase of people, charitable relief 3,000, numbers on works will probably continue increasing till monsoon. Concentration on large works whereon five-sixths of total number are employed. Condition people continues good, except some cases of recent applicants for relief and their young children, which were bad. These cases specially treated. Condition cattle, central and eastern districts, still causing anxiety, but cannot be accurately ascertained till animals reassembled in villages; believed that enough will survive for agricultural purposes. Grain trade active, prices slightly rising, exportation Bombay to Western Coast ports trade endeavouring to throw in supplies before ports close. Position hopeful, but vigilant activity needed. Arrangements working well."

We have the honour to be, &c.

No. 258.

Telegram, dated 21st May 1877.

From GOVERNOR, Madras, to VICEROY, Simla.

Lowest scale of wages insufficient.

Yours of 12th* received. Lowest scale of wages to workers of one pound grain with half anna is insufficient. Much influenced by entire want of vegetables, and increased heat. Prices slowly rising, recent rain general over eastern plains, but heavy only near Madras. Damages immaterial. Water-supply good for some time. Some irrigation tanks fairly supplied. Cultivation being commenced; if this checks upward prices, matters will go well; if prices continue rising, distress and number must increase. Hope to visit southern districts next week.

Simla, 28th May 1877.

I am directed to acknowledge the receipt of your letters quoted in the margin, forwarding, as requested in paragraph 6 of my letter of November 30th, 1876, information regarding the condition of Native States comprised in the portion of the Bombay Presidency affected by famine.

No. 20E.—85 of January 17th.
No. 177E.—627 of March 20th

The Native States in Bombay Presidency affected by famine.

2. This information being in some cases imperfect as regards area, population, revenue, or proportion of kharif and rabi cultivation, it has not been found possible to compile it into a definite review such as that regarding the British districts which was issued in the Resolution of the Government of India, No. 212, dated February 21st. In view, however, of the difficulty which has no doubt been experienced in obtaining reliable statistics regarding Native States, and of the general view of their condition which has been afforded by the weekly statements, and by the correspondence which has passed in certain cases, his Excellency the Governor-General in Council considers it unnecessary to trouble the Government of Bombay with further calls upon the subject.

3. From the various sources of information which are available, it would appear that the States which have been affected by famine, or the condition of which, in view of their probably becoming so, has been the subject of careful inquiry, comprise, roughly speaking, an area of 9,708 square miles and a population of 2,073,066, and that the portion actually suffering from scarcity is at present estimated by the Bombay Government at 4,804, square miles, with a population of 847,848 persons. The following table shows some of the more prominent points regarding each State :—

Names of States.	Approximate Gross Revenue.	Area.		Population.		By Latest Accounts.		
		Total.	Affected.	Total.	Affected.	Numbers on Works.	Actual Expenditure.	Price of Staple Grain in Lbs. per Rupee.
	Rs.						Rs.	
Akalkote—under Sholapur.	2,28,500	498	373	78,222	58,000	3,130	41,389	$18\frac{3}{8}$
Jinjeera—under Colaba	3,20,000	324	—	72,000	—	—	—	—
Satara Jagirdars, viz.:—								
Jath - -	79,857	884	879	64,000	63,628	2,261	26,071	$14\frac{9}{10}$
Phaltan - -	1,20,175	397	397	59,124	59,124	657	8,440	?
Pant Pratinidhi -	1,24,163	213	138	68,335	44,594	727	9,061	15
Pant Sachiv - -	4,92,775	500	—	111,689	—	—	—	—
Kolhapur State and its feudatories, viz., Bawra, Inchalkaranji, Kagal, and Vishalgarh -	24,29,000	3,184	2,999	802,691	620,482	21,985	3,73,020	$15\frac{1}{11}$
Southern MahrattaStates, viz., Miraj (two), Sangli, Kurandwar (two), Jamkhandi, Mudhol, Ramdurg - -	14,90,000	2,734		610,434				
Savanur—under Dharwar.	8 1,671	70	18	15,757	2,020	324	1,514	$16\frac{1}{2}$
Sawant Wari - -	2,91,640	904	—	190,814	—	41	1,084	25
	56,57,781	9,708	4,804	2,073,066	847,848	—	—	—

The Native States in Bombay Presidency affected by famine.

4. As regards failure of crops the case of each State appears to be somewhat as follows:—

Akalkote.—The failure has been about five-sixths of an average crop, or nearly as bad as in the adjoining district of Sholapur.

Jinjeera.—Half the rice crop and three-fourths of the warkas crop have failed, and heavy remissions have been given, but the proximity to Bombay has prevented scarcity of grain.

Jath.—The failure has been almost complete, and the distress similar to that in the adjoining Sholapur and Kaladgi districts.

Phaltan.—Failure nearly the same as in Jath.

Pant Pratinidhi.—A portion of the State is alone much affected, but the failure there has exceeded half the crop.

Pant Sachiv.—This State, owing to its proximity to the Ghâts, has almost entirely escaped loss.

Kolhapur.—The eastern taluks have alone suffered, and that not very severely. The four feudatories likewise have done fairly. On the whole, it would seem that the average loss in affected parts does not exceed half the crop; about two-thirds of the land revenue will be recovered.

Sangli has lost nearly the whole of both *kharif* and *rabi* crops.

Miraj.—Both the senior and junior branches of this State have saved about one-fifth of their crop, on an average, but in some parts the failure has been complete.

Koorundwar.—The senior branch has got about a half crop, and the junior branch considerably more, so the distress is very slight.

Jamkhandi.—The failure may be said to be complete.

Mudhol.—About one-fifth of the crop has alone been saved.

Ramdurg.—Nearly the whole *kharif* crop has been lost, but the *rabi* has yielded about one-third of an average.

Savanur.—The failure has been slight, except in a few villages.

Sawant Wari.—The yield has been from one half to three-fourths throughout, so that the distress, if any, is very slight.

5. The circumstance that Akalkote, Jath, Kolhapur, with all its four feudatories, Miraj (senior), Sangli, Mudhol, and Sawant Wari, are all under British administration, in consequence of the minority of their Chiefs, has tended materially to strengthen the hands of the Government in extending to the suffering people of the territories under their political jurisdiction the measures of relief applied to British subjects. The same fact has tended to render available ample funds for the purpose, the accumulated revenues of Kolhapur and its feudatories, for instance, aggregating 27½ lakhs of rupees, and those of Miraj (senior) and Mudhol about 15 lakhs more.

6. The organisation of relief works has been found necessary in all the States excepting Jinjeera, though in some the works are only of a trifling nature. The necessity of every State providing for its own distressed population was brought prominently to the attention of the Bombay Government by the Government of India (No. 1T., dated December 20th, 1876), and the principle was approved of by the Secretary of State in his Despatch No. 21 of the 28th February last. His Excellency the Governor-General in Council fully concurs in the efforts in this direction which have been made by the Bombay Government in its orders quoted marginally, and has every confidence that at the present time, when the famine is pressing with daily increasing stringency, no means will be spared to ensure that the relief works in Native States, and the house-to-house visitation, shall be equal to the occasion.

No. 276E.—892 of 19th April.
No. 317E.—1,021 of 2nd May.

7. With reference to the important question of the freedom of the grain trade, his Excellency the Governor-General in Council has only to repeat the full concurrence, expressed in my letter No. 272 of March 7th, in the efforts of the Government of Bombay to suppress the tendency to interference which has been somewhat marked in certain cases, especially in the recent one of Sawant Wari.

8. In conclusion, I am desired to express the sympathy of his Excellency the Governor-General in Council with the political officers of Bombay in the arduous and delicate task which has fallen to them, and his appreciation of the measure of success which so far, under the guidance of the Local Government, appears to have attended their labours.

No. 262.

No. 25 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, the 4th June 1877.

We enclose a minute by Sir Richard Temple, dated April the 14th,* reporting generally on his late mission to the distressed districts of the Madras Presidency. Regarding the operations of the mission in the presidency of Bombay, it has seemed to him unnecessary, under existing circumstances, to add anything to his minute of 24th March, which was submitted to your Lordship with our Despatch of the 12th April, No. 20.

*No. 214.

Review of Sir R. Temple's Report on his mission to Madras.

2. This interesting and important State paper is divided into the following parts:—

1st. The extent of the drought, the failure of the harvests, and the effect of these disasters upon the fortunes and the physical condition of the people.

2nd. The measures adopted by Government to help the people in meeting or bearing up against these misfortunes.

3rd. The several points towards which the proceedings of the mission have been principally directed.

4th. The state of affairs at the present time of writing.

5th. The lessons to be deduced from all the circumstances which have yet occurred in connexion with these affairs.

We propose to recapitulate some of the more leading points in each part.

1st part.

3. The drought of 1876, Sir Richard Temple points out, affected the whole of the Madras Presidency except the littoral tract south of Orissa and the deltas of the Godavery and the Kistna. The rainfall of the year ranged from three to twenty inches, and in large tracts from only to six to ten inches, whereas the ordinary average ranged from twenty to forty inches. The misfortune threatened first in July, and became more pronounced from month to month, till it culminated in November. Its severity was aggravated by the fact that the Deccan districts of Bombay, the greater part of Mysore, and a part of the Nizam's dominions were similarly affected. Ten Madras districts, with an area of 74,000 square miles, were thus more or less seriously injured, and of their population of sixteen millions, eleven were distressed in a greater and five in a lesser degree.

4. In the distressed tracts there are two harvests in the year, one depending on the summer rains and the other on the autumnal. Rice and various sorts of millet are the principal crops. The cultivation is to a small degree "wet," that is, dependent on tank irrigation, but principally "dry," or watered by rainfall, with some aid from wells. In the "wet" lands the failure was worst, the tanks being transformed into dusty hollows. The "dry" lands suffered to a somewhat less extent, and some of the more valuable crops were in part preserved, as the wells more or less held out, and the cultivators struggled bravely for water by digging pits in river beds, by deepening existing wells, and by sinking new ones. The failure varied in extent in different districts. Bellary and Kurnool saved only one-sixteenth of an average crop, Cuddapah and Chingleput three-sixteenths, Nellore, North Arcot, Coimbatore, and Madura one-quarter, Salem one-third, and Tinnevelly six-sixteenths. The difficulty of dealing with famine is aggravated if the population is dense, but in Madras the most distressed districts are fortunately the more thinly peopled. Some districts, moreover, were at the disadvantage that the previous year had been an unpropitious one, and Bellary had suffered from two previous bad seasons. On the other hand, spendid harvests had been reaped in Burma, Guzerat, the Central Provinces, Malwa, and Northern India, as also in Bengal, Behar, and Orissa.

5. As regards the effect of the drought upon the people, while there was ample ground for anxiety and for exertion, there were many circumstances justifying hopes of a not unsuccessful issue. Grain rose, indeed, to 12 and 14 lbs. per rupee, but the sea-board afforded easy communication on both east and west with grain-holding provinces, railways and excellent roads traversed in all directions the distressed tracts, and enterprising traders, European as well as Native, were at hand to push their opportunities. As to the people themselves, while there were low-caste and wandering classes, and humble artizans, whose condition inspired alarm, there was a mass of well-to-do peasant proprietors, strong to bear passing adversity and often neither unable nor unwilling to aid the farm labourers dependent on them, and, finally, there stood behind all the British Government, with a will to save, and all the strength which money, ability, and devotion could contribute to that end.

Review of Sir Rd. Temple's report on his mission to Madras.

6. The measures adopted by the Madras Government were at the outset confined to the opening of relief works on a small scale, but when the failure of the autumn rains was no longer doubtful, a great expansion took place. Some large works were proposed, and the East Coast Canal was sanctioned. But in the main the course of opening small works, within easy reach of all who might need relief, was adopted with the approval of the Government of India, which by the end of October was fully alive to the magnitude of the impending calamity, and seeking detailed information as a secure basis of action. These works were almost entirely under the guidance of the civil officers, the Public Works Department being mainly utilised in advising, designing, and measuring up, but not being in actual command of works or of the tasking of labour. The relief wages were at first fixed at $2\frac{1}{2}$ annas for a man, and in some places even 3 annas were paid, but soon after the end of the year the introduction of a 2-anna rate was enjoined, together with a fixed task. The latter, however, rarely became effectual, as no test of admission was prescribed, nor was any discretion to reject applicants vested in the local officers. It was assumed that none would come on the works who did not need relief, and it was, apparently, also considered to be the duty of Government to alleviate all suffering, not merely to prevent death from starvation. The local charities and the habits of the people having contributed to a vast influx of starving wanderers into the city of Madras, relief camps on a large scale were organised for them, and the system was ordered to be adopted near Arcot, Vellore, and elsewhere.

2nd part.

7. During the months of August, September, and October the importations of grain into the presidency by sea amounted to 43,637 tons, and 20,446 tons were carried by rail from Madras into the distressed tracts. The grain trade, though thus not inactive, was in some places sensitive and excitable, grain riots occurred, and the influx into Madras above referred to followed. These circumstances caused anxiety to the Madras Government, who purchased from without the presidency 30,000 tons of Government grain as a reserve, to be sent to any localities where a dangerous deficiency of grain arose. Payment of relief wages in grain being also contemplated, about 13,000 tons more were purchased for this purpose. With the view of distributing the grain reserve in a way to control the markets favourably, a transport agency was established, with head quarters at Bellary, and efficiently organised so as to be capable of expansion as might be required.

8. The relief provided by the measures above described was largely resorted to—

"The progress of the number of relief labourers, men, women, and children, up to the first week in January when the highest number was reached, may be thus seen:—

	Number of Persons.
1st November - - - - - -	160,000
1st December - - - - - -	310,000
15th ditto - - - - - -	656,000
31st ditto - - - - - -	982,000
7th January - - - - - -	1,066,000
14th ditto - - - - - -	1,055,000

and the last-named number was increased to 1,165,000 by the addition of 110,000 persons on gratuitous relief,"
which was dispensed from centres established throughout the districts, and largely supplemented by private charity. The expenditure up to the end of December 1876 was—

	£
"On relief - - - - - -	372,500
On purchase of grain - - - - -	302,400
Total -	674,900

"There were other items, such as transport agency and local purchases of grain, which brought up the total to nearly three-quarters of a million sterling.

"The members of the Revenue Board were deputed to visit the most distressed districts and to make reports to Government of all that they ascertained.

"In every part of the distressed districts the civil officers of all grades exerted themselves with the utmost zeal, devotion, and humanity, and in a manner entirely worthy of the urgency and magnitude of the occasion."

9. Such was, very briefly described, the position of affairs when Sir Richard Temple entered the Madras Presidency on January 14th. He thus summarises the instructions he had received verbally before starting, and which reached him formally on the 23rd of that month— Review of Sir Rd. Temple's report on his mission to Madras.

3rd part.

"Every effort is to be made for the prevention of deaths by famine.

"Severe economy in relief should be practised. Indiscriminate charity on the part of individuals is admitted to be bad, but on the part of a Government is worse. A Government has no better right in a time of scarcity than at other times to attempt the task of preventing all suffering, and of giving general relief to the poorer classes of the community.

"The numbers on relief works are so great that there is reason to fear that many persons must be employed who without such relief could sustain themselves for a time at least.

"The collection of such numbers should be restricted on works where labour is not exacted, where supervision is wanting, and where people can obtain, for the asking and in return for next to no work at all, wages in money or in grain.

"No time should be lost in giving to the people, to the greatest extent practicable, the means of employment on large public works, which need not always be in the distressed districts or near the homes of the people.

"The Government may be driven to set up petty relief works near the homes of the people, but not until distress becomes extreme, or a state of famine has been reached.

"There is great advantage in paying relief labour in money (not in grain) wherever and so long as this mode of payment is practicable. But if money payment is not practicable, there is no more objection to Government purchasing grain for payment than there is to its making purchases through the Commissariat for the troops.

"There is to be no interference of any kind on the part of Government with the object of reducing the price of food.

"Inquiry should be made as to how far private trade, if unfettered, can supply the wants of the country.

"In certain localities remote from railways and large markets which private trade is unable to reach, it may become necessary for Government to intervene.

"The transport of grain by the trade, by railways, by roads in the interior, and by the seaports, should be carefully observed.

"A question shortly arose as to what degree of distress was to be prevented by Government. I understood from the first that practically there would be two principal degrees of distress. Firstly, there might be distress which, however sore and lamentable, can yet be borne without physical health being impaired, or bodily power being disabled, or life being imperilled; and this the Government could not undertake to prevent or alleviate. Secondly, there might be distress which, increasing slowly perhaps but surely, must lead to extremity which would sooner or later end in death;—and this the Government would, to the utmost of its means and ability, prevent. It was necessary, by the best diagnosis which could be made, to discriminate between the one kind of distress and the other; and if there should be a doubt whether any person or persons come within the first or the second category, then to give the people the benefit of that doubt. These principles were fully borne in mind in the discussions and conferences of the third week of January in Bellary, Kurnool, and Cuddapah. Shortly afterwards similar principles were enunciated by the Government of India in reply to some references which had been made."

The application of these principles to the actual state of affairs was the practical question presented to the mission.

10. The first point was the dealings of the Government regarding grain. Finding the local markets everywhere well supplied, the railway carrying to the utmost of its power, the merchants confident in their own powers of importation and distribution, but apprehensive of Government interference, Sir Richard Temple represented this to the Madras Government. The purchase of grain and the payment of grain wages soon afterwards ceased, and the operations of the transport agency were confined within the narrowest practicable limits.

11. Another important question was that of the accumulations of grain existing at various stations along the railways. The deficiency of engine power was found to be the principal cause of the "blocks," and it was supplemented by engines obtained from other parts of India. The doubling of the line from near Madras to Arconum was recommended and put in hand, and facilities for importation for Mysore, viâ Negapatam

Review of Sir Rd. Temple's report on his mission to Madras.

were afforded by the Madras Government. By these measures, and the unremitting and praiseworthy exertions of the Traffic Departments of the several railways, aided by the suggestions of an Engineer officer specially deputed to watch over the matter, the pressure was greatly relieved.

12. The character of the relief afforded was also one of the earliest matters for the consideration of the mission. Of this, Sir Richard Temple observes—

"There could be no doubt that, on the whole, the grave consequences with which the people had been threatened by the drought were being successfully averted. In the interior of the presidency, and especially in the most distressed districts above the Ghât mountains, there was no information of any mortality or even of any deaths of individuals from starvation. There was indeed information to the effect that nothing of the kind had occurred or was likely to occur. There was no sign of distress. Whatever distress had been threatened was being thoroughly relieved. Irrespectively then of cost, present or prospective—irrespectively also of any possible demoralising influences on the people—there was no doubt that the famine was being completely subdued."

But the question remained whether the relief was not more than sufficient, and consequently unduly attractive to the people and unduly burdensome to the finances of the State. This question Sir Richard answered in the affirmative. It appeared that the proportions of the population on relief works and gratuitously relieved in the Bellary, Kurnool, and Kuddapah districts were 27, 35, and 16 per cent. respectively, while in the Bombay Presidency, in the Sholapur and Kaladgi districts, and part of Poona, which were similarly drought-stricken, the proportions were only 13, 3, and 11 per cent. In part this seemed attributable to the great size of the jurisdictions of the Collectors, and to the want of superior controlling authority on the spot. Sir Richard remarks as follows:—

"It has been already stated that on behalf of the Madras Government, one member of the Board of Revenue after another had visited temporarily the most distressed districts, had consulted with the local officers, and had made reports to the Government which had been very useful so far as they went. But these high officials did not always possess authority to give orders or instructions on the spot. Whatever authority they indirectly exercised was in its nature undefined, and was insufficient for conducting urgent and critical affairs. Each of them stayed but for a short time and then returned to Madras. There was no superior authority resident in the scene of trouble, vested with power, and imbued with that sense of personal responsibility which conduces to forceful and thoughtful administration. Consequently there was no policy laid down in adaptation to local circumstances. The District Collectors had not enough of guidance under circumstances transcending their ordinary experience. And junior Civil officers in out-stations and in remote subdivisions were sometimes obliged to confront extraordinary difficulties, to incur large expense, and to commit the Government to important decisions, without having received any definite instructions."

Besides this, other causes for the large numbers relieved in the ceded districts and Kurnool were found to be at work. They were—

"Offering of work close to the homes of the people.

"Rendering the work light and easy.

"Making the wages worth having irrespective of bare subsistence.

"Admitting all comers without any question as to whether they could sustain themselves for a time.

"Allowing all applications for employment without exception."

* * * * * *

"The wages were, at the outset, supposed to be low relatively to the dear prices of food. But they were not really low, when every member of the family was able to earn them close at home. The monthly earnings of a poor family, at this time on the relief works, was equal to the salary in ordinary times of the lowest paid classes who can read and write."

13. The enforcement of the orders already given to the Madras Government for the introduction of task-work, and the strengthening of the local establishments by officers, Civil and Military, from whatever locality obtainable, were among the earliest points urged upon the authorities. Sir Richard also on the 21st January laid before the Madras Government proposals for—

"Stopping all fresh admissions to relief works in Bellary, Kurnool, and Cuddapah, save under an order from some responsible official.

"Examining every gang person by person with the view of discharging for the present every one not in absolute need of State relief.

"Reducing the relief wage for men from 2 annas to 1½ annas per diem, the wage for women and children to be adjusted accordingly.

"It was shown that at the price of common grain then prevailing and likely to prevail (namely, one rupee for eight seers or 16 lbs.) during the time of distress, the 1½ annas rate would enable a man to buy 1 lb. of grain per diem, and to have a margin for buying vegetables and condiments. Besides the financial saving, which would be considerable, the foregoing narrative will have shown the importance of lowering the relief wage to the standard of subsistence, of sustaining life in ordinary health, and nothing more."

These views were accepted by the Madras Government on the 31st January, but with some modification—

"Instead of the wage of 1½ annas per diem as proposed by me, the Madras Government ordered that the wage should be fixed for all relief labourers, not under professional supervision, at an amount representing the price of 1 lb. a day of grain plus ½ anna for vegetables and condiments. This rate was as economical as mine, but it had this disadvantage that doubts would arise in different districts as to what kind of grain was meant, that time would be lost in discussion, and that, in the midst of doubts, the reduction of wage would in some localities fail to take effect. All this actually happened. The reduction did not take effect till nearly the end of February, and in many places it settled itself into the 1½ annas rate,—the very rate first recommended.

"For those relief labourers who were employed by the Public Works Department under the departmental rules of work, or who, though supervised by other agency, might be working up to the departmental standard, a rate of 2 annas per diem was allowed."

14. Another important point was—

"To provide for the inspection of the poorer classes in the distressed districts from village to village, from house to house, in the highways and byeways, in every place where men either congregate or wander."

On this Sir Richard Temple reports as follows:—

"The orders of the Madras Government were that relief camps for the reception of destitute persons should be formed at all the principal places, and that the residuum of such persons should be relieved by the village headmen under the supervision of the district authorities. These orders were doubtless excellent so far as they went. But being general in their terms they needed to be followed up with more specific directions. On the 16th January I caused a detailed memorandum to be drawn up of the manner in which the Kurnool district might be divided into circles and sub-circles for the inspection of every house in every village for the purpose of searching out cases of destitution; which memorandum was immediately transmitted to the Madras Government. On the 19th January I drew attention to the importance of impressing upon the headmen of every village their responsibility for bringing before the nearest authority every case of dangerous distress. On the 8th February I formally represented to the Madras Government the general importance of the subject, observing that, however comprehensive the relief measures might be, still experience showed that individuals or families might be suffering in silence, and might compose themselves for death without complaining."

15. After submitting these various matters for the consideration of the Government, Sir Richard Temple made a series of visits to various parts. He observes:—

"My next care was to visit rapidly the distressed districts below the Ghât mountains. As already seen, some parts of those districts were much distressed. And if the ideas which had for a time prevailed in the districts above the Ghât mountains (Bellary, Kurnool, Cuddapah) should take possession of the people below them, the crowding of large numbers on relief works might become very embarrassing. I therefore passed through parts of Chingleput, North Arcot, Salem, Coimbatore, Trichinopoly, Madura, and Tinnevelly. This visit was decidedly re-assuring. The failure of the autumn and winter harvests had been less; the promise of the spring harvest was better; the resources of the people were in several respects greater. Nothing like indiscriminate relief had prevailed; the local officers had been cautious and thrifty; the people had been taught the lesson of self-control under threatening circumstances. The recipients of relief were comparatively few, and their number did not seem likely to increase largely."

After the tour above noticed and a brief visit to Mysore, Sir Richard returned to Bellary, Kurnool, and Cuddapah to watch the effect of the new orders, and spent nearly a month there. He describes in the following graphic terms the change he found going on—

Review of Sir Rd. Temple's report on his mission to Madras.

"The local officers, despite much difficulty, exerted themselves most loyally to restrict relief to those who absolutely needed it; to reject those who were making a convenience of the State bounty; while they extended discriminating charity to all cases of real misery. Many persons were discharged as being manifestly without claim to support from Government. This doubtless discouraged applicants who knew themselves unworthy. To such persons the reduction of the relief wage served as a further discouragement. This tended to keep the numbers down. As might be expected, the increased supervision brought to light the various sorts of frauds, malpractices, and false returns, which are sure to be found on these occasions everywhere. The returning of persons who never existed is expressively termed in these districts, the 'counting of crows in the air and entering them in a roll.' Sometimes outbreaks of small-pox or cholera or other sickness, sometimes also holidays and festivals, would cause gangs to break up, and not to re-assemble. Again, the relief works were systematically re-arranged in order to take the relief labourers to some reasonable distance from their homes, and to make the tasks in some degree irksome—so as to apply some test and trial of the reality of their need. The manner in which the gangs thinned their ranks—when required to move away, to perform a day's march, to render a fixed tale of work, to bivouac or encamp in the open fields—was quite remarkable. Then it was that tens of thousands proved by their own behaviour that they had been taking State wages for gain or convenience, and not for the support of life. More than this, many gangs, on receiving orders which would have been obeyed unhesitatingly by persons really in need, struck work, hoping to make terms with the authorities. Finding themselves unable to dictate their own terms, some would come back after remaining for a while on strike; but many stayed away altogether. Instance after instance occurred of gangs, some thousands strong, disappearing from muster on being told that the road running through the middle of their villages, to which they had sauntered leisurely day by day for weeks past, was now finished and that they would be assembled at another road one day or two days' march off. Other gangs equally large, on being set to do an augmented task, would cease working and run off shouting that this new burden was unjust, and that Government, having let them become accustomed to easy work, should allow them to continue in ease to the end. The effect of all this was to bring down the numbers week by week. In Bellary, Kurnool, and Cuddapah, the highest total in January of persons on relief works amounted to 950,000. It fell to 540,000 by the end of February, and to 490,000 by the middle of March. And the decrease is the more remarkable, inasmuch as the season was advancing during which the distress was expected."

Inquiries showed that in some cases the labourers were able to hoard a small portion of their wages, that in others only the women of a family were on the works, the men following other occupations of their own. The robberies and thefts which had been rife in November and December had for the most part ceased. Of village relief Sir Richard states—

"It was found that much was being done in this direction; that the village headmen had received strict injunctions to inspect, report, or relieve; that they had in many cases received small advances of funds, so that they would be without excuse for failing to afford relief in emergency; that circles had been formed, each containing a few villages only, there being a special relief centre in the midst of each circle; that there was a larger relief centre at the head-quarters of each subdivision comprising a cluster of circles. But still here and there among the villages, and sometimes among the gangs of sturdy and vigorous relief labourers, I found weakly or wretched individuals. And sometimes inquiry into these miserable cases showed that the poor people were sharing their wages with infirm people at home. Such infirm persons ought, of course, to have been sought out and brought forward for succour under the system of village inspection and relief. These and other circumstances induced me again to address the Madras Government, reiterating the recommendation made on the 8th of February, and suggesting the issue of more definite and detailed orders, compelling all village headmen to pay thorough attention to this part of their duties, and ensuring an effective watch over the headmen on the part of relief officers and officials of all grades."

In the course of the same period the necessity for a superior officer in the ceded districts, to direct and control all the relief operations, was formally represented. The commencement of the earth-work of the projected railways from Bellary towards Dharwar, and from Chingleput to Conjeveram, was also recommended and sanctioned by the Government of India. A visit to Nellore resulting in orders for the transfer of large bodies of labourers from the village works to the East Coast Canal completed the inspection of the distressed districts.

Review of Sir Rd. Temple's report on his mission to Madras.

16. The probable cost of the famine was naturally the subject of careful calculation. In December the Madras Board of Revenue had made a rough estimate showing an expenditure of nearly 3½ millions sterling, exclusive of losses of revenue. On the data furnished by the Collectors, which appeared high, but which were adopted in order that the Government of India might be prepared for all eventualities, a fresh estimate of 2,920,000*l.* was submitted on February 5th, being about half a million below that above referred to. On the 4th of March a third estimate was formed at the desire of the Government of India, which, owing to the extensive fall in the numbers relieved, amounted to only 2,176,000*l.* This, however, was expressly said to be contingent on the maintenance of all the existing economical checks, and on the propitiousness of the coming summer rains. The last estimate at the close of the mission was 2,050,000*l.*, exclusive, as before, of loss of revenue.

17. After a brief visit to Salem and Coimbatore, and an examination of relief camps near Madras, representations were made regarding the insufficient arrangements for separation of castes in relief camps, the provision of light relief work for weavers of fine fabrics, the failure of certain zemindars near Madras to perform their duty towards their tenantry and dependants, and the indiscriminate dispensation of private charity by benevolent Native gentlemen. All these subjects received in consequence suitable attention.

18. Early in March a controversy was commenced by the Sanitary Commissioner of Madras regarding the sufficiency or otherwise of the reduced relief wage. Sir Richard observes :—

"The Sanitary Commissioner of Madras had raised objections to the reduced scale of wages for relief labour, based on theoretical and scientific grounds, and supported by his previous experience of the people in Southern India. It was thought by him and by some others that the wage ought to be raised to the rate at which it had stood in the beginning of January. I, however, represented to the Government of Madras that the reduced wage had not received any proper trial, and that it ought, in justice to the public interest, to be fully tried. This view was accepted. It was at the same time ordered that any person in the relief gangs who might be found in a condition below par should be specially treated, either by extra allowance or by diminution of task.

"It was arranged that, when relief labourers brought to the work children of tender age unfit for labour, such children should receive a special allowance. This concession, on which the Madras Government laid great stress, obviated a risk which might otherwise have been run, when the relief wage was reduced.

"Besides the advantage of economy, which is considerable, there are obvious reasons for keeping the wage down to the lowest rate compatible with the health of the relief labourers. The people are less tempted to resort to relief except under necessity, as they are known to be much influenced by the rise or fall of the relief wage. The margin for illicit practices on the part of ministerial officials is narrowed. If the wage is liberal, a part of it is sure to be absorbed by these officials; if it be just enough and no more, then the labourers cannot afford to give anything to the officials. The question whether the wage representing 1 lb. of grain a day, and half anna for extras, is sufficient, can be decided by experience. There is reason to infer from the rates of wages in ordinary times—not of trained labourers or of persons employed in central places or on special work—but of the labouring poor among the villages, and from the ordinary prices of food grains, that a man of this class can hardly get more than 1 lb. a day besides extras. If that be so, it becomes important to establish a relief wage on this basis. It may be that somewhat more liberal terms have been allowed on former occasions. But that is no reason why these more economical terms should not be now introduced if experience proves them to be feasible. And although some instances to the contrary were adduced, still, at that time, the middle of March, large gangs of labourers in Bellary and Kurnool were known to have been working for some little time on the reduced wage without physical detriment. Opinion at Madras was apparently affected by the wretched condition of the wanderers who strayed into the capital or its suburbs, in quest of food, and who doubtless may need generous sustenance for a time. But these were cases of special distress, and were quite apart from the mass of relief labourers in the interior of the country, who had been employed before they could lapse into wretchedness, and had since been maintained in good case."

Review of Sir Rd. Temple's report on his mission to Madras.

"On this occasion* I was accompanied by Dr. S. Townsend, the Sanitary Commissioner to the Government of India, whose assistance had been asked for to enable me to judge of the physical condition of the relief labourers, and to estimate under professional advice the objections raised by the Sanitary Commissioner of Madras. After inspecting nearly 40,000 of these people in different parts of the country, Dr. Townsend stated his deliberate opinion that their physical condition was fairly good, and that there were no grounds perceptible for raising the wages. This opinion I duly reported to the Government of Madras.

*Referring to a visit to Bellary at the end of March.

"The Sanitary Commissioner of Madras has, however, admitted that with the special allowance given to the little children of relief labourers, perhaps also with the allowance of wages on Sundays, the reduced wage is about equal to that which he himself recommended.

"Still in some quarters it seems to be supposed that there is some connection between the mortality among the recipients of gratuitous relief and the reduced relief wages; if persons die at the gratuitous relief camps, or are picked up in a famishing state on the roads or elsewhere, that is imagined by some to be a proof that the relief wages must be too low. But evidently there is no connexion whatever between the two cases. Those who are found starving (with exceptions so rare as to prove the rule) are not, and have never been, relief labourers at all, and have not been earning any wages. Most of them are not accustomed or not able to work; and this is mainly the reason why they have been admitted to gratuitous relief. How, therefore, can the rate of relief wages possibly affect them? Any inference drawn from these conditions would be wholly irrelevant if applied to relief labourers. These poor people have sunk into danger, either because they themselves failed to apply for charitable aid, or because those who ought to have brought them forward for gratuitous relief failed to do so. But that is a matter quite separate from the question of relief wages, which refers to a totally different class of persons.

"Even though the reduced wage may, as now stated by the Sanitary Commissioner of Madras, be much the same as that which he recommends, and may so far have the support of his authority, still its effect ought to be carefully watched; and if any signs of real deterioration in the physique of the relief labourers should hereafter appear, there need not be any difficulty in raising it."

Before quitting this subject we may invite attention to two telegrams from the Madras Government which we enclose, from which it will be seen that on the 23rd instant the "reduced relief wage was" abolished. All labourers on civil works will consequently now receive the rates sanctioned on January 31st for those under Public Works supervision, but with an obligation to perform a task of only 50 per cent., instead of 75 per cent. of an ordinary task. The reasons which have induced the Madras Government to make this change are stated in their Despatch to your Lordship of the 26th ultimo, No. 38. We are not aware on what data it is calculated that the increased cost will be only one lakh and three-quarters per mensem, unless indeed the reduced wage was far less generally adopted than was supposed.

19. Another subject noticed by Sir Richard Temple is that of his recommendations for the suspension of land revenue demands, with a view to collection in future years, instead of absolute remission. He thus states the case:—

"In the Bengal Presidency the theory of the land revenue settlement is that the landholder bears any loss in bad years, for he enjoys all the profits of good harvests or high prices. In years of grievous failure of harvest it is customary to suspend collection of a part of the land revenue until the next good season comes. And in temporarily settled tracts some remission is often granted where all the crops have been lost. The theory of the Madras revenue system is somewhat different. In the districts under regular settlement the rule is, that if the water supply to any "wet" lands (that is, lands irrigated from tanks or rivers) wholly fails, then the land revenue on such lands is remitted in full, but not otherwise. For either it is a part of the implied understanding between Government and the ryot, or else it has been the practice, that water shall be provided to irrigate "wet" lands. On "dry" lands (that is, lands not irrigated at all, or irrigated only from wells) a reduction of 20 per cent. is made on the Government demand to meet vicissitudes of season; and on these lands no remission is granted save under very exceptional circumstances. In the districts not under regular settlement, remission of land revenue is granted on account of partial failure on "wet" lands, and it is also allowed more freely for loss of crop on "dry" lands.

"The present season of scarcity deepening into famine is indeed very exceptional; and the Madras revenue authorities considered that very large remissions of revenue

would be required; while they regarded it as inexpedient to hold in suspense over the ryots any part of the land revenue that could not with fairness be collected this year."

Review of Sir Rd. Temple's report on his mission to Madras.

* * * * * *

"The Madras land revenue has been moderately assessed, and falls comparatively light on 'dry' lands; and an ordinary ryot might well afford to pay the arrear land revenue of a bad year out of his profits, if the succeeding two years shall be good. The circumstance that lands irrigated from wells are taxed at 'dry' or unirrigated rates of land revenue, greatly strengthens the position of ryots on 'dry' lands; for crops irrigated by wells yield an outturn on which the assessment falls with very light incidence. On the other hand, a considerable portion of the whole land is held by very petty ryots, whose standard of living is low, and who might be unable to pay up the arrears of their land tax in full. I estimated, however, that perhaps two-thirds of the land revenue which could not fairly be collected this year, might be paid by the ryots during the two succeeding years, if the seasons should be propitious. And I recommended that the arrear land revenue of the present year should be kept in suspense, and that no remission should at present be promised on 'dry' lands, in order that the public treasury might have a chance of recovering part of the arrears, if the future seasons shall be favourable. If the people should be found hereafter unable to pay the revenue for this year, which by settlement or other arrangement they had engaged to pay, neither I nor anyone else would recommend their being unduly pressed."

* * * * * *

"The Government of Madras held that his view could not be accepted, and that the practice of Northern India is not applicable to the different circumstances of Madras. In Bombay, where, as in Madras, the land is held on ryotwari (petty proprietary) tenure the Government after consideration accepted this view, so far that the arrears of the present year in the famine tracts of Bombay are in part 'remitted,' and in part 'suspended' for collection in future years if seasons permit. The Government of India decided that the question of remitting or suspending the land revenue should be left to the discretion of the Local Governments. And the latest estimate of the Madras Board of Revenue is that 143 lakhs of rupees (1,430,000*l.*) of land revenue must be remitted on account of the recent failure of harvest. I see reason to hope that the total remissions, which will not be precisely known till August next, will fall below this estimate; for the Board has inculcated and enforced on Collectors carefulness and regard for the public treasury within the broad lines laid down for the settlement of the affair."

The decision of the Madras Government is taking effect. The question has, however, an important bearing on the finance of famines in general, and we have under consideration a separate paper by Sir Richard Temple on the subject, prepared after perusal of the detailed papers which were lately supplied to him by the Madras Government.

20. After a further visit to Salem, Arcot, Bellary, and Kurnool, Sir Richard Temple's mission to Madras terminated. He thus summarises his movements and proceedings:—

21. In summarising the state of affairs at the date of his minute (April 14th), Sir Richard Temple points out that the numbers relieved rose in the last week of March from 761,000 to 810,000, and expresses his expectation that they must rise further. Of persons on the works, he considers that the great majority do really need and deserve relief, but that there are many thousands not in absolute want who would still leave the works if task-work could be properly enforced. More he considers might have been, and might still be, done in this respect, especially by greater utilisation of the Public Works Department. At the same time he admits that the distressed districts are unfortunate in having comparatively few large and practicable projects suitable for relief labour. Of gratuitous relief he remarks:—

4th part.

"The total of those on gratuitous relief amounts now to 115,000 persons. It is in some degree swollen by little children whose parents are on the relief works. Excluding these children, I am sure that the total is not larger than it ought to be. Indeed, I fear that it is not large enough. Despite the persistent efforts which have been made, the system of village relief and house-to-house inspection is far from perfect. Disappointment may reasonably be felt at the shortcomings in this matter under a ryotwari system which offers such advantages in this behalf. Much was to be expected from the hereditary headmen and the hereditary accountants in the villages, who represent ancient institutions, which have been studiously fostered by the Madras Government for generations. These men may yet do well, and are doing better than they did, but at first they were backward in their duty."

eview of
ir Rd. Tem-
le's report
n his mis-
on to
Iadras.

On the general condition of the people he makes the following remarks :—

"The physical condition of the people in the distressed districts of the Madras Presidency is fairly good; better decidedly than it was expected to be. An impression (which I quite share) seems to be gaining acceptance that the agricultural classes have more self-sustaining power, more life-supporting resources than was originally anticipated. There is reason to think that the relief wages earned by so many thousands have not been entirely spent in buying food, but have in part been hoarded. This circumstance may be expected to facilitate the discharge of these people as soon as the season shall improve. There is still some lamentable mortality in or about Madras itself, and in some other central places below the Ghât mountains, which, though immediately caused by disease, is in part traceable to insufficient nourishment. The death-rate among the people received into the relief camps in and about the city of Madras continues extraordinarily high. These occurrences, happening at or near the capital, naturally make a painful impression on the public mind. Elsewhere the physical condition of the peasantry is in the main satisfactory, although to a broad and important statement of this kind there are, and must be, some exceptions. On the whole, the consequences of the drought are being well subdued."

With reference to their frame of mind, he considers that, while the relief operations must bind the people to the Government with ties of gratitude and respect, the constant recurrence of scarcity in one part or another of the Madras Presidency, and the quickening sense of responsibility for relief on the part of the Government may have tended, and tend, to foster a disposition to rely on the State and to lower among the labouring classes the sense of the duty of being independently industrious.

22. The activity of the grain trade, the early symptoms of which have already been referred to, has been unremitting, but was rather more conspicuous in January and February 1877 than subsequently.

"From the beginning of the present trouble down to the end of March 1877, the quantities of food grain brought into the distressed districts of the Madras Presidency amounted to about 535,000 tons. This great supply was drawn from several sources, thus :—

By sea into Madras, Tuticorin, and other east-coast ports from Bengal, Burma, Orissa, and Ganjam	356,000 tons.
By sea into Beypore and other west coast ports	118,000 ,,
By the Great Indian Peninsula Railway from Northern and central India into the Madras Presidency	61,000 ,,

"The pressure of the scarcity was felt in the interior of the country before imported grain began to arrive from distant provinces. And the earliest movement of the grain trade was the transport of grain by rail from old stocks on the coast into the interior. Considerable importations from without began in November, and the imports went on increasing till they culminated in January with a total of 101,000 tons. The imports slackened somewhat in February, when the total was 80,000 tons; and they were still less during the month of March.

"Only 30,000 tons of all this quantity were imported on Government account; the rest, 505,000 tons in all, were brought into the country by private trade. The imported grain was distributed by the Madras railways into the interior of the country, thus :—

Bellary, Cuddapah, and Kurnool received	147,000 tons.
The Mysore province received	81,000 ,,
The districts of North Arcot, Salem, Coimbatore received	73,000 ,,
The districts of Chingleput and Malabar received	10,000 ,,
	311,000

Of this total some was sent into the Nizam's territory, and the remainder has either been distributed by the South Indian Railway, by cart or by canal-boat, through the coast districts, or is still awaiting means of railway carriage into the interior. There were some considerable grain imports by cart from the southern parts of the Bombay Presidency, and much grain was carted from Raichore and other places in the Nizam's territory into Kurnool.

It is estimated that if imported grain did not come into consumption before November, the grain carried into the interior by rail up to the end of March was sufficient to feed $3\frac{3}{4}$ millions of people for six months, or to support 25 per cent. of the population of the more distressed parts of Madras and Mysore from 1st November to the end of April. The sufficiency of these importations is shown by the fact that the price of common

food-grain at the larger marts has since January 1st usually been cheaper than 16 lbs. per rupee, while at the lesser marts in the interior it has rarely been so dear as 14 lbs.

Review of Sir Rd. Temple's report on his mission to Madras.

23. With a view to the future and the frequent recurrence of famine in Southern India, Sir Richard Temple makes some interesting and valuable remarks on the destruction of forests and jungles owing to a variety of circumstances, which shall have our careful separate consideration.

24. The concluding part of the minute is devoted, in the first place, to a summary of the lessons to be deduced from all the circumstances which have yet occurred in connexion with these affairs, which is full of practical wisdom, and will not bear any further condensation. Much of what is here so ably stated commands our full concurrence, but as the famine is unfortunately not yet over, we shall defer detailed notice of the several points brough forward until we are in a position to review, as a whole, the operations of 1876–77 in Madras, Bombay, and Mysore.

5th part.

25. Sir Richard Temple records in the following terms his appreciation of the courtesy and consideration which he has experienced during his very delicate and responsible duties, and of the admirable tone and conduct of the Madras local officers engaged on relief works, with whom he has been brought so much in contact :—

"I must declare my cordial thanks to the Madras Government and its principal officers for all the kindness and consideration received from them during my mission. And though the Government is doubtless well aware of the merits and services of its officers throughout this trying time, yet I must state my sense of, and add my testimony to, the excellent conduct of the local officers, the Collectors, Sub-Collectors, Assistants, and other Civil and Military officers employed on relief. Having travelled, worked, and lived among them for three months of strenuous exertion, I have unsurpassed means of knowing how unremittingly they have toiled, how thoughtfully they have planned, and how anxiously they have striven, in the service of the Government and for the good of the people."

26. Regarding his personal staff Sir Richard Temple, who is always conspicuous for his readiness in acknowledging the assistance he receives from those who are employed under him, makes these remarks :—

"My thankful acknowledgments are due to the members of my staff, Mr. C. E. Buckland, C.S., Captain S. Rivett-Carnac, and Dr. R. Harvey, for their zealous and useful assistance in the work of the mission; also to Captain W. S. S. Bisset, R.E., for his vigilant attention to all affairs connected with the grain traffic on the railways.

"From my Secretary, Mr. C. E. Bernard, C.S.I., I have received valuable aid and counsel in every branch of the work, and I would represent his good service and his administrative ability for the favourable consideration of the Government of India."

We have great pleasure in bringing to your Lordship's notice the excellent service rendered by the gentlemen named. While doing so, however, we must not omit both to express our own acknowledgments for the very able and exhaustive minute which we have just passed under review, and to repeat our warm admiration of the inexhaustible energy, the untiring zeal, and the conspicuous ability which have enabled Sir Richard Temple himself to endure, without, we are glad to know, any personal detriment, the enormous physical labour and the exposure to climate which his mission has involved, and to accomplish, by his tact, firmness, and discrimination, the objects which that mission was designed to achieve.

27. We enclose a letter* which we have addressed to the Government of Bombay, briefly reviewing the condition of the Native States in that presidency affected by famine. These States are 18 in number, and the portions affected comprise an area of 9,708 square miles, and a population of 847,848. Some parts of these States have suffered severely, but on the whole we are glad to find that there has been in them no extreme distress, and that the Native Chiefs and the political officers have taken measures sufficient to meet the necessities of the case.

* No. 261.

28. With reference to the 2nd paragraph of your Lordship's Despatch of the 26th of April, we enclose copy† of the proceedings of the Madras Government regarding the Sangam, project, which would appear not to be yet ripe for execution. We also enclose a memorandum on the dynamic value of the task exacted from labourers on relief works, by Dr. Lyon, the Chemical Analyser at Bombay.

† No. 247.

29. We are glad to state that the prospects of the season are satisfactory, good rain having fallen in Bombay, Madras, and Mysore, and a fresh of upwards of four feet

having occurred in the Toombadra River. The numbers in receipt of relief were as follows according to the latest returns:—

In Madras	772,947	on relief works.
	412,461	charitably relieved.
In Bombay	376,920	on relief works.
	134,833	charitably relieved.
In Mysore	64,399	on relief works.
	108,482	charitably relieved.

We have, &c.
(Signed) LYTTON.

No. 263.

To his Excellency the Right Honourable the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

Revenue No. 46. India Office, London, 7th June 1877.

No. 221. Para. 1. The Despatch of your Excellency in Council dated 19th April, No. 21 of 1877, relative to the progress of the famine in the Madras Presidency, has been considered by me in Council.

2. The Despatch chiefly refers to the discussion on the question of the sufficiency of the scale of rations to labourers on relief works. On this point I have very recently been in telegraphic communication with your Excellency in Council, and you have stated that no restriction has been placed on the Government of Madras in relation to this matter, and that if that Government is satisfied that the present rate is unduly low, it would doubtless raise it. Under these circumstances, I have no further instructions to give on the subject.

3. The favourable opinion again recorded by Sir R. Temple on the progress of relief administration in Mysore is satisfactory; but some explanation seems necessary as to the remarkable disproportion of the gratuitously relieved to those who are employed on works in Mysore, as compared with both Madras and Bombay. This disproportion seems to be increasing every week, and I should be glad to be informed of the causes. With respect to the migration of inhabitants of Mysore to the adjoining districts in Madras, and the incidence of the charges incurred for their relief, the facts do not appear quite clear, but no orders are at present demanded on the subject.

4. I concur, in conclusion, with your Excellency's Government in regarding as satisfactory the prospect of the supply of grain to the ceded districts from the north, as detailed in Captain Bisset's memorandum of the 31st of March.

I have, &c.
(Signed) SALISBURY.

No. 264.

From the SECRETARY OF STATE to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

Revenue, No. 48. India Office, London, 14th June 1877.

No. 213. Para. 1. The Despatch of your Excellency in Council, dated 12th April, No. 20 of 1877, relative to the famine in the Presidencies of Madras and Bombay, has been considered by me in Council.

2. The intelligence contained in this Despatch has been in some degree anticipated by telegrams, and I have also, by the same mail, received another Despatch, of the 19th April, from your Lordship's Government, containing information of a later date. It will not, therefore, be necessary for me to notice at any length the topics to which allusion is made in the present communication.

3. I concur with your Excellency's Government in considering that the Government of Bombay is entitled to great credit for the firmness and care with which it has dealt generally with the famine, and especially with the organised combinations to oppose its orders as to the grant of relief.

4. The statement of Sir R. Temple, that in the Deccan districts of Bombay no abuse of State charity is allowed, no appreciable amount of Government money is wasted, and no demoralisation of the rural classes is going on, is very satisfactory.

I have, &c.
(Signed) SALISBURY.

No. 265.

From the SECRETARY OF STATE to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

Revenue, No. 49. India Office, London, June 14, 1877.

Para. 1. The Despatch of your Excellency in Council, dated 3rd May, No. 23 of 1877, on the subject of the famine in the Presidencies of Madras and Bombay, has been considered by me in Council. No. 245.

2. On the question of more effectually utilising the Public Works Department in the superintendence of relief works in the Madras Presidency, I do not propose at present to offer any remark. This subject has been alluded to by the Madras Government in a Despatch just received, and I am promised a more detailed communication on the question involved by an early mail. It would, therefore, be premature for me to enter on the discussion at the present juncture, and my abstaining from any remark now will enable me to receive a copy of your proposed Despatch to the Government of Madras, and a further expression of the views of that Government, before recording any opinion on the issue which has been raised.

3. With respect to the discussion between the Sanitary Commissioner at Madras and Sir R. Temple as to the rate of wages, I have addressed your Excellency by telegraph.

4. I fully concur in the estimate formed by your Lordship in Council, to which you have given public expression in the notification dated 30th April, of the valuable service rendered by Sir Richard Temple in the execution of the arduous duty connected with his recent mission to the distressed districts in the Presidencies of Madras and Bombay.

I have, &c.
(Signed) SALISBURY.

NOTE.—*This Return is a continuation of Part III., and contains letters of the Government of India subsequent to No.* 25 *of the* 4*th of June* 1877, *with their enclosures, and the Despatches of the Secretary of State in reply.*

The arrangement is chronological. It will be seen that the earlier correspondence herein contained is of prior date to some already published; this is explained by the marginal references. The documents in question form enclosures to letters which were not received when Part III. was prepared.

CORRESPONDENCE.

EXTRACT from the PROCEEDINGS of the GOVERNMENT OF BOMBAY in the Public Works Department (Local), No. 268 C. W.—1,038, dated 13th December 1876.

READ again—

Government Resolution No. 186 C. W.—827 of 15th November 1876, and Government Resolution No. 206 C. W.—869 of 21st November 1876.

RESOLUTION.—Looking to the large and increasing number of people who, at this early period, have sought, and are seeking, relief on works, it seems probable that these works are rendered too attractive, either by the rate of wages to be earned upon them, or because from want of efficient superintendence, or from other causes, a proper amount of labour is not exacted from the persons who resort to them.

2. It is not the desire or intention of Government to render these relief works attractive; they have been commenced on the scale on which they are in progress, not because the Government desire to carry them on to so large an extent, but in order that they may afford an opportunity of earning wages to persons who are without means, and cannot elsewhere (owing to the absence of agricultural employment) find the means of procuring money, to enable them to purchase sufficient food to preserve themselves from starvation.

3. Government are most desirous that these works should be carried on in such a manner that, without pressing too hardly upon the people, and without requiring from them an amount of work which would over-strain in any way their physical powers, there should still be required of the persons who come upon relief works, a fair return for the aid which Government is making great sacrifices to afford them.

4. Government, in short, do not propose to afford gratuitous relief to those who can work, but expect a fair return for the present drain upon the treasury, and are also most solicitous not to pauperise the people by supporting them in idleness, or comparative idleness.

5. First as regards the rate of wages—

In accordance with orders already issued, the rates have been fixed at 2 annas a man, $1\frac{1}{2}$ annas for a woman, and 1 anna for a boy or a girl old enough to be able to work, and a sliding scale has been authorsed, by which the rate of wages increases when the staple food-grain becomes dearer than 16 lbs. for a rupee.

6. Government have no desire to alter the principle of this arrangement, and, looking to the fact that in ordinary times a labourer can earn on works about 3 annas per diem, and to the prevailing price of food, the rates of wages fixed, though ample, are not excessive, and were intended to supply a reliable test of the need of the persons who accepted them. But Government consider that as the scale increases, as the price of grain rises above 16 lbs. for the rupee, so it should, to be consistent with the principle adopted, decrease when the price of grain falls much below that point.

7. In this view they are pleased to rule, that whenever the price of grain is not lower than 18 lbs. per rupee, the existing order shall remain in force; but in all cases when the price of grain is 18 lbs. or more for a rupee—

a man shall be paid at the rate of 1 anna + the value of $\frac{1}{2}$ a seer of 80 tolas, or 1 lb. of grain;

a woman shall be paid at the rate of $\frac{1}{2}$ an anna + the value of $\frac{1}{2}$ a seer of 80 tolas, or 1 lb. of grain; and

a boy or girl employed on the works shall be paid at the rate of the value of $\frac{1}{2}$ a seer of 80 tolas of grain; or, at the option of the directing officer, at the rate of $\frac{1}{2}$ an anna + the value of $\frac{1}{4}$ seer of 80 tolas, or $\frac{1}{2}$ a lb. of grain.

8. As regards superintendence—

Government fear that, in consequence of the sudden and great pressure that has come upon the District Officers, Civil and Public Works, they have not been able to arrange for efficient and trustworthy superintendence in sufficient quantity. The question is a most important one; unless there be a proper check and control, Government will not obtain the whole object they have in view; they may support the people who really require

assistance, and may also be led into providing for persons who do not need support. There will be no security that the State will receive a proper return for the large expenditure it is incurring, and the people will suffer in their morale.

9. Immediate reports, should be made by Civil and Public Works Department Officers on the superintendence available, and it should be shown how the existing establishments are composed, what further aid is actually needed, not only to meet present, but to satisfy probable prospective wants, and how much is required on each considerable work and in each district. Collectors should be reminded that, under existing orders, they are empowered to place the Mamlatdar of each affected taluka on special duty as a Relief Mamlatdar, and to appoint a temporary Mamlatdar in his place, also that a Relief District Deputy Collector has been allowed for each seriously affected district.

10. On receipt of the reports regarding establishment now called for, Government will endeavour to make the necessary arrangements; the kind of assistance that will, in all probability, be chiefly needed will be that of intelligent persons capable of making and recording simple measurements, and who are to be trusted to disburse payments to workpeople.

No. 2.

EXTRACTS from PROCEEDINGS of the GOVERNMENT OF MADRAS. 9th February 1877.

No. 245.—Read the following telegram from the Government of India, Department of Commerce, dated Calcutta, 26th January 1877:—

> Sir Richard Temple represents importance of not promising to the people remissions of land revenue, but only suspending the demand. We commend question to your notice in consultation with him.

Resolved that the following reply be despatched as a telegram:—

> No. 246.—" Yours 26th, about remissions of land revenue. Principle of assessment is a share of crop. Wet land, when crop is lost for want of water, receives remission by prescriptive custom. Dry land when crop is lost receives remission under special order of Board Revenue. To introduce now suspension where remission customary, would tend to check attempts at cultivation, which it is desirable to stimulate. Letter follows."

No. 247.—MINUTE by the Honourable SIR W. ROBINSON, K.C.S.I.

In dealing with this telegram we ought, I think, distinctly to state the broad principle of our land revenue demand under ryotwari settlement, viz., a right to a share of the crop of each field for the year in which it is grown, commuted into a money payment. No margin is allowed for extraordinary vicissitudes of season, and the demand is so heavy and searching that little room is left for the accumulation of agricultural capital to meet contingencies such as have overtaken the population. The proposal is, therefore, inconsistent with the principle of our settlement, and alike impolitic and impracticable in a season like this, when the crop has utterly failed, the cattle are perishing, and nothing remains to exact from the bulk of our poorer ryots in whose interest remission is being made.

The acreable demand on wet land is high throughout the presidency, averaging upwards of 5 rupees per acre. On dry land the demand is less, but averages upwards of 1 rupee per acre. The total is heavy, and in this presidency 30 millions pay about $4\frac{3}{4}$ millions sterling of land revenue; while 60 millions in Bengal pay, I understand, considerably less.

Under the principle of our settlement when the crop, whether wet or dry, is lost, there is nothing to share. The ryot has lost his labour, seed, and profits; the Government necessarily forego their demand against his unaided toil; thus remission, not postponement, is the unwritten and prescriptive law of the land when failure is so serious as to require abandonment of the State demand.

In the case of wet land, for which water—which Government is bound to supply—has failed, remission is absolute and of right. There is no crop to share, and the rent-charge is high, and water supply has not been maintained.

As regards dry land, the claim to remission is probably no less of right, but it is less completely conceded by Government, because the demand is, on the whole, lighter, and there is no guarantee in respect to needful water. Only when serious loss occurs in very bad years therefore, and under special orders, is remission for failure of dry crop

conceded—such a season as the one we are passing through now—and circumstances render remission unavoidable on dry land where crop has wholly failed.

On these grounds I entirely dissent from Sir Richard Temple's proposals, as contrary to the principle of a ryotwari settlement and customary immemorial law of the country, and as being specially unjust under the circumstances of the season and of agricultural population at this time.

A season like the present one must, irrespective of the loss of seed, labour, and profits necessarily incurred, and of debt already contracted, plunge the whole population in pecuniary difficulty of no ordinary magnitude for the maintenance of life; and still further pecuniary demand is before the agriculturists to enable them to resume their agricultural operations, and obtain seed and cattle. To keep a debt of a million sterling and more hanging over their heads in the shape of suspended taxations will prove most disastrous to the well-being of the country, and must postpone its future restoration. I do not believe that in the long run it would be found possible to recover the suspended demand, and plenary remission must prove the final necessity. Why, in the meantime, hold so injurious a demand *in terrorem* over the country? The policy now pressed upon us by Sir Richard Temple is the objectionable practice of native zamindars, which so burdens the serfs they make of their cultivators—a policy which we take every opportunity of deprecating and, as opportunity (Court of Wards) occurs, of abrogating. Nothing has been more strongly deprecated and discouraged by our administration than the accumulation of arrears and State debts against our ryots, and this is specially a time for adhering to this policy.

It may not be out of place here to call attention to the enormous drain on the means of our people for mere subsistence which is going on at this moment, and promises before the end of our distress to assume gigantic proportions. The imports of food-grain in the single port of Madras amounted, during the six months between July and December 1876, to Rs. 1,45,00,000, against an average for the same six months of the previous three years of about Rs. 9,50,000. The exports of agricultural produce have, of course, fallen off very greatly, in respect to some articles ceased, and this import of food is being met from the small savings of the people. They will have spent millions on foreign food ere the country recovers; and I ask from whence is this suspended demand to be met?

31st January 1877. (Signed) W. ROBINSON.

ORDER thereon by the GOVERNMENT OF MADRAS, dated 9th February 1877, No. 575.

No. 248.—Ordered that the following letter be despatched to the Government of India:—

No. 576, dated Fort St. George, the 9th February 1877.

From the Secretary to the Government of Madras, to the Additional Secretary to the Government of India.

Referring to the telegrams marginally noted, arising out of a representation to the Government of India by Sir Richard Temple on the subject of remissions of land revenue which are being made in respect of the present famine, I am directed by his Grace the Governor in Council to submit the following additional observations.

From Government of India, dated 26th January 1877.
To Government of India, dated 2nd February 1877.

2. During the existence of the heavy assessments which prevailed in this presidency down to the time of Lord Harris's Government, and before the introduction of the revenue settlement now in progress, and which has already taken effect in five districts, and in considerable portions of four others—remissions were large and numerous, administered under a complicated system, and forming part of the annual and ordinary jamábandi. Under the revised assessment, it was anticipated that the necessity for making them would cease, except under rare and special circumstances. A district once settled—the following are the sole rules on the subject, viz.:—

(1.) *Wet land.*—Full remission when the land is left waste, or the crop totally lost owing either to deficiency or excess of water.

(2.) *Dry land.*—None; except in very exceptional circumstances of distress, and under the express sanction of the Board of Revenue in each case.

In regard to unsettled districts, the second rule applies to them also; but to wet lands in unsettled districts partial loss of crops entitles the occupant to partial remissions; the additional concession in favour of unsettled districts in this respect being based on

t that the rates there are often high and unequal; and no allowance was made, g them, for vicissitudes of season.

... Taking the accounts of the fasli year ending 30th June 1875, it appears that the remissions under the first head came to Rs. 2,70,000 only, and were caused principally by disastrous floods in Nellore; and that those under the second head amounted to 1 lakh. Sundry small remissions of a miscellaneous character brought up the total to $4\frac{3}{4}$ lakhs, being about $\frac{3}{4}$ per cent. on the total assessment of ryotwari holding of Rs. 3,88,46,315. Such were the results of the system in an ordinary year.

4. With regard to the proposal to saddle the ryot with the sum that would now, under customary law, be remitted—the assessment on a crop which was never grown—as a debt to be paid by him in the following year—the Governor in Council is entirely opposed to the suggestion.

In the first place, as respects wet land, it is obvious that the Government is under an implied covenant to supply the necessary irrigation. In making the settlement, which proceeds in all cases on the basis of sharing the crop between the Government and the ryot, a certain allowance is made to the ryot for ordinary vicissitudes of season; and this being so, the full assessment is exacted even in bad years where the loss of crop is partial only; but where the water to be supplied fails altogether, the attempt at such exaction would be universally resisted as at variance with the bargain and a grave injustice.

2ndly. As regards dry lands, although, from the nature of the case, there is no similar implied covenant here, the objections to the policy of exacting the full assessment in a season like the present are manifold—

(*a.*) The Madras ryot is very heavily taxed; 5 rupees per acre for wet (single crop) and 1 rupee per acre for dry being his average assessment. Moreover, under other terminable settlements, the whole of the waste land is given up by Government for the term of thirty years—and under the zemindari settlement it is given up in perpetuity, in addition to the per-centage for the zemindar's commission. But in Madras, not only is every acre of waste liable to its full quota of tax, as soon as brought under cultivation, but there is no allowance whatever for fallow, or for land in a ryot's occupation which is *bonâ fide* set apart by him for the pasturage of his cattle. For instance, during the fasli year last reported on, as much as 2,134,110 acres with an average assessment of 15 annas, left waste by the ryots of this presidency out of their holdings chiefly for the purpose last mentioned, was fully charged against them, and fully collected.

(*b.*) Let the extent and nature of their holdings be considered. The number of leases is 2,392,064; of these 38,825 only are above 100 rupees, while upwards of one million and a quarter are below 10 rupees. The average extent of a holding is·8 acres, and the average assessment payable is 15 rupees, or thirty shillings sterling. How are two million peasant proprietors of this kind to pay sixty shillings apiece next year—after a season of unprecedented calamity, which, in addition to other sufferings and losses, has brought about already the destruction of a great portion of their cattle—and will cause the loss of many more? So far from supposing it possible to collect the assessment from the great body of impoverished ryots, the Government anticipate having to make considerable advances for the assistance of cultivators in the purchase of agricultural stock and seed grain.

(*c.*) It is, at all events, impossible to inaugurate any new system *per saltum* or without full and sufficient notice; and where such notice is given the ryot has at hand a procedure by which he can readily protect himself. By immemorial custom the Madras ryot is at liberty to readjust the extent of his holding within a certain day of each year, which day is selected with special reference to the monsoon on which his district principally depends for its rains. In Bellary, for instance, the south-west monsoon is looked for in the first week of June; and the ryot is allowed till the 15th of July to contract his holding. There can be no doubt that, if Bellary cultivators had foreseen that however bad the coming season, they would, sooner or later, be called upon to pay the full assessment on their holdings, those holdings would, in the vast majority of cases, have been contracted, and very many altogether relinquished. Nobody has anything to fear from competition, for his neighbours are as straitened as himself; and in this way the Government would be a far greater loser in direct collection of revenue than it is at present; would have many hundreds of thousands more on relief works; and would lose for the common good the produce of the cultivation which is still carried on. Many a reputable ryot, who is now digging a well and toiling on as best he may with the help of the village money-lender, would immediately fall into the utter destitution which characterises the great majority of his fellows; he will not try to help himself, if his possible failure is to be followed by the swift and inexorable demands of the State

for the full assessment of his land; nor would any sane money-lender advance him a loan in such circumstances.

5. His Grace in Council trusts that in the foregoing remarks he has demonstrated the utter impossibility in part, and the inexpediency in all, of attempting to vary the usual undertaking and custom by substituting, suddenly and without notice, suspension for remission of revenue in a specially disastrous season. He would, however, point in conclusion to the large figures yielded by the land revenue of Madras—the highest in any part of India—and to its annually steady increase. He believes that its management is thoroughly well in hand by those to whom the system pursued has long been familiar; and that the wholesale innovation proposed had nothing to recommend it, except that it would retain apparently to the credit of Government a claim which would never be realised. It is as incompatible, in his opinion, with justice to the ryot as with the prosperity of the general revenues of the presidency; not only the land revenue but that under every other head—Salt, Stamps, Abkari—rises or falls with the condition of the ryot, and of the vast agricultural and mercantile populations linked with his interests.

6. The people, it has been shown, can protect themselves by relinquishing their lands in bad years, and would certainly in self defence do so, if the unusual course proposed by Sir Richard Temple were adopted. Such action on the part of the ryots would be alike injurious to themselves and to the State; and his Grace the Governor in Council trusts that valid reasons have been advanced for making no change in the ordinary practice, which has always been observed in this presidency, of granting remission of the Government revenue on the occurrence of disastrous seasons.

7. A copy of this correspondence will be furnished for the information of the Secretary of State.

Revenue Department.

Proceedings of the Board of Revenue, Madras, dated 1st March 1877.

In separate proceedings the Board have passed orders on the recommendations of the several Collectors as to the remissions to be granted in the present season; but the amount of revenue at stake being, in the unfortunate circumstances of the present season, enormous, they deem it necessary to issue the following general instructions for the guidance of settling officers at the approaching Jamábandi.

2. The demands for remission in the current year will be so great that the Board fear that sufficient scrutiny of them will be very difficult. Great care will have to be exercised in checking the disposition of tahsildars and subordinate revenue officers to recommend wholesale remissions. Nunjah remissions should be dealt with strictly according to the remission rules. As to punjah remissions, none should be granted where one crop of any kind has been obtained, even though it be not the principal crop of the year. In the southern districts, especially, a large extent of land has yielded a crop, though possibly one below the average, under the early rains, and the prices commanded by agricultural produce are now so great that a single crop of the kind will enable the ryots to pay the assessment on their lands as easily as in ordinary years. Per-centage remissions for partial failure of crop have been sanctioned on the Collector's recommendations in some districts; but it is the Board's desire that the rates named should always be considered as maxima and not to be granted as a matter of course. The rates must be adjusted by the settling officers to the condition of the country and the circumstances necessitating indulgence to the people; and it must be remembered

that in settled districts a large reduction is already made to allow for vicissitudes of season. No remission should be granted when the crops have yielded 6 annas or upwards, *i.e.*, half or more than half of an average crop. The principle of dealing with claims with reference to whole villages, groups of villages, or tracts, must be carefully carried out. As regards *punjah waste*, care must be taken to exclude from remission lands usually left waste for pasture and other purposes which are known in some districts as mamool waste.

3. Collectors are requested to furnish to the Board, as soon as possible after the Jamábandi of each taluk is finished and in advance of the settlement report, a brief report showing the amount of remission for waste, shavi, and partial loss in dry and wet lands respectively in the taluk, with any remarks which the Collectors or settling officers may see fit to record; and to note in the reports, for comparison, the average remission granted in the three previous faslis. In these reports occasional remissions only should be given.

Telegram dated 18th March 1877.

From Sir R. Temple, Sholapore, to Revenue Additional Secretary, Calcutta.

The Madras Government were asked to decide question of remission of revenue after consulting with me. I have never been able to submit a proper opinion without seeing the papers. I should be obliged if the Madras Government were instructed to let me see the papers necessary for understanding the case. It is quite understood that the local Government is to decide question of remission or suspension at its discretion. Papers which I desire to see are Revenue Board orders on each district regarding remissions.

No. 8.

Extract from the Proceedings of the Government of India, Financial Department, No. 1,826, dated 28th March 1877.

Read—

A letter from the Government of Madras, No. 213, dated the 22nd January 1877, requesting that a special assignment of funds may be made to Provincial Services

for gaols to meet the extraordinary expenditure anticipated in 1877–78 owing to the high prices and distress prevailing in the Madras Presidency, and the consequent increase of crime.

RESOLUTION.—The Governor-General in Council observes that, as the provincial allotments are consolidated, no addition thereto can be made on the ground of the alleged insufficiency of any particular item used in the calculation upon which they were based.

2. When the Bengal famine occurred, the local Government was required to exhaust its entire resources, provincial and local, in contending against the calamity, and the same course should now be followed in the Madras and Bombay Presidencies.

3. To save the Government of Bengal from actual insolvency, such a contribution was eventually made from Imperial Revenues as left it after the famine with a net balance of five lakhs of rupees at credit of its Provincial Funds and the Local Funds at its disposal for provincial purposes together. His Excellency in Council will be prepared to treat the Governments of Madras and Bombay hereafter in the same way.

ORDERED,—that this Resolution be communicated to the Revenue Department, the Governments of Madras and Bombay, to the Accountants-General in those presidencies, and to the Comptroller-General, for information and guidance.

No. 351, dated Simla, 11th April 1877.

Telegram dated 8th April 1877.

From SIR RICHARD TEMPLE to VICEROY.

Mr. Hope's message of 23rd March told me Madras Government was instructed to furnish me copies of Revenue Board's orders regarding land revenue remissions; thereupon I asked repeatedly for those papers without obtaining either answer or papers; to-day I learn that Madras Government object to furnish papers, and are submitting letter to Government of India on subject; my object in asking for these papers is to master present state of question. I fully understand decision that local Government is to settle remission question, but I might press locally for economy within lines laid down by Madras Government, and I should be able to submit general question in shape for enunciation of rule for guidance in future famines. My time is drawing very short, I solicit that decision may be communicated by telegraph. If Government of India decides I shall have papers, a message might go to Madras accordingly. Unless telegraphic orders issue, I shall not have time to do anything. In either case I would solicit to be informed. The papers could be kept quite confidential for the present.

No. 10.

Encl. in No. 51.

Telegram dated 9th April 1877.

From VICEROY to GOVERNOR, Madras.

The Government of India learn from Temple that Madras Government object to furnish him with the papers referred to in our telegram of 21st March. The Government of India think it very desirable that Temple should be furnished with these papers in order that he may be enabled to state his views fully. There is no intention of interfering with the discretion of local Government regarding remissions on present occasion, but a full discussion of the subject may be useful for future famines. The discussion can be treated as confidential for the present if the Madras Government desire. It seems due to Temple that his request should be complied with, and we trust that your Grace's Government will waive this objection.

Encl. in No. 51.

No. 11.

No. 1,382, dated Fort St. George, 10th April 1877.

From the Officiating Chief Secretary to the Government of Madras to the Additional Secretary to the Government of India.

I am directed to reply to your telegram dated 21st ultimo. It communicates copy of a telegram received by you from Sir R. Temple, in which he states that this Government were asked to decide the question of remissions after consulting him; that in view to his understanding the question it is necessary for him to see all the orders that have been issued by the Madras Board of Revenue on each famine district; and he accordingly suggests that this Government may be instructed to supply him with such papers. The Government of India, you state, will be obliged by a compliance with Sir R. Temple's wishes.

2. Although Sir R. Temple does not mention it, it should be stated that when addressing you he had already received a communication from this Government declining to afford him the papers required, on the ground that the case was fully concluded by the terms of the Government of India Despatch to the Secretary of State, published at page 199 of the supplement to the "Gazette of India" of the current year; and to this opinion his Grace the Governor in Council continues to adhere.

3. It is desirable to trace the course which the correspondence on this question has taken.

It will be admitted that it was no part of Sir R. Temple's original commission, the objects of which are laid down in the Despatch marginally noted. It appears, however, that shortly after entering upon his duties in this presidency Sir R. Temple represented to the Government of India the importance of not promising to the people remissions of land revenue but only suspending the demand, and in their telegram to this Government, dated 26th January, the Government of India remark—"We commend question to your notice in consultation with Sir R. Temple." In reply the Government of Madras strongly deprecated the proposed reversal of policy, both by telegram* and by letter†. To the telegram the Government of India replied by a telegram dated 7th idem, viz. —"Your telegram of 2nd. The Government of India merely commend Sir. R. Temple's "suggestion to your consideration"—no longer it is observed in consultation with him—"but will not interfere with the discretion of the local Government in a question of "this kind;" and to the latter they replied by referring his Grace in Council to the answer conveyed in the telegram. When it is added that these communications were immediately followed up by the Despatch to the Secretary of State, already referred to as having been published in the "Gazette of India," in which, besides repeating their decision that the matter must be left to the discretion of this Government, the Government of India go much further and say—"We have now only to observe that the Madras Government have "shown good reasons for the opinions which they so strongly hold"—it is impossible to conceive a case in which further discussion is more inadmissible than the present one.

From Government of India to Secretary of State, No. 2, dated 12th January 1877.

* Dated 2nd February.
† Dated 9th February.

From Government of India, dated 17th February 1877, No. 201.

4. If after a decision deliberately passed in communication with the Government of Madras the Governor-General in Council thinks proper to reopen the question as regards future years, his Grace the Governor in Council will be prepared to discuss it again with the Government of India; but as regards the present year the case is absolutely concluded.

5. A copy of this letter will be submitted for the information of the Secretary of State.

No. 12.

Encl. in No. 51.

Telegram dated 17th April 1877.

From Sir R. Temple, Arcot, to Revenue Additional Secretary, Simla.

Having learnt from Viceroy that Madras Government were instructed to give me the land revenue remission papers, I asked for them. Madras has again declined to furnish them pending answer to their official reference. Unless they obey orders of Government of India to send papers now, there will be no time for me to make a report, but I can do so afterwards whenever papers received.

No. 13.

Encl. in No. 60.

No., 1914, dated Bombay Castle, the 17th April 1877.

From the Chief Secretary to the Government of Bombay to Secretary to the Government of India, Financial Department.

I am directed by his Excellency the Governor in Council to acknowledge the receipt of the Resolution of the Government of India, No. 1,826, dated 28th ultimo, regarding the appropriation of the Provincial and Local Funds towards the expenses incurred in consequence of the famine.

2. His Excellency the Governor in Council observes that the balance to the credit of the Provincial Funds at the close of 1876–77 amounts to Rs. 7,41,854, and if, out of that amount, the sum apparently contemplated by the Government of India, viz., Rs. 5,00,000, be reserved to meet Provincial and Local charges, the sum which will be hereafter available for the final settlement of famine advances will amount to Rs. 2,41,854.

3. It will at the same time be for consideration what proportion of the reserved balance of Rs. 5,00,000 must be assigned to those Local Committees whose funds will have been exhausted; but his Excellency in Council takes it for granted that no claim can be made on the Local Funds of districts in which no famine charges have been incurred, as he considers that such a proceeding will be altogether at variance with the spirit of the Local Funds Act.

4. His Excellency in Council feels it his duty to point out that by thus complying, when the time comes, with the present orders of the Government of India, the Provincial balance of the presidency will be reduced much below the amount which the Government of India have declared to be necessary, and that it has never been found practicable up to the present time to provide for the annual charges without drawing on the balance, although this Government have endeavoured to be as economical as possible. Provincial taxation appears therefore to be inevitable.

5. Looking, however, to the figures for 1877–78, I am to state that a large portion of the balance referred to in paragraph 2 has been appropriated towards the expenditure estimated for the current year, and the balance estimated to the credit of the Provincial Services at the end of the current year thus amounts to Rs. 5,62,555. His Excellency in Council does not think that any saving is possible, as this Government are not commencing a single new public work beyond the petty ones included in the Minor Works grant. Reserving, therefore, Rs. 5,00,000 out of this balance, the amount available towards the famine charges will amount to about Rs. 62,000.

No. 17.

No. CXVII.—Memorandum by Mr. C. E. Bernard, Secretary to Sir Richard Temple, regarding the Remissions of Land Revenue in consequence of the failure of Harvests in 1876, Nagpur, April 28, 1877.

One of the very first points which attracted the attention of Sir Richard Temple on his mission to the famine districts in January last, was the apparent disposition of revenue officers in Madras and Bombay to remit so much of the land revenue as could not fairly be collected this season from the ryots, who had lost their crops in consequence of the drought. It was understood that the higher revenue authorities of Madras and Bombay were opposed to the system of suspending (that is, postponing to future good years the collection of) any of the land revenue that the ryots could not be fairly called upon to pay this year.

2. In permanently settled Bengal it had been the almost unvarying rule not to remit or suspend any land revenue in consequence of vicissitudes of season. In provinces of the Bengal Presidency, where the land revenue was settled for a term of years only, such as Orissa, the North-West Provinces, and the Punjab, it had been usual to grant certain suspensions (postponements of the collection) of land revenue in the most affected tract. In subsequent years the greater part of the suspended demand was collected; but some small* part was remitted in extreme cases.

---

* It may be well to adduce figures in support of the statement that in other parts of India it is customary to grant remission of land revenue very sparingly even in cases of very great failure of the crops. For the earlier famines, the records are not very clear, but so far as I can ascertain the subjoined figures are correct:—

	Total land revenue remitted.	Total land revenue demand of the afflicted area.
North-West Provinces famine of 1803 -	30 lakhs (approximate)	156 lakhs.
North-West Provinces famine of 1837–38 -	90 lakhs	350 „
North-West Provinces and Punjab famine of 1860.	10 „	420 „
Bengal and Behar famine of 1866 - - (The figures for Orissa are not now accessible to me.)	0 „	240 „
North-West Provinces famine of 1869 -	2¼ lakhs	128 „
Central Provinces famine of 1869 - -	—	30 „
Behar and Bengal famine of 1874 - -	—	300 „

3. Sir Richard Temple drew the attention of the Government of India to this matter, and recommended that no remissions of land revenue should, for the present, be made or promised; but that the land revenue demand shonld be suspended whenever necessary; it being left for future decision how much of the suspended demand ought to be finally remitted, and how much might be properly collected from the ryots. The Government of India, after consulting the Governments of Madras and Bombay, decided that the matter should be left to the discretion of the local Governments.

4. In the exercise of this discretion the Bombay Government has arranged that its Collectors should distribute the land revenue arrears of the present year under the two heads of "to be remitted" and "to be suspended," hoping that, if the next two seasons are favourable, a part, at least, of the "suspended" revenue may be collected. It will probably turn out that less than 30 lakhs will be remitted out of a total land revenue demand of 115 lakhs in the distressed districts of Bombay.

5. The Madras Government, on the other hand, held that it was inexpedient to vary the usual custom, and to substitute suspension for remission of revenue in a disastrous season like that which has just passed. The Board of Revenue estimated that the remissions of land revenue, to be made on account of the recent failure of crops, would reach 143 lakhs of rupees (1,430,000*l.*). The total (ryotwari) land revenue of the twelve districts affected by the drought is 192 lakhs. No remissions are proposed for permanently settled (zemindari) estates, the land revenue on which is distinct from the ryotwari land revenue. But the Board, in reviewing the remission proposals submitted from each district, and in their circular order of the 1st March, have inculcated great care in granting remission. In some districts the Collectors have postponed the jamábandi (that is, the verification of holdings and apportionment of remissions) in case the May showers might restore hope and credit to the ryots; and perhaps the actual remissions finally made may fall short of the Board's estimate. Possibly the discussion which has taken place may help revenue authorities to be firm in realising as much of the Government dues as can fairly be collected.

6. But the question has an important bearing on the finance of future famines, and it would be well that it should be considered how far the practice of the Madras Government, in regard to remissions of revenue, should be held as a precedent for the guidance of revenue authorities in future famines.

7. Before considering the reasons for or against the decision taken by the Madras Government in the present case, it may be well to review very briefly some of the statistics of and the system of the Madras revenue administration.

8. The land revenue of Madras is derived from three distinct sources, namely:—

		Rs.
Permanently settled quit rent and zemindari estates paying about		69,00,000
Irrigated lands paying land revenue at "wet" rates, about -		1,70,00,000
Lands which are unirrigated, or are irrigated only from wells, paying at "dry" rates about - - - - -		1,69,00,000
Total - -		4,08,00,000
Add for the two unmeasured West Coast districts -	30,70,000	
Ditto miscellaneous land revenue items -	26,50,000	
		57,20,000
Grand Total - -		4,65,20,000
Deduct averarge remissions granted in ordinary years - -		12,00,000
Average land revenue of a good year for the Madras Presidency, or say 4½ millions sterling.		4,52,20,000

I do not lay much stress on the precedent set by permanently settled Bengal, where the land revenue bears a comparatively small proportion to the rental or the produce of the land. But the example of the North-West Provinces and the Punjab is surely to the purpose; for the land revenue there presses at least as hardly on the land as it does under present arrangements in Madras, and further, the profits of the land have in some cases to be divided among two or more sets of rightholders, instead of going straight into the pockets of the ryot (peasant proprietor) as they do in Madras.

It is noteworthy that, though in 1837–38 considerable remissions had to be given, yet the great improvement in the condition of the landed classes during the last 40 years has enabled them to make good from the surplus of favourable seasons the arrears of land revenue due on account of occasional years of drought and failure of harvest.

The figures in this note are taken from Geddes' "Famine Experiences" and from Girdlestone's "Past Famines of the N. W. P."

9. Over a part of the Madras Presidency (about nine districts out of the 21 which compose the presidency) the land revenue has been settled for 30 years. Under this settlement the land has been surveyed; holdings have been demarcated and mapped; the incidence of the land revenue has been made much more equable; the Government has engaged not to demand land revenue at the settlement rates only for 30 years. But the ryot (or peasant proprietor) has not bound himself to pay the revenue for 30 years; he can, even in the settled districts, throw up his land when he likes. In the districts to which the 30 years' settlement of the land revenue has not been extended, the ryots theoretically are liable to have their land revenue altered from year to year. But practically, they are just as secure as their brethren in the settled districts. They can and do sell or mortgage their holdings; and their title as peasant proprietor is almost as good as a ryot's title in the settled districts. The land revenue in parts of these districts used formerly to press unequally, and in some cases it was heavy and the people were poor. But during the last 15 years the position of the Madras ryot, even in the districts which are not settled for 30 years, has very greatly improved; the revenue rates are fair and equable; the high rates of Rs. 27 or Rs. 30 per acre have disappeared, and generally speaking the land revenue demand presses nearly as equally in the unsettled as in the settled districts.

10. In both the settled and the unsettled districts the land revenue on ryotwari lands is separated into—

(*a.*) The demand from "dry" or unirrigated lands;

(*b.*) The demand from "wet" or irrigated lands.

The demand on "wet" lands includes the revenue from the land, and also the rent for the water which Government supplies for irrigating the land. In two districts the land revenue is kept apart and distinct from the water-rent, but over the rest of the presidency the land revenue and water-rent are assessed together, and the one is not kept distinct from the other. Land which is fertilised by rain water only, or which is irrigated from wells, pays land revenue at "dry" rates. The concession whereby land irrigated from wells is assessed to land revenue at "dry" rates was granted about 15 years ago. Since then the number of irrigation wells has greatly increased; and in this respect the petty proprietors of Madras have a great advantage over their fellow subjects in most other parts of India, where land watered from wells is reckoned, and is assessed to land revenue, as "irrigated" land.

11. It was mentioned in paragraph 8 (above) that a certain proportion of the land revenue (averaging in good years about 12 lakhs of rupees per annum) is remitted on account of failure of harvest. There is some slight difference in the rules under which remissions of land revenue on "wet" lands are granted in the settled districts, as compared with the rules for districts where a 30 years' settlement of the land revenue rates has not been made. In districts of both classes the full land revenue is remitted on "wet" lands whereon the crop may have been totally lost owing to deficiency or excess of water. But in the settled districts no remission is granted for the partial loss of "wet" crops, whereas in districts where a long term settlement of the land revenue rates has not been made, partial remission is granted for partial failure of "wet" crops. The Madras revenue rules provide that on "dry" lands no remission of assessment shall be granted save "in very exceptional years and under very exceptional circumstances."

12. The manner in which remission of land revenue, when sanctioned, reaches the landholders of Madras differs from the practice of other parts of India. A certain percentage of remission (say 25 or 50 per cent. on the demand) is sanctioned for either the "dry" or the "wet" lands of a whole tract, and thereupon all the lands ("dry" or "wet" as the case may be) of that tract enjoy the sanctioned remission in full, quite irrespective of the excellent yield the ryots of that tract may have had in a year of high prices on their other lands, or by means of irrigation from wells. Obviously a ryot*

---

* It has been occasionally said that a Madras ryot does not ordinarily hold "wet" and "dry" land together, and that while one ryot's holding is all "wet," another's is all "dry." This may be the case in Bellary, where the "wet" lands are so very small, barely 6 per cent. of the cultivated area. But in other districts outside the river deltas it is, I am told, common for a ryot to hold some "wet" and some "dry" land, or to have a part of his "dry" land irrigated from wells. At any rate, I see that Mr. Dalyell, at paragraph 71 of his Famine Memoir of 1866, takes a representative Madras ryot as holding 6 acres of "dry" land and 2 acres of "wet" land, or 8 acres in all.

† It ought, perhaps, to be explained that "jamábandi" is the name given to certain operations conducted by a Madras Collector and his establishment every year. When the sowings are done, the village officers compile returns showing all the lands cultivated by each ryot. When the crops are reaped, additional entries are made to these returns, showing what crops may have failed, and why. The taluk revenue officials then test these papers, and report how much land ("wet" or "dry") each ryot has cultivated, and what land revenue he has paid and still has to pay. These returns are then tested on the spot by the Collector or his Assistants in the

with 2 acres of "wet" land and 4 acres of "dry" land may often have a bumper crop on his "dry" lands, while his "wet" crop is lost by reason of flood or from the bursting of the neighbouring tank. On the other hand his "wet" land may have yielded a capital crop, while his "dry" crop has failed by reason of the shortness of the early rain (south-west monsoon).

13. It is not necessary to explain here the reasons which have guided the Madras authorities in adopting this rule of practice. The existence of the rules is mentioned because it operates to make remissions, when granted, wider and more sweeping in Madras than in other parts of India.

14. As it has never been the practice in Madras to grant suspensions of the land revenue, so it follows that all the land revenue which is not remitted at the jamábandi† (attestations of holdings) of each year, is leviable and practically is collected immediately. Processes for the collection of the unremitted arrears issue at once, and, theoretically, the ryot has no opportunity to make the land revenue arrears of a bad year from the surplus profits of a good year. In other parts of India it is held to be fairer to the public treasury, and to be in some respects better for the landed classes, to suspend the greater part of the land revenue in a year for extreme drought, and to let the landholders make good the arrears from the surplus profits of future years.

NOTE.—*See* Mr. Muir's proposed sliding scale for suspensions, according to the severity of the drought, at pages 103, 104 of Girdlestone's "Past Famines."

15. The grounds on which it was held inexpedient to suspend instead of remitting such portion of the Madras land revenue as could not be fairly collected during the present famine year, were set forth in the Honourable Sir William Robinson's Minute of the 31st January, and in Mr. Secretary Carmichael's letter No. 576, dated the 9th February 1877. It does not appear that the Revenue Board have recorded an opinion on the matter. These reasons are, in brief,—

(1.) The Government is under an implied obligation to supply water for irrigating "wet" lands; and if Government fails so to supply the necessary water, it cannot demand, either now or in future years, any land revenue in respect of lands which by reason of failure of irrigation have yielded no crop.

(2.) The theory of the land revenue in Madras is that the State share the produce of the land with the ryot, though the State share has been commuted for a cash payment; and, if there be no produce on the land, then there is nothing for the State to share, and it must forego its land revenue.

(3.) The Madras ryot is heavily taxed, and he has ordinarily no accumulations or surplus wherefrom to make good the land revenue due for a year of extreme drought.

(4.) Most of the Madras ryots have very small holdings, and so they could not pay the arrears of one year out of the surplus of the next. Moreover, they could, and probably would, throw up their holdings if they were called upon to pay the arrears due on account of a year of drought.

16. In regard to the first point, namely, the implied contract in respect of "wet" lands, it seems fair that, if no water is supplied for irrigation, the share of the land revenue which is reckoned as water-rent should be remitted. But it does not necessarily follow that the share of the land revenue debitable to the land should also be remitted. In other parts of India the canal revenue is remitted on lands which the canal water may have failed to reach; but the land revenue on such lands is usually collected as a matter of course. For instance, the land revenue of the North-Western Provinces falls on the average at about $1\frac{3}{4}$ rupees per acre; while the canal revenue falls at an average of $3\frac{1}{8}$ rupees per acre. If the canal water fails, the canal rent is remitted; but the land revenue is payable and is generally paid all the same.

17. But it was in regard to the remission of land revenue due in respect of "dry" lands that Sir Richard Temple specially made representation. The remissions on the "wet" assessment will hardly reach 50 lakhs out of the total of 143 lakhs to be remitted

---

presence of the villagers interested. At the time of this attestation the Collector or his Assistants decides finally what remissions of revenue are to be given under the rules or under any special orders for the year; he hears all protests against the entries made in the papers, and decides such questions as may arise thereon. The questions so arising generally refer to ryots having cultivated lands to which they were not entitled; to ryots having encroached on their neighbours; to ryots having failed formally to surrender their lands; to the extent of loss suffered by failure of water in tanks or rivers. All this business has to be done in the fullest detail every year in every district, whether it has come under regular settlement or not.

under the Board's estimate. Happily the irrigation of the delta country in the Tanjore, Tinnevelly, South Arcot, Godavery, Kistna, and Nellore districts was little affected by the drought of the past year.

18. The second argument is, that the land revenue is merely the State share of the produce, and that when there is no produce, there can be no State share therein, and consequently no land revenue. Doubtless, the principle that the State is entitled to a share of the produce of the land, underlies the land revenue system of India as of other countries. But in Madras, as in other parts of India, affairs have passed beyond the primitive stage when Government officials stepped in after each harvest and carried off an appointed share of the produce of each field. The theory of the Madras settlement and the rules of the Madras Revenue Board do not altogether proceed upon the principle which has just been recited. The settlement officers deduct 20 per cent. from the estimated value of the average produce before they assess the money value of the State share in the produce; and the settlement rules set forth that this deduction is made to meet losses caused by vicissitudes of season. The Board's rules provide also that no remissions shall be granted on "wet" lands on account of partial failure of crops in settled districts; and that no remission at all shall be granted on account of failure of "dry" crops, save under very exceptional circumstances.

It appears then, that in Madras, as in other parts of India, the principle which underlies the land revenue system, is not ordinarily pushed to its logical conclusion; and, indeed, it would seem to be in practice but little observed. It appears questionable, therefore, whether this principle need in a famine year be held to bind the Government to remit all, or nearly all, its revenue on drought-stricken lands.

19. The next argument is, that the Madras ryot is heavily taxed, and that the heavy land revenue he has to pay leaves him in good years little margin wherewith to pay the arrears due for a year of failure. The severity or the lightness of any taxation is after all comparative; and all we can do is to compare the incidence of the land-tax in Madras with its incidence in other parts of India, and with the productive power of the land in Madras. The amalgamation of the water-rent with the land revenue into a single "wet" assessment rate, makes it somewhat difficult to compare the incidence of the Madras land revenue with other parts of India. Moreover, detailed statistics of Madras districts exist only for the ryotwari tracts; so that it is not possible to ascertain the incidence of the land revenue per acre for the whole presidency. The pressure of the land tax on a country or population must be gauged, not only by the rate per acre, but also by the rate per head of the population. For the margin of profit per acre to the farmer may be larger on the rich irrigated lands of Tinnevelly and Cuddapah paying Rs. 9 and Rs. 7 an acre, than on the light "dry" lands of Bellary, paying an average of 10 annas per acre. Similarly, the Gujarat ryot, who pays an average of Rs. $2\frac{1}{4}$ an acre land revenue, is a richer man than the Sholápur ryot, who pays on the average only 10 annas per acre. Matters in this respect are often nearly equalised by the much larger size of holdings in poor soils; for instance, an average ryot's holding is 24 acres in the Nágpur country, while it is 4 or 5 acres in the rich delta lands of Lower Bengal.

20. Figures for instituting a comparison between the incidence of the land-tax are available from published reports. According to these figures* the incidence of the land-tax in six temporarily settled provinces in the Empire may be compared thus:—

	Incidence of Land Revenue per acre of cultivated land.		Incidence of Land Tax per head of the Total Population.
	Rs.		Rs.
Madras, including water-rent	1·75	on Ryotwari lands only.	1·4
„ excluding water-rent	1·1		1·03
North-West Provinces, including water-rent	1·88		1·44
„ „ excluding water-rent	1·72		1·32
Oudh	1·8		1·3
Bombay (including Sind)	1·17		1·72
British Burmah	3·0		2·55
Punjab	1·38		1·14

* *See* appended note, which gives in detail the authorities for the figures offered in this paragraph. If the results here offered cause surprise, it is solicited that the authorities cited may be consulted before the deductions made in this paragraph are rejected.

21. It will be seen that even though the State has provided artificial irrigation for 4,000,000 of acres in Madras, as against 1,100,000 acres in the North-West Provinces, yet the incidence of the combined land-tax and water-rent in Madras is lighter than in the North-West Provinces. It is also lighter than the incidence of the land revenue proper in Oudh and Burmah, where the State has provided no irrigation whatever. If the water rent in Madras be taken at Rs. 3 per acre (somewhat less than the average charge* for canal water actually paid in the North-Western Provinces) then the land revenue of Madras would stand thus :—

	Rs.
Land revenue and water-rent - - - -	4,50,00,000
Deduct water-rent - - - - -	1,20,00,000
Balance, or land revenue proper - - -	3,30,00,000

And the incidence of the land-tax (proper) in Madras would be Rs. 1·03 per head of the population, that is to say, the land-tax would fall more lightly on the land and on the population of Madras, than it does on the land and population of the North-West Provinces, or of Oudh, or of Bombay, or of the Punjab, or of Burmah. The land-tax in Madras is heavier on the land and on the people than the land-tax of permanently settled Bengal on its land and people. But in this respect Bengal taxation must always compare unfavourably with that of the rest of India.

22. Then, as to the Madras ryot being poor and unable to pay the arrear land revenue of a bad year from the surplus profits of a good year. It certainly seems that the Madras ryot was poor, and the land-tax often pressed heavily and unequally upon him in the first half of the century. But some of the older Madras revenue officers who have been consulted say that the position of the Madras ryot has improved very greatly since those days. The revenue rates have been revised and equalised, and the crushing revenue rates of Rs. 27 and Rs. 33 an acre, which used to be demanded are now unknown. A ryot has now to pay at "dry" revenue rates for the land he irrigates from his wells. And there has during the last 20 years been an enormous rise in the prices of all agricultural produce, without any commensurate rise (indeed, without any considerable rise at all) in the land revenue rates. The total land revenue of Madras has, indeed, risen, but this is due to the spread† of cultivation and to the great extension of irrigation facilities, rather than to any enhancement of the land revenue rates.

23. The facts and arguments regarding the great improvement which has taken place in the condition of the Madras ryot are well put by Mr. Dalyell in his Famine Memoir of 1866. He shows that the money value of a ryot's crop was in 1866 nearly double what it was in 1856. And he states that, as one consequence of the great rise in agricultural profits, the area of ryotwari cultivation rose from 10 millions of acres in 1856 to 16 millions of acres in 1866. The best opinion seems to be that, compared with what he was 25 years ago, the Madras ryot is now a well-to-do, substantial, peasant proprietor.

24. Sir Richard Temple's tour in the Madras districts was short; but there were ample opportunities of inquiring from the revenue officers. The Collectors of Kurnool and Chingleput, alone of the Collectors, described their ryots as poor. It seemed to be the general opinion, that in other districts the ryots were in ordinary years well of, and enjoyed (for an Indian rural population) a high "standard of comfort." Nowhere in Madras were heard accounts of any general indebtedness and ruin of the ryots, such as are told, orally and in the reports, regarding the ryots of Sholapur, Poona, and part of Khandesh. Regarding the ordinary condition of the ryots of "dry" lands in Bellary, Kurnool, and Cuddapah, no estimate could be formed during a short tour in a time of famine. But no one who has seen the splendid cultivation of the delta country in Tinnevelly, South Arcot, Trichinopoly, and Tanjore, can regard the peasant proprietors of those tracts as heavily taxed, when they pay a combined land and water-rent of 5 to 8 rupees an acre for fields which yield two and three crops a year. Nowhere in India, save in the best parts of the delta districts of Eastern Bengal, can such rich cultivation as that which covers the irrigated lands in the delta districts of the Madras Presidency be seen.

---

* *See* paragraph V. of the note appended to his memorandum.

† NOTE.—*See* the facts as to increase of cultivation quoted from Mr. Dalyell's Memoir in the next paragraph.

25. Statistics regarding the selling price of land in Madras districts are not at present available; but it is understood that 400 rupees and 500 rupees an acre is no uncommon price for irrigated lands in the delta districts. The Madras Administration Report does not contain tables of the ordinary wages of labour. But, so far as could be ascertained, the daily wages of an adult unskilled labourer in Madras ranges from 3 annas to 4 annas; that is to say, 50 to 80 per cent. higher than in the North-West Provinces, the Punjab, or Behar. And it is reasonable to suppose that, where the wages of unskilled labour are high, the earnings of the classes above the common labourer must be fairly good.

26. There remains the argument as to the extreme smallness of so many ryotwari holdings in Madras. It may be taken that, under ordinary circumstance, a Madras ryot can maintain himself and his family on a holding of nine acres of "dry land," or on a holding of 4 acres of "wet" land. He would till his fields himself, and would spend very little on wages. His surplus profits per acre would be greater than in the case of a large holding of 25 to 30 acres, whereon hired labour was employed. And the proprietor of the small holding would be able to make good the small arrears on a bad year as easily as the proprietor of a large holding could pay the larger arrears due from him. In Madras there are a great number of petty ryots whose holdings range from 1 to 3 acres; and in ordinary cases such holdings do not suffice to support the ryot and his family, who probably work for hire during a part of the year. The liability to make good the arrears of a single bad year (3 or 4 rupees in all) would not press very hardly on such a ryot in a country where the wages of labour are high.

27. There remains the alleged risk that the ryots, if called on to pay the arrears of a former year, would throw up their holdings. In Northern India the land revenue settlement binds not only the Government but also the landholder for the term of its duration. But the Madras settlement, while it binds the Government not to demand more than the fixed revenue rate, permits the ryot to surrender his holding any year he chooses. But the land in Madras districts is, for the most part, a valuable possession; the land revenue is moderate; the soil is good; markets are near; means of communication are remarkably good. And it may very well be doubted whether any considerable number of ryots would throw up their lands because they were called upon to make good the arrears of a bad year from the surplus profits of two or three bumper crops. Wholesale surrender of lands does not occur in a Madras district when the full land revenue is collected, without any suspensions or postponements, in years of partial failure of crop.

28. The only occasion that can be recalled on which similar apprehensions were expressed was in 1866–67. In that year the Commissioner of Assam, acting under the orders of the Government of Bengal, raised the (previously very light) land revenue 70 per cent. all round. The Assam ryots held their lands direct from Government on yearly leases. It was predicted by some of the revenue officers that the sudden enhancement of the land revenue would cause the ryots to surrender their holdings. But the Commissioner of Assam knew that the lands of Assam were fertile, and could well bear an increased revenue; so he persevered. Many thousands of ryots thereupon resigned their holdings, but after they had filed their resignations in the Collectors' offices, they one and all returned home and tilled their lands just as before. So the enhanced revenue was paid, and the area of actual cultivation hardly decreased at all.

This Assam case is adduced to show that Indian ryots are not so short-sighted as to throw up good properties because the fiscal arrangements of Government impose on those holdings, temporarily or permanently, a moderate burden.

29. It is submitted that there is really nothing so special in the condition of the Madras ryot and his tenure as to make it expedient for the State to grant him remissions of land revenue under circumstances which entitle landholders in other parts of India to suspensions of land revenue instead of remissions. It was shown (para. 2 above) that the Government grants remissions of land revenue very sparingly indeed to landholders of Northern India, even in famine years. If the Madras ryot, however, gets his land revenue remitted in a famine year, and if the Imperial Government accepts the practice as correct, then it will be very difficult to refuse similar concessions to landholders and ryots of other provinces which may hereafter be afflicted by famine.

30. If all the costs of a famine, including losses of land revenue, are hereafter to be borne by the province concerned, then other provinces of the empire have less interest in the amount of land revenue remissions which may be granted in the famine-stricken districts of Madras. But if the loss caused by such remissions has to be made good from the general taxation of the empire, then the taxpayers and administrators of other

provinces have some claim to ask, either that the practice of Madras in this respect be re-considered, or else that similar concessions be made to them when they are afflicted by famine.

31. If it be said that the practice of postponing arrears of land revenue from one year to another is new to the Madras Presidency, then it might be replied that the practice of spending millions of public money on saving famine-striken populations, though its humanity and expedience are widely admitted, is to some extent new also. This advance of policy—an advance which no English or native administrator will regret—involves a vast expenditure of public money. And, therefore, in the interests of the public treasury, the Madras Presidency may reasonably assimilate its practice, in respect of remissions of land revenue, more nearly to the practice of other parts of India, and thereby secure the State against very large, but avoidable, loss of revenue in years of famine.

NOTE by MR. BERNARD to PARAGRAPH 20 of his MEMORANDUM regarding Land Revenue Remissions consequent on the Failure of Harvests in 1876.

It may be well to cite the authorities for the figures used in obtaining the results summarised at the end of paragraph 19 of the foregoing memorandum.

MADRAS.

2. The incidence of land revenue per acre is taken from the tables at pages 99, 101, 102 of the Administration Report for 1874–75. The total assessed area is given (pp. 101, 102) at 19,380,000 acres. The land revenue (inclusive of the water-rent) on these lands is put down at 329 lakhs. If to this be added the water-rent on ryotwari lands of the Krishna and Godavari, about 15 lakhs, we get a total land and water revenue of 344 lakhs on the ryotwari lands of the presidency. And this gives an average incidence of Rs. 1·75 per acre.

3. The total land revenue of the Madras Presidency is taken at 450 lakhs. In the Administration Report for 1874–75 the total land revenue is variably stated at 463* lakhs, 455 lakhs, and 442 lakhs. A land revenue of 450 lakhs on a total population of 32 millions gives an incidence of Rs. 1·4 per head.

4. It is not quite clear how much land is irrigated, or what is the total of the combined land and water-rent for the "wet" lands. The revenue chapter of the report (page 102) gives the "wet" lands at 3,500,000 acres, yielding a total revenue of 162 lakhs. The irrigation chapter (page 301) gives the irrigated area at 4,500,000 acres, yielding a total revenue of 192 lakhs. The irrigated zemindari lands paying 8½ lakhs (page 99) water-rent account for only a small part of the discrepancy. I have split the difference, and taken the irrigated area at 4,000,000 acres, on which the water-rent, at Rs. 3 per acre, would be 120 lakhs. The balance, 320 lakhs, being land revenue proper, falls on the total population at the rate of Rs. 1·03 per head. And the land revenue† proper, exclusive of the water-rent, falls on the ryotwari lands at the rate of Rs. 1·1 per acre.

† 167 lakhs on "dry" land, page 101.
57 lakhs, being 162 lakhs (page 102) less by Rs. 3 an acre for water-rent on 3,500,000 acres.
224 lakhs,—total land revenue proper on the area given.

NORTH-WEST PROVINCES.

5. The land revenue is taken (page 269 of the Administration Report for 1875–76) at 419 lakhs. But out of this total, 9 lakhs are (page 139) indirectly due to irrigation; so that the land revenue proper is only 410 lakhs. The water-rent, direct and indirect, is (page 139) 37½ lakhs. The area irrigated is (page 141) 1,188,000 acres; so that the water-rent falls at about Rs. 3⅛ per acre. The total cultivated revenue-paying area is (General Statement III. of the Census‡) 23,750,000 acres; and on this area the combined land and revenue rent (447½ lakhs) falls at the rate of Rs. 1·88 per acre, while the land revenue proper (410 lakhs) falls at the rate of Rs. 1·72. On a population of 31 millions the land and water-rent fall at the rate of Rs. 1·44, and the land revenue proper at the rate of Rs. 1·32 per head.

---

* These totals seem to include about 10 or 12 lakhs collected on behalf of village officers or others entitled to allowances. I have, however, made no deduction on this account.

‡ I have no access to more recent returns of cultivated areas.

Oudh.

6. The table of page xxxi of the Oudh Administration Report for 1875–76 gives the total land revenue at 148 lakhs; and the rate per acre of cultivated land under assessment, Rs. 1-12-11 (or Rs. 1·8). The population of Oudh is (page xxvi) 11,180,000. And on the population the land revenue (without any water-rent) falls at the rate of Rs. 1·3 per head.

Bombay.

7. If Sindh be included, then, according to the last Census Report, the area of cultivated land assessed to land revenue is 23,900,000 acres. The total land revenue in the Administration Report of 1875–76 is stated (page 202) at 369 lakhs, and also (page 226) at 339 lakhs. In the Census Report the land revenue is taken at 260 lakhs. The explanation of this discrepancy, perhaps, is that the Census Report gives the net land revenue, after deducting from the gross assessment "the allowances and assignments" made out of the gross land reveuue. These allowances are in most other parts of India paid direct by the villagers to the recipients, and do not pass through the public treasury. The total of "assignments, &c." is (page 203) 75½ lakhs, out of which about 63 lakhs are deductions from the land revenue. For the purposes of the present calculation the Bombay land revenue has been taken at 280 lakhs. This gives an incidence of Rs. 1·17 to the acre, and of Rs. 1·72 on the population of 16¼ millions.

British Burmah.

8. The Administration Report for 1873–74 gives (paragraph 334) the total territorial revenue,—that is to say, the land tax and the capitation tax—at 72 lakhs. The cultivated area is given in the same report at 2,400,000 acres; and the population by the last census 2,818,000. These figures give an incidence of Rs. 3 per acre and Rs. 2·55 per head of population.

Punjab.

9. The last census gave a population of 17,600,000. The Administration Report of 1875–76 gives the land revenue at 202 lakhs, of which 2 lakhs were tribute; so that the land revenue proper was 200 lakhs. The area of cultivated land under assessment is put at 14,400,000 acres. These figures give an incidence of Rs. 1·38 per acre and Rs. 1·14 per head of the population.

No. 19.

Memorandum by the Honourable E. W. Ravenscroft, C.S.I., Chief Secretary to Government, Bombay.

The subject of remissions of the land revenue in the Bombay Presidency was in an unsettled state until the 7th February 1877. On that day the Government of India telegraphed as follows:—

"Government of India do not desire to limit the discretion of local Government in matter of this kind, and will be satisfied if Collectors are again warned against too free remissions, and authorised to hold balances in suspense in cases in which it appears likely that the ryot will, without undue pressure, be able to pay up next season."

On the 13th February the Bombay Government, having fully considered the whole question, issued the following Resolution:—

"Copy of the Government of India telegram to be sent to the three Revenue Commissioners for information and guidance.

"2. In individual cases of remissions, Collectors will use the discretion which is entrusted to them by Government to dispose of such cases.

"3. Where general and large remissions are to be given, they will report the matter to Government through the respective Commissioners for final disposal."

Again, on the 21st February 1877, the following letter was written to the Revenue Commissioners :—

"I am desired by his Excellency the Governor in Council to draw your particular attention to the concluding portion of the telegram from the Government of India on the subject of remissions —

"'The Government of India will be satisfied if Collectors are again warned against too free remissions, and authorised to hold balances in suspense in cases in which it appears likely that the ryot will, without undue pressure, be able to pay up next season.'"

These orders show the exact conditions on which remissions and suspensions of land revenue are granted by the Bombay Government. The method of carrying out these orders is as follows :—The Assistant Collector in charge of each taluka makes a careful investigation of the state of the crops of his taluka. The charge of each officer not being very large, he is able to do this in an efficient and thorough manner. Having satisfied himself, by personal examination, as far as is possible, and where he cannot personally examine, on the reports of the native officials, he submits his proposals, both as regards remissions, and suspensions to the Collector of his district. The Collector of the district satisfies himself as to the propriety of the proposals ; and when satisfied, forwards them to the Revenue Commissioner of the division. This latter officer then submits the proposals as regards each taluka separately to Government; and final orders, after full investigation of all the papers, are passed by Government. By this means it appears that the orders of the Government of India are carried out according to their letter and spirit. Up to the present time the revenue settlements of many talukas have not been made. It is not therefore possible to say yet what proportion the remissions will bear to last year's collections, or to suspensions held over for collection till next year. To give however some idea on the subject, some of the talukas of the Collectorate of Ahmednagar may be quoted. In the taluka of Nagar the trifling sum of 3 annas has been remitted, whilst the sum of Rs. 36,102–5–2 has been held over for future collection. In the taluka of Jamkhed Rs. 28,532–8–1 have been remitted, and Rs. 7,137–2–3 held over for future collection. In Kopargaon Rs. 26,009 have been remitted, and Rs. 54,062 held over for future collection. These figures are all much lower than the original estimates; and I have no doubt that the remissions of land revenue will be considerably less than was at one time probable. I think 25 or 30 lakhs will cover all the remissions. After the fullest inquiry I feel convinced that the revenue officers, though most heavily worked with famine matters, are paying the closest attention to the very important subject of collecting the land revenue. They are loyally carrying out the wishes of Government, which, briefly, are to see that the State does not lose more than is actually necessary, but at the same time to see that the ryot is not unduly pressed. I believe also that the ryot fully recognises the liberality and equity of Government. He knows perfectly well that Government must collect that portion of its land revenue which the ryots *can* pay ; and he knows also now by experience that Government are willing to draw distinctions between different grades of want, and that in some cases it would be foolish to forego altogether what may be collected with care at a future time. If a hard and fast line had been drawn that *no* revenue was to be remitted, but that every farthing was to be collected in some future year, the ryot in many cases would have become utterly despondent or reckless. He now feels that his case is judged on its merits. If his misfortune has been so great, and his condition is so critical, that to compel him to pay this year's rent either now, or in the future, would ruin him, he knows he will be let off altogether. If without undue pressure, he can pay at some future time, he feels that he is not being called on to do anything that is unfair, and he willingly accepts the alternative.

The subject of collecting in future years the outstandings of this year will require much consideration; but this can be settled when all the Jamabundies are completed, and the full amount of remissions and suspensions is known. Statements are being daily corrected in the Secretariat, showing the exact amount of remissions and suspensions up to date; and these will enable Government, as soon as the famine is over, to learn exactly, without loss of time and in detail, how the very important subject of remitting or suspending the land revenue has been treated in the different collectorates of this presidency affected by famine.

No. 20.

No. 1669B., dated Fort St. George, 8th May 1877.

From the Additional Secretary to the Government of Madras to Mr. C. E. Buckland, Private Secretary to his Excellency Sir Richard Temple.

I am directed to acknowledge receipt of Mr. Bernard's letters, Nos. 197, 199, 202, 204, 206, and the Minutes by Sir Richard Temple to which they gave cover, and to state, with reference to Sir Richard Temple's suggestions regarding South Arcot, that while the Government are prepared to meet the question of the concentration of all able-bodied labour in the district on public works under the Public Works Department and of the relaxation of certain departmental orders, it is not possible to lay down any rule until the probable area over which distress is likely to extend is more accurately indicated, which cannot be the case until it is known whether rain has fallen in any of the taluks of the district.

2. With regard to Sir Richard Temple's suggestions relative to the conduct of public works in the North Arcot district, I am to state that his Grace in Council does not consider it is expedient to issue a general order that all able-bodied persons in need of relief should be drafted to the irrigation works, as much will depend on the locality or nature of the works in question and on the seat of distress from time to time.

3. In reply to the suggestions relative to the removal of paupers from relief camps, I am to state that the removal of small parties has already been carried out in various cases, but has not been very successful, the paupers having in some cases returned on foot long distances in order to gather round the visionary plenty of the presidency town, a proceeding which there was no legal means of preventing.

4. The suggestion contained in Mr. Bernard's letter, No. 204, must of necessity be adopted as the consequence of giving effect to the order of this Government quoted.

5. Sir Richard Temple's other suggestions will receive careful consideration.

Encl. in No. 79.

No. 21.

No. 431, dated 8th May 1877.

From Surgeon-Major W. R. Cornish, F.R.C.S., Sanitary Commissioner for Madras, to the Additional Secretary to the Government of Madras, Revenue Department.

I have the honour to acknowledge receipt of G.O. No. 1,630, of 3rd instant, and, with reference to the question therein raised, to submit the following remarks.

2. In my report dated 29th April, I mentioned that the Honourable Sir Richard Temple had, at Goondacul, on the 24th of April, picked out 41 men from a gang of 180, who from weakness and emaciation were obviously unfit for work, and whom he considered should be fed at a relief-house without work. Of these persons, so far as could be ascertained, only 12 had recently come on the works, the remainder having been present for two or more months. In addition to these 41, I noted 18 others who, in my opinion, were in very feeble condition. As, at a previous inspection on 23rd February 1877, Dr. Harvey, Sir Richard Temple's medical attendant, specially comments on the fine physique of the Goondacul gangs, the only inference I can draw from the fact is that, to quote Sir Richard Temple's own words, the men had been getting "thinner and thinner" and "weaker and weaker, till at last they have had to be drafted off to "gratuitous relief-camps as unfit to work."

3. I have, in former reports, commented on the great fluctuations which occur in the units of gangs on relief works. From a variety of causes the people met with at one inspection are not to be found at a subsequent inspection. For instance, Dr. van Someren, about two months ago, weighed 25 men, 25 women, 25 boys, and 25 girls (total 100) of the relief labourers at Palaveram, and at an inspection made conjointly with myself on Thursday, the 3rd instant, there were present of the 100 persons—

Men	12
Women	3
Boys	5
Girls	4
Total	24

that is, more than three-fourths of the individuals whose heights, ages, and weights were specially registered were not at the works two months subsequently.

4. Now the experience of the Palaveram works is the experience more or less of every relief work in the country. Of the people who come to work, some few remain permanently, but the great majority are constantly shifting from week to week and month to month. The weakly ones I imagine, from Mr. Howe's experience in the Bellary district, are turned out of the gangs by the maistries, or else give up in despair and wait quietly at home to die.

5. I am quite aware of the fact that in the several labour gangs are to be met many persons who have not been perceptibly reduced in flesh or strength, and their presence amongst the labourers, no doubt, tends to the support of the view that relief wage is, in itself, sufficient to keep a man in health and strength. According to my experience, these well-to-do looking people are mainly composed of two classes :—

(1.) Of small landholders and servants of ryots who have obviously other means of livelihood besides what they get from the Government relief.

(2.) Of the flesh-eating castes to whom the famine has brought an enormous supply of cheap and nourishing food, and who have been exceptionally well off during the period when cattle were dying, or being sold for a mere trifle to the lower castes who used animal food.

6. A very close and minute inspection of relief labourers in various parts of the country has satisfied me that it is chiefly the above classes who are in good physical condition; and I think it has been the presence of so many of the flesh-eating classes amongst the gangs that has tended to give wrong impressions regarding the actual condition of the people as a whole.

7. From the constant changes going on in the individuals of the several gangs on relief labour, it is clear that there is the greatest difficulty in tracing out the effects of wages on their health and strength; but the impressions of famine officers like Messrs. Price, Gribble, Oldham, Murray, Ferricks, and others, who have had daily opportunities of observations, cannot be lightly set aside, and I think there can be no reasonable doubt that of the vast number who go for a short time on relief works and then leave them, many do so from a conviction that the wage is insufficient for the maintenance of their health and strength, and that many of these gradually drift into a low condition and die in their homes, or ultimately come in great numbers on our gratuitous feeding camps.

In my report on Bellary I alluded to the case of a man who had been on relief works, but whose wife died of starvation, and afterwards two children died in the same way, the third child being in an hopeless state when I saw it, and the father himself so stricken that I doubt if he can survive.

8. Government are well aware of the rapid and enormous increase of gratuitous relief,—not for young children or old people only, but to those in the prime of life,—in all the distressed districts. This is a sure indication of increasing weakness and diminishing vitality amongst the labouring classes.

9. The death registration in the famine districts, as compared with that in districts which have not hitherto required special means of relief, tells the same tale. In the returns before me for the month of February 1877, the registered deaths in the eight famine districts as per margin were in the annual ratio of 81·3 per thousand of the population, while in the remaining districts of the presidency (with the exception of Tinnevelly and South Canara, the figures of which have not come to hand), the registered mortality was only 23·2 per thousand. The people, in fact, of the famine districts in the month of February were dying nearly four times as fast as in other parts of the presidency. Cholera and small-pox have been general throughout the presidency, but it is only in the famine tracts that this excessive mortality has been going on (the figures for the months of December and January are given in my letter and memorandum, No. 243, of the 6th April).

Madras.	Cuddapah.
Chingleput.	Bellary.
Nellore.	Kurnool.
North Arcot.	Salem.

10. It would seem, therefore, to be idle to dispute or question the fact of the connexion between the famine and mortality of the population. The connexion between the experimental famine wage and the mortality of the labourers is not so easy to trace, for the reason that the labour gangs fluctuate so violently as regards their *personnel* that we cannot trace out the history of the individual workers with the precision that is so desirable in an experiment like that of Sir Richard Temple's; and secondly, the destruction of life by chronic insufficiency of food is a very slow, though very certain process. It is easy enough to make assertions on either view of the case when proof is impracticable. The difficulty lies in following out the history of a sufficient number of

NOTE.—Bullocks, carrying from 70 to 100 lbs. of flesh, have been sold for 8 annas each during the famine

individuals. As regards those weakened by insufficient food, it seems quite obvious that the tendency would be to their elimination from the working gangs and to their joining the ranks of the sick and the diseased, which swells so largely the mortality bills of the famine districts.

11. But however this may be, I must again take my stand on the insufficiency of the famine wage to supply the food necessary for the physiological requirements of the body. The practical results show that the wages have been inadequate to keep the people steadily at work, and the increasing numbers of persons unfitted for work show that the famine relief has not met fully the necessities of the people in the way of keeping up their health and strength. That there are many able-bodied persons still remaining on relief works I very gladly admit; but I do not think that they have had to thank the famine wage for their present condition, while I am quite certain that in the case of those who have had no other means of support, or in those unable or unwilling to use the abnormal supply of cheap animal food, the effects have been and will be disastrous.

12. I infer from the present Minute by Sir Richard Temple, as well as from some of his earlier reports, that he supposes the rescue of persons who have fallen into a weak and emaciated state from prolonged ill-feeding to be a very simple matter, necessitating only care and the judicious use of nourishing food. But my own warnings to the Government have all along been distinct on this point, that chronic starvation is a disease practically beyond remedy, and that more good will result from keeping the population from falling into a low state than from any subsequent efforts to save life in the case of those whose vitality has been imperilled by insufficient food for a long period of time. If the famine has taught us anything at all, it has certainly shown us what a very dangerous condition chronic ill-feeding will bring the people to, and the extreme difficulty of remedying this condition by the most careful and humane system of treatment.

13. The great facts to be borne in mind in connexion with the system of relief works is the constant shifting of the units of the gangs, the general preponderance of women in the gangs, thereby showing that some of the able-bodied male population have other sources of employment and most probably of income also. The next two months will prove a very critical time for those who have still strength to work, and it seems to me that on grounds of public policy, it is highly important that work should be everywhere found for those who really need it for their maintenance, and that it would be safer to err on the side of liberality in this respect up to the time when the normal agricultural employments of the people are resumed.

14. I suppose no one has yet been able to frame anything like an estimate of the effects of the famine on the population, but, making due allowances for defective registration of mortality and for the inevitable mortality that must outlast the dearth of food, I have grounds for supposing that the population of the affected districts will be reduced in eighteen months' time by one-fifth or one-sixth of the number living before the scarcity commenced. This of course is an estimate only based on the current birth and death-rates, and the present generally enfeebled condition of the working classes in the affected districts.

Encl. in No. 51.

No. 22.

No. CXVI.—Minute by Sir Richard Temple, dated Bombay, May 9th, 1877.

In the remarks made towards the end of Part III. of my general report on the famine in the Madras Presidency, regarding the collection of the land revenue, it was stated that I might have to offer some further remarks on that subject, which is very important, involving, as it does, a proposed remission of land revenue to an amount of nearly one and a half million sterling (143 lakhs of rupees). Any such remission, if it is really conceded, must necessarily be a circumstance of much gravity. I accordingly submit a momorandum drawn up, at my request, by my Secretary, Mr. Bernard, of the principal arguments which, to my mind, affect this important question; also a memorandum by Mr. Ravenscroft, Chief Secretary to the Government of Bombay, of the orders given in the Bombay Presidency on the subject. If a reference be made to the Minute by Sir W. Robinson and the letter by Mr. Carmichael and the Board's circular of the 1st March, it will be seen that there is a considerable difference between the practice which is being pursued in Madras and in Bombay, and that the practice in Bombay will probably lead to a greater proportion of the land revenue being collected in that presidency than in Madras. There is in the Bombay Presidency, as I am informed, a much closer scrutiny than in the Madras Presidency into the circumstances of every ryot or payer of land-tax, on whose behalf remission of land revenue is claimed: the question

being in Bombay, not whether a man has lost so much of his crop or whether he would be entitled to remission according to an assumed rule of per-centage; but whether his circumstances admit of his paying the revenue which he had by settlement engaged to pay. My impression is, that in Madras many ryots are likely to obtain remissions, because a part of their crops failed, notwithstanding that the other part, which was saved, yielded them a good money return quite enabling them to pay their revenue. If this be so, it ought not, I submit, to happen. It certainly would not happen in the Bombay Presidency. The main point, however, is this, that in Bombay no land revenue is now remitted so long as there is any chance of its being collected. It is, indeed, suspended for the moment, if its immediate collection seems calculated to bear hard upon the ryot. Time is readily allowed to the man within which to pay. If the seasons become propitious, he will have the means of paying; if they continue unpropitious, the amount at first suspended may have in the end to be remitted. In Madras, on the other hand, there seemed to be at the outset a disposition to remit much of the land revenue as soon as the failure of crop had declared itself.

The orders by the Madras Revenue Board will lead to more, or to less, of remission, according as they are carried out with a disposition to make concessions or with strictness. If they be carried out with strictness,—that is, if the revenue officers be instructed to collect all that they fairly can within the lines laid down by the Board,—if, too, they be duly impressed with the serious consequences of an extensive remission of land revenue,—then I should hope that, if the coming season shall prove propitious, much revenue may yet be collected, and the amount actually remitted may ultimately prove much less than the first anticipation. There is time within which much may yet be done, as the remission inquiries are still going on, and as the matter will not be finally settled till July, or perhaps till August. If instructions in this sense were now to issue, much of the threatened loss of land revenue might yet be retrieved.

Orders in this sense have been previously given in the Bombay Presidency, and will be reiterated. The amount first estimated to be remitted was 78½ lakhs of rupees. The second estimate was 56 lakhs, but the best authorities now hope that the amount actually remitted will prove much less. The Government itself exercises supervision over this subject. The amount proposed to be remitted in every single village has to be reported to Government, and is not finally remitted till the orders of Government have been received. This practice does, doubtless, act as a check upon remission.

Whether the same practice prevails in Madras, I am not sure.

It must always be borne in mind that if the drought continues (and the latest accounts of the weather in Southern India are perhaps less favourable than the anticipation), then the remission in the Madras Presidency, as elsewhere, will become greater as the difficulty of collecting the land revenue increases.

Also, it is, perhaps, superfluous to repeat (what, indeed, has been stated in previous papers) that this question in the Madras Presidency refers only to the "dry" or unirrigated lands (including, however, lands irrigated from wells) and not to the "wet" lands irrigated from tanks or canals.

But my sojourn in the Madras Presidency impressed me with the view that greater pressure ought to be put upon the cultivators of the wet lands to cultivate these lands as "dry," or unirrigated lands, whenever the tank water or the canal water fails. It often happens in these lands that, although the water supply from the tank or the canal is withheld, and, consequently, the superior crops cannot be raised; still some crops, perhaps of an inferior sort, can be afterwards raised by digging temporary wells and other expedients. The existing revenue system seems to me to fail to apply an adequate stimulus to the cultivator in this respect.

If the tank water is withheld, full remission of land revenue follows as a matter of course; although for many years past, the cultivator has drawn a good profit from these fields. If, afterwards, a man chooses to grow "dry" or inferior crops on these lands, he will, indeed, be charged with land revenue. But if he neglects to do so, and lets his land be uncultivated, he is not charged at all; and thus he has not the stimulus which cultivators in other parts of India have, who know their liability to pay land-tax even if they neglect to cultivate. It might not be difficult to arrange the settlements so that the cultivators of wet lands should feel themselves obliged to do their utmost to raise "dry" crops on their lands in years when the tank water fails.

No. 23.

No. CXVIII.—Memorandum by Mr. C. Bernard, late Secretary to Sir Richard Temple.

Proceedings of the Madras and Bombay Revenue Authorities in regard to Remission of Land Revenue in 1876–77 up to the end of March 1877.

Nágpur, May 10, 1877.

In a memorandum dated the 28th April was offered some account of the general considerations affecting the question of remitting land revenue due from famine-stricken tracts. Copies of correspondence regarding revenue remissions in most of the affected districts of Madras have now been received.* The proceedings of the Bombay Government and its officers in respect of revenue remissions are also available, and Sir Richard Temple desires to submit this brief review of these papers, with his remarks, to the Government of India. This memorandum could not be prepared until after the close of Sir Richard Temple's mission to Madras, because the necessary papers were not received until the beginning of the month of May.

* Chief Secretary's letter dated 26th April 1877.

2. In case this review should be read without the previous memorandnm of the 28th April, it may be well to state very briefly some of the distinctive features of the Madras revenue system.

About one-fifth of the cultivated land of Madras is held by large proprietors (zemindars) on quit-rents, settled in perpetuity many years ago. The remaining four-fifths are held by petty proprietors (ryots), at land revenue rates liable to periodical revision. The land revenue of Madras is derived from three distinct sources, namely:—

		Rs.
Permanently settled, quit-rent, and zemindari estates paying about		69,00,000
Irrigated ryotwari lands, paying land revenue at "wet" rates, about		1,70,00,000
Ryotwari lands which are unirrigated, or are irrigated only from wells, paying at "dry" rates, about		1,69,00,000
Add—for the two West Coast districts	Rs. 30,70,000	
for miscellaneous land revenue	„ 26,50,000	
		57,20,000
Total		4,65,20,000

Over a part of the Madras Presidency (about nine districts out of 21) the land revenue has been settled for 30 years. At the settlement a deduction is made to meet losses from vicissitudes of season before the Government revenue is assessed on the land. In the settled districts, and also in the districts not yet settled, the land revenue is separated into—

(*a.*) The demand from "dry" lands;

(*b.*) The demand from "wet" land to which the State supplies water for irrigation; this demand includes both the revenue from the land and the rent of the water.

3. Every season the revenue authorities verify the land actually held by each individual ryot, surcharge any ryots who have cultivated extra lands, and grant remission of land revenue to certain of the ryots whose crops may have failed. This annual operation, which extends over some months, is called the "jamabandi." The rules under which remission of land revenue is permissible are, briefly, as follows:—

(1.) The land revenue is remitted in full on all "wet" lands, whereon the crop may have totally failed by reason of lack or excess of water.

(2.) In districts not yet settled, partial remission of land revenue is granted for lands whereon the crop may have partially failed from like causes.

(3.) No remission of land revenue is permissible in respect of "dry" lands, save in "very exceptional" years and very exceptional "seasons."

When "dry" remissions are necessary, the Collector reports to the Board what percentage of the land revenue ought in his judgment to be remitted on the "dry" lands in any specified tract or tracts of his districts. The Board passes orders on such report. Remissions are granted at "jamabandi" according to the rate sanctioned by the Board on all the "dry" lands of the specified tract, irrespective of the means of individual ryots, and irrespective of any good crops which such ryots have had on their "wet" lands, or which they may have secured by special effort, or by some chance on their "dry" lands.

Until the "jamabandi" of a tract or district is done, the financial results of the remissions sanctioned thereon cannot be known. Collectors and Sub-Collectors have full discretions to award more or less remission to any tract, and to treat any village or tract specially, so long as the limit of remission sanctioned by the Board is in no case exceeded. Thus very much latitude is, in this matter, left to district officers who are the constituted guardians both of the people and of the public revenue.

4. The ordinary rules were held to suffice for the requirements of the present season. No special orders were issued regarding remissions when the famine declared itself in December last, or when Sir Richard Temple, during January 1877, recommended caution in remitting land revenue. But on the 1st March the Board issued a circular, which will have an effect in restricting remissions at the "jamabandi" now being effected all over the Madras Presidency. A copy of that circular is appended;* its results should be advantageous to the public treasury. Its purport was that the disposition of Tahsildars† and subordinate Revenue officers to recommend wholesale remissions, should be checked; that remissions should not be given for "dry" lands whereon one moderate crop had been secured, even though that crop were not the principal crop of the year; that the per-centage of remissions sanctioned by the Board was in each case a maximum, and remissions should be kept below the maximum wherever possible; that no remission should be allowed for partial failure on lands which had yielded half an ordinary crop, for the money value of such a yield was large owing to the high prices prevailing.

* NOTE.—*See* Appendix A. The meaning of parts of that circular will perhaps be veiled by the use of vernacular terms peculiar to Madras. It may be well, therefore, to explain that—
Punjah lands are those assessed to land revenue at "dry" rates;
Nunjah lands are those assessed at "wet" rates;
Shavi lands are those on which the crop may have withered, by reason of drought, before harvest.

† NOTE.—The correspondence summarised in the following paragraph shows that revenue officers above the grades here described occasionally recommened "wholesale remissions."

5. The correspondence now forwarded regarding remissions may be summarised for each district, as follows:—

BELLARY.

The Collector reported that "wet" remissions would be granted under the rules; he asked general sanction to the grant of requisite "dry" remissions by officers making the "jamabandi." The Board granted (31st October) the general sanction asked. Nothing further passed on the question. No subsequent report seems to have been received from the Collector. The latitude of discretion given him by the Board will have been limited somewhat by their circular of 1st March.

KURNOOL.

The Collector proposed "full remissions of 'dry' assessment, as there was no doubt "that such crops had utterly failed throughout the district" * * * * Remission to be granted in cases of proved failure. The Board sanctioned (3rd January) the Collector's proposals for "cases of proved failure." They observed that on much "dry" land a crop must have been secured by means of irrigation from the canal and from wells. The Board's orders appear to Sir Richard Temple to be correct so far as they went. But the terms of the late Collector's proposal seem to be quite unguarded, and might, if acted upon, lead to an almost total relinquishment of the land revenue of the district, excepting the canal tracts. Such proposals, doubtless made at a time of alarm, indicate the need of supervision. It would have been more satisfactory if a subsequent report had been called for from the present Collector.

CUDDAPAH.

The Collector proposed full remission on all* "dry" lands not cultivated, and a per-centage remission of from two-thirds to three-fourths of the whole assessment for "dry" lands in villages whereon there had been partial failure of crop. The Board sanctioned (10th February) the Collector's proposals, but pointed out that a very moderate crop would give the ryot a good money yield at present prices. Here, again, the proposals made by the late Collector seem to Sir Richard Temple to be excessive and to amount to this—that under a settlement the ryot is to have all the profit of the good years and the Government all the loss of the bad years. Here, also, it would be well to look for the report, which will doubtless be prepared by the present Collector.

* NOTE.—It is not clear if this includes assessed pasture lands; *see* reference to these lands by the Kistna District Collector below.

Bellary, Kurnool, Cuddapah.

For each of these districts the Board sanctioned the remission of all demands on petty quit-rent (inam) holdings whereon no crop had been produced; and also suspension (*i.e.*, postponement till a better season) of the Government revenue on larger holdings of this class. The Madras Government disallowed (13th February) remission on any quit-rent (inam) holdings, but approved suspensions of the Government demand thereon in cases of extreme failure of crop. The orders of the Government of Madras seem to Sir Richard Temple to have been very necessary in this case. These holdings have been enjoyed for many good years on nominal assessments, and in a bad year the holders object to pay even this much, little as it is.

North Arcot.

The Collector asked sanction to the grant of liberal remission at "jamabandi" in certain tracts where drought had been worst. The Board agreed (13th January) to "dry" remissions being made in the specified taluks "to such extent as might seem urgently needed." The Collector subsequently (15th February) reported that he had instructed his officers to be sparing with remissions. Sir Richard Temple believes that the Collector did try to prevent excessive remissions being allowed.

South Arcot.

The Collector proposed a remission of one-third the assessment on "dry" lands (exclusive of pasture land) not brought under cultivation; and a remission of from half to three quarters the assessment on certain food crops that had failed. The Board sanctioned (13th February) remissions of one-third the assessment on "dry" waste,—nothing else,—as even a very moderate crop at the present time gives a considerable money yield. Sir Richard Temple sees great force in this remark. It would be well if this view were borne in mind oftener than it apparently is. The Collector again wrote asking for remission in cases of partial failure. But the Board adhered (10th March) to their previous order. Sir Richard Temple believes that these orders of the Board were right so far as they went.

Salem.

The Collector proposed 60 per cent. remission on the "dry" lands of three-quarters, and 40 per cent. remission on the "dry" lands of one quarter of his district. The Board were disposed (20th December) to grant "entire" remission in "villages where "the crop had entirely failed, and per-centage remissions according to circumstances "elsewhere."

The Collector wrote again, proposing 75 per cent. remission, where one-quarter of an ordinary crop had been secured; and 30 per cent. remission where two-thirds had been saved. The Board declined (3rd February) to accept the principle that remission of land revenue should be granted in the full ratio that the crop had failed; and pointed out that in other respects also the Collector's proposals went beyond the requirements of the case. The Collector sent further details, and recommended the remission of from 15 to 60 per cent. on the land revenue of tracts where there had been partial failure of the crop. The Board sanctioned (12th March) these proposals, subject to compliance with orders contained in the circular of the 1st March. These proposals of the Collector seem to Sir Richard Temple to have been extreme and calculated to involve undue sacrifice of revenue. They were very rightly checked by the Board.

Godavery.

The Collector proposed 50 per cent. remission on "dry" lands in certain villages where there had been entire failure of crop. The Board asked (2nd January) for further information. The Collector subsequently furnished information, and recommended remission at from 10 to 20 per cent. on the assessment in certain villages. The Board sanctioned (17th and 20th February) the proposals, but observed that inquiry into individual cases of failure was wrong.

Kistna.

The Collector reported that the yield on "dry" lands in his district had been, on the average, half an ordinary crop. He recommended remission of one-half the assessment on lands which had yielded less than one-fourth an ordinary crop, and a remission of one-quarter the assessment on land which had yielded less than one-half an ordinary

crop. He also recommended remission of the assessment on pasture lands. The Board sanctioned (3rd March) the Collector's proposals, but the Madras Government called for further report on the reasons for granting remission in respect of pasture lands.

Chingleput.

The Collector proposed full remission on "dry" lands yielding no crop; and percentage remissions for short crop on "dry" lands. The Board sanctioned (19th February) these proposals. This sanction will have been much qualified by the Board's subsequent orders of 1st March. Here again, however, it seems to Sir Richard Temple that the Collector's proposals are extreme, and amounted to an almost total sacrifice of land revenue. It is to be remembered that, on the one hand, this district has great advantages from its proximity to the capital, and on the other hand, that it was then suffering from a long-continued drought extending over more than one year.

Coimbatore.

The Collector proposed three-fourths remission on all "dry" lands left uncultivated on account of drought, and partial remission up to a maximum of one-half the assessment for partial failure. Such partial remission was, the Collector said, to be granted to whole tracts, and not to individual villages or holdings. The Board approved (16th January) the Collector's proposals. These proposals of the Collector seem to Sir Richard Temple to have gone considerably beyond the necessity of the case. They will have doubtless been subsequently modified under the Board's subsequent orders of the 1st March.

Trichinopoly.

The Collector asked leave to remit up to 50 per cent. of the "dry" assessment on specially bad tracts; he said that the rates of assessment in his district are low. The Board agreed (13th February) to the Collector's proposals, but observed that no remission should be given for lands whereon one crop had been raised. They further directed (12th March) that not more than half remission should be given in any case, and not more than 25 per cent. where one quarter of an ordinary crop had been secured. Looking to the condition of this district when he last visited it (April), and to its past history, Sir Richard Temple thinks that the Collector's proposals would have involved undue fiscal sacrifice. They were very properly checked by the Board. But the fact of their having been made shows the need of strict supervision by superior authority.

Tanjore.

The Collector proposed remissions up to 25 per cent. of the assessment on certain rain-watered lands. The Board agreed (22nd March), noting that the total remission would be only Rs. 12,350.

Madura.

The report on proposed remissions for Madura is in greater detail than for any other district, and it shows cause for the recommendations respecting each tract. The Board sanctioned (9th March) remissions on "dry" lands at from 25 per cent. to 100 per cent. on the assessment in different tracts, but directed attention to the requirements of their circular of 1st March. Full remission was proposed for only 26 villages.

Tinnevelly.

The Collector proposed "either to remit or to postpone" land revenue on "dry" lands, estimated at $4\frac{1}{2}$ lakhs; he estimated the "wet" remissions at $5\frac{1}{2}$ lakhs, and he recommended the suspension of $1\frac{1}{2}$ lakhs out of the revenue due from the zemindaris. The Board sanctioned "dry" remissions up to 40 per cent. in the settled taluks, and up to 70 per cent. in the taluks not yet settled. They directed that no remission should be given for "wet" lands in settled tracts, whereon even a partial crop had been secured. In regard to the suggestion for postponing part of the demand from ryots, and the proposal to postpone part of the zemindari revenue, it was said that the Board did "not "approve of the principle of postponement and of keeping demands hanging over the "heads of the ryots, and they did not think that sufficient reason had been shown for "extending grace to holders of permanently settled estates." Considering that Tinnevelly is a rich district and ordinarily enjoys good seasons, Sir Richard Temple thinks that it might have been expected to pay most of its land revenue, despite one drought, accord-

ing to the practice in other parts of India; and that the Collector's proposals were over-liberal. They were properly checked by the Board. But Sir Richard Temple would not admit the Board's objection to suspending the instalments due.

No papers have been forwarded regarding remissions in Nellore, Malabar, Ganjam, or Vizagapatam. Remissions are probably being granted in the Nellore district.

6. The correspondence, of which the above is an abstract, gives no materials for framing an estimate of the probable total of the remissions. But it is clear that the more recent orders issued by the Board of Revenue tend to restrict the land revenue remissions within narrower limits than the local revenue officers had proposed. But Sir Richard Temple remarks that in some districts, however, such as Bellary, Chingleput, and Kurnool, the discretion left with the local officers in regard to granting remissions at "jamábandi" is practically unlimited. If Collector, Sub-Collectors, or Head Assistant Collectors could scrutinise the remissions, holding by holding, or even village by village, then the interests of the public treasury would in most cases be safe. But such scrutiny is forbidden by the Board's rules; remissions are granted according to the average circumstances of tracts or groups of villages; the subordinate revenue officers supply the data, and initiate proposals for per-centage remissions on tracts; and when once the per-centage remissions for a tract is decided, the rest follows by an almost purely arithmetical rule of thumb.

7. The "jamábandi" is going on everywhere, and it must have been finished by this time in many taluks. If it be not too late, Sir Richard Temple would represent that it might be well that a member of the Board should consider in personal conference with each Collector the division of the district into tracts for remission purposes, and the per-centage to be granted to each tract. In other parts of India, the Revenue Commissioner would in this way scrutinise the Collector's operations. A perusal of the correspondence leaves an impression that the attention given to this important matter has varied in the different districts. *A full report like that for Madura shows that detailed information has been sifted, that the subject has been thought out, and that general proposals for per-centage remissions (whether their principle be right or wrong) have been framed after consideration of particulars. But it seems to Sir Richard Temple that general proposals for remission in full, such as were made and sanctioned for Bellary and Chingleput, leave a very wide scope for needless sacrifice of public revenue if further supervision be not exercised.

8. The papers regarding land revenue remissions in the Bombay Presidency may be summarised thus :—

"The Bombay Government decided (9th November) to deal separately with land revenue remissions proposed for each district. The Revenue Commissioner, Northern Division, proposed that the Collector and his revenue subordinates should at once settle for each drought-stricken village or group of villages the amount of remission to be given, and with the help of the village headmen should settle how much of each ryot's revenue should be collected, how much remitted, and how much postponed for collection during the next two years. The Government decided (15th and 29th November) that no remission whatever should be given in villages where half of an average crop had been secured. They reminded Collectors that assessments were fixed on an average of seasons; they said that remission should be given only to ryots of small means who could not pay without being ruined; and they directed that ryots, who might be able to realise good prices for their old stocks of grain and fodder, should get no remission, even though their crops had entirely failed."

The Government of India, in January, on Sir Richard Temple's recommendation, put the question which had been raised by the Revenue Commissioner, Northern Division, whether some part of the revenue which could not be collected this year without undue pressure on the ryots, might not be postponed for collection in future years. The Bombay Government considered that such postponements of the Government demand were contrary to the Bombay revenue system, and expressed a fear that many of the ryots were too poor to be able to pay arrears of land revenue out of the surplus of future years. On the 27th February, Bombay Collectors were "authorised to hold balances in suspense in "cases in which it appears likely that the ryot will, without undue pressure, be able to pay "up next season."

---

* NOTE.—The Board wrote (2nd April) that there was nothing to prevent Collectors adjusting the proportion of remission to a single village. But such detailed adjustment is contrary to the practice of Madras, and in the foregoing abstract it will be seen that the Godavery Collector was corrected by the Board for inquiring into individual cases (apparently individual villages); and the Coimbatore Collector's determination not to inquire into cases of individual villages was approved by the Board.

The settlement of the suspensions and remissions were not, when these papers were compiled, complete for any district. But the Commissioner of the Canarese districts reported (3rd February) that the land revenue was coming in; that even small ryots were paying out of the profits on the sale of their fodder or grain stocks; and he deprecated any stoppage of collections from those who were able to pay. Reports were received from the Násik and Ahmednagar districts, showing that in the—

Jamkhed taluka of Ahmednagar ... { Rs. 18,000 were remitted, Rs. 7,000 suspended, and Rs. 53,000 being collected.

Koparyaon taluk of Ahmednagar ... { Rs. 26,000 were remitted, Rs. 54,000 were suspended, and Rs. 1,06,000 being collected.

Karjat, "one of the most, if not the most, severely affected taluk in Ahmednagar," } Rs. 28,000 were remitted, Rs. 1,500 suspended, and Rs. 68,000 being collected.

In two different letters, forwarding statement of remissions for the Násik district, the Revenue Commissioner, Northern Division, wrote that "he would have preferred a much larger sum postponed and less remitted." Mr. L. Ashburner, for many years Collector of a part of the district, regarding which he thus writes, is one of the most experienced revenue officers in the Bombay Presidency; and it will be seen that he expresses a decided opinion that it is fitter, both for the people and the treasury, to postpone more of the revenue and to remit less, in a season like the present. Mr. E. P. Robertson, the Revenue Commissioner, Southern Division, an able and experienced officer, is also of the same opinion.

9. The present papers do not furnish any data for estimating what the total amount of the Bombay land revenue remissions will probably be. From the data given by the local officers in January last, Sir Richard Temple estimated the total remissions at 50 lakhs. A subsequent return received from the Bombay Revenue Secretariat put the estimated total remissions at 54 lakhs. But the revenue officers seem to think that the land revenue is coming in more easily than had been anticipated. And if the coming season be good, the total land revenue remission for the Bombay Presidency will perhaps not exceed 20 lakhs.

10. The difference between the systems pursued in the Bombay and Madras Presidency seems to be—

(*a.*) In Bombay, remission is granted to each ryot according to his circumstances; if he has savings from past years, he has to pay what is due on his fields, even though he may have no crop this year. In Madras remission is granted according to the average circumstances of each kind of crop over large tracts, without reference to the circumstances of each village or each ryot. The Madras system used formerly in this respect to be the same as the Bombay system. It was altered some 18 or 20 years back, for reasons which were, in the then condition of the country and of the subordinate revenue officials, considered sufficient. The Bombay plan is in accordance with the practice of landlords or revenue receivers elsewhere; it is more elastic for the people, and it is more advantageous for the public treasury. But it involves more labour and requires more honesty, on the part of village officers and revenue subordinates, than the Madras system.

(*b.*) The Bombay Government, acting on the advice of Sir Richard Temple, and in accordance with the opinion of some of its most experienced revenue officers, authorised Collectors "to hold balances of land revenue in suspense in cases in which it appears "likely that the ryot will, without undue pressure, be able to pay up next season." The Madras Government declined to postpone any of its land revenue demand, save in the case of certain permanently settled zemindaris. The decision was based on grounds which need not be discussed here.

11. The tenure on which a Bombay ryot holds his land is the same as a Madras ryot's tenure. A ryot of the Bombay Deccan (*i.e.*, Poona, Sholápur, and part of Admednagar) is reputed to be much poorer than his confrére in the Kanarese districts of the Southern Mahratta country; and my impression is that the ryots of Bellary, Cuddapah, and Kurnool are about as well off as the ryots of Dharwar and Kaládgi. In ordinary years there is much more irrigated land in the ceded districts than in any part of the Bombay Deccan. The Madras ryots of the delta and littoral districts are certainly better off than any Bombay ryots outside Gujarat.

No. 24.

No. 3,065, dated Bombay Castle, 12th May 1877.

From the Chief Secretary to the Government of Bombay to the Additional Secretary to the Government of India.

I am desired by the Honourable Sir R. Temple to forward, for the information of his Excellency the Viceroy in Council, the accompanying Minute recorded by him and other papers connected with remissions of revenue in the distressed districts.

2. Two spare copies are also forwarded.

Encl. in No. 37.

No. 25.

Dated Calcutta, the 16th May 1877.

From Dr. T. R. Lewis, Special Assistant to the Sanitary Commissioner with the Government of India, to the Officiating Sanitary Commissioner with the Government of India.

I have the honour to report, for the information of the Government, that in accordance with instructions received, I visited Bombay and made careful inquiries regarding the nature of the fever which has for some time been prevalent in that city. In carrying out these inquiries I received every possible assistance from Dr. W. G. Hunter, Acting Surgeon-General, from Dr. Vandyke Carter, Acting Principal of the Grant Medical College, and First Physician to the Jamsetjee Jejeebboy Hospital, and from Dr. Joint, the physician in charge of the Goculdass Hospital.

2. Opinions have been expressed that the fever is of an infectious nature; that it was originally produced by want; and that the disease presents the characters ascribed to the relapsing or famine fever of systematic writers.

3. In arriving at these conclusions it is probable that the very interesting fact of the detection by Dr. Vandyke Carter of peculiar organisms in the blood of several fever patients exercised considerable influence. These organisms, described as *spirilla*, were discovered by Obermeier about nine years ago in the blood of persons suffering from relapsing fever, and their presence has been, pretty generally, considered as pathognomic of the malady.

4. I examined repeatedly the blood of about 25 fever patients during my stay in Bombay, and was able to detect these spirilla in the blood of five; but with regard to the character of the fever from which these five persons suffered I could see no well-marked feature which would be sufficient to distinguish it from the class of fevers usually referred to as "remittent" in this country. In none of these five cases could it be said that their temperature charts clearly presented the characters ordinarily given as typical of relapsing fever.

5. It will be more convenient to consider the question of the relation which the spirilla in the blood may bear to the fever under consideration when similar examinations of the blood of fever patients will have been made in Calcutta and elsewhere, and after comparison with the results of my colleague's (Dr. D. D. Cunningham) inquiries in Madras.

6. With regard to the supposed infectious character of the fever, as it at present exists in Bombay, I can only say that I failed to convince myself that anything like sufficiently satisfactory evidence existed for any such inference; nor could I satisfy myself, so far as the patients at present in hospital were concerned, that any direct causitive relation existed between the fever and the famine. The fever patients seen by me had, nearly all of them, been resident in Bombay for more than six months—certainly in not one of the five cases in which I observed the spirillum could the origin of the fever been directly attributed to want.

7. As I understand that Surgeon-General Hunter will shortly submit a full report regarding the clinical and other features of this fever, it is not deemed necessary that any attempt should be made here to give more than a general outline of the salient points in connexion with it.

8. On a future occasion Dr. Cunningham and myself hope to be in a position to submit a detailed account of the more technical features of the inquiry—more especially as regards the diagnostic value of the presence of spirilla in the blood.

Encl. in No. 37.

EXTRACT from the Proceedings of the Government of Madras, Revenue Department, No. 1,830, dated 28th May 1877.

His Grace in Council finds from the reports of various officers that a strong dislike prevails amongst the distressed poor in villages to removal to the relief camps provided for their use at convenient centres. The Governor in Council, moreover, fears that the system now in force tends to induce and foster those wandering and unhomely habits amongst the distressed, which render the distress more difficult to detect and more costly to relieve; habits which it is on every account most desirable to discourage and check.

2. His Grace in Council, therefore, authorises all Collectors to make arrangements to relieve, in their respective villages, any distressed persons who are fit objects for transmission to a relief camp, but are reluctant to leave their homes, and to issue to them, so long as they need it, a continuous daily money-dole through the village officers instead of removing them to central camps.

3. The head of the village will be directed to enter the names and circumstances of all such persons in a register, and to relieve them at the rates herein-after provided, until the arrival of the village inspector. Each case will then be carefully inquired into by that officer; and if worthy of continued relief a ticket will be issued to the distressed person authorising him to receive from the village head the sanctioned daily money-dole. The name of the recipient, his number on the register, the date of his admission to relief, and the name of his village should be entered on the ticket. The dole should be issued daily not later than 8 a.m. The village inspector will be instructed to inspect each recipient on his first and subsequent visits, and to report any change for the worse or other casualty; to satisfy himself, on the one hand, that the dole has been properly and regularly paid, and on the other that no undeserving cases have been added to or allowed to remain on the register.

4. The inspector will be required to sign the register and the recipients' tickets on each visit. The inspector will also satisfy himself as to the current price of food grains, and report to the Collector any material change which he may ascertain, adding any remarks regarding the conduct of the payment arrangements which he may consider necessary.

5. His Grace in Council further authorises Collectors and officers in charge of relief-camps to arrange for the transmission to their homes of such inmates as desire to return to them, with their families, if they are in a fit state of health to proceed beyond the reach of the medical aid and special relief provided at the relief centres. The same provision may be extended to distressed persons seeking admission to camps and relief houses without requiring residence.

6. It will probably suffice, as respects villages within the same district, for the officer in charge of the camp or relief house to grant certificates, accompanied by sufficient food or batta for the road, addressed to the heads of the villages from which the inmates come, authorising them to enter the distressed persons in their lists, and to issue to them the daily money-dole on arrival in their respective villages. Notice should at the same time be sent to the Tahsildars of the taluks in which the villages are situated for transmission to the village inspector of the circles, whose duty it should be to visit forthwith any village to which any considerable number of distressed persons are so relegated, and satisfy himself of the propriety of their claims. When the number is small this inspection will take place in the ordinary course of the inspector's tour.

7. When persons belonging to adjacent districts have collected in relief camps and centres, and are desirous to return to their own districts and villages, and there receive the village money-dole, arrangements will be made, through the officials of the district in which are situated the villages to which the inmates wish to return, for their safe transit to their respective villages, the necessary batta for the journey being supplied by the officer in charge of the camp or centre.

8. His Grace the Governor in Council resolves to authorise officers to issue the money doles at not less than:—

Anna 1–2 for each adult, male or female; and
„ 0–6 for each child below 12 years of age.

These rates may require to be raised in case of any material change in price of food grain.

9. District and divisional officers are specially directed to watch the effect of this concession, and to state the results in their fortnightly narratives.

Encl. in No. 51.

No. 27.

Dated Bombay, the 28th May 1877.

From Mr. C. E. Buckland, Private Secretary to his Excellency the Governor of Bombay, to the Additional Secretary to the Government of India.

I am desired by his Excellency Sir R. Temple to forward the accompanying memorandum on the subject of remissions.

Encl. in No. 79.

No. 28.

Dated Madras, 30th May 1877.

From Surgeon-Major W. R. Cornish, F.R.C.S., Sanitary Commissioner for Madras, to the Additional Secretary to the Government of Madras, Revenue Department.

In the "Gazette of India" of the 19th instant, I observe a further communication from the Honourable Sir R. Temple, Bart., K.C.S.I., in regard to the sufficiency or otherwise of one pound of grain as the basis of wages for adults on famine relief works. The letter to which I refer (No. 340E. of the 10th May 1877) is accompanied by a "memorandum,"* drawn up by Surgeon-Major J. B. Lyon, F.C.S., Chemical Analyser to the Government of Bombay, and to which memorandum is appended numerous tables for the construction of dietaries for natives of India, according to the weights of individuals.

2. I would crave the permission of his Grace in Council briefly to state that, in my opinion, the data of Surgeon-Major Lyon's paper do not justify the conclusion which Sir Richard Temple has founded on it, viz., that "a ration based on a pound of grain is "sufficient for the sustenance of persons not performing severe labour." I cannot find any statement in Mr. Lyon's paper in which he expresses such an opinion in words, although a casual reader may perhaps draw some such conclusion from his figures.

3. In all the scales of diet drawn up by Surgeon-Major Lyon, he has proceeded on the assumption that "there is no theoretical objection to the proposition that the quantity "of food required by adults is proportionable to their weight, provided, of course always "that the quantity of work expected from them is likewise proportioned to their weight." This method of procedure is in my opinion extremely fallacious, and I shall briefly show why any scale of diet drawn up in furtherance of this view must be received with the greatest caution.

4. Surgeon-Major Lyon argues that a human being requires food in exact proportion to his weight, and he has furnished tables showing, according to this theory, the quantities of nitrogenous and carboniferous food necessary for the sustenance of persons weighing from 80 to 150 lbs., under the different conditions of hard labour, light labour, and complete rest.

5. If there was any relation between the weight of an individual and his capacity for assimilating food, and effecting work requiring expenditure of force, there might be some show of reason for laying down a principle that men require food in proportion to their weight. But we know, as a fact, that there is no such correspondence—that in a very considerable number of persons, the power to work diminishes as the body increases in weight, notably in those who, with increasing years, tend to develop fat instead of muscle.

6. The everyday experience of the most superficial observer must afford instances of persons of large appetite who never get fat, and of persons who are not large eaters who lay on an amount of flesh that becomes a serious burden and inconvenience to them, and with regard to these persons it is apparently seriously proposed by the chemical analyser to the Government of Bombay that they should be fed, the thin and the stout alike, in proportion to their weight. The mere statement of the proposition in this form is suffi-

---

* See "East India Famine Correspondence, Part III. p. 471."

cient to show that, without being hedged in by important qualifications, the theory cannot be applied in practical dietetics.*

7. The theory that work can be performed in proportion to weight is still more wide of the field of practical observation. According to this theory "the Claimant," who weighed 22 stones on going to jail, was then more fit to endure hard labour than he was six months after when he had lost one fourth of his weight; and athletes instead of striving to keep their weight down ought, according to this theory, to take means to lay on extra flesh. There is, in fact, no relation between the ability and capacity for labour and mere weight of body, as Mr. Lyon would seem to suggest.

8. There are so many things more important than weight of body, bearing on the necessity for food, that it is surprising to find a chemist in these days laying so much stress on weight as the principal factor in determining the quantities of food necessary for health and strength. One might think that questions connected with the idiosyncrasies of the individual, his age, race, temperament, habit of body, slowness or rapidity of vital changes, were to be set aside as of no value in comparison with a theory that the body needs sustenance in proportion to its bulk. I suppose Mr. Lyon would admit that a very different amount of nutriment is needed for a spare man of large frame, and without fat, and another of equal weight, but whose size depended on an abnormal deposition of fat in his tissues, yet this weight theory makes no distinction between the requirements of the two.

9. Mr. Lyon has taken 150 lbs. as the average weight of male Europeans and 105 lbs. as the average weight of natives of India. According to Sir R. Christison's experiments in Perthshire the average weight of Scotchmen was 140 lbs., and from some experimental measurements and weighings made of various castes by Dr. John Shortt in Madras some years ago, he found that the average weight of male adults of the fishermen, Boyas, and other labouring castes, was about 120 lbs., and of certain other castes from 114 to 118 lbs. It would seem, therefore, that as regards the classes of persons suffering from famine in this part of India, there is not that great difference in weight and bulk, of the people as a whole, which would justify a very marked reduction of food in comparison with European diets.

10. The argument in regard to food, and average weight and bulk of the body must not be pushed too far. With certain limitations it must be admitted as useful in the construction of dietaries, but after all, the facts of most importance are, (1) the habits of the people themselves in the choice of food, its nature and amount; and (2) the daily waste which the body suffers from vital changes. Observations on the former head are sufficiently accurate, but in India we have never had any scientific determination of the daily waste of the body under strictly defined conditions of diet and labour. The subject is so important that I hope some of our scientific officers, who have leisure and means of observation, will take it up, and let us know if there be any truth in Sir Richard Temple's surmise, that natives of India excrete less nitrogen in proportion to weight, food, and exercise than the European races do.

11. There can be no question as to the capacity of the labouring classes of India for hard work, provided they get food in amount and quality to satisfy their necessities,

---

* NOTE.—The physiological needs of men whose tendency it is to clothe themselves with flesh, and of those who remain thin and spare in spite of all the food they consume, are essentially different. The two types and their personal characteristics have been well defined by Shakespeare, who makes Julius Cæsar say to Mark Antony—

Cæs.—"Let me have men about me that are fat;
"Sleek headed men, and such as sleep o'nights.
"Yond Cassius has a lean and hungry look,
He thinks too much; such men are dangerous."
Ant.—Fear him not Cæsar, he's not dangerous!
* * * * *
Cæs.—"Would he were fatter! * *
I do not know the man I should avoid
So soon as that spare Cassius. He reads much;
He is a great observer, and he looks
Quite through the deeds of men: he loves no plays
As thou dost, Antony! he hears no music!
Seldom he smiles, and smiles in such a sort,
As if he mocked himself, and scorned his spirit
That could be moved to smile at any thing.
Such men as he be never at heart's ease,
Whiles they behold a greater than themselves,
And therefore are they very dangerous."

While our streets are lined with miserable scare-crows of humanity, who have scarcely vitality enough to drag themselves along, there may be seen on the Madras beach magnificent specimens of working men, whose strength and powers of endurance are not to be surpassed by the like qualities of any other class of people in the world.

12. A common task of four men is to take from the beach and load on a hand-cart 22 bags of rice, each bag weighing 164 lbs. This load they push or drag to the railway station distant more than two miles, unload, returning empty to the beach. Four or five trips of this kind go to an average day's work.

In carrying rice bags from the beach to merchants' warehouses, I find that an average cooly will take up a bag weighing 164 lbs., carry it from 60 to 100 yards over loose, heavy sand, and a further distance of 30 or 40 yards on good road, and up a flight of steps to a loft, and that he will manage 100 of these trips in a day.

13. Work of this nature, I need not observe, is not performed on famine wages even of the highest scale. A cooly engaged in carrying rice from the beach to warehouses, or from the beach to the railway station, can earn 1 rupee or even $1\frac{1}{4}$ rupee a day, and his diet includes a plentiful supply of meat or fish and ghee, in addition to his rice and curry. Those interested in the study of dynamics might work out the number of "foot tons" lifted or moved in the course of a day by the Madras beach coolies, and from this data estimate the amount of food necessary for the production of the requisite force, but practically we know that labour of this class can only be followed by those in full strength and health, and that it could not be accomplished without a liberal diet, such as men earning a rupee a day can well afford themselves.

14. I observe that Surgeon-Major Lyon bases his tables of diets on the experience of the Bombay house of correction, where it is stated that the prisoners on hard labour gained in weight on the average 1 lb. $10\frac{1}{4}$ ozs. each, while existing on the scale of food for labouring prisoners. I admit that the increase or decrease in weight of the people subjected to a dietary, with certain reservations and limitations, affords indications of value, regarding the sufficiency of the food, but the weight record alone is only a portion of the evidence necessary. Surgeon-Major Lyon says nothing about the sickness and mortality of the prisoners in the Bombay house of correction. It would be essential to know to what extent they suffered from bowel disorders, anœmia, scurvy, and other diseases of innutrition, as well as the general rate of mortality, before coming to the conclusion, that the hard-labour scale of diet was actually sufficient to keep the people in ordinary health. As regards the proposed diets for those on light labour and those doing nothing at all, there appears to be no practical evidence whatever to prove their sufficiency or insufficiency, and all that can be said of such scales is that they are based on a theory, which in some respects has been shown to be fallacious.

15. As a matter of fact and excluding all theory whatever, we have ascertained in certain Madras gaols, that where punishment by restrictions in food, so as to reduce the daily amount of nitrogen to much less than 200 grains, has been persevered in for any length of time, there has been loss of strength, loss of health, and sacrifice of life, and this knowledge would make me very sceptical as to the sufficiency of a "bare subsistence" diet, containing only 136·7 grains of nitrogen, such as Mr. Lyon now proposes. In his table of "Food Equivalents," published a few years ago, I observe that Mr. Lyon was more liberal in his views, for he there speaks of 200 grains of nitrogen, and 3,079 grains of carbon as "almost a starvation diet." Certainly, without the most cautious experimental tests, a dietary like the No. 3 scale of Mr. Lyon would never commend itself to those practically acquainted with the subject of the connection of food with vital force, and based as it is on mere theory, I think it is to be regretted that a subsistence ration, ranging in nitrogen from 104·2 to 195·3 grains according to the weight of the individual, was ever seriously put forward as a practical guide for those dealing with famine relief.

16. There is one other point requiring a cursory notice. Mr. Lyon proposes to eke out the deficient nitrogen of various cereal grains by the addition of pulse, so as to make the total nitrogen of the food equivalent to the needs of the body, as reckoned by the weight theory.

To take, for instance, the case of an obese native merchant accustomed to feed on rice, and sentenced to hard labour. His daily diet would be made up of 21 ounces of rice, and 9·55 ounces of gram or dhall. In all probability he would be unused to the latter food, and certainly, under no circumstances, could he digest and assimilate the nutriment contained in 9·55 ounces of that grain in the course of 24 hours. If he failed to digest the dhall the nitrogenous principles of it could in no way assist in the nutrition

of the body. In these proposed dietaries Mr. Lyon has, in fact, omitted the very necessary caution enjoined in his former paper on "Food Equivalents." "Regard should "always be paid to the relative proportions in which, by custom or habit, articles of "food are consumed by a population. This often indicates a limit of digestibility "which ought not to be greatly exceeded."

17. The present period of famine is presenting many opportunities for the study of those conditions of the body induced by privation of food. And the more this subject is considered, the more important does it become that we should follow only sound and true principles. in dealing with questions connected with the food of a community.

18. A careful study of the condition of the people who have been subjected to slow starvation, shows that there is a point in the downward progress of such cases from which there is no possible return to health and strength. Food of the most nutritious character, and in the greatest profusion, is then powerless to save life. Chemical theories as to the composition of food do not in the least help us to explain why people should die, with an abundance of nutritious food within reach, but if we carefully examine the bodies of those who have died of this form of starvation, we shall find that the delicate structures engaged in the assimilation of nutriment from food, have wasted (owing probably to insufficient use) and undergone degenerative changes, so as to unfit them for their peculiar office. It has been my painful duty to observe, not one or two, but many thousands of such cases, within the last few months, and I need not say that the contemplation of the causes leading to these slow, but almost certainly fatal, changes in the assimilative structures of the human body, lead me to look with very grave suspicion upon all proposals for "bare subsistence" dietaries; and especially when such proposals are known to be out of harmony with the natural habits and customs of the people to whom they are proposed to be applied.

19. This is not the time, nor the occasion, to review the practical effects of Sir Richard Temple's experiment in reducing the famine-wages of the people to the basis of 1 lb. of grain, but this much may be stated, that the recent experience of nearly every famine officer who has observed the practical effects of the reduced wages has led him to believe, and publicly record his opinion, that the subsistence scale of wages was perilously low. While as regards our destitute poor in relief camps we have had too abundant evidence of the fact, that a more liberal scale of food than that purchasable for a famine relief wage is inadequate to restore health, or to arrest decay.

No. 29.

Encl. in No. 79.

Dated Bombay, the 1st June 1877.

From Surgeon-Major W. Dymock to the Editor of the Bombay Gazette.

As there has been a good deal of discussion lately upon the amount of aliment required for a bare subsistence diet, perhaps some of your readers may be interested by a short account of the experiences of the French during the siege of Paris. The observations made at that time concerning the effect of a reduced dietary upon the Mobiles serving in the trenches are particularly valuable, as the men were all under complete control both as regards their official rations and the extras they were allowed to purchase. The following particulars are gathered from Armand Gautres's valuable work on chemistry as applied to physiology, pathology, and hygiene. After mentioning that for people leading a sedentary life 0·2 grammes of nitrogen and 4·202 of carbon per kilogram of body weight daily, have generally been accepted as a sufficient allowance for the maintenance of a perfect state of health, he says that the average weight of the Mobiles was 63 kilos (138 lbs. 12¾ oz.), and that these men being employed upon severe duties in the trenches during winter months, and receiving only 12·5 grammes of nitrogen and 263 of carbon per diem preserved generally a good state of health. Upon this he remarks, that the generally accepted bare subsistence ration would appear to be a little too liberal.

As the nature of the aliments used is a matter of importance, the diet table of the Mobiles is particularly valuable as a standard of a liberal bare subsistence ration in a temperate climate.

Diet Table.

They received daily.	Weight of food.	Dry protein matters.	Hydrates of carbon.	Fatty matters.
Fresh meat (if preserved, 100 grammes)	175	33·25	—	3·15
Rice or beans	80	5·14	62·04	0·34
Bread	250	18·75	132·70	0·75
Biscuits	250	22·49	159·20	2·09
Coffee ration	30	3·30	12·50	—
„ purchased	25			
Sugar ration	20	—	40·	—
„ purchased	20			
Wine	125	—	—	1·25
Brandy	75	—	—	0·30
Grammes	—	82·93	406·44	49·83

From this table we may draw the following conclusions :—

Proportion of nitrogenous substances to hydrates of carbon and fatty matters.

:: 1 : 4·9 : 0·6

Quantity of nitrogen supplied in 24 hours, 12·5 grammes.

Quantity of carbon { Protein matters 44 grammes; Hydrates of carbon 181 „; Fat 38 „ } Total 263 grammes.

In order to adapt this dietary to natives of India, we should omit all or part of the meat, insert dâl for rice or beans, increase the bread, omit coffee, wine, and brandy, and insert oil and condiments.

Encl. in No. 103.

No. 30.

IMPORTS OF GRAIN INTO THE PRESIDENCY OF MADRAS, AND ITS TRANSPORT BY THE MADRAS RAILWAY.

Proceedings of the Madras Board of Revenue, dated 1st June 1877.

The additions to the food-stocks of the presidency by importations by sea from places beyond the presidency between 1st May 1876 and 30th April 1877, were as shown below :—

Months.	Imports.	Exports.	Net additions to the food-stocks.
	Tons.	Tons.	Tons.
May 1876	16,967	9,045	+ 7,922
June „	12,283	13,695	— 1,412
July „	3,908	11,134	— 7,226
August „	3,795	11,118	— 7,323
September „	6,109	7,920	— 1,811
October „	10,830	9,740	+ 1,090
November „	34,746	5,879	+ 28,867
December „	52,311	1,872	+ 50,439
January 1877	99,923	2,992	+ 96,931
February „	86,818	4,739	+ 82,079
March „	87,422	5,728	+ 81,694
April „	93,379	3,438	+ 89,941
Total	508,491	87,300	+ 421,191
1875–76	73,394	142,063	— 68,669

2. The imports are chiefly from Bengal and the exports to Ceylon. The following statement shows the places whence the imports were received :—

	Tons.
Bengal - - - - - -	354,823
Bombay - - - - - -	68,712
British Burmah - - - - -	63,170
Scinde - - - - - -	7,022
Foreign ports in other presidency - - -	6,363
Ditto beyond India - - -	8,401
	508,491

3. The information available in regard to the imports by land is not complete. There is no record of the cart traffic, and the records available do not show the imports by rail prior to August 1876. The grain-trade by land, however, from and to places beyond the presidency is, the Board believe, ordinarily so very small that the railway exports and imports from August, which are shown below, may be regarded as the trade for the entire period from April 1876 :—

Months.		Imports.		Exports to the Mysore Country.	Net additions.
		From G. I. P. Railway.	From the Mysore Country.		
		Tons.	Tons.	Tons.	Tons.
August	1876 - - -	4,039	157	3,049	+ 1,147
September	„ - - -	5,163	79	6,173	— 931
October	„ - - -	4,921	101	14,485	— 9,463
November	„ - - -	7,951	282	10,194	— 1,961
December	„ - - -	12,281	248	11,515	+ 1,014
January	1877 - - -	7,872	79	12,072	— 4,121
February	„ - - -	10,665	118	9,220	+ 1,563
March	„ - - -	8,226	—	15,484	— 7,258
April	„ - - -	9,583	—	14,909	— 5,326
	Total - -	70,701	1,064	97,101	— 25,336

4. Thus the total *net* imports from places beyond this presidency from 1st May 1876 to 30th April 1877 is 395,855* tons.

*	Tons.
By sea -	+ 421,191
By land	— 25,336
Difference -	395,855

5. As regards the additions to the food stocks in the distressed districts, the only information available relates to the imports by sea and the traffic on the Madras Railway. The returns for the South Indian Railway are not complete, being for quarters and extending to December 1876 only; and even for the Madras Railway the Board have been able to obtain returns only from August 1876. The Consulting Engineer has been requested to furnish the necessary information for earlier months of 1876, and it will be submitted when received. Meanwhile, the Board think it will be useful to submit the information available, though it is incomplete.

6. The accompanying statements show (1) the imports and exports by sea into and from each district and for each month from 1st April 1876 to 30th April 1877, and the net result for each district. (2.) Ditto by the Madras rail from 1st August 1876 to 30th April 1877, and the net result for each district. The total of the figures now given to 31st March do not agree with Captain Bisset's statements, Nos. II. and III., partly, it is believed, because his statements do not include traffic from Malabar (except Beypore), Mysore, Cuddapah, Beliary, and Kurnool, which is of small amount; and partly because, either from misprints or arithmetical error, the cross and vertical totals in the statements do not agree. The Board have followed his No. I. statement for the March traffic. The Madras Railway returns are also imperfect; in that they do not show traffic from that line to the South Indian Railway. (3.) Ditto by the South Indian rail for the quarters ending June, September, and December 1876, and for April 1877 and the net result for each district.

7. From these statements it will be seen that the net additions to the food stocks in the distressed districts, by sea and by the Madras rail from 1st August 1876 to 30th April 1877, were in tons as shown below:—

Months.	Kistna.	Nellore.	Cuddapah.	Bellary and Kurnool.	Madras and Chingleput.	North Arcot.	South Arcot.	Madura.	Tinnevelly.	Coimbatore.	Salem.	Total.
1876.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
August - -	− 7,296	− 1,135	+ 703	+ 2,942	+ 11,307	− 1,008	− 793	− 116	+ 1,891	+ 1,561	+ 103	+ 8,159

The traffic by the South Indian Railway up to December was not, in its net result, of very great importance, and the figures are entirely omitted above.

It will be noticed that the Kistna has been a supplying district, and the extent to which this has been the case is far greater than is represented by the figures above given, as very large quantities passed from the district by land into Nellore and Kurnool. In August and September Nellore was still exporting by sea, but this ceased, and after the two months of October and November, when native vessels could not ply, imports by sea set in. Large quantities have also been sent from Madras to Nellore by road and canal. The North and South Arcot, Madura, and Coimbatore districts were also in the earlier months exporting districts. The imports by rail into Cuddapah, Bellary, and Kurnool were highest in December. In the first-named district they have been falling since March, perhaps owing to harvesting of spring crops under wells; while in Bellary and Kurnool they fell in January and February, and have been since rising. The high prices in December may have, to some extent, brought out local stocks. It is probable that much of the South Arcot imports have passed on into Salem.

8. The food-stocks received in the distressed districts were supplied chiefly from Madras from the imports from Bengal and the northern parts of this presidency. The imports and exports into and from Madras in each of the months from August 1876 are detailed below:—

——	Imports.	Exports.	Difference or quantity retained for consumption.
	Tons.	Tons.	Tons.
August 1876 - -	14,606	3,299	+ 11,307
September „ - -	10,315	6,712	+ 3,603
October „ - -	19,048	11,073	+ 7,975
November „ - -	40,052	13,208	+ 26,844
December „ - -	56,251	30,754	+ 25,497
January 1877 - -	76,168	27,620	+ 48,548
February „ - -	69,200	20,305	+ 48,895
March „ - -	48,469	36,676	+ 11,793
April „ - -	41,824	34,137	+ 7,687
TOTAL - -	375,933	183,784	+192,149
Particulars—			
By sea - - -	374,002	5,494	+368,508
By rail - - -	1,931	178,290	−176,359
	375,933	183,784	+192,149

This quantity, 192,149 tons, is retained for consumption in Madras and tracts easily accessible thence by cart, viz., Chingleput, Nellore, and part of North Arcot. Large quantity has been sent to Nellore.

9. The additions to the food-stocks distributed on the population of the districts concerned show the following results:—

Districts.	Net Imports.	Population.	Rate per 1,000 for 11 months.
	Tons.		Tons.
Kistna - - -	— 13,871	1,452,374	—
Nellore - - -	+ 24,816	1,376,811	2
Cuddapah - -	+ 47,996	1,351,194	3·9
Bellary - - -	+109,237	1,668,006	4·6
Kurnool - - -		959,640	

District.	Net Imports.	Population.	Rate per 1,000 for 11 months.
	Tons.	No.	Tons.
Madras and Chingleput - -	+192,149	1,254,879	17
North Arcot - - -	+19,437	2,015,278	1
South Arcot - - -	+10,575	1,755,817	·7
Madura - - -	+11,920	2,266,615	·6
Tinnevelley - - -	+33,569	1,693,959	2
Coimbatore - - -	+18,511	1,763,274	1·2
Salem - - - -	+22,877	1,966,995	1.2
Total - -	+474,543	19,524,842	2·7

These results are largely tainted with error, as the land traffic is not included, but are nevertheless, to some extent, instructive, especially those for Bellary, Kurnool, and Cuddapah. At 1½ lbs. per head per diem, which taking rich and poor together, considering that some of the sea-imported grain is paddy, is a low estimate; 1,000 persons will eat 20·1 tons in a month of 30 days. For Bellary, Cuddapah, and Kurnool, therefore, it may be stated that from one-fifth to one-fourth of the population are fed on imported grain. As a good deal of the rail-borne grain has gone from these districts into Mysore and Hyderabad, the lower proportion is perhaps more likely to be correct.

10. With reference to the remark in paragraph 2 of Sir Richard Temple's Minute, that the imports prior to November 1876 into the town of Madras were at first erroneously assumed by him to be inconsiderable on data published by the Madras Board of Revenue, the Board beg to observe that they are not aware of having published any returns showing the trade of the Madras port. Sir Richard Temple has probably taken his figures from the returns published by the Chamber of Commerce, which do not come under the review of the Board; but it is not apparent how the mistake was made, as the places whence the imports come are recorded in the statements, and ports within the presidency are not included.

(Signed) H. E. STOKES,
Secretary.

Encl. in No. 37.

No. 32.

No. 313, dated Simla, 4th June 1877.

From SURGEON-MAJOR S. C. TOWNSEND, Officiating Sanitary Commissioner with the Government of India, to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce.

I have the honour to forward, for the information of the Government, a copy of Dr. Lewis' Report on his preliminary investigations into the nature of the fever lately prevalent in Bombay.

Encl. in No. 60.

No. 33.

No. 1,054, dated Simla, 4th June 1877.

From R. B. CHAPMAN, ESQ., C.S.I., Secretary to the Government of India, Financial Department, to the CHIEF SECRETARY TO THE GOVERNMENT of BOMBAY.

In acknowledging the receipt of your letter No. 1,914, dated the 17th April, I am directed to say that the principle upon which the Resolution of the Government of India, No. 1,826, dated 28th March 1877, is based, was, as appears upon its face, adopted during the operations undertaken for the relief of the people of Bengal in the famine of 1873–74.

2. It seemed to the Governor-General in Council then, and seems still, that when a great calamity is confined to any particular Province, it is necessary and right that all provincial and local resources shall be exhausted in contending against it, before any demands are made upon the General Treasury of the Empire, and further that the Government of the Province is bound to take care that this principle is effectually applied, and to submit to every possible sacrifice in order to reduce to the utmost its ultimate demands upon the Imperial Revenues.

3. The extent to which provincial resources shall be held responsible for charges incurred on such occasions from the Imperial Treasury has yet to be determined; but the general principle that some such responsibility must be enforced has, as the Government of Bombay is aware, been recognised by the Secretary of State and by the Government of India.

4. The duty required from the Governments of Madras and Bombay by the Resolution against which the Government of Bombay now remonstrates was accepted, without controversy, by the Government of Bengal, and the accounts show that a sum of Rs. 12,70,476 was contributed from the provincial and local resources of Bengal towards the cost of the operations of 1873–74. The Government of Bombay will probably on reconsideration admit that, although these contributions doubtless pressed heavily upon provincial and local resources, the Government of India was right to require them, and the Government of Bengal right to make them; and that the rule should hereafter be always observed that Local Governments shall bear from provincial and local resources as large a share as possible of any expenditure incurred upon the operations for the relief of the people in time of famine.

5. The Government of India, on its part, while it would not think it right to relieve the provincial and local funds of other Provinces any more than it did those of Bengal, from any part of the burden which they can properly bear, or from the inconvenience and sacrifices thence resulting, will yet take care, as it did in the case of Bengal, that these funds are not left at the end of the operations insolvent. It must not, however, be assumed that because it was considered right, upon this principle, to assure to the Government of Bengal an unencumbered balance of Rs. 5,00,000 at the end of the famine of 1873–74, it will be necessary to leave as large a sum in the Provincial and Local Treasuries of the less populous and less extensive Presidencies.

6. In settling the accounts of the Government of India with that of Bengal, the Governor-General in Council did not appropriate any part of the balances belonging by law or equity to the District and Local Funds. The five lakhs of rupees left with the Government of Bengal was the aggregate amount placed at credit of that Government

in its Provincial Treasury including the Local Funds which were by law and equity at the disposal of the Local Government at its discretion for provincial purposes. The balances of the District and other Appropriated Local Funds were not absorbed, but were left in the possession of the Committees apart from the settlement which left Rs. 5,00,000 at the disposal of the Provincial Government. These bodies were, however, required to contribute to the general need so far as the law allowed them, and so far as it was considered in each case just to demand contributions from them. Of the total sum of Rs. 12,70,746 contributed from Bengal provincial and local sources, Rs. 2,50,000 was thus paid by these separate District and other Local Committees.

7. The same course should be followed by the Government of Bombay in the present emergency. The Government of India cannot require and has not asked the Governments of Madras and Bombay to demand from any District, Municipal, or other Local Committee, any contribution towards the great expenditure for the relief of the present distress which is now proceeding, which the law does not authorise, or which, even though it might be legal, local circumstances may make inequitable. But it is, undoubtedly, the duty of the Local Governments to exact from every such local body the utmost contribution towards meeting the cost of relieving the local distress, which may legally and equitably be required from it.

8. The principle seems to the Government of India to be clearly right that the distress should first be met from local resources so far as is possible, and that district resources should only be responsible when local resources fail, provincial resources when district resources fail, and imperial resources last of all.

9. The Governor-General in Council trusts that the principle thus explained will now be accepted by the Government of Bombay as reasonable and right. His Excellency in Council will be prepared, on his part, to give liberal consideration to the representations which he will expect to receive hereafter as to the amount to be left at the credit of the Local Government and as to the contributions which should be exacted from the District and other Local Funds or resources.

Copy forwarded to the Department of Revenue, Agriculture, and Commerce for information.

No. 34.

Encl. in No. 37.

No. 504.—From the Additional Secretary to the Government of India to the Chief Commissioner in Mysore.

Simla, 8th June 1877.

His Excellency the Governor-General in Council has lately had under his consideration the condition of the Province of Mysore, with reference to the prevailing scarcity.

2. According to the latest accounts which have been received, the persons in receipt of relief appear to have been as under :—

Date—week ending.	Numbers on Works.		Numbers charitably relieved.	Total.
	Under Public Works agency.	Under Civil Officers.		
Christmas	48,644		21,959	70,603
February 17th, 1877	31,248	63,348		94,596
March 3rd, „	30,794	33,513	23,295	87,602
„ 10th, „	30,794	36,600	37,361	104,805
„ 17th, „	31,052	38,512	48,861	118,425
„ 24th, „	31,052	44,365	52,471	127,888
„ 31st, „	31,715	55,687	57,974	145,376
April 7th, „	31,715	32,047	59,444	123,206
„ 14th, „	30,542	29,159	68,641	128,342
„ 21st, „	30,542	27,686	82,501	140,729
„ 28th, „	33,183	30,070	87,693	150,946
May 5th, „	30,159	32,352	94,873	157,384
„ 12th, „	34,222	32,281	102,399	168,902
„ 19th, „	34,466	29,933	108,482	172,881

3. According to the telegram of the 31st ultimo, the distribution of numbers was as under :—

	On works.	Charitably relieved.	Total.
Bangalore	4,630	56,996	61,626
Kolar	4,730	12,389	17,119
Túmkúr	5,529	16,247	21,776
Mysore	700	5,248	5,948
Hassan	1,761	4,701	6,462
Shimoga	1,234	936	2,170
Kadur	1,232	1,247	2,479
Chitaldroog	10,117	10,718	20,835
	29,933	108,482	138,415
On works under Public Works Department			34,466
Total			172,881

4. According to your letter No. 829—12 of April 21st, the allotments made up to April 17th, from the sum of 8 lakhs of rupees sanctioned for relief expenditure were as under :—

	Rs.	Rs.
Nundidroog Commissioner		49,216
Bangalore District—		
Cantonment	12,637	
Municipality	30,513	
Public Works Department	2,230	
District generally	1,28,766	
Ditto kitchens	74,000	
Cantonment and town kitchens	27,803	
Miscellaneous	2,489	
		2,79,438
Kolar District—		
Relief works	58,283	
Kitchens	27,156	
		85,439
Túmkúr District—		
Relief works	47,500	
Kitchens	38,300	
		85,800
Ashtagram Commissioner		16,000
Mysore District and Town		20,625
Hassan District		13,200
Nagar Commissioner		7,000
Shimoga District and Town		21,000
Kadur District-		27,267
Chitaldroog District		33,000
Total		6,37,985

The actual expenditure against these allotments does not appear.

5. According to the weekly report for April 21st, the sanctioned and actual expenditure was as follows :—

	Sanctioned amounts. Rs.	Actual expenditure. Rs.
For works under Civil officers	10,51,547	7,25,272
Ditto Public Works Department	19,11,634	14,96,760
For charitable relief	1,77,792	1,59,688
Total	31,40,973	23,81,720

By May 5th these totals had risen to Rs. 33,51,033 and Rs. 29,52,596 respectively. It is, however presumed that these larger figures comprise the whole regular Public Works

expenditure of the year, and possibly the District Fund and Municipal Fund charges too, much of which is not really for relief purposes.

6. The return for the week ending May 12th states the number of works in progress under revenue officers as 2,170. The number of persons employed on them being 32,281, the average on each work must be only about 15.

7. From the statistics above given, the following facts are apparent:—

1st.—That the numbers on works under professional agency have scarcely varied during the last two months and a half.

2nd.—That the numbers on works under revenue officers have on the whole varied little; they rose up to the end of March, then fell, for reasons which have formed the subject of separate correspondence; and now again are rising slowly, if at all.

3rd.—That the charitably relieved, who on March 17th were only as 49 to 69 on the works, were on May 19th as 108 to 64, thus preponderating greatly, whereas in Bombay and Madras their proportion to persons on works is only about one-third and one-half respectively.

4th.—That the relief afforded in the district of Bangalore enormously exceeds, both as to numbers and cost, that in other districts.

8. From these facts it might be inferred that relief works were regulated by the work in hand to be done, rather than by the number of persons requiring relief and able to do a full day's work; that no efficient supervision of such petty works could exist; that either multitudes are being improperly and unnecessarily fed, or relief works have been kept down to so narrow a limit that the people have been reduced to the last stage of distress, and have no alternative but to resort to the kitchens; or, again, that if village relief were efficient, such large bodies of persons would not leave their homes and crowd to centres of relief. In this connexion it may be noticed that in the weekly report of the 21st ultimo, the Commissioner of Ashtagram is said to state that "a large "portion of the persons fed at kitchens were half-starved and sickly emigrants from other "places."

9. His Excellency the Governor-General in Council is not, however, prepared to draw these conclusions, being well aware that the total numbers relieved is not excessive compared with the population, that emigration may have had an important effect upon the numbers able to work, and that habit, difficult to overcome, may promote resort to centres. At the same time his Excellency in Council considers that the apparently peculiar condition of affairs at the present juncture demands your most careful consideration, made by means of specially deputed officers, or otherwise as you may deem best, with the view of ensuring, on the one hand, that all who can work shall be forced to do so, and on the other, that charitable relief may reach all who are really in need of it without too great concentration of recipients, and its concomitant evils and abuses. His Excellency the Governor-General in Council has every confidence that you will take with vigour and promptitude whatever steps may seem to you advisable for these ends, and will be glad to know by telegraph the course you propose to adopt.

No. 35.

Encl. in No. 37.

No. 510.—From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

Simla, 8th June 1877.

With reference to your letter No. 492 C. W.—1,145 of the 6th instant, on the subject of the Ashteh Tank, I am directed to remark that in the programme appended to the resolution of the Bombay Government, No. 6,152 of October 27th, 1876, this work was entered as "Ashteh Tank, Mahrah, amount Rs. 3,64,000."

2. In the statement submitted with your letter No. 257 C. W.—986, dated December 8th, 1876, in reply to the request of the Government of India for full particulars, it is stated that the "amount of estimate" is Rs. 5,28,760.

3. In the memorandum forwarded with your letter No. 309—1,110 C. W. of December 23rd, in consequence of the telegram of the Government of India of December 12th, intimating that the statement above referred to did not give sufficient details, it is stated that the cost of the work will be Rs. 6,45,260, including all direct charges, and that the revenue will be 5·1 per cent. on this outlay.

4. From your letter No. 403 C. W.—921 of April 21st, 1877, it appears, however, that the direct outlay will be Rs. 6,77,618, and the total outlay including indirect charges Rs. 7,98,938, thus bringing the revenue down to 4·15 per cent.

5. Your reply of the 16th instant to the inquiry what amount of *bonâ fide* relief labour the project affords is not very explicit, but as the number of relief labourers on the work has not yet reached 15,000, and the part of the work to cost Rs. 3,66,274 is said to be not quite all suitable for relief labour, it may be inferred that probably the *bonâ fide* relief labour will not cost above three lakhs, or one-third of the total.

6. I am directed to request the attention of his Excellency the Governor in Council to the foregoing remarks.

Encl. in No. 37.

No. 36.

No. 514.—From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

Simla, 11th June 1877.

I have the honour to inform you that his Excellency the Governor-General in Council has had under consideration the Resolutions of the Bombay Government regarding the Pangaon Tank, which are quoted in the margin.

No. 303 C. W.—225, dated January 30th, 1877.
No. 535 C. W.—1,220, dated May 24th, 1877.

2. The amount of the estimate is said to be Rs. 12,79,819, but whether this includes indirect charges or not, and what return is expected for the outlay, does not appear, the project not having yet been submitted as usual.

3. It is also not stated what arrangements have been effected with the Nizam for a fair apportionment of the cost with him, in consideration of the fact that five out of the 10 villages which it is proposed to irrigate are situated in his Highness's dominions.

4. The earthwork of the dam will, it appears, "afford employment to 20,000 relief labourers for as long as the famine is likely to last." As, however, the work was only recently commenced, and the numbers of labourers have not up to the latest known date exceeded those stated in the margin, while the near approach of the monsoon may render any large increase improbable, it would appear that the work is likely to afford but a small proportion of relief compared with the total outlay.

	No.
April 27th	1,278
May 4th	1,244
„ 11th	3,552
„ 18th	6,730
„ 25th	7,453

5. There may, of course, be circumstances which render the continuance of the work desirable, notwithstanding the apparent heavy future liability, but I am directed to invite the attention of his Excellency the Governor in Council to the subject in connexion with the foregoing remarks.

No. 37.

No. 26 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, 11th June 1877.

No. 20. We enclose for your Lordship's information a copy of the reply of the Madras Government to the important Minutes of Sir Richard Temple regarding the utilisation of the Public Works Department, the removal of paupers from relief camps, and the exclusion of masonry and other work not purely relief work from the famine charges.

No. 26. We observe, however, from the Madras proceedings No. 1,830, dated May 28, of which a copy is appended, that the Madras Government have issued instructions in the sense of Sir Richard Temple's recommendations on the subject of the return of paupers to their homes.

2. The condition of the province of Mysore has for some time past occasioned us anxiety, on account of the large preponderance of the charitably relieved over those employed on the works, and the flocking of the former to the administrative centres, especially Bangalore. We are not prepared to affirm that these features necessarily indicate insufficient application of the labour test, or inadequate village relief, but we

No. 34. have thought it right to direct the attention of the Chief Commissioner to the subject, and to instruct him to make without delay any special inquiries into the state of affairs which he may deem to be requisite.

Nos. 35, 36. 3. We request your Lordship's attention to two letters which we have addressed to the Government of Bombay adverting to certain facts connected with the selection of the Ashti and Pangaon tanks as relief works. We consider it to be regretted that in the case of the former the full charge involved was not shown at the outset, and in the case

of both, that works involving a less heavy ultimate outlay in order to render them serviceable were not selected for relief purposes.

4. The prospects of the season continue favourable. In Bombay two inches of rain have fallen at Carwar, and indications of the near approach of the monsoon are general. In Mysore heavy showers have fallen generally, and 1·15 inches have been registered at Bangalore. In Madras there has been rain in all districts except Chingleput. In Tinnevelly it has amounted to $2\frac{1}{2}$ inches, and in Kistna, South Arcot, Tanjore, Trichinopoly, and Salem to about 1 inch, though not always generally. In the ceded districts and Kurnool only very slight showers have fallen, and the distress is proportionately severe. The numbers in receipt of relief were, by the latest returns, as follows :—

In Madras	- -	- { 790,304 on relief works. 430,727 charitably relieved.
In Bombay	- -	- { 387,075 on relief works. 143,737 charitably relieved.
In Mysore	- -	- { 56,631 on relief works. 107,814 charitably relieved.

5. We take this opportunity of enclosing a report by Dr. Lewis, Special Assistant to the Sanitary Commissioner with the Government of India, of his preliminary investigations into the nature of the fever lately prevalent in Bombay. "Opinions have been expressed," Dr. Lewis remarks, "that the fever is of an infectious character; that it was originally "produced by want; and that the disease presents the character usually ascribed to the "relapsing or famine fever of systematic writers." These conclusions have probably, he adds, been influenced by the discovery by Dr. Vandyke Carter of certain organisms in the blood of Bombay fever patients which are known as *spirilla*, and were discovered some nine years ago by Obermeier in the blood of relapsing fever patients. No. 25.

6. Although Dr. Lewis detected these *spirilla* in five out of 25 fever patients examined he saw no features in the fever itself sufficient to distinguish it from the ordinary "remittent" fevers of India, and he considers that similar comparisons should be made in Calcutta and elsewhere, and that his colleague Dr. D. D. Cunningham's inquiries in Madras should be collated before any satisfactory decision can be arrived at. As to the supposed infectious character of the fever found in Bombay, and any direct causative relation between the fever and the famine, Dr. Lewis failed to find any satisfactory evidence, but he hopes to be hereafter in a position to submit a more detailed account of the technical features of the inquiry, especially as regards the import of the presence of *spirilla* in the blood.

We have, &c.

No. 42 P., dated Bombay Castle, 11th June 1877.

From MAJOR-GENERAL M. K. KENNEDY, R.E., Secretary to Government of Bombay, P. W. Department, to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

I am directed to bring to the notice of the Government of India that this Government have been furnished by the Government of Madras with a copy of their Despatch to the Secretary of State for India, No. 38 of the 26th May last, and, among other accompanying papers, with a copy of a Resolution by the Government of Madras, in the Revenue Department, No. 1,788 of the 22nd May, and I am to submit, for the information of the Government of India, one or two observations on these documents, so far as they refer to the arrangements for famine relief that have been made in Bombay.

2. In speaking of the lower scale of wage, *i. e.*, the scale which provides that an adult male shall receive the value of 1 lb. of grain in addition to half an anna in money, women and children in proportion—commonly called the Civil Agency scale—the Madras

Government remark that they have "seen reason to believe that the scale is practically "of very limited operation in Bombay, and there only with a specially light task." As regards this observation, I am to state that, speaking of the present time and of the progress of the famine operations in Bombay since January last, the Government of Madras are correct in respect to the limited number of persons who are on the lower scale of wages.

3. In the earlier stages of the distress, and before the Government of Bombay were able to undertake large works, the number of relief labourers on the Civil Agency works was very considerable, amounting to nearly a half of the whole. As soon, however, as works under the better discipline and more strict management of the Public Works Department were organised, the numbers on the lower scale under the Civil officers were reduced, and they now stand, and for some time past have stood, at about one-tenth of the whole number employed.

4. The cause which has conduced to the limited application of the lower scale noticed by the Government of Madras has been, that the Government of Bombay have been enabled in the great majority of cases to grant the higher scale of the value of 1 lb. of grain, plus 1 anna in money, per man, in payment for a commensurate return of good and useful work.

5. Most of the persons who have been employed on the lower scale are old and partially incapable persons, who have not been found fit to perform the higher task exacted on the works under the Public Works Department, but the task that has been demanded from the less capable persons can hardly be called "specially light," and it is the same task that the Government of Madras have now ruled should be exacted from the persons to whom that Government have applied the higher scale of wages. The Government of Madras rule that the work to be performed on the higher rate of pay shall be limited to 50 per cent. of a full task according to individual's physical capacity and other collateral circumstances; and this is precisely the task that has been laid down to accompany the lower scale of wages in Bombay, the task for the higher scale being 75 per cent. of a full task.

6. Orders regarding the special relief of nursing mothers, and of children under 7 years of age, have been in force in Bombay from a very early period of the famine operations.

7. Piece-work at ordinary rates has been disallowed in Bombay on the principle that, although the Government have determined to sustain the people in a manner that will secure, as far as possible, a commensurate return for the outlay incurred, and that will not demoralise the recipients of relief, yet they do not propose to expend a larger sum of the public money than is absolutely needed to secure the essential object aimed at; and they hold that, if the extent of relief necessary to secure the substantial safety of the people be afforded, any excess on the outlay needed for that purpose is not justifiable, even though it be ultimately represented by work which, though it may prove useful, would not have been undertaken in ordinary times and under normal conditions. If this view be correct as regards large and useful works undertaken for relief purposes, but carried out under strict discipline and by professional agency, it is, perhaps, especially so as regards the petty works usually performed in return for the lower rate of wages under Civil officers, and for the most part in and near villages.

No. 39.

TELEGRAM from VICEROY to the SECRETARY OF STATE FOR INDIA, 12th June 1877.

Yesterday's Despatch covered reply of the Madras Government to Sir Richard Temple's suggestions regarding utilisation of Public Works agency, the reduction of relief camps, and the exclusion from famine charges of masonry and other not purely relief work; they have apparently not adopted the first suggestion, but have issued instructions in the sense of the others.

Mysore occasions anxiety on account of large proportion of charitably relieved. We have invited Chief Commissioner's attention to conditions of province, and authorised special inquiries. We have also sent report by Dr. Lewis on nature of fever recently prevalent in Bombay. He reserves final opinion, but has not found satisfactory evidence that fever is infectious or caused by famine, or different from ordinary remittent fever.

Prospects of season continue favourable in Bombay, two inches of rain at Carwar, and general indications of near approach of monsoon. In Mysore heavy showers general.

In Madras rain in all districts except Chingleput, but very slight in ceded districts and Kurnool.

Numbers relieved were, in Madras, 730,000 on works, 430,000 charitably relieved. In Mysore, 57,000 on works, 108,000 charitably relieved. In Bombay, 387,000 on works, 144,000 charitably relieved.

No. 40.

Encl. in No. 60.

No. 1,963, dated Fort St. George, 12th June 1877.

From the Additional Secretary to the Government of Madras to the Secretary to the Government of India.

For some weeks there has been a gradual and continuous rise in prices in the districts of this Presidency generally. This rise has left the prices which are now generally stationary at the dates marginally shown in terms of seers of 80 tolas to the rupee.

Districts.	Rice.		Cholum.		Raggi.		Cumboo.

Malabar - -	9·09	12·5	..	..	12·25	19·5	..	..

The Collector's reports, however, show that while in April all markets were supplied with either raggi, cholum, or cumboo, as well as rice, at the end of May, in Tanjore, no cholum or cumboo was obtainable in four markets out of nine, and no cholum or cumboo in two others, while rice was 7·5 seers to the rupee in three markets. In Trichinopoly, out of five markets no grain, except rice, was obtainable at Kulitalai, and rice was 6·5 seers in Udyapolium. In Coimbatore rice was 4·9 seers the rupee in Collegal taluk, and raggi 6·9, while prices were high generally in Pallachi taluk. In Salem prices at Tripatore were, rice 6·42 seers the rupee, raggi 8·12, and cumboo 7·44, while in Salem itself rice was 7·68. In Bellary, though prices are stationary in Kudlighi and Hurpenhully, rice is 5·25 seers the rupee, and 5·5 in Hudgully, while cholum is 6 to 6½ seers the rupee. In South Arcot, of eight markets cholum was not quoted in four, nor cumboo in two. In Chingleput, of six markets cholum and cumboo were not quoted each in five markets. In South Canara cholum and cumboo are not quoted, but are not consumed. In Tinnevelly cholum and cumboo were not quoted in four and three markets out of five. In Malabar cholum and cumboo are not quoted; in Madura cholum is not quoted at all in one out of six markets. In Kistna, out of four markets cumboo is not quoted in two. On the Nilgiris, of four markets, cholum is not quoted in one, cumboo in two. In the Godavery, of six markets cumboo is not quoted in four. While in Kurnool the price at Ramalcotta was quoted for rice at 6·0, while cholum was 7·1, and no other grain was quoted.

It thus appears that throughout the greater portion of this Presidency prices are at a point which causes a most severe pressure and continually increasing distress.

There are doubtless yet considerable stocks in the Presidency, although it is found impossible to obtain certain and reliable information, and these a favourable south-west monsoon may cause to be brought forward; but that these stocks must have been seriously diminished is apparent from the fact that while the consumption of the population at 1 lb. per head per diem would equal about 3,849,300 tons, the total import of food-grain to the Presidency, from August to April has been only 417,839, as shown by the annexed statement prepared by the Board of Revenue. The increasing demand on the stock at Bellary for Mysore territory is also noticeable, the export of grain from Bellary being as shown below:—

	To Mysore.	To Hyderabad.	Total.
From 3rd to 31st March -	285·8	911·6	1197·2
During April - -	660·0	1604·2	2264·2
Up to 26th May - -	822·1	1649·9	2472·0

The stock available at the ports for inland transport was ascertained at the end of last month to be:—

		Tons.
Madras - - - -	25,000	35,000
On sea - - - -	10,000	
Negapatam - - - -	-	8,000
Beypore station, and some in boats -	-	1,500
Total -	-	44,500
Say -	-	45,000

This stock will be entirely moved up-country, in the usual course of traffic, by the end of the current month, and Government are not aware of any considerable further quantity being on its way or ordered; and there is no accumulation at the up-country railway stations. While it is very probable that the price grain has now reached may induce increased importations, yet the Governor in Council deems it his duty to point out that, while he is under no apprehension as to the means of the railways to carry the daily supplies, yet, if the railway power is not made use of with regularity, there will be very serious ground for apprehension, because the number of trains that can be run is limited by the circumstances of the line, and the locomotive power and waggon stock available. If any material diminution of the grain traffic inland occurs for a fortnight, it will probably be found in practice impossible to carry up the quantity which will be thus deficient in addition to the ordinary daily demands.

For these reasons I am directed to state that the present state of trade causes this Government much anxiety, the pressure of the existing high prices is rapidly adding to the numbers whose sole dependence must be State aid, not only in those districts which have been noticed as distressed, but even in others; and it is moreover reducing to abject poverty very many of those who should and would have maintained themselves throughout, had prices similar to those which generally prevailed in the famine districts of Bengal in 1874 prevailed in this Presidency.

Movements of Food-grains by Sea and by the Madras Rail.

No. 41.

EXTRACT from the PROCEEDINGS of the GOVERNMENT OF INDIA, Financial Department, No. 1,169, dated Simla, the 14th June 1877.

RESOLUTION.—The Governor-General in Council is pleased to decide that all outlay on public works executed for the purpose of relieving distress among the people arising from famine, whether supervised by the officers of the Public Works Department, or by Civil officers, shall, in the first instance, be recorded in the accounts of the Public Works Department under a suspense head to be called "Famine Relief."

2. Of the whole outlay thus recorded, the portion which represents the value of the work done calculated at normal rates must be ultimately recorded as expenditure under the proper sub-divisions of the Service head Public Works, ordinary or extraordinary, as the case may be, the remainder being transferred to the Service head "Famine Relief."

3. The responsibility of determining, in each case, how much of such outlay shall be recorded as Public Works expenditure, and how much as expenditure under the head of Famine Relief, will rest upon the Public Works Department. But it is important that the Suspense Account to be kept in the Public Works Department should be cleared as quickly as possible, and no such refinements of calculations should be attempted or permitted as will cause any delay in the attainment of this object.

4. The Governor-General in Council trusts to the Local Governments to issue such subsidiary orders as will secure this result.

5. As a rule, the Governor-General in Council considers that experience shows, conclusively, that public works executed for relief purposes can be most conveniently and economically supervised by the professional officers of the Public Works Department; but if, in any case, this is found impracticable and the supervision of such works is entrusted to Civil officers, the arrangement must not be allowed to interfere with thorough obedience to the present order, and the Civil officers must act only as disbursers of the Public Works Department, submitting to that Department all accounts of their outlay.

6. This Resolution is to be applied immediately, and with retrospective effect, to the outlay now being incurred for the relief of the distress arising from the present famine in the Presidencies of Madras and Bombay.

ORDERED.—That this Resolution be communicated to the Revenue and Public Works Departments of the Government of India, to the Local Governments, to the Comptroller-General, and to the Accountants-General, and Deputy Accountants-General in independent charge.

TELEGRAM from the GOVERNOR OF BOMBAY to the SECRETARY OF STATE FOR INDIA, 15th June 1877.

Weekly report sent yesterday.

Rain has fallen in all distressed districts, also in Bombay, but monsoon has not properly commenced.

Situation slightly improved, and agriculture progressing. No marked change. Prices still high.

No. 43.

TELEGRAM from the GOVERNOR OF MADRAS to the SECRETARY OF STATE FOR INDIA, 16th June 1877.

Monsoon rains have commenced.

Hugry River stopped Bellary Railway, Monday. Bridge, permanent, will be ready Sunday.

Prices generally steady.

No. 44. Encl. in No. 60.

Dated Calcutta, 18th June 1877.

From SURGEON D. D. CUNNINGHAM, Special Assistant to the Sanitary Commissioner with the Government of India, to SURGEON-MAJOR S. C. TOWNSEND, Officiating Sanitary Commissioner with the Government of India.

I have the honour to report that, in accordance with your instructions, I proceeded to Madras in order to ascertain whether any peculiar form of fever were present among the inmates of the relief camps there, and to investigate the pathology of the so-called "famine diarrhœa" and "famine dysentery." I arrived in Madras on the 20th of May and left on the 8th June, reaching Calcutta on the 13th of the month.

2. In regard to the occurrence of any peculiar forms of fever, careful inquiries were made as to the presence, then or at any previous period during the prevalence of the famine, of any forms of fever which could in any way be ascribed to the influence of want. I could hear of no such disease as having occurred previously, and during the whole period of my stay in Madras fevers of any kind were practically non-existent, hardly a case being present in any of the hospitals or relief camps in spite of the high degree of mortality prevalent at that time among the inmates of the latter.

3. I had, however, ample opportunity of investigating the pathology of the diarrhœa and dysentery so prevalent and fatal in the camps. Careful *post-mortem* examinations were made of the bodies of persons dying in the Monegar Choultry relief camp where the mortality was very high, and almost entirely due to diarrhœa and dysentery. Numerous specimens of the various tissues and organs of such cases have been preserved, and will form the subject of minute microscopic investigation. As this, however, will necessarily be the work of some time, I shall in the meantime give a brief account of such of the results arrived at in the examinations conducted in Madras as appear to be of most practical importance.

4. The general results of such examinations were confirmatory of the belief that morbid conditions exist which may with propriety be termed "famine diarrhœa" or "famine dysentery," as the case may be. There are, without doubt, cases in which the symptons of disease observed during life can be referred to no other origin save morbid changes and degenerations dependent on mal-nutrition. Many other cases occurring among the inmates of the relief camps are, however, complicated by the supervention of other diseases, such as acute dysentery, pneumonia, &c., and although in the majority of such cases the conditions leading to true "famine diarrhœa" may be distinctly detected, and in some the complications may be directly ascribed to their agency, yet the fatal termination is caused, or at all events accelerated by the complications.

5. The pathological changes essentially characteristic of "famine diarrhœa and dysentery" consist in a softening and subsequent atrophy of the mucous membrane of the intestinal canal, due apparently to a process of fatty degeneration of the tissues, and leading to the destruction of the apparatus provided for the absorption of nutritive material. That such a process is sufficient to account for the phenomena of the disease observed during life, is manifest. The disintegration of the intestinal mucous membrane fully accounts for the disordered state of the alimentary functions. The pathological appearances also account for the failure of curative measures, improved diet, medicines, &c., in the treatment of the disease. Where once the complex structures of the intestinal mucous membrane have been so seriously affected by degenerative changes dependent on insufficient nourishment, they cannot be renewed, and no diet, however careful and generous it be, can be of any avail when once the means, by which alone it can be appropriated to the necessities of the body, have been destroyed.

6. In conclusion, I must acknowledge the great obligation which I am under to the medical officers in Madras who assisted me in obtaining opportunities for investigation, and facilitated my work in other ways—more especially must I acknowledge the aid which was afforded to me by Mr. Cornish, the Sanitary Commissioner for Madras.

No. 45. Encl. in No. 79.

No. 2,030, dated Fort St. George, 18th June 1877.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF MADRAS, Revenue Department, to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

In reply to your letter No. 441, dated 12th May 1877, I am directed to state that his Grace the Governor of Madras in Council is fully alive to the importance of inducing

the inmates of relief camps to return as speedily as may be to their own homes, as well with regard to economy in the administration of relief as to lessen the evils attendant upon large gatherings of comparatively unemployed people.

2. With this view many had been sent home before the date of Sir Richard Temple's note of the 22nd April, but the results were not encouraging. It was found in practice that there was not sufficient inducement to these people to remain at their homes either on the relief wage or village relief. Thus many such persons after being cared for and strengthened by food and removed by train to Vellore in the North Arcot district, almost immediately set out to wander back to Madras, where, after a time, they were again found in the streets exhausted and famine-stricken.

3. This Government consider that no extensive enforced removals from relief camps can be successfully carried out until, in the ordinary operations of agriculture, are found sufficient inducements to overcome those which draw the people into the large towns.

4. Hitherto movements of the people under direct pressure, whether it be in large parties or in small, whether to the large relief works or from relief camps under escort of camp servants, have proved barren of results for good, as the people largely desert on the road.

5. Considerable numbers have, however, been induced voluntarily to return to their villages.

6. I am further directed to state that his Grace the Governor in Council is giving, and will continue to give, that attention to the subject noticed by Sir Richard Temple which its importance demands.

No. 46.

Telegram, dated 19th June 1877.

From the Viceroy to the Secretary of State for India.

In Madras, rain has fallen in all districts in fair quantities; on works 848,000, charitably relieved 461,000; prices generally high, and grain imports limited.

In Mysore, heavy showers throughout the Province; one inch at Bangalore; four inches in Coorg; prospects encouraging; on works 58,000, charitably relieved 109,000.

In Bombay, one to three inches in Nassik, Poona, Ahmednagar, and Sholapur, three-quarters inch in Sattara, six inches in Canara; numbers on works 375,000, charitably relieved 157,000, of whom children 114,000. Heavy rain has just begun at Bombay.

Temple telegraphs, young crops Dharwar, Belgaum thriving; large areas preparing Kaladgi, Satara, Nassik, Khandesh, and sowing begun, prices of grain unaltered. Imports coast reduced, on railway considerably increased, general situation hopeful, marked improvements shortly expected, cattle benefit by new grass.

Encl. in No. 79.

No. 47.

Extract from the Proceedings of the Government of Bombay in the Public Works Department, No. 98 P., dated 20th June 1877.

Resolution.—As soon as the monsoon shall have been favourably established, it is necessary for the agricultural prospects of the season, and for the relief of the existing demands on the treasury for outlay on account of State charity, that many of the persons who are now supported at the public expense should resume their usual avocations, and revert to their ordinary modes of obtaining a livelihood. The preliminary eastern showers have been very heavy and general, the regular western rain has now commenced, and there is a prospect that the season will be a very favourable one as far as rain-fall is concerned; but this inestimable advantage will be lost, if those on whose labour the tillage and cultivation of the land depend should cling, in large numbers, to the charity of the State, instead of making efforts to help themselves, and to resume their independent occupations. Many are now voluntarily leaving the relief works, and more, it may confidently be expected, will do so shortly. But if any who ought to return to their own avocations should try to remain on State relief, some pressure may be needed for them, and must be applied gently, and prudently, but firmly.

2. In order to effect this, the following measures should be adopted in each district,

and in every case wherever and as soon as the rain-fall has been good and favourable :—

1st.—The gangs on each work should be carefully inspected by the Civil officers of the district, the registers should be examined, and all the holders or sub-holders of land, who may be in good physical condition, should be relegated to their villages, and be told that they should now betake themselves, as in ordinary years, to the cultivation of their fields.

2nd.—The class of agricultural labourers should be similarly examined, and sent to their villages to assist the landholders as in ordinary years; for unless labour be available, or if it be detained on the relief works, the landholders will be placed in difficulties, and their field operations will be materially impeded.

3rd.—To these people, and to those who may seek to remain on the works, it should be explained, that at this season of the year Government can neither carry on the works in progress, nor open fresh ones, and that it is not for the good of the people that Government shall endeavour to do so; that this has been a season of difficulty due to drought, during which the Government have consented to aid people who would otherwise have been unable to find subsistence, but that this drought has happily passed away, and that the people can, and must now, exert themselves in their own behalf, and that the remaining works will therefore be very shortly entirely closed.

4th.—That Government will not give any general Tagai advances, but will only afford assistance in special cases, and on good security; and that for such credit as they may need, and as they would ordinarily require, the people must look to the sources from which they usually obtain it.

5th.—That it will shortly be necessary, as the people who are not ordinary labourers leave the works, and as the latter, or such of them as it may be necessary or practicable to keep open, gradually assume the character of ordinary Public Works, to raise the tasks to the usual standard, and to cease to pay wages, should tasks not be performed, in consequence of idleness, interruption by rain, or from any other cause.

3. The Civil and Public Works Department officers in each district should co-operate fully, and should work together in carrying out these arrangements; but all the necessary measures as above detailed should, as regards the time and extent of their application, be left to be finally determined by the Collectors and their assistants. These officers should bear in mind that, though the general policy to be adopted is indicated above, and is to be generally adopted, it need not and should not be applied abruptly or mechanically, but should be introduced with judgment and discrimination, as well as with firmness on a careful consideration of the prospects of the season in each district as regards agriculture and of the condition of the people.

No. 48.

Encl. in No. 79.

Dated Bombay, the 21st June 1877.

DEMI-OFFICIAL from Dr. J. B. LYON, to General KENNEDY.

Thinking the enclosed may interest you, I have cut it out of the "Bombay Gazette," of the 19th where it appeared.

The corresponding value in grains of nitrogen 12·5 grammes is 193 grains and of carbon 263 grammes=4,060 grains; this for men weighing 140 lbs. is about my scale, No. 3 (bare sustenance). As the experience detailed in the letter cut from the "Bombay Gazette," shows that men can do a considerable amount of work on a diet of the value quoted above, the indication is that my scales are on the side of liberality rather than in the other way.

No. 49.

TELEGRAM from the GOVERNOR OF BOMBAY to the SECRETARY OF STATE FOR INDIA, 22nd June 1877.

Monsoon begun well on Bombay coast and throughout Deccan. Effect not fully produced on relief operations. Prices still high, but numbers on relief works decreasing, and agriculture progressing.

No. 50.

No. 538. From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF MADRAS.

Simla, 25th June 1877.

I am directed to transmit, for the consideration of his Grace the Governor of Madras in Council, the enclosed copies of a Minute by Sir Richard Temple, under date the 9th ultimo, and of two memoranda by his late Secretary, Mr. C. Bernard, on the subject of remissions of land revenue.

2. The Governor-General in Council thinks that this question should receive very careful attention when the pressure of the present famine shall have passed away; and will be glad to be furnished with a full statement of the conclusions at which the Madras Government may arrive after considering the arguments and observations contained in the enclosed papers.

No. 51.

No. 27 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, the 25th June 1877.

Your Lordship has been furnished by the Madras Government, in their Despatches of the 14th and 28th April last, with the correspondence which has taken place between that Government and the Government of India on the subject of supplying Sir Richard Temple with copies of certain papers for which he applied relating to the subject of granting remissions of the land revenue on the occasion of failure of the crops. We now enclose a complete collection of the correspondence which has taken place on this subject, including a Minute by Sir Richard Temple, under date the 9th ultimo, and two memoranda by his late Secretary, Mr. Bernard. We have caused copies of these papers to be furnished to the Government of Madras, with a request that they will give them their careful consideration, and furnish us hereafter with a full statement of the conclusions at which they may arrive. A copy of the letter which we have addressed to the Madras Government on the subject is enclosed.

Nos. 2 to 7, 9 to 12, 14 to 19, 22 to 24, 27, 50.

2. It will be in the recollection of your Lordship that the suggestion made by Sir Richard Temple at an early period of his tour that, instead of entirely remitting the revenue due to Government on land on which the crops had failed, its collection should be only suspended pending inquiries as to the circumstances of the persons concerned was referred to in our Despatches of the 26th January and the 9th and 16th of February last, in the last of which Despatches we stated that we had intimated to the Governments of Madras and Bombay that the matter would be left to their discretion, adding that, in our opinion, the Madras Government had shown good reasons for the opinion which they strongly held, that in *ryotwari* districts it would, as a general rule, be inexpedient to substitute suspensions for remissions of revenue, especially in the case of a season so disastrous as the present. The course taken by us in this matter received the approval of your Lordship in your Despatch of the 29th March last, paragraph 6.

3. In forwarding to the Government of Madras Sir Richard Temple's telegram of the 18th March, requesting that he might be furnished with the papers above alluded to, we were actuated by the consideration that, however inexpedient it might be, during the pressure of a serious famine, to interfere with the discretion of a Local Government on a subject specially demanding a knowledge of local circumstances, it would not be right or proper that an officer engaged upon the arduous duty which had been entrusted to Sir Richard Temple, should be denied access to official records which he desired to consult on a matter to which he attached importance, and which was closely connected with the work upon which he was engaged. It was subsequently explained to the Madras Government in the Viceroy's telegram to the Duke of Buckingham, dated the 9th April, that there was no intention of interfering with the discretion of the Local Government regarding remissions on the present occasion; but that a full discussion of the subject might be useful for future famines; that the discussion could be treated as confidential if the Madras Government desired, but that it seemed due to Sir Richard Temple that his request should be complied with. The Madras Government having declined to comply with our request, and having persisted in their refusal after the receipt of the Viceroy's telegram just referred to, we deemed it necessary to issue the order conveyed in our

telegram of the 20th April, which led to Sir Richard Temple's being furnished with the papers for which he had applied.

4. We have not deemed it expedient for the present, in our correspondence with the Government of Madras, to take any notice of their letter dated the 10th April last, stating their reasons for declining to comply with the request made in our telegram of the 21st March; but we think it right to call your Lordship's attention to the tone and tenor of that letter, which appear to us to indicate a very extraordinary misapprehension on the part of the present Government of Madras of their position in relation to the Government of India. We shall probably recur to this subject when the time comes for reviewing the incidents of the present famine.

We have, &c.

From the CHIEF SECRETARY, TO THE GOVERNMENT OF BOMBAY, to the SECRETARY TO THE GOVERNMENT of INDIA, Financial Department.

I am directed to acknowledge the receipt of your letter, No. 1,054, dated 4th instant, on the subject of the appropriation of Provincial and Local Funds for famine expenditure, and in reply to state that his Excellency the Governor in Council will gladly accept the principle therein explained, and is assured that the Viceroy in Council will give liberal consideration to the representations which will be made hereafter on this subject.

No. 54.

Telegram, dated 26th June 1877.

From VICEROY to the SECRETARY OF STATE FOR INDIA.

Yesterday's Despatch covers complete collection of correspondence about question of remission or suspension of land revenue on failure of crops, includes Minute by Temple and two memoranda by Bernard; these papers have been also sent for consideration and opinion of Madras Government, without intention of limiting discretion in present case already given, but for final settlement of question in view of future famines. Madras Government having in April last refused to furnish Temple with necessary information on this subject, we were obliged to order it to be given to him.

Prospects of season generally very encouraging in Madras. Rainfall in Bellary, Kurnool, and Cuddapah from 1 to 6 inches; in Kistna, Nellore, North Arcot, Chingleput, varied up to 2 inches; South Arcot, up to 1 inch; Coimbatore, Salem, $\frac{1}{2}$ inch; everywhere slight; in Mysore, up to 1 inch, but more needed in Coorg; $3\frac{1}{2}$ inches in Bombay. Temple telegraphs thus: "Monsoon burst favourably 19th, 20th, along entire western "border of famine tract, gradually extending eastward; growing crops much benefited; "agriculture being everywhere resumed; prices of grain slightly higher; fall shortly

" expected; imports coast small. Railway returns not received, believed large. Situa-
" tion improved. Good monsoon following heavy eastern rain promises favourable
" season. People encouraged; numbers expected to leave works soon. Cattle saved."
Message ends.

Numbers relieved in Madras, 857,000 on works, 483,000 charitably; in Mysore, 57,000 on works, 115,000 charitably; in Bombay, 366,000 on works, 165,000 charitably.

Encl. in No. 60.

No. 55.

Telegram, dated 27th June 1877.

From Revenue Additional Secretary, Madras, to Revenue Additional Secretary,

Prices still continue high notwithstanding the rain; rice risen in Vizagapatam, Kurnool, Bellary, Chingleput, and South Arcot. Dry grains risen in Vizagapatam, Godavery, Kistna, Kurnool, Bellary, North Arcot, Chingleput, South Arcot, Salem, Madura, Tinnevelly, and Malabar. Stocks entirely exhausted in Nilgiris district and in some taluks of Salem and Bellary. Increased prices at Kurnool reported, attributable to decrease of stocks and difficulty of carriage.

No. 56.

Telegram, dated 29th June 1877.

From Governor of Bombay to the Secretary of State for India.

Weekly famine report favourable. Continued rain in all distressed districts except Kaladgi. Agriculture progressing everywhere except one part of Poona district. Numbers on relief works decreasing. Prices high. No sickness. Monsoon not yet begun in Guzerat.

Encl. in No. 60.

No. 57.

No. 557.—From the Additional Secretary to the Government of India to the Additional Secretary to the Government of Madras.

Simla, 29th June 1877.

I am directed to acknowledge the receipt of your letter No. 1,963 of the 12th instant, and your telegram of the 27th instant, on the subject of the rise of prices of food-grains, the low condition of stocks, and the consequent increasing pressure upon the population of the distressed districts of the Madras Presidency.

2. The prices given in your letter are contrasted in the following table with those of March 31st as given in the Proceedings of the Board of Revenue dated April 6th, which were published in the Supplement to the " Gazette of India " of the 21st idem:—

Districts.	Rice.		Cholum.		Ragi.		Cumboo.	
	June 5.	Mar. 31.	June 5.	Mar. 31.	June 5.	Mar. 31.	June 5.	Mar. 31.
Kistna - - -	8·45	8·26	11·15	10·97	12·94	13·9	10·38	10·53
Nellore - - -	7·78	7·87	9·64	10·	11·74	11·88	10·06	9·8
Chingleput - - -	8·90	9·40	9·05	10·98	10·72	11·26	..	10·78
South Arcot - - -	8·75	..	11·	..	11·5	..	11·75	..
Trichinopoly - -	7·6	8·12	13·2	16·8	10·3	10·87	9·7	10·32
Tanjore - - -	8·	..	10·	..	12·18	..	10·81	..
Madura - - -	8·2	8·47	10·4	12·15	9·8	10·46	9·7	11·08
Tinnevelly - - -	8·25	8·40	11·25	9·	10·75	11·47	11·	10·85
Kurnool - - -	6·95	7·29	8·06	8·79	9·51	9·92	8·92	8·88
Cuddapah - - -	7·73	7·91	8·66	9·53	9·25	9·91	8·92	8·36
Bellary - - -	6·83	7·41	7·56	9·05	8·25	9·30	7·29	8·64
North Arcot - -	7·9	8·58	8·9	10·58	9·8	10·38	8·2	8·91
Salem - - -	7·43	7·70	9·	9·09	8·81	9·26	8·12	8·93
Coimbatore - - -	7·40	7·62	8·41	9·14	8·89	9·55	8·61	10·61

From this it would seem that in Kistna, Nellore, Salem, and Tinnevelly prices were on June 5th pretty much the same as they were at the end of March; that in North Arcot, Trichinopoly, and Madura there has been a considerable rise, but only in comparison

with a previous lower average; that in Chingleput, Kurnool, and Cuddapah the rise has been about half a seer, and in Bellary and Coimbatore about a seer. For South Arcot and Tanjore the prices of March are not available.

3. Since June 5th the general upward tendency of prices has continued, but the table in the margin, which has been compiled from the telegraphic reports of prices on the 19th instant, which appeared in the "Gazette of India" on the 23rd instant, shows that except in Bellary a man can still everywhere procure for 1 anna more than the 1 lb. ration, which in Bombay at least has been found sufficient for maintaining health; that except in Bellary and North Arcot 1 anna and 3 pies suffice to procure within about 2 ounces of what authorities in Madras have admitted to be sufficient, while in seven districts that sum will procure more than $1\frac{1}{2}$ lbs. Under the new scale lately introduced the conditions as regards the labourers on the relief works are still more favourable.

—	Lbs. per rupee.		For 1 anna.	For 1-3.	For 1-6.
	Rice.	Dry grain.			
			lbs. oz.	lbs. oz.	lbs. oz.
Kistna -	17·84	23·95	1 7·95	1 13·93	2 3·92
Nellore -	15·90	21·98	1 5·98	1 11·47	2 0·97
Cuddapah -	14·75	17·98	1 1·98	1 6·47	1 10·97
Kurnool -	14·31	17·94	1 1·94	1 6·42	1 10·91
Bellary -	13·82	14·93	0 14·93	1 2·66	1 6·39
North Arcot	15·24	16·89	1 0·89	1 5·11	1 9·33
Chingleput -	17·42	19·69	1 3·69	1 8·61	1 13·53
South Arcot	16·99	22·88	1 6·88	1 12·60	2 2·32
Salem -	14·79	17·55	1 1·55	1 5·94	1 10·32
Coimbatore -	15·14	17·42	1 1·42	1 5·77	1 10·13
Madura -	17·09	21·36	1 5·36	1 10·70	2 0·04
Tinnevelly -	16·48	22·66	1 6·66	1 12·32	2 1·99
Malabar -	18·17	24·20	1 8·20	1 14·25	2 4·30

4. With reference to the supply of food grains, I am to remark that although the marginal statement, taken from the returns published weekly in the "Gazette of India," shows a certain falling off in the imports into the Madras Presidency by sea, the last three weeks have witnessed a very decided improvement in the shipments of rice from both Calcutta and Burmah.

—	By sea.	From Raichore.
	Tons.	Tons.

5. Under these circumstances his Excellency the Governor-General in Council is of opinion that the rise of prices which has occurred is not excessive, and considers it, on the whole, a fortunate circumstance that the rates are keeping up for the present, and thus holding out fair inducements for the continued importation of food by private trade. It is indeed not improbable that this rise may lead to some increase in the numbers on the works and in receipt of gratuitous relief, and so may augment the drain on the public Treasury, but this his Excellency in Council believes to be a far lesser evil than that which would result from any reversion to the plan of purchasing supplies of grain on behalf of Government—a plan likely to be more costly and less efficient than that of leaving the present high prices to attract importation. This general principle is, of course, subject to the modification which was referred to in paragraph 9 of the instructions to Sir R. Temple of the 16th January last, in the case of remote localities where private trade may be inactive. In such cases the best course would appear to be for the Government to advertise for supplies to be delivered at the nearest spots to which there are facilities for importation, and to give the relief to those who need it in the shape of food. It is obviously most desirable that the measure here referred to should be adopted only on the most clear and urgent grounds, and that if resorted to, it should be carried out with the utmost practicable publicity.

6. In conclusion, I am to state that with the view of informing the trade of the present condition of supplies, and the continuance of the policy of non-interference hitherto observed, this correspondence will be made public with the least practicable delay.

No. 58.

Encl. in No. 79.

Dated Calcutta, 29th June 1877.

From the SECRETARY, Bengal Chamber of Commerce, to the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA.

The Committee of the Chamber of Commerce have observed in to-day's papers, with considerable concern and interest, the essential portions of a reported correspondence

between the Supreme Government and the Government of Madras relative to the famine districts of that Presidency, the prices of food-grains, and supplies necessary to maintain adequate stocks for the requirements of the people dependent on Government aid.

But there are some points which do not appear to have been touched upon, and the Committee bring them to notice in the hope that Government will furnish such information as may place private trade in a position to judge how far it may proceed in helping the State in its measures of relief; and with the view that merchants may have full confidence in operating to that purpose it is submitted that the details of stock and of consumption at the various inland markets in the famine districts should be given with all possible publicity both in Calcutta and Madras.

Another material point, in the judgment of the Committee, is that a careful inquiry regarding the probable out-turn of growing crops of food-grains will enable the Government to arrive at an approximate estimate of the extent to which existing stocks should be supplemented by importations from Bengal, Burmah, &c., and it would be expedient to fix, if possible, after such inquiry, a date at which it may be reasonably assumed that such importations might cease.

It appears to the Committee of the Chamber that unless some authoritative declaration in these respects be promptly made, the course of trade may be arrested by merchants discontinuing their shipments, and that the existing scarcity will be aggravated by diminished supplies from this and other rice ports.

No. 59.

Telegram, dated 2nd July 1877.

From VICEROY to the SECRETARY OF STATE FOR INDIA.

To-day's Despatch covers important correspondence with Madras Government, which we have made public. That Government lately reported that a gradual and continuous rise of prices in the famine districts generally was causing a most severe pressure, and increasing the distress; also a serious diminution of stocks, and their exhaustion in Nilgiris, and parts of Salem, Bellary, and Cuddapah. They added that the whole of the stocks at the seaports would be moved inland by the end of the current month. As there were no accumulations at up-country stations, and no considerable fresh imports were known to be expected, they urged the importance of using railways with regularity, and pointed out the impossibility of making up afterwards for even a fortnight's diminished traffic. We replied that, comparing the prices on June 5th with those for 21st March, no very serious increase was perceptible. Even at the prices of the 19th instant, more than 1 lb. of grain was procurable for 1 anna everywhere except at Bellary, and under the new scale, more was procurable everywhere by relief labourers than was sufficient to support health according to the highest estimates. By returns published in "Gazette of India" importations by sea were certainly falling off somewhat, but then the shipments from Bengal and Burmah had increased during the last three weeks, and the Raichore supply was well maintained. We hold that the rise of prices which has occurred is not excessive, and that it is, on the whole, fortunate that the rates are keeping up, for thereby a fair inducement is offered for the continued importation of food by private trade. It is not improbable that the rise may cause some increase in the numbers on the relief works, and of those receiving gratuitous relief, and may so augment the drain of the public Treasury. But we believe this to be a far lesser evil than would result from reversion to the plan of purchasing supplies of grain by Government,—a plan likely to be more costly and less efficient than that of leaving the present high prices to attract importation. This principle was, of course, liable to the modification referred to in paragraph 9 of Sir Richard Temple's instructions of the 16th January last, in the case of remote localities where private trade is inactive. In such cases the best course appeared to be for the Government to advertise for supplies, to be delivered at the nearest spots where there are facilities for importation, and to give relief to those who need it, in the shape of cooked food; but the measure there referred to should be adopted only on the most clear and urgent grounds, and if resorted to, should be carried out with the utmost practicable publicity. Despatch also states that question of carrying powers on railways still engages attention in Revenue and Works Departments. Engines hired by Great Indian Peninsula from Baroda Railway; shelter provided for grain accumulated at numerous stations; Wardha Valley Railway kept open. Despatch forwards letter from Bombay, explaining that paucity of relief labourers on lower scale, to which Madras referred in Despatch, Number 38, is owing to works orga-

nisation obtaining higher tasks. Letter from Doctor Cunningham also sent, regarding the alleged presence of famine, diarrhœa, and dysentery at Madras. Prospects of season generally favourable; fair general rain in all Bombay distressed districts, except Kaladgi; in Mysore, showers, but more required. In Madras, light rain in most districts, but deficient monsoon in Kurnool and Cuddapah apprehended. Numbers relieved are, in Madras, 836,000 on works, 507,000 charitably. In Mysore, 57,000 on works, 111,000 charitably. In Bombay, 325,000 on works, 173,000 charitably. Temple telegraphs that monsoon has not yet reached Kaladgi, favourable elsewhere; prices slightly rising, fall expected when grass springs up and sowing completed; imports, coast small, by rail steady; general position still improving; condition of people good; cattle improving; causes of anxiety passing away.

No. 60.

No. 28. of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, 2nd July 1877.

We enclose for your Lordship's information copies of an important correspondence which has taken place with the Madras Government on the subject of the rise of prices of food-grains, the reduction of stocks, and the consequent pressure upon the population of the distressed districts of the Madras Presidency. The Madras Government represented that there had been a gradual and continuous rise of prices in the districts generally, and that stocks had been seriously diminished in most parts, and were entirely exhausted in the Nilgiris and some portions of Salem, Bellary, and Cuddapah. They also stated that stocks at the ports would have been moved inland by the end of the month, that there were no accumulations at up-country stations, and that no considerable fresh imports by sea were known to be on their way. Finally, they dwelt on the importance of the resources of the railways being used with regularity, and the impossibility of making up at a later date for a material diminution, even of a fortnight's duration, in the grain traffic inland. Nos. 40, 55, 57.

2. These representations have received our most anxious consideration. Comparing the prices of June 5th with those of March 31st, however, we find them in four districts to be pretty much the same as then, and in eight more not to have practically increased above one seer per rupee. Up to the 19th instant the upward tendency is still apparent, but even on that date a man could still procure for 1 anna everywhere, except in Bellary, more than the 1 lb. ration which has been found in Bombay to be sufficient for the maintenance of health under moderate labour, while in seven districts that sum would procure more than the $1\frac{1}{2}$ lbs. pound ration which is admitted to be adequate by the Madras authorities. Labourers on the relief works would, under the new scale recently adopted, be able to get considerably more. A comparison of prices in Madras with those prevailing in Bombay and Mysore moreover was, in the most distressed districts, in favour of the former.

3. With regard to the supply of food-grains from beyond the Madras Presidency, it appeared that though there had been of late a certain falling off in the actual imports by sea, the shipments from Calcutta and Burma had improved during the last three weeks, and that the importations viâ Raichore were well maintained.

4. Under these circumstances we considered it justifiable to conclude that the rise of prices which had taken place was not excessive, and was on the whole not to be regretted in view of the inducements thereby held out for the continuance and increase of importation by means of private trade. And we were of opinion that the increase which might occur in the numbers relieved by means of the works and charitably, was a lesser evil than that which would be created by any return to the policy of undertaking the supply of grain through Government agency. The only exception to this policy of non-interference was, as it always has been, the case of remote localities which private trade was unable to reach, to which allusion was made in paragraph 9 of the instructions to Sir Richard Temple of January 16th. While reminding the Madras Government of this exception, we have pointed out that such a measure as the supply by Government of the localities indicated should not be resorted to except on the most clear and urgent grounds, and should be carried out by means of advertisement for supplies to be delivered at the nearest points to which there are facilities for importation, and with the fullest practicable publicity. We have made our decision public by means of the press and the "Gazette of India."

5. In connexion with the reduction of stocks and large demand for food-grains in the Madras Presidency, the question of the carrying powers of the various railways has engaged our attention in the Departments both of Revenue and Public Works. For the Great Indian Peninsula Railway 40 engines were some time ago ordered, of which 10 have arrived and will shortly be in use; others have also been procured from the Bombay, Baroda, and Central India Railway, which is enabled by the commencement of the monsoon to dispense with them. The additions necessary to the stock of the East Indian and the Sind, Punjab, and Delhi Railways are under consideration. In the meantime, representations from the Chief Commissioner of the Central Provinces as to the large accumulations of grain at Nagpore, Katni, and various other places have resulted in the provision of temporary shelter at numerous stations. Arrangements have also been made, on the representation and under the guarantee of the local traders, to keep the Wurdah Valley State Railway open during the monsoon, in order to remove the large quantity of grain now lying and expected to arrive at Hingunghat. Upon the whole, while it is to be regretted that trade should have received any check, and prices in the distressed districts should have been raised through the limited powers of the railways, there can be no doubt, on the one hand, that all existing resources have been fully utilised, and on the other, that trade will have received an important stimulus and a direction into new channels through which it may be expected hereafter to flow.

6. We do not propose, for the present, to offer any further remarks upon the increase lately made by the Government of Madras to the wages of labourers on relief works, as we have not yet satisfied ourselves regarding the extent to which the measure has altered the wages at the time actually in force, or the grounds upon which it was deemed to be necessary. We enclose, however, for your Lordship's information, a copy of a
No. 38. letter from the Government of Bombay, on the subject of the allusion made by the Government of Madras in their Despatch to your Lordship, No. 38, dated the 26th of May, to the scale in force in the former Presidency. The remarks in this letter regarding piece-work have our full concurrence, and have been lately communicated to the Chief Commissioner of Mysore with reference to the adoption of piece-work in that Province.

No. 41. 7. In continuation of paragraphs 5 and 6 of our Despatch No. 26, dated the 11*th* ultimo, we enclose copy of a report from Dr. D. D. Cunningham, the Special Asistant to the Sanitary Commissioner with the Government of India, regarding his preliminary investigations at Madras into the nature of the so-called "famine diarrhœa" and "famine dysentery" lately prevalent there. While unable to discover any forms of fever which could in any way be ascribed to want, Dr. Cunningham considers the existence of morbid conditions which may be termed "famine diarrhœa" and "famine dysentery" to be established. He adds that "where once the complex structures of "the intestinal mucous membrane have been so seriously affected by degenerative "changes dependent on insufficient nourishment, they cannot be renewed, and no diet, "however careful and generous it be, can be of any avail when once the means by "which alone it can be appropriated to the necessities of the body have been "destroyed."

Nos. 8, 13, 33. 8. We would invite your Lordship's attention to two decisions with reference to the method of dealing with charges incurred for famine relief, of which copies are enclosed. In one, it has been distinctly affirmed, in reply to a remonstrance from the Government of Bombay to a previous order of the Financial Department, that a Local Government must exhaust its entire resources, provincial and local, in contending against the calamity of famine before Imperial aid can be afforded, but that, on the other hand, the Imperial Government will, at the conclusion of the emergency, make such a contribution as may suffice to secure the Local Government from actual insolvency. The second
No. 41. decision is to the effect that all outlay on Public Works executed for relief purposes shall be in the first instance debited in the Public Works accounts to a suspense head of account, termed "famine relief," and that of the whole sum thus recorded, the portion which represents the value of the work done, at normal rates, shall be ultimately recorded under the head "Public Works," the remainder being transferred to the head "famine relief."

9. We are glad to be able to report that the prospects of the season continue favourable. Fair general rain has fallen in all distressed districts of Bombay except Kaladgi. In Mysore showers have been pretty general in the plains, but more rain is to be desired. In Madras showers, and in some taluks a fair rainfall, are reported from almost all districts, which are probably sufficient, considering what has fallen already, to meet the present wants of most tracts. Apprehensions of an unfavourable monsoon in

Kurnool and Cuddapah are, however, entertained. The numbers in receipt of relief are as follows:—

In Madras - - - -	836,329 on relief works. 507,433 charitably relieved.
In Mysore - - - -	56,781 on relief works. 110,805 charitably relieved.
In Bombay - - - -	324,491 on relief works. 173,372 charitably relieved.

We have, &c.

No. 61. Encl. in No. 79.

No. 3,454—69 G., dated Bangalore, 2nd July 1877.

From the Officiating Secretary to the Chief Commissioner of Mysore to the Additional Secretary to the Government of India.

I am desired to acknowledge the receipt of your letter No. 504, of the 8th ultimo, in which, after setting forth certain inferences to be drawn from a review of the figures supplied in the special famine reports furnished from this office, you remark that the apparently peculiar condition of affairs at the present juncture "of the prevailing distress "in this Province, demands the most careful consideration of the Chief Commissioner, "made by means of specially deputed officers, &c., with the view of ensuring on the "one hand that all that can work shall be forced to do so, and on the other, that "charitable relief may reach all who are really in need of it without too great con-"centration of recipients and its concomitant evils and abuses." No. 34.

2. It may be convenient, Mr. Saunders considers, that the Government of India should be furnished with a brief resumé of the measures which have been taken to supervise and control the administration of relief.

3. In the Nundydroog division, comprising the three districts of Bangalore, Tumkur, and Kolar, the Deputy Commissioners have been generally relieved of the heavier portion of their magisterial duties, and divested temporarily of the powers they have exercised in disposing of sessions cases of a certain class under section 36 of the Criminal Procedure Code, thus setting them free for bestowing greater attention to purely administrative work. Up to the 10th June last, the Civil courts having been kept closed as long as it was practicable to do so, the Deputy Commissioners were aided by the Judicial Assistant Commissioners and Munsiffs and their establishments, in superintending famine relief operations, and the services of these officials are still retained for these duties so far as is compatible with the work of their courts. In Bangalore itself, where several large relief camps or kitchens have been established, owing to the large influx of people to this centre, their supervision has been vested in a Central Executive Relief Committee, of which Mr. Gordon, the Judicial Commissioner, is President. In the Bangalore district proper, the Deputy Commissioner is aided by his several assistants, one of whom is a European officer. In the Kolar district, the Deputy Commissioner's hands have been strengthened by the deputation of an additional Assistant Commissioner, and the Munsiffs who are zealous and able officers are still able to afford him their assistance. In the Tumkur district, the Deputy Commissioner's efforts have been ably seconded by two European officers temporarily transferred from the Mysore Revenue Survey.

4. In the Ashtagram division, the local distress has been confined chiefly to parts of one district, Hassan, and to several taluks of the Mysore district. The Commissioner, Colonel Hay, by constant visits to all parts of his division, has been able with the zealous co-operation of the district officers to cope with requirements in that division without further aid; but while the distress has been comparatively restricted in this division, the difficulty of dealing with it has been aggravated by the migration, through

the Mysore and Hassan districts of large bodies of labourers with their families who were tempted by the prospects and expectation of finding both employment for themselves and pasturage for their cattle in the hill districts of the Wynaad, Coorg, and Manjarabad. As the Government are aware, the supply of labour in those districts is almost wholly obtained in ordinary years from this Province, and though efforts have been made to arrest the stream, and prevent the movement in that direction of persons who were not under engagements to work on the estates, or who were physically unfit for such employment, it has not been found practicable to effect this object as effectually as could be wished. To aid the Commissioner, the services of two European officers of the Mysore Revenue Survey have been placed at his disposal, and more recently, Captain Clerk in charge of the Coorg Survey (which is now in recess) has been deputed for special work under Colonel Hay's orders.

5. In the Nagar division the Chitaldroog district alone is wholly affected; the Kadur Shimoga districts being only partially so. In the Chitaldroog district the Deputy Commissioner has been aided for several months past by a European officer of the Mysore Revenue Survey, and in the Shimoga district the Deputy Commissioner has the assistance of two European Assistants, in addition to his ordinary complement of Native Assistants.

6. The Chief Commissioner has reason to believe that the means taken as above shown to supplement the agencies at the disposal of the divisional and district officers, without looking for aid outside the administration, have been and are on the whole adequate to the purpose in view, but it cannot be denied that the energies of all these officers have been severely strained, and that it is due to the strenuous and hearty exertions of all concerned that the difficulties with which they have had to contend have been, as Mr. Saunders hopes, so far successfully grappled with.

7. It is necessary to add, however, that there are certain circumstances connected with the Bangalore district which have occasioned the Chief Commissioner some anxiety. The disproportionate number of persons who are being gratuitously fed in this district as well as the large expenditure incurred both under this head and on relief works, has attracted the attention of the Government of India. It is true, as has been explained by the Deputy Commissioner, that the inducements which have naturally attracted the people to flock into Bangalore, populated as it is by wealthy natives as well as by a large body of European residents, have led to a large number of distressed persons being thrown upon the relief kitchens in the district, but this reason does not sufficiently explain why such considerable numbers, ascertained to belong to the district, have had recourse to the charity of Government; and inquiries have been set on foot to elucidate the point. The matter is viewed by the Chief Commissioner as important also in so far as it appears that while the ratio of those gratuitously fed to the total population is as 1 to 53 in the Madras Presidency (the affected districts), and as 1 to 58 in the Bombay Presidency, the ratio is as 1 to 46 in Mysore. But if the figures relating to the Bangalore district (not including those of the Bangalore Municipality) as taken from the special famine report No. 19,* be eliminated, the proportion of gratuitously fed to population in this Province is as 1 to 58, being precisely equivalent to that prevailing in the Bombay Presidency.

* For the week ending 16th June 1877.

8. On the subject of the method adopted in respect of affording the distressed people employment on relief works, the Chief Commissioner conceives that a brief explanation may be desirable, with reference to the remarks made in paragraph 8 of your letter under reference. The course followed in this Province has been to provide such works as far as possible within easy reach of the homes of the people, in those localities where the distress has been most felt. A reduced task work was exacted in respect of all who were not sufficiently able-bodied to undertake employment on works in progress under the Public Works Department. In this manner, numerous petty works, such as sinking or deepening wells, excavating silt from tank beds, have been opened and carried out from funds assigned to some extent from local funds, but chiefly from famine grants. Road projects have been taken up to some extent, but in a Province so largely intersected by roads already, an objection has been felt to prosecuting works of this kind too actively, with the certainty of imposing an undue burden on the district funds in their maintenance hereafter. As a circumstance bearing on this subject, it may be needful to state also that, in a large number of the relief camps—certainly in all those where the numbers being gratuitously fed are large—light work is provided for those inmates who are capable of it, by employing them in collecting and breaking road metal, gravel, and in other ways. The advantage of this arrangement is that useful work is provided under more efficient supervision than it is always practicable to secure for petty and scattered relief works.

No. 62.

Telegram, dated 6th July 1877.

From Governor of Bombay to Secretary of State for India.

No rain of consequence since last telegram. Situation not improved. Prices of grain high. Still numbers on relief works decreasing, and agriculture progressing in all distressed districts save Kaladgi, regarding which anxiety felt. Monsoon not yet begun in Guzerat, nor in Nizam's Deccan, nor in neighbouring parts of Madras, all which slightly aggravates Bombay position.

No. 63. Encl. in No. 79.

Telegram, dated 6th July 1877.

From Revenue Additional Secretary, Simla, to Revenue Additional Secretary, Madras.

Governor-General in Council considers it of utmost importance in order to give confidence to merchants, and prevent discontinuance of shipments, that all procurable information regarding stocks, consumption, and growing crops should be made public. His Excellency therefore requests Madras Government will obtain as soon as possible and publish in "Government Gazette," as regards each distressed district or smaller convenient division, first, anything known about quantity of local stocks; secondly, the imports and exports of grain; thirdly, the estimated daily consumption of food grain by the population dependent on each principal market; fourthly, the condition of the growing crops of food grains. Similar information should be published fortnightly in future, and as crops reach maturity their probable out-turn should be given as far it can be roughly estimated.

No. 64. Encl. in No. 79.

Telegram, dated 7th July 1877.

From Revenue Additional Secretary, Simla, to Secretary, Chamber of Commerce, Calcutta.

Governor-General in Council thanks chamber for valuable letter of 29th ultimo, and will gladly afford all information procurable, but it must be remembered that ascertainment of existing stocks and estimate of out-turn of growing crops on vast areas is most difficult. Government of Madras have been requested to ascertain and publish in "Madras Government Gazette," as regards each distressed district, first, anything known about quantity of local stocks; secondly, the imports and exports of grain; thirdly, the estimated daily consumption of food grain by the population dependent on each principal market; fourthly, the condition of the growing crops of food grains. Madras Government have also been told that similar information should be published fortnightly in future, and as crops reach maturity their probable out-turn should be given as far as it can be roughly estimated. Chief Commissioner, Mysore, has been similarly requested. Government India consider that importations on a large scale into the Madras Presidency may be expected to last until the reaping of the new harvest, that is, September and October, and that if the harvest be good they will then probably return by December to their normal average.

No. 65. Encl. in No. 79.

No. 585, dated Simla, the 7th July 1877.

From the Additional Secretary to the Government of India to the Secretary to the Bengal Chamber of Commerce.

In reply to your letter of the 29th ultimo, I have the honour to enclose post copy of a telegram addressed to you yesterday, which his Excellency the Governor-General in Council trusts will meet the wishes and suggestions of the Chamber of Commerce.

I am directed to add that his Excellency in Council feels considerable doubts whether district officers generally have as good means of ascertaining the extent of stocks, and of estimating probable out-turn of crops as are possessed by the up-country agents of mer-

cantile firms deeply interested in the issue, and having access to many private sources of communication. In the case of district officers in the distressed districts of Madras the difficulty will be enhanced by the multifarious and onerous duties now falling upon them.

No. 66.

Telegram, dated 8th July 1877.

From VICEROY to the SECRETARY OF STATE.

No despatch this week. Prospects scarcely so favourable in Madras: no rain in Salem, Trichinopoly, Madura; fair in parts of Bellary, Kistna, Tinnevelly, Coimbatore; very slight elsewhere. In Mysore no rain; standing crops beginning to suffer. In Bombay, rain still insufficient in Kaladgi and extreme east, where young crops withering. Elsewhere in Bombay crops good and agriculture spreading. Number relieved,—In Madras, 850,000 on works; 537,000 charitably. In Mysore, 52,000 on works; 116,000 charitably. In Bombay, 297,000 on works; 173,000 charitably. Temple telegraphs thus:—"Prices still slightly rising, specially in Kaladgi, where imports are checked by "the employment of cattle on agriculture; imports of grain by steamer to coast con- "siderable, by rail steady. Condition of people good; cattle improving. General "improvement continues, and would be greater if monsoon were more steady, and rain- "fall extended better eastward. Nearly 100,000 persons voluntarily left works last "three weeks." We anticipate from Bombay reports possible saving of 40 lakhs on estimate for that Presidency.

Encl. in No. 79.

No. 67.

EXTRACT from the PROCEEDINGS of the GOVERNMENT OF BOMBAY in the PUBLIC WORKS DEPARTMENT (Local), No. 190 P., dated 8th July 1877.

RESOLUTION.—His Excellency the Governor in Council is pleased to issue the following orders for the guidance of the Collector and of the Executive Engineer in the Kaladgi Collectorate. If rain should not have fallen, or if from appearances it is not immediately expected when these orders are received, and if the price of staple grain is dearer than a rupee for 9 lbs., then wherever such prices may prevail, an equivalent for the Sunday's wage should be allowed, both on Public Works Department and Civil agency relief works, by adding an increment to the week days' wages.

2. Should rain continue to hold off, the Collector should be careful not to turn away people off the works who are not actually wanted for agriculture. He should also secure that facilities are given for taking people on to relief works, and that the machinery for village inspection is maintained in its fullest vigour, so that all people who are falling deeper into want may be brought before Relief Officers; the Collector should be informed that he will be held absolutely answerable in this respect, and his attention should again be drawn to Government Resolution No. 260 E.—852, Local, dated 16th April 1877.

3. As an example of the increment to be paid under these orders, the following is given, the price of grain being assumed to be 8 lbs. per rupee:—

On Public Works Department Works.

	Pay per working day, according to the table accompanying Government Resolution No. 268 C.W. —1038, Local, of 13th December 1876.	Increment as ordered, being one-sixth of the daily pay.	Total pay per working day.	
	A. P.		A. P.	
Man	3 0	0 6	3 6	
Woman	2 6	0 5	2 11	
Boy or girl employed upon the works	1 6 or 2 annas at the discretion of the directing officer.	0 3 or 4 pies at the discretion of the directing officer.	1 9 or 2 a. 4 p. at the discretion of the directing officer.	Mean of these rates, or 2 as., probably sufficient in all ordinary cases.

On Civil Agency Works.

Man	2 6	0 5	2 11	
Woman	2 3	0 4½	2 7½	
Boy or girl employed upon the works	1 3 or 1 a. 6 p. at the discretion of the directing officer.	0 2½ or 3 pies at the discretion of the directing officer.	1 5½ or 1 a. 9 p. at the discretion of the directing officer.	The higher rates might here be given.

No. 69.

Telegram, dated 12th July 1877.

From GOVERNOR OF MADRAS to the SECRETARY OF STATE FOR INDIA.

South-west monsoon so far very inadequate over wide area causing great increase distress. Recently sown crops in many districts reported withering. Prices still tending upwards.

Encl. in No. 79.

No. 70.

Telegram, dated 12th July 1877.

From REVENUE SECRETARY, Madras, to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

Your telegram of 6th. All possible reliable information will be published as requested; prices, imports, and movements of grain are communicated to press. Information as to stocks in districts too unreliable to publish authoritatively; any actual shortness of stock has been communicated to Chamber of Commerce.

No. 71.

Telegram, dated 13th July 1877.

From SECRETARY OF STATE to VICEROY.

Bad accounts of weather and prices from Madras. Have you any information?

No. 72.

Telegram, dated the 13th July 1877.

From Governor of Bombay to the Secretary of State.

No material improvement since last telegram. Monsoon still suspended, causing anxiety. Prices rising generally, in some parts expensively dear, aggravating distress.

Partial rain has fallen in eastern tracts of Deccan. Numbers on relief works still decreasing, but increasing on gratuitous relief in many places. Importation of grain maintained well. Human labour employed carrying grain, cattle being engaged for agriculture.

No. 73.

Encl. in No. 79.

No. 600, dated Simla, 13th July 1877.

From the Additional Secretary to the Government of India to the Chief Commissioner of Mysore.

With reference to your Secretary's letter, No. 3,454–69G., dated the 2nd instant, which has been laid before his Excellency the Governor-General in Council, I am directed to point out that no explanation has been afforded on the subject of paragraphs 4 and 5 of my letter No. 504 of the 8th ultimo as to the amounts sanctioned and those expended, or on the first and second points noticed in paragraph 7.

No. 74.

Encl. in No. 79.

No. 598, dated Simla, the 13th July 1877.

From the Additional Secretary to the Government of India to the Chief Commissioner of Mysore.

With reference to your famine report for the week ending 23rd June, I am directed to state that his Excellency the Governor-General in Council has observed with surprise that a system so unsuited to famine times as paying coolies only once in 15 days exists in the Province of Mysore, and has continued so long without attracting notice. This practice alone would go far to account for the small numbers on works under Public Works agency and for the eventual swelling of the numbers in need of charitable relief. His Excellency in Council desires that bi-weekly, and where distress is extreme, daily payment may be substituted as soon as possible.

2. The attention of the Madras Government has been invited to the remarks in paragraph 7 regarding the arrangements of the railway company in favour of certain merchants.

3. His Excellency the Governor-General in Council also observes that the report of the Commissioner of the Ashtagram Division for the month ending 15th May was not despatched till the 26th idem, dealt with until 12th June, or forwarded to the Government of India till 30th June, and considers that all famine matters should be disposed of with the utmost promptitude.

No. 75.

Encl. in No. 79.

Telegram, dated 13th July 1877.

From the Additional Secretary to the Government of India, Simla, to the Revenue Secretary, Madras.

Your telegram of 12th very satisfactory. Publication in Gazette in addition to communication to press and Chamber desirable for information of Bengal and elsewhere.

75[a]. Encl. in No. 79.

No. 76.

Encl. in No. 103.

Dated Calcutta, 14th July 1877.

From the SECRETARY TO BENGAL CHAMBER OF COMMERCE to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

The Committee of the Chamber of Commerce desire me to convey their respectful acknowledgment of the reply which his Excellency the Governor-General in Council was pleased to transmit by telegraph on the 6th instant to their representation of 29th of last month, and to state that the full information therein communicated will serve in a very great measure to guide the operations of merchants who may be interested in supplying the wants of the famine districts of Madras.

The Committee also desire me to thank you for your letter No. 585, of 7th instant. They are quite sensible of the difficulties in the way of officers in those districts, and would not desire to burden them with superadded laborious service; and probably the enterprise and industry of merchants will enable them to ascertain for themselves the information which the district officers would, no doubt, have cheerfully obtained had their present duties been less pressing.

The Committee further desire me to say that, with the view to the largest publicity being given to the reply with which they have been honoured, they have requested the daily papers to publish the correspondence.

No. 77.

Telegram, dated 15th July 1877.

From the VICEROY to the SECRETARY OF STATE.

Your telegram of 13th. Prospects of season continue unfavourable. Situation undoubtedly critical in Madras. No rain last week, except slight showers in parts Bellary and some southern districts. Recently sown crops withering in many quarters. Prices Madras still rising, principally of rice, but pound of grain still procurable for 1 anna in almost all distressed districts, and there are few parts where rice is the only grain to be got, moreover nowhere yet so high as in Kaladgi, Dharwar, Belgaum, of Bombay.

No. 78.

Telegram, dated 15th July 1877.

From the VICEROY to the SECRETARY OF STATE.

To-morrow's Despatch covers more papers by Cornish and Lyon. Condition: Mysore still critical; rainfall trifling. Rice selling at $11\frac{2}{3}$ lbs. per rupee at Bangalore, and higher in districts. Distress increasing. Standing crops suffering; unless rain soon, season will be lost. Of Bombay, Temple telegraphs as follows on 13th:— "Monsoon break continues, causing anxiety in districts, chiefly Kaladgi, where previous "rainfall insufficient. No harm yet where previous rainfall sufficient, but everywhere "more wanted. Sowing and agriculture proceeding in tract where rain was best. In "south, quick growing crops and vegetables sown with early rain coming to market. "Prices rising, especially Kaladgi and south districts, where imports impeded by em- "ployment of cattle in fields. People, eastern districts, conveying grain by head loads "from markets to remoter parts. Movement is healthy and facilitates imports, and "gives profitable occupation to many. Imports by coast trifling; by rail full. Con- "dition of cattle improving, except extreme east. General improvement continues, "and will be greatly accelerated by good rainfall, now probably near. Last four weeks "labourers reduced 124,002." Message ends. At request of Bengal Chamber of Commerce, we have requested Madras Government to publish regularly all information procurable regarding stocks, exports and imports, consumption of food grain, and condition of standing crops; also their weekly reports. Numbers relieved are as follows:— In Madras, 866,000 on works; 581,000 charitably. In Mysore, 50,000 on works; 120,000 charitably. In Bombay, 275,000 on works; 169,000 charitably. Prices and condition of Madras reported in separate telegram.

No. 79.

No. 29 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, the 16th July 1877.

Nos. 21, 28. We enclose for your Lordship's information two reports by Dr. Cornish, and a demi-official letter from Dr. Lyon, on the vexed subject of famine wages. In the first of his reports Dr. Cornish dwells on the difficulty of testing the effects of the reduced wage which is occasioned by the constant changes in the *personnel* of the gangs and the slowness of the process of destruction of life through chronic insufficiency of food. In his second report Dr. Cornish combats the views of Dr. Lyon set forth in the memorandum which we submitted to your Lordship with our Despatch No 24, dated the 17th May last, and adds that the data of Dr. Lyon's paper do not justify the conclusion which the Bombay Government have founded on it, that a ration based on 1 lb. of grain is sufficient for persons not performing severe labour. Dr. Lyon's demi-official letter Nos. 29, 48. brings to notice a letter of Dr. Dymock regarding the experiences of the French on a bare subsistence ration during the siege of Paris.

2. Your Lordship will have learned, from paragraph 2 of our Despatch No. 26, of the 11th ultimo, that the large preponderance of the charitably relieved in the Province of Mysore, which is alluded to in paragraph 3 of your Lordship's Despatch No. 46 of June 7th, had already attracted our attention. We now enclose the reply of the Chief Nos. 61, 73, 74. Commissioner to the reference we had made to him and a call for further explanations which we have found it necessary to make, as also a communication regarding the practice of paying the relief labourers only fortnightly, which has come to light. We regret to say that the condition of the Province continues critical, as shown by the following telegram from the Chief Commissioner, dated the 12th instant :—

"Rainfall at Bangalore 35 cents, Coorg 1·78 inches. Ordinary rice selling at Bangalore at 11½ lbs. per rupee. Prices unprecedentedly high in the districts, and distress greatly on the increase. Standing crops have already suffered, and unless rain falls, of which there are no signs, the cultivating season will be lost."

No. 45. 3. With reference to paragraph 7 of our Despatch No. 24, of May 17th, we beg to enclose a copy of the reply of the Madras Government to our letter on the subject of reducing the numbers in the relief camps. The question is one which must be left to the discretion of the Madras Government, but we observe that in the present week the Collector of Salem reports that the number in the relief camps there has risen 15 per cent. through the revised scale of diet and the consequent popularity of the camps, and we cannot but think that the system of discouraging the receipt of relief by any except those absolutely in need which is being carried out in Bombay, as shown in a Resolution Nos. 1, 47. of which a copy is enclosed, combines sufficient relief with necessary economy.

No. 58. 4. We submit for your Lordship's information a letter from the Bengal Chamber of Commerce, which has been elicited by the publication of the correspondence with the Government of Madras which was reported in our Despatch No. 28 of the 2nd instant. In consequence of this letter we requested the Madras Government to publish in the Nos. 63 to 65, 70, 75. "Fort Saint George Gazette" as much of the information desired by the Chamber as appeared practicable, and are glad to learn that there will be no difficulty in doing so. We have also requested that Government to publish their weekly relief reports, so that the grain trade in Bengal and elsewhere may receive information earlier than is possible No. 75a. through the "Gazette of India." In connexion with this subject we append statement of the prices of the four principal food grains in Madras at various dates from March 31st up to last week. The continued rise is serious, but a pound of grain can still be obtained for 1 anna in almost all the distressed districts, and there are probably but few parts where rice, which is the most expensive grain, is alone procurable. Prices in Madras, moreover, are nowhere yet so high as in the most distressed districts of Bombay, where they stood as per margin by the last accounts, and the Bombay Government had, in consequence, added payment for Sundays to the previous wage.

Kaladgi	- -	4¾ to 5 „

No. 67.

5. We regret to state that the prospects of the season continue very unfavourable. The condition of Mysore has been already referred to. In Madras there has been no rain during the week, except slight showers in parts of Bellary and some of the southern

districts, and the recently sown crops are withering in many quarters. Of Bombay Sir Richard Temple telegraphs on the 13th as follows :—

"Monsoon break continues, causing anxiety in districts, chiefly Kaladgi, where previous rainfall insufficient. No harm yet where previous rainfall sufficient, but everywhere more wanted; sowing and agriculture proceeding in tracts where rain was best. In south quick-growing crops and vegetables sown with early rain coming to market. Prices rising, especially Kaladgi and south districts, where imports impeded by employment of cattle in fields. People eastern districts conveying grain by head-loads from markets to remoter parts; movement healthy, facilitates imports, gives profitable occupation to many; imports by coast trifling, by rail full; condition cattle improving, except extreme east. General improvement continues; will be greatly accelerated by good rainfall now probably near; last four weeks labourers reduced 124,002."

The numbers in receipt of relief were, by the latest accounts, as follows:—

In Madras - -	865,752	on relief works.
	581,633	charitably relieved.
In Mysore - -	49,794	on relief works.
	120,251	charitably relieved.
In Bombay - -	274,521	on relief works.
	169,482	charitably relieved.

We have, &c.

Telegram, dated 19th July 1877.

From Viceroy, Simla, to his Excellency Col. Anson, Singapore.

The drought which prevailed during the past season throughout large portions of the Madras and Bombay Presidencies and Mysore has caused great decrease in stocks of food grains throughout India, and consequent rise of prices. The prospects of the season now commencing are doubtful, the S. W. monsoon so far having been unfavourable, and there is every probability of continuance of high prices and demand for at least next three or four months. It is important to encourage immediate imports of rice from the Straits, Cochin China, and Siam. Please communicate this to your Chamber of Commerce, and also to French and Siamese Consuls, with request that they will inform Governor-General and King.

No. 81.

Telegram, dated 20th July 1877.

From Secretary of State to Governor of Madras.

What news of monsoon? We are very anxious.

No. 82.

Telegram, dated 20th July 1877.

From Governor of Bombay to Secretary of State.

Some improvement since last telegram.

Good rain Concan, Guzerat, Kattywar, Khandesh, extending to Berar. Partial rain in Deccan. Monsoon not properly restored. Numbers on relief slightly decreased. Prices high in consequence of bad news from Madras, Mysore, and Nizam's country.

Timely rain, if vouchsafed, would re-establish everything in Bombay Presidency.

Quantities of grains ready for despatch to distressed districts.

Encl. in No. 164.

No. 620, dated Simla, 20th July 1877.

From the Additional Secretary to the Government of India to the Additional Secretary to the Government of Madras.

With reference to the proceedings of the Madras Government quoted in the margin, I am directed to state that his Excellency the Governor-General in Council considers that the system of a daily money dole is certain to lead to very extensive abuses, not merely on the grounds so forcibly set forth by the Collector of Nellore, but because the most recent of the orders quoted appear to leave the rates to be paid entirely at the discretion of the local officers.

No. 1,820, dated May 25th.
„ 1,830, „ „ 28th.
„ 1,979, „ June 13th.

2. I am accordingly directed to request that the orders sanctioning this mode of payment may be re-considered.

No. 84.

Extract from Letter from W. H. Glenny, Esq., Sub-Collector of Bellary, to J. H. Master, Esq., Collector of Bellary, No. 273, dated 20th July 1877.

In continuation of my letter No. 171, dated 10th May 1877, and with reference to Board's proceedings, No. 3,244, dated 21st December 1876, I have the honour to submit report on the famine relief operations under my charge during March 1877, accompanied as usual by a statement received from the Range Officer exhibiting the estimated value of the work turned out, with marginal notes by me showing the cost thereof.

2. There is not much to say in this report. Relief operations in Adoni taluk were placed in charge of Mr. Oldham, B.C.S., on 7th. The great reductions in numbers and the concentration of our labour on one or two works in each of the other taluks (Tadpatry, Gooty, and Alur) rendered it possible for us to take systematic and stringent measures against fraud. Tadpatry taluk lagged behind in this respect. I found on the 20th March the old system, of allowing Revenue Inspectors to draw round sums of money on undetailed indents when they chose, going on in this taluk, accompanied by general laxness. I repeated my orders and an improvement ensued. Alur taluk was administered better than Tadpatry. In Gooty taluk Lieutenant Wilson, by great personal care and activity, brought about a crisis. The Revenue Inspectors, the rest of the paying establishment, and the maistries (*alias* Mustseddies) found that if they obeyed orders the fount of dishonest gain was sealed. A regular combination was formed to evade obedience. Declarations of sickness, of want of time, of inability to understand orders, were all tried. I need not go over the history of this dead-lock again. Of two circumstances one availed to tide us over it, and the other to keep our hands strong against the enemy. The first was an arrangement made for sweeping away the whole native paying establishment at a day's notice, and taking the duty of paying upon ourselves and the European Superintendents, in the event of a single member of the native establishment continuing to be contumacious. The second circumstance (which, however, did not occur within the month under report) was the Government's dismissal of Revenue Inspector Ongole Sreenevassa Row, which most judicious step probably astonished him as much as it did myself. Previously to our getting the upper hand of the conspirators, one of them, Akkarally Venkataramayya, a revenue settlement Gumastah, had starved some gangs by withholding pay from them, with fatal consequences in two cases. All this again is before Government.

3. On the 28th Sir Richard Temple paid Gooty a visit, and inspected some coolies. He also made inquiries into my arrangements for gratuitous relief of all kinds, viz., (1), permanent gratuitous relief at "selected" centres throughout the division; (2), casual or temporary relief at all villages other than "relief centres;" and (3), subsistence allowance at $\frac{1}{4}$ anna each to children of labourers. He was satisfied with the arrangements which had a short time before been thoroughly organised, and which are before the Board and Government.

4. Prices remained nearly stationary during the month. They were rather higher in Alur taluk than elsewhere. They ranged between about $8\frac{1}{2}$ and 10 local (2 lbs.) measures of inferior cholum for the rupee. The lower retail rates prevailed on market days at the larger villages. Markets continued well supplied.

5. The rates of wages to labourers continued to be these of Scale No. II. of Government Order No. 329, dated 31st January 1877, viz., 1½ annas and 1¼ annas and ¾ anna for man, woman, and child. No Sunday wage was given. The children of labouring coolies too young to work received ¼ anna gratuity per diem. No deterioration in the physique of the coolies was apparent. Except those of the two persons referred to in paragraph 2 *supra*, no deaths from starvation came to light. It is not likely that any occurred; on the other hand, there were abuses on the side of lavishness (especially in Tadpatry taluk) when the advances for casual relief were first made to the Reddies of all villages other than "relief centres." This was to be looked for; it was soon checked with a fair amount of success.

No. 85.

Telegram, dated 21st July 1877.

From Governor of Madras to Secretary of State.

Monsoon west coast scanty; failed elsewhere. General condition became worse last week.

Average prices highest yet reached. Eleven districts above 7;* four above 6; retail in places 4 or 3. Some places short supplied and stocks exhausted. Imports insufficient although large. Recently sown crops reported failing. Mysore wants very heavy rain, but Madras Railway transport good.

Supplies and prices cause great anxiety. Rain reported on Bombay side, but no flood in Godavery.

No. 88.

Telegram, dated 23rd July 1877.

From Viceroy to Secretary of State.

Prospects continue generally unfavourable in Madras, Mysore, and Eastern Bombay. Some apprehensions of short rainfall were entertained regarding Behar, but during last three days good rainfall is encouraging. In North-West Provinces and Oudh rainfall as yet quite inconsiderable and causes serious anxiety. In Burma, Assam, Central Provinces, Berar, and Guzerat, rainfall good and prospects encouraging. In Hyderabad territory rain has ceased for some time past, and young crops reported withered.

Regarding Bombay, Temple telegraphs that monsoon is not yet fully established; rain good in Gujerat, Nasik, Khandesh, deficient in Southern and Eastern districts, where, if general fall be much longer delayed, young crops will suffer, except over limited areas where heavy partial showers have fallen. Price of grain slightly higher, further rise checked by increased employment of human labour on grain transport, movement encouraged is increasing. Imports, on coast considerable, by rail active. General situation improved by northern rain, still hopeful in south and east, but more rain greatly wanted there. Message ends.

Mysore Commissioners telegraphs no rain at Bangalore, slight in Coorg, rice 10½ lbs. per rupee at Bangalore, crops fading fast, insects destroying them in two districts,

* Seers per rupee. Seer = lbs. 2.

want of rain in Coorg affecting transplanting paddy and coffee plants. In Madras very light falls in Bellary, South Arcot, Trichinopoly, Madura, Tanjore, Tinnevelly, Cuddapah, Mangalore, none elsewhere. Extensive failure inevitable unless good fall in few days. Prices have further advanced considerably throughout Madras districts, and in Calcutta rice risen 1 rupee 2 annas per maund in 10 days. In view of general reduction of stock of grain we have informed Governor Straits Settlements of high prices, probably continued large demand, and importance of encouraging immediate imports of rice, and have requested him to inform Cochin China, and Temple states that Great Indian Peninsula Railway can supply daily 800 tons grain through booking to Madras, and 400 more for Raichore, and that stocks are large. Numbers relieved:—In Bombay, 273,000 on works, 160,000 charitably; Mysore, 47,000 on works, 120,000 charitably; in Madras, 893,000 on works, 618,000 charitably.

No. 90.

Telegram, dated July 23, 1877.

From Revenue Additional Secretary, Madras, to Revenue Additional Secretary, Simla.

Madras Government deem it their duty to report that condition of distressed districts of this Presidency is now very critical. If more rain falls within 10 days some dry crops on the ground may be saved, but even then the harvest must be an indifferent one. If no rain falls before end of month the dry crops, other than those which may be irrigable from tanks or wells, will completely fail, and result will be most disastrous. Local stocks of grain appear to be failing in many places and entirely exhausted in some; actual inability to purchase any in several parts of the country has been reported; prices higher than they have yet been and still rising, causing largely increased numbers to fall on State aid; notwithstanding careful scrutiny greatly increased expenditure will be inevitable. Government are making arrangements on assumption that the monsoon proves a failure.

Encl. in No. 164.

Telegram, dated July 27, 1877.

From GOVERNOR OF BOMBAY to VICEROY, Simla.

Replying to your Lordship's telegram I have promised the Duke of Buckingham delivery of 900 tons daily at Raichore, as Madras Railway can carry that quantity away. I have also promised to increase daily delivery as soon as Madras Government can carry away more. I have further promised Resident, Hyderabad, to deliver 300 tons daily at Shahabad terminus of Nizam's railway. I hope arrangement will be satisfactory to your Lordship, as these quantities exceed those mentioned in your telegram. I have asked Sir Andrew Clarke for 100 additional engines to be ordered from England, and rails and sleepers for 150 miles for Dhond-Munmar Chord Railway. If these be granted, your Lordship may depend on our doing everything that can be required, not only for ourselves, but for our neighbours and for Supreme Government if crisis becomes further aggravated.

Telegram, dated July 28, 1877.

From SIR A. J. ARBUTHNOT, Simla, to GOVERNOR OF BOMBAY.

Your telegram of yesterday to Viceroy. Clarke is in communication with your Government regarding your application for additional engines and for rails for the Dhond and Munmar Railway. We will do what we can, but I fear neither will be in time to do much good for present famine.

No. 96.

Telegram, dated July 28, 1877.

From VICEROY to the SECRETARY OF STATE.

Seriously apprehensive as to famine. I believe that unless immediate measures are taken in Madras and Mysore, a great catastrophe and enormous as well as fruitless expenditure of money are imminent. Now that another year of worse famine and still vaster expenditure are impending, it is our duty to introduce a better system, so that this immense amount of labour and money shall be devoted to great works of lasting value. An excellent example of good management has been given by Bombay.

I feel that to cope with the dangers and difficulties present and imminent in Madras and Mysore, the highest ability and experience to be found throughout India are urgently required; and it is the duty of the Supreme Government to see that such ability and experience are applied to help the Madras Government in organising the most complete system of relief that can be arranged. I anxiously desire to maintain to the utmost the authority of the Local Government, to exercise no unnecessary interference, to give that Government every possible assistance, and to act in complete accord with it. I feel that the means now at the disposal of the Madras Government for dealing with such a crisis are insufficient. Sir A. Arbuthnot, Member in charge of the Famine Department, would forthwith go to Madras for private conference with the Duke on these matters, and with a view to form on the spot the best possible judgment. I shall also myself go to Madras accompanied, if possible, by Sir John Strachey. It is still not impossible that immediate rain might greatly improve situation, but it would be unwise to allow this hope to cause any further delay.

No. 102.

Encl. in No. 164.

EXTRACT from the PROCEEDINGS of the GOVERNMENT of INDIA, Financial Department, No. 2,144, dated 30th July 1877.

RESOLUTION.—The Governor-General in Council deems it important, that in all accounts of expenditure on public works undertaken by the State for the relief of distress caused by famine, a clear distinction should be maintained between the cost of materials and skilled labour, and the outlay on unskilled labour.

2. It will often be impossible to avoid some expenditure on such works for materials (the purchase and carriage of which can seldom, if ever, contribute much to the relief of the distressed population, which is the first object of the works), or for skilled labour, the employment of which might not be required immediately for relief purposes; if it is so required, the wages paid should, as a rule, be at unskilled rates only.

3. But it is the paramount duty of all authorities responsible for the expenditure on such works to reduce to a minimum the expenditure which is thus accessory to the large outlay for direct relief which, at such times, strains the resources of the State. The accounts should be so constructed as to show plainly the proportion of the whole expenditure absorbed in such accessories.

4. His Excellency in Council is accordingly pleased to decide, that whenever any public work is undertaken for purpose of famine relief, the expenditure thereon shall be classified as follows:—

(1.) For materials.
(2.) For labour paid at the rates fixed by the Government for unskilled labour upon relief works.
(3.) For labour paid, for whatever reason, at any higher rates divided into (*a*) skilled labour, (*b*) supervision of labourers, skilled and unskilled.

5. Explanation will be expected by the Supreme Government whenever the proportion of the whole expenditure which falls under headings (1) and (3) bears any substantial proportion to the whole expenditure on the work.

6. These instructions should, as far as possible, be applied retrospectively in the case of the works undertaken since the beginning of the existing famine in the Madras and Bombay Presidencies and in Mysore; and all future estimates of works to be thus undertaken should be classified in the manner thus prescribed.

ORDERED.—That this Resolution be published in the "Gazette of India" and distributed for information and guidance as follows:—

1. To the Revenue and Public Works Departments of the Government of India.
2. To the several Local Governments and Administrations.
3. To the Comptroller-General and to the several Accountants-General and Deputy Accountants-General in independent charge.

No. 103.

No. 31 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Simla, 30th July 1877.

Our telegram dated the 23rd instant will have made your Lordship aware that in view of the general decrease in the stocks of food-grains throughout India and the consequent rise of prices, we had informed the Governor of the Straits Settlements of the probability of a continued large demand for rice, and the importance of encouraging immediate importation, requesting him to communicate these facts to the Governor-General of Cochin-China and the King of Siam. A copy of our telegram to which we have not yet received a reply, is enclosed. No. 80.

2. We also now beg to report the result of inquiries which we have instituted regarding the stocks of grain available for exportation to the famine districts. In Burma the stocks are practically exhausted. The estimated stock of rice in Calcutta just now is 178,000 tons; what the stocks in the districts of Bengal may be we have not yet been informed. In the North-West Provinces and Oudh there are reported to be 220,000 tons of food-grain available for export, provided abundant rain fall soon and a good monsoon crop be produced. The estimate is, however, said to be conjectural, and it is

added that stocks are low, and prices rising owing to alarm caused by the absence of rain. At the same time we learn that grain from Northern India is still being delivered by the East Indian Railway at Jubbulpore at the rate of 500 tons per diem. The result of accounts received from Sir Richard Temple and the Chief Commissioner of the Central Provinces is, that 100,000 tons are available in the Central Provinces, 16,000 in the hands of the railway company, and 25,000 tons in Bombay, making a total of 141,000 tons. About 200 tons per diem are being delivered in Bombay by the Bombay, Baroda, and Central India Railway. Regarding the Punjab, information has not yet been received. We are thus not in a position to state with any approach to accuracy what amount of grain will be available for the distressed districts, but it is evident that even in the event of a favourable monsoon in Northern India, regarding which some doubts may well be entertained, no amount of foreign grain which is likely to arrive will be otherwise than opportune.

No. 30. 3. The subject of the probable requirements of the famine districts of Madras, Mysore, and Bombay has also engaged our attention. We enclose some valuable proceedings of the Madras Board of Revenue regarding the additions to the food stocks of that Presidency during the period from May 1st, 1876, to April 30th, 1877. They consider that the quantity of food stocks received by their distressed districts, as far as it is possible to ascertain it, was 474,216 tons, that 1,000 persons consume, at 1½ lbs. per head, 20 tons per month, and that in the districts of Bellary, Cuddapah, and Kurnool about one-fifth of the population have been living on imported grain. The quantity of foreign grain required for these districts was some months ago estimated by Sir Richard Temple at 2,700 tons per day; recently other calculations placed the amount at 4,400 tons; and now the Madras Government have stated it to be 3,500 tons. The requirements of Mysore are given by the Chief Commissioner at 1,000 tons to be imported daily by railway alone. Those of Bombay are still uncertain owing to the holding off of the monsoon, but we trust they may prove less onerous than those of other districts. The Nizam's territory will need a considerable supply, of which the only gauge we possess at present is an arrangement, which the Bombay Government report, for the delivery of 300 tons daily at the Shahabad station of the Hyderabad Railway.

4. Whatever may, however, be eventually ascertained to be the actual requirements of the several distressed localities, it has become clear that the railway companies are, under existing arrangements, unable fully to meet them. As an illustration of this we may mention that Sir Richard Temple reports that the Great Indian Peninsula Railway are prepared to deliver 1,200 tons of grain at Raichore daily, but the Madras Government state that their railway is unable to remove more than 900 tons daily therefrom. Under these circumstances we have under consideration in the Public Works Department a project for more united action, and effectual utilisation of stock, between the several companies, which will be reported to your Lordship heareafter when fully matured.

No. 90. 5. Regarding the condition of the Madras Presidency generally, we enclose an important telegram from the Local Government, dated the 23rd instant, and stating that if more rain falls within 10 days some of the dry crops may be saved, though even then the harvest must be an indifferent one, but that if rain should hold off all unirrigated crops must completely fail. With reference to their concluding intimation that they are
No. 91. making arrangements on the assumption that the monsoon will fail, we have requested them to state what these arrangements are.

No. 76. 6. With reference to paragraph 4 of our Despatch No. 29, dated the 16th instant, we enclose copy of a letter from the Bengal Chamber of Commerce, expressing their acknowledgments for the arrangements made for giving information likely to be useful to those merchants who are interested in supplying the wants of the famine districts of
No. 53. Madras. We also enclose copy of a letter from the Government of Bombay accepting the decision regarding the appropriation of Local and Provincial Funds for famine expenditure which was reported to your Lordship in paragraph 8 of our Despatch No. 28, dated the 2nd instant.

7. The present condition of the famine districts of Bombay is described in the following telegram from Sir Richard Temple, dated the 26th instant:—

"Monsoon rain not yet resumed. Cloudy weather with general light showers still preserves young crops, reported to be withering in places but not yet lost. Cessation of rain in Guzerat causes some anxiety. * * * * * Prices grain still rising. Importation by human labour to rural districts increases; coast imports small, by rail active, 400 tons more than last week. General situation not materially worse, but good rain much needed to reduce prices, revive credit, and lessen pressure on people."

From a further telegram, dated the 27th instant, we learn that there has been a fall of 2 inches of rain in Sholapur, with fair local showers in parts of Ahmednagar and Satara.

8. We will now give a few particulars regarding the prospects of the season throughout British India. In British Burma the rain commenced on May 24th, three weeks later than usual, but the fall has been sufficient since, and agriculture is everywhere progressing satisfactorily. In Bengal, regarding Behar and other portions of which apprehensions were lately entertained, the rainfall has on the whole been sufficient to remove anxiety, but some individual districts have not yet received a proper supply. In Assam the rains began in March as usual, the early rice crops are nearly ready, and both food grains and tea are doing well. In the North-West Provinces and Oudh generally the drought continues, causing much anxiety and a perceptible rise in prices. The effect which a failure of crops here would have, not only on the province itself, but on the supplies for the distressed provinces to the south, would be serious in the extreme. There is, however, still time for rains to produce an average harvest. In the Punjab, little rain has fallen as yet, but the season has scarcely arrived when the fact need cause apprehension. Rajputana and Central India received at first a sufficient supply, but rain is now holding off, and much wanted in parts, though the general prospects cannot yet be termed unfavourable. The Central Provinces and Berar have received an abundant rainfall, and the crops are doing well. Regarding Bombay, Sir Richard Temple's report has been given above, to which we may add that the absence of rain in Guzerat is now attracting attention. Of the Nizam's territories the reports are most gloomy. The suspension of rainfall for a month, with high drying winds, has withered the young crops almost everywhere, and in the southern portion the population generally are said to be dependent on Government relief. The weather in Mysore and Coorg has changed somewhat for the better since the 22nd instant; showers have fallen pretty generally, and if the improvement should be maintained some portion of the newly sown ragi crop may, the Chief Commissioner believes, be saved. In Madras there has been slight rain in parts of all the distressed districts excepting apparently Nellore and Kurnool. On the whole, the season must be recognised as a most extraordinary one, in illustration of which we may mention that recent advices from Karwar describe the fishermen as still pursuing their avocation, as if it were the month of October.

The latest telegram from Madras, dated yesterday, gives the following particulars:—

Daily telegram noon July 27th:—

Madras Observatory.—·30 inches.

Salem.—Good showers over greater parts of Tripatore taluk on 24th.

Cuddapah.—Showers from 24th to 26th about 1 inch; weather cloudy; slight rain at Sidhout and Badroail.

Bellary.—Slight shower on 23rd, and seven-tenths inch at Gooty on 24th.

Trichinopoly.—Heavy showers at Perambular on 22nd; Godavery from $\frac{1}{2}$ to $2\frac{1}{2}$ inches on 26th; villages of Ramachendrapur taluk, on 20th, 21st, and 22nd.

Vizagapatam.—2 inches on 22nd.

Kistna.—22nd, 2 inches at Tiruvur and 1 at Krosur.

9. The number of persons relieved during the week has been as follows:—

In Madras - -	913,442	on works.
	731,267	charitably.
In Mysore - -	47,609	on works.
	137,560	charitably.
In Bombay - -	255,762	on works.
	149,072	charitably.

There have thus been very considerable increases in both Madras and Mysore, especially in the charitably relieved, but a decrease in Bombay. We take this opportunity of forwarding for your Lordship's information a revised statement of the numbers charitably relieved in the Madras Presidency since January 1st, it having been ascertained that, owing to the omission of relief camps and other items, the figures reported in the weekly telegrams from Madras were considerably under the mark. No. 104.

Telegram, dated 31st July 1877.

From SECRETARY OF STATE to VICEROY.

We strongly feel that, if your health enables you to do it, an immediate or very early visit by you to Madras, as you suggest, will be of great possible public service. It will settle many controversies, will dispose of all difficulties of jurisdiction, will enable you when you return to leave settled principles behind you, and will greatly tend to satisfy public mind.

No. 105.

Telegram, dated 31st July 1877.

From SECRETARY OF STATE to GOVERNOR OF MADRAS.

Yours 24th. Do you wish all military officers to return or only those in civil employ?

No. 106.

Telegram, dated 31st July 1877.

From SECRETARY OF STATE to GOVERNOR OF BOMBAY.

Please let me have full information as to fall of rain and monsoon.

No. 107.

Telegram, dated 31st July 1877.

From SECRETARY OF STATE to VICEROY.

A considerable quantity of rice has been offered to us by Mr. Samuels, of London. I do not know whether you will require assistance in obtaining supplies, but if you do Samuels supplied us sufficiently and at a fair price during Bengal famine.

No. 108.

Telegram, dated 31st July 1877.

From VICEROY to SECRETARY OF STATE.

To-day's Despatch reports progress of inquiries regarding grain supplies available for export to famine districts. In Central Provinces and Bombay, 141,000 tons. From North-West Provinces exportation depends on monsoon, but 500 tons daily still reaching Jubbulpore; from Guzerat 200 tons daily reach Bombay. Bengal stocks considerably reduced, but new rice coming into market, and trade from interior to Calcutta active at falling prices. In Burma, none. From Singapore, Anson telegraphs having informed all quarters of India's wants; probable action still unknown. Despatch also reports requirements of Madras at 3,500 tons daily; Mysore, 1,000 tons daily, and that we are arranging Public Works Department project for more effectually utilising stock of all railways for famine purposes.

Prospects of season throughout India as follows:—Burma, rain began May 24th, three weeks late, but fall sufficient; agriculture satisfactory. Bengal, some districts still want rain, but general apprehensions removed. North-West Provinces and Oudh, drought continues, causes anxiety and rise of prices, but still time for average harvest. Rajputana, Central India, rain wanted in parts; prospects fair. Assam, Central Provinces, Berar, quite satisfactory. Bombay, no rain in Gujerat, causes anxiety; heavy fall in Concan, and two inches and a half in Sholapur. Good showers in Eastern Bombay. Deccan keeps agriculture going, but prices very high. Rainfall on western coast at present very small for the season. Nizam's territory much distressed from no rain for one month, but two inches just fallen. Mysore and Coorg, rain generally not abundant; more needed to save part of young crop. Madras, fair showers in all distressed districts except Nellore and Kurnool. Cuddapah, Bellary, fall considerable, continuance may save portion of dry crops, but harvest at best indifferent.

Numbers relieved in Madras, 913,000 on works, 731,000 charitably relieved.

Mysore, 48,000 on works, 149,000 charitably relieved.

Bombay, 256,000 on works, 149,000 charitably relieved.

No. 109.

Encl. in No. 164.

No. 2,336, dated 31st July 1877.

From A. MACKENZIE, Esq., Officiating Secretary to the Government of Bengal, Financial Department, to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

On receipt of a telegram from his Excellency the Viceroy to the address of the Lieutenant-Governor, which reached this office on the 25th instant, intimating that the Government of India had reason to fear that the Calcutta exports of food-grain to Madras had been really far below those stated in the "Gazette of India," and requesting that inquiry might be made as to the actual stock of grain and reserve for export in Calcutta, steps were at once taken to make the necessary investigations, and I am now to submit the result for the information of his Excellency the Governor-General in Council.

2. There seems to be no doubt that the returns of exports of food-grains to coast ports furnished by the Calcutta Custom House have been throughout seriously misleading. No preventive officer is posted on board of vessels clearing for coast ports with cargoes of grain, and the Customs returns have been made up from the shipping passes, which represent merely the amount of grain that the applicants for passes think it possible they may ship, and do not at all represent the quantity of grain actually shipped. In some instances the shipping passes are returned to the Custom House with a note of short shipments or re-lands endorsed thereon, but in the majority of cases the passes are not returned, and it is assumed in the returns that the whole amount passed was shipped, though possibly this is only true of a mere fraction of that quantity.

3. In the "Monthly Commercial Guide" published by the Collector of Customs, the figures prepared from the shipping passes, less known re-lands and short shipments, are shown in the body of the book. At the close are grain tables purporting to be prepared from the manifests of the vessels cleared. Although these figures frequently do not tally with those in the body of the Guide, they are still, it is found, but little more trustworthy; for it is alleged that the manifests in the case of coast vessels are filled up very often from the Collector's daily export lists, which, as above explained, are compiled from the shipping passes. The fact seems to be that no importance has been attached hitherto, and in ordinary times, either by the Customs authorities or the trade, to the correctness of the statistics of exports to free ports. This matter was referred to in paragraph 32 of the Board's letter, No. 61 B., of the 30th January last, forwarded with this office endorsement No. 334 of the 6th February.

4. An attempt has been made to arrive at a knowledge of the actual shipments during the last few months, by procuring correct figures from the agents of the vessels, but this information has not yet been completed. Probably, however, the extent of the error in the Calcutta export returns is to be measured by the figure of the Madras imports, and in that case it is very serious indeed, as will appear from the statement annexed.

5. Orders have been given that in future a preventive officer shall visit every vessel immediately before she clears, and take extracts from the cargo-books of the actual grain shipped. If this does not secure an accurate return, more stringent measures will have to be adopted to secure correct manifests, in anticipation of any provisions that may be made in the revised Customs Act. But it is undesirable to throw unnecessary obstacles in the way of the trade at present, or to make unpopular changes of system at a time of pressure.

6. Turning now to the question of the stocks of Calcutta, a local inquiry with regard to rice, which is the most important item, has been made by an intelligent native officer accustomed to statistical work, who visited all the markets and entrepôts in Calcutta and its neighbourhood, and arrived at the conclusion that the stock now in hand is about 50 lakhs of maunds, of which, however, only about 10 lakhs are in the hands of dealers likely to supply an export demand. The following extracts from his report are given, as showing that the general conclusion is based on inquiry as detailed as the circumstances admitted.

"The present stock of rice amounts in round numbers to 50 lakhs of maunds, distributed as follows:—

	Mds.
At Baliaghatta and Wooltadingee	9,20,000
„ Hatkhola and Coomertooly	6,50,000
„ other marts within Calcutta	9,25,000
„ Tallygunge	2,15,000
„ Chitlah	20,000
„ Kidderpore, Moonsheegunge, and other adjoining marts	5,00,000
„ Seebpore, Ramkrishtopore, Howrah, Sulkeah, Ghoosoory, Bally, &c., say	12,00,000
„ the Railway Jetties and at other outlying places, such as Gurreah, Kassipore, Baranagore, say	5,70,000
Total	50,00,000

Baliaghatta and Wooltadingée.—"The trade of these places consists of balam rice. At Baliaghatta the trade is mostly in the hands of a dozen aruthdars, three of whom—Bunsi Buddun Puddar, Ram Kanye Puddar, and Petambur Shah—do the largest trade. The whole of the rice, as seen by me on the 24th instant, was thus distributed:—

At Baliaghatta—	Mds.
In the hands of the aruthdars (10 in number)	1,20,000
In minor aruths	1,00,000
Quantity packed in bags and awaiting delivery at the several aruths	2,00,000
In the hands of phoreahs or retail vendors	1,00,000
Total	5,20,000

At Wooltadingee—	Mds.
In the hands of mahajuns	3,10,000
In minor aruths	90,000
Total	4,00,000

Hatkhola and Coomertooly.—"Moogy rice is the chief staple of traffic here. This rice is imported from Northern Bengal, chiefly from the Dinagepore district. There are about 51 wholesale dealers in these localities, who import rice direct from the producing tracts. Moogy rice is not consumed in Calcutta, but is shipped for exportation by sea. The stocks at these marts are shown as follow:—

At Hatkhola—	Mds.
In hands of aruthdars	50,000
In bags awaiting delivery	1,50,000
Total	2,00,000

At Coomertooly—	Mds.
In the hands of aruthdars	4,45,000
In minor aruths	5,000
Total	4,50,000

Other marts within Calcutta.—"The trade here is in innumerable hands, and is entirely of a local character. We visited 21 bazars, but there are about as many more which we could not visit. The estimated figures for these are as follow:—

	Mds.
At the 21 localities visited on the 25th instant	1,20,000
For other places, say	2,80,000
Total	4,00,000

Besides this stock, we have seen a large quantity in boats on the riverside. We counted about 1,219 boats of various capacity fully laden with rice, estimated the stock to be about $5\frac{1}{4}$ lakhs of maunds.

Tallygunge.—"The bulk of the trade in this bazar is in the inferior qualities of rice, namely, amun kujlah, boro kujlah, and aus kujlah—all produced in the eastern districts, as well as in the Soonderbun tracts of the 24-Pergunnahs and Jessore.

The demand upon this market for local consumption is inconsiderable, and almost the whole of the imports, which amount annually from 25 to 30 lakhs of maunds at this place, are carried away for shipment by sea. The estimated figures for this mart are—

	Mds.
In hands of aruthdars	45,000
In boats on the khal	20,000
Rice packed in bags and awaiting delivery	1,50,000
Total	2,15,000

Chitlah Hát.—"Here the trade is in atub or table rice, imported mostly from Joynuggur and other places in the southern part of the 24-Pergunnahs. The quantity available here may be set down at 20,000 maunds.

Kidderpore and Moonshigunge.—"The bulk of the rice at these places is consigned

from Midnapore, the 24-Pergunnahs, and Hooghly. The total stock may amount to 5 lakhs of maunds. In most of the books inspected the grand total of imports had not been struck, so that it was not possible to test their figures with those obtained by internal registration by the Government.

"The tradespeople are unanimous in the belief that the stock, whatever it may be, has been depleted to the extent of half the quantity of previous years. There was, however, one gentleman of the firm of Sumbhoonath Chowdhery, at Hatkhola, who stated that the ordinary annual stock might amount to a crore of maunds, which, no doubt, is a near approximation to the truth, and is corroborated by inquiries made some months ago.

"There are large consignments of moogy rice daily expected in Calcutta, and the fact of the aus crop already appearing in the market makes the people very hopeful of the future. The aus crop at this moment will not only help the peasantry, but will also be shipped for expertation by sea; and I was informed at Tallygunge that about 10 or 12 lakhs of maunds of aus rice are annually purchased from that market for export by sea.

"As regards the exports by sea, the demand is met from the reduced stocks in the hands of the aruthdars, as well as by daily importations; and it is a fact that new rice, as fast as it comes to Calcutta, is exported, without there being anything left to replenish the reduced stocks of Calcutta."

7. There is every reason to believe in the general accuracy of this report, but the Lieutenant-Governor has appointed a native officer to go round all the marts daily and report on the state of stocks and the briskness or otherwise of the trade. The traffic registration abstracts are also ordered to be submitted weekly instead of fortnightly, and district officers have been directed to report weekly the state of stocks in the district markets, as far as this can be ascertained, and to take note of any material fluctuations in the quantities despatched to Calcutta. This information will be duly communicated to the Government of India.

8. During April, May, and June, 39½ lakhs of maunds of rice were registered at the inland trade registration stations as *en route* to Calcutta. Besides this, a good deal comes in that is not registered; so that there can be no reasonable doubt as to the existence of a considerable stock in and about the city.

9. It is quite impossible to form any sort of accurate estimate of the amount of grain in the country. It is not collected in large warehouses and marts, but is scattered about in small quantities in every village, and nearly in every house. The brokers and boatmen, now that the rivers and creeks are open, go round and buy from house to house, and in due course the rice reaches the market. In Rungpore and Dinagepore there is a large stock, which has been awaiting the rise of the rivers, and which is now being moved into the market in Eastern Bengal. The aus crop is on the point of being reaped, and will add considerably to the stocks. There is reason to believe that in some places the people have sold too much rice for export, and have brought upon themselves an enormous rise of price of food-grain, but this is a temporary evil and applies chiefly to Chittagong and Orissa, two great places of export.

P.S.—The result of the orders to examine the cargo-books has been, in the case of the first vessel boarded, to show that in lieu of 50,020 bags entered in the Customs returns, and 48,960 bags in the manifest, only 23,663 bags were really shipped.

No. 110. Encl. in No. 164.

No. 111.

Telegram, dated 1st August 1877.

From Governor of Bombay to Secretary of State.

Your Lordship's telegram 31st. Monsoon not failed, but continues scanty in Bombay Presidency. Sholapur, rainfall sufficient; elsewhere in Deccan, showers more or less, sometimes heavy; crops kept alive; prospects of harvest uncertain.

Rainfall generally under seven inches since beginning of monsoon; winds high; rainfall in Guzerat, Kattywar, came late; continues slight, under four inches. Rainfall, Concan, greater, but continues slight relatively. Position on coast at Bombay, rainfall heavy, nearly 40 (sic) inches, but local only, with long intervals of sunshine. Rainfall on ridge of western Ghâts sufficient, flooding streams, seasonable. Downpour monsoon in Deccan not likely till better rainfall in Concan and Canara. No danger yet in Bombay Presidency.

People engaged in agriculture. Short harvests probable, though rain may come to save much. Fair accounts from Central Provinces, Berar, Malwa.

Though some rain recently in Hyderabad, Mysore, Ceded Districts, Madras, yet accounts still indifferent. Short harvests expected at best. Lateness of monsoon in northern India aggravates situation.

Prices in Deccan touching famine rates. Though stocks large and carriage active, distress widens. Anxiety about sufficiency of engines on railway. I have made recommendations thereon, if sanctioned we can manage, even though monsoon fails.

No. 112.

Telegram, dated 2nd August 1877.

From Viceroy to Secretary of State.

As the earthworks of Dhond and Munmar line will probably be sufficiently advanced to admit of rails being laid temporarily by end of December, we are of opinion that this line should be completed as a permanent broad gauge railway in preference to any other sanctioned railway not yet commenced, except Western Rajputana line. This chord line avoids the Ghâts and cuts off 120 miles in through communication. Should famine continue into next year, and the most serious apprehensions are entertained by us and by the Local Governments on this head, the chord would be invaluable in augmenting the carrying capacity of the present rolling stock. Moreover, the chances of having to interfere with the export traffic would be diminished. Bombay Government urges that materials be got immediately. We recommend this course strongly, and that the chord shall be completed as a permanent line as soon as estimates have been prepared and sanctioned.

The following materials are required for length of railway, including sidings, of 150 miles:—Sixty-seven pound double-headed rails, same section as got out by Peninsula Railway, and now laid in Wardha Valley State Railway, with fastenings, steel rails preferred. Sleepers to be iron or wooden, or both, as most quickly obtainable; if of creosoted wood not less than 9 feet long, preferably 9 feet 6 inches long, 10 inches broad, 5 inches thick; if cast iron of same pattern as on Peninsula Railway; for same rails no objection to wrought-iron or steel sleepers, as on Oudh Railway, if obtainable quickly and suitable for double-headed rails. Arrange for only 135 miles of sleepers, as 15 miles may be got in this country. Shipments should begin to arrive in Bombay early in October, and be continued weekly so that all may reach by middle of December. Rails, fastenings, and sleepers should be shipped in due proportions for laying line on receipt at sight. Also send 12 water cranes and connexions, 20 hydrants, 100 sets of switches, 100 steel reversible crossings, of which 32 angle 5 degrees 45 minutes, 50 angle 7 degrees 45 minutes, 18 angle 10 degrees 45 minntes, 13 station signals, 25 distant signals, 3 traversers, 3 engine turntables, 3 weighbridges.

No. 113.

Telegram, dated 3rd August 1877.

From Viceroy to Secretary of State.

Supply of rails for Dhond Munmar line may possibly be facilitated by giving part at least of order to firm which supplied us with some 67 lb. rails for Wardha Valley Railway, of same section as Peninsula Company's rails. Section of rail should not be altered if steel be adopted. No objection to the additional weight. Fastenings should include chairs for wooden sleepers.

No. 114.

Telegram, dated 3rd August 1877.

From Governor of Bombay to Secretary of State.

Monsoon not established, but better rain in Concan. Showers Deccan. Rain Guzerat, Kattywar insufficient for growing crops. Distressed districts sustained. Number of persons on relief continues decreasing. Prices very high. Trade active. Hope arises from improved accounts from Madras and Mysore, and good accounts from Central Provinces, but Hyderabad rainfall scanty. Fear of drought in Northern India is raising prices there, and impeding influx of grain towards Western and Southern India.

No. 115.

Telegram, dated 4th August 1877.

Yours 30th July not understood. Are the 100 locomotives Great Indian Peninsula in addition to 40 already ordered ?

No. 116.

Telegram, dated 6th August 1877.

From Viceroy to Secretary of State.

The 100 locomotives are additional to 40 under supply. We reserve our recommendations, pending details from Bombay by post ; but meanwhile kindly ascertain possibilities of supply.

No. 117.

Telegram, dated 6th August 1877.

From Viceroy to Secretary of State.

Prospect of great distress among population of Baroda State, causing great anxiety to minister. We have, therefore, in anticipation of your approval, assented to his request for construction of railway from Ahmedabad to Pahlunpore, on same gauge as Baroda line, which would work this section, and also to immediate formation of embankments as relief works. We have assented the more readily in consideration of the fact that Baroda State has contributed largely to the recent loan.

No. 118.

Telegram, dated 6th August 1877.

From Governor of Madras to Secretary of State.

Wrote to Viceroy to-day, suggesting his sending somebody of experience, in whom he would place confidence, without formal gazette appointment or delegation, to confer with us on measures taken and proposed, saying we should welcome such a mission with pleasure.

My suggestion has entire approval of my colleagues here.

Scattered but good showers continue ; better reports from Malabar of weather prospects. Godavery river without freshes. Imports to Madras good ; at Raichore short.

No. 119.

Telegram, dated 6th August 1877.

From Viceroy to Secretary of State.

Your telegram of 31st, about offer of grain by Samuels, of London. We remain strongly of opinion that Government should not purchase grain at present. On 29th June, by our letter to Madras Government, to which every publicity was given, we notified to trade that we did not intend to purchase grain. The trade are acting on that assurance ; to adopt a different course now would destroy all confidence in the Government. Moreover, the railways are at present, and will for some time be, unable to dis-

tribute the grain offered by private trade. Any grain we buy would, therefore, take up waggons which are wanted for private grain consignments. If we have a second famine, our difficulty will be sufficient means of transport to certain remote localities, and we may have to indent on you for light rails for tramways.

No. 120.

Telegram, dated 6th August 1877.

From VICEROY to SECRETARY OF STATE.

Prospects of the season generally improved in Madras. More or less rain in all districts, heavy in Bellary and Kistna; considerable in Kurnool and Cuddapah, and parts Nellore; slight in Trichinopoly, Madura, Tinnevelly, and Salem; moderate in other districts. Standing crops saved in many parts and prospects of harvest improved, but distress still severe.

In Mysore, showers pretty general, have done some good, but prospects not materially improved.

In Coorg, moderate rain has fallen.

Regarding Bombay, Temple telegraphs as follows:—"Fair rain in eastern districts "has saved much young crops, but along western border famine area larger; monsoon "continues insufficient, better rain on Malabar coast last few days, may be considered "to indicate favourable return of monsoon; slight showers, Guzerat and Kattywar, but "anxiety regarding those parts still remain. Prices grain continue very high; imports "to rural districts by human labour continue; traffic from coast by carts active, coast "exports large, but rail increasing; general situation improved by weeks rain, but "pressure on people by high prices continues and will not be relieved till prospects of "season are reassured by better fall of monsoon rain." Message ends.

In North-West Provinces, rain has at length begun to fall in many districts and anxiety much relieved.

In Punjaub, some rain, more wanted, but condition of crops fair.

Numbers relieved in Madras, 957,000 on works, 839,000 charitably. In Mysore, 48,000 on works, 151,000 charitably. In Bombay, 248,000 on works, 149,000 charitably.

No. 121.

Telegram, dated 7th August 1877,

From GOVERNOR OF MADRAS to SECRETARY OF STATE.

Yours 21st July.

Send military officers in civil employ only.

No. 122.

Telegram, dated 7th August 1877.

From SECRETARY OF STATE to VICEROY.

Pahlunpore Railway. Your telegram hardly gives us material for decision. Do you propose to construct railway as famine work at British cost? If so, why do you undertake famine charges for a Native State? I would prefer to devote our funds, which are restricted for the moment, to our own people, whom we shall with difficulty keep alive.

If Baroda and Pahlunpore propose to find money, the matters will assume a different aspect.

No. 123.

Telegram, dated 8th August 1877.

From VICEROY to SECRETARY OF STATE.

The Baroda State having subscribed funds sufficient to construct the Ahmedabad Pahlunpore section of the Western Rajputana Railway on the understanding that the work had been sanctioned and would be early undertaken, has by this depleted its own treasury, and is now confronted by famine within its own territory. I have thought it but just that the money so subscribed should go towards the relief of this famine as proposed. This will have the immediate effect of retaining on their own soil the sufferers who would otherwise seek relief in British territory, and it will not interfere with Baroda's taking further steps for the relief of its subjects from its reserves or by loans from us.

No. 124.

Revenue, No. 61.

From the Secretary of State for India to the Governor-General of India in Council.

India Office, London, 9th August 1877.

No. 51. Para. 1. The Despatch of your Excellency in Council, dated 25th June, No. 27, of 1877, forwarding a complete collection of the correspondence with the Government of Madras, on the subject of supplying Sir R. Temple with certain records relative to the grant of remissions, has been considered by me in Council.

2. You have also forwarded copies of a Minute by Sir R. Temple, and two memoranda by his late secretary, Mr. Bernard, on the general subject of remissions of land revenue. These you have transmitted to the Government of Madras for consideration when the present pressure has passed away. They therefore do not demand any observation from me on the present occasion.

3. You have drawn my attention to the letter addressed to your Lordship in Council by the Government of Madras on the 10th April. A misunderstanding appears to have arisen on both sides, which gave a turn to the correspondence not wholly satisfactory. The Madras Government evidently were under an entire misapprehension as to the object with which the papers in question were asked for by Sir R. Temple, while they failed, I think, to convey to the minds of your Excellency's Government a clear conception of the nature of the scruples they entertained. As, however, your Excellency proposes to revert to the subject on a future occasion, it will not be necessary for me to enter more largely upon it now.

I have, &c.
(Signed) SALISBURY.

No. 125.

Revenue, No. 62.

From the Secretary of State for India to the Governor-General of India in Council.

India Office, London, 9th August 1877.

Para. 1. The Despatch of your Excellency in Council, dated 2nd July, No. 28, of 1877, forwarding copy of a correspondence which has taken place with the Government of Madras on the subject of the rise in prices of food grains, the reduction of stocks, and the consequent pressure upon the population of the distressed districts in the Madras Presidency, has been considered by me in Council.

2. While the Despatch under reply was in transit telegrams have been received which show that the entire situation is altered for the worse in Madras, and render any detailed comment on the views stated by your Excellency in Council unnecessary.

3. I entirely concur with you in the necessity of observing the most complete publicity in making any necessary importation of supplies on Government account, but the far graver prospect which arises from the failure of the monsoon will doubtless induce your Excellency to watch with the utmost vigilance the operation of your orders restricting the purchase of grain. Due weight should be given in deciding upon the steps to be taken in this respect, to the views of the Local Government and their district officers. Your financial arrangements for meeting the charges of the famine have my concurrence.

I have, &c.
(Signed) SALISBURY.

Encl. in No. 164.

No. 126.

Telegram, dated 10th August 1877.

From Bengal Government, Calcutta, to Revenue Additional Secretary, Simla.

Memorandum on stocks sent by Bayley. Special inquiries completed to-day; find about thirty-two lakhs maunds in Calcutta for all purposes; importation slackened lately owing to bores on Megna, but now brisk. Exportation lively. Freight abundant.

No. 127.

Telegram, dated 10th August 1877.

From Governor of Madras to Secretary of State.

Imports from all sources large, but insufficient for daily wants. Have telegraphed to Government of India that if imports do not cover daily wants with margin to cover occasional interruption, great calamity by starvation appears inevitable, and asking them to state what they can do with trade. Monsoon may interrupt the traffic after eight weeks.

No. 128.

Telegram, dated 10th August 1877.

From Secretary of State to Viceroy.

Despatch leaves to-day, including following sentence:—

I entirely concur with you in the necessity of observing the most complete publicity in making any necessary importation of supplies on Government account; but the far graver prospect which arises from the failure of the monsoon will doubtless induce your Excellency to watch with the utmost vigilance the operation of your orders restricting the purchase of grain. Quotation ends.

Following in letter from merchant I mentioned:—Telegrams from Saigon and Bangkok inform me that our steamers are carrying about 1,000 tons of rice daily from those ports to China, and since 1st of January this year to 30th June more than 300,000 tons of rice have gone to China, and in another six weeks the whole of this year's crop will have been shipped to the north. End of quotation.

We feel considerable anxiety about this question of supply of grain, and understand Madras Government uneasy. Let me know what your calculations are.

No. 129.

Telegram, dated 10th August 1877.

From Governor of Bombay to Secretary of State.

Monsoon not materially improved since last telegram. Some rain Concan and South Mahratta country; showers in Deccan; hardly any rain Gujerat, Kattywar. Agriculture and crops kept going in distressed districts, but high prices telling on people.

Gradual decrease on relief continuing since beginning monsoon now arrested, and slight increase of numbers occurred, but showers falling, and hope decrease will be soon resumed.

No. 130.

Telegram, dated 11th August 1877.

From Governor of Madras to the Secretary of State for India.

Showers diminishing. Hot wind recurred. Food import does not increase. Supplies *viâ* Raichore less than half promised. Godavery river falling. No irrigation supply for Delta.

No. 131. Encl. in No. 64.

Minute by His Excellency the Viceroy, dated Simla, 12th August 1877.

1. The summer rains of June and July have now failed, more or less, over many of the districts in Southern India where the rainfall of 1876 was lamentably deficient. The severity of the situation is increased by the scantiness of the rainfall in Western and Northern India during the past six weeks. I desire to place on record my appreciation of the probable effect of these unanticipated circumstances on the condition of the people and the prospects of the Government. In so doing, I will endeavour to indicate my general views as to some of the measures required to prepare for a second year of famine, if unhappily so terrible a calamity should overtake any large tract of Southern India.

2. The time has not come for the Government of India to review the famine operations of the year 1876–77; for the famine is still almost at its worst. But a short notice of the failure of last year's harvests, of the misfortunes thereby caused, and of the relief operations undertaken, is necessary to a proper understanding of the extreme gravity of the present situation.

3. The summer rains (south-west monsoon) of 1876 were extremely scanty over tracts belonging to the Presidencies of Madras and Bombay, to the State of Hyderabad, and to the Province of Mysore. Over these tracts, which contain a population of about 26 millions, the summer rains yield the main rainfall of the year; they fill the irrigation tanks, and on them depends the safety of the main food crops. In the above-mentioned districts, therefore, the chief food crops of 1876 failed by reason of the shortness of the summer rains. But in the rest of the Madras country the main rainfall comes with the October rains (north-east monsoon): these rains were also very deficient, and so the irrigation tanks of the Madras districts remained dry, and the chief food crops failed. The fate of the Madras crops was thus partially in doubt until the middle of November.

4. The failure of the crops of a single year might not have caused a famine, if it had been confined to only one province, or to a few districts; for inter-communication, by railway and by road, is easy and cheap all over Southern India, and the surplus of one province would have supplied the deficiency of another. But, last year the area of failure was so vast that famine prices were inevitable; and by the month of December 1876, food-grains in the markets of Southern India were three times as dear as in ordinary years. The calamity pressed with special weight on some of the stricken districts (notably Bellary, Sholapore, parts of the Carnatic, and of Mysore), because the crops of one, or even two, preceding years, had been short. In such districts food stocks were lower than usual, and the people had less money to buy food brought from a distance. In Bengal, Burmah, Central and Northern India, the crops were happily good; food stocks were large; and there was plenty of grain to supply the stricken districts, if it could be carried thither, and if the people could afford to pay for it.

5. The policy of the Government of India, as declared after previous famines, was to give all possible facilities for the transport of grain to distressed districts; to abstain from interference with the grain trade, so long as that trade was active; to give relief wages to the destitute who would labour on useful public works; to relieve gratuitously, under trustworthy supervision, the helpless poor, when the pressure of famine became extreme; and to avert death from starvation by the employment of all means practically open to the resources of the State and the exertions of its officers; but to discharge this duty at the lowest cost compatible with the preservation of human life from wholesale destruction. In the autumn of 1876, no general instructions were issued by the Government of India for the management of serious and widespread famine; nor until November was it certain, from the reports received by the Supreme Government, that positive famine was impending in the Madras districts.

6. From the month of September 1876 a large importation of grain from Northern India and Bengal into the distressed tracts began; and this traffic rapidly increased till, in the month of December, grain was landed by sea at Madras, and was also consigned by railway, from the west, through Raichore (the westernmost limit of the Madras Railway), in much larger quantities than the railways could distribute, to the districts of the Madras Presidency and of the Mysore Province. From December up to the present time of writing, private traders have kept consigning, month by month, into the interior of the famine districts more grain than the railways from Madras, Beypore, Negapatam, and Raichore, have been able to carry. This grain has come from Bengal, Burma, the Punjab, the North-Western Provinces, Central India, and Scinde. Government has done much to facilitate the traffic; and on one occasion only have Government operations interfered with private trade, namely, when 30,000 tons of grain were bought by the Madras Government at the beginning of the famine, and were carried into the interior of the country. To this extent the railway and cart power of the country was temporarily occupied by Government to the exclusion of private trade. These proceedings of the Madras Government were disapproved by the Government of India. Prices have been very dear; but from nowhere, until the 23rd of July, have we received reports that food cannot be had in the bazaars by those who can afford to pay for it. In some of the worst districts the imported food has sufficed for the needs of about one-third of the total population. The remaining two-thirds in such districts, and a much larger proportion in the less severely afflicted tracts, have subsisted on old stocks and on the yield of the petty crops that have been harvested even during this year of famine. The importation of grain by railway into the interior has not yet exceeded an average of about—

2,200 tons a day into the interior of Madras and Mysore;
1,000 tons a day into the interior of the Bombay Presidency.

These figures do not include the large quantities of grain distributed into the interior by road or canal, from the port of Madras, and from the lesser ports on the Coromandel,

Malabar, and Southern Mahratta coasts. There are in Central and Northern India and in Bengal large stocks of food, ready to go forward to the famine districts as soon as the railways can carry them.

7. At the outset of the famine operations there was general failure to employ the destitute poor on properly managed and useful public works. During November and December, hundreds of thousands of people sought, and obtained, relief wages on works which were not of the highest utility, and on which there was no adequate professional supervision. For this result I fear that the orders of the Government of India, enjoining the employment of the people on petty works near their homes, were in some degree responsible. In the Government Despatch, conveying instructions for Sir Richard Temple's mission to the famine country, it was mentioned that small and well-supervised local relief works might properly be opened at the beginning of a period of distress, so long as there was doubt regarding the extent of scarcity; but that, when measures of relief on a large scale became clearly necessary, great public works of a permanently useful type should be opened for the employment of relief labourers. The experience of the present famine—the friction, distress, and loss, caused by the transfer of labourers from small to large works, during February, in the Bombay Presidency—and the difficulty of moving to large useful works any considerable proportion of the relief labourers in Madras—has since convinced me of the impolicy of opening petty local relief works during the early stages of a scarcity. The orders directing the opening of small local works were modified in December, and it was subsequently laid down that relief labourers should be employed, to the utmost extent possible, on large useful works, under the direction of competent engineers. Meanwhile, before those orders had reached the local officers,

1,050,000 persons in the Madras districts,
266,000 „ „ Bombay „

were, in the beginning of January, receiving relief wages for labour that was generally inadequate, on works that were often of little value.

8. During the month of January the manner of employing relief labourers changed greatly for the better in the Bombay districts, where the Local Government utilised to the full its staff of engineers, and possessed a number of excellent irrigation schemes and other projects. During the same month Sir Richard Temple was deputed by the Government of India to visit the famine districts, and to confer with the Local Governments and their officers as to the best means of enforcing economy and system in relief operations. The admirable services rendered by Sir Richard Temple have already been acknowledged by the Government of India. It was found that vast numbers were in receipt of relief who, for a time at any rate, could support themselves. The relief wage rate was lowered, the number of petty relief works was reduced, and the supervision of relief labour was increased. In consequence of these measures the numbers of people on the relief works were, at the end of April,

In Madras districts - - - 716,000 persons.
In Mysore „ - - - 62,000 „

In Bombay, at the same time, the numbers had risen to 287,000. In Madras 11 per cent. of these labourers were employed on useful works under professional supervision. In Bombay 90 per cent. were so employed. In Mysore 47 per cent. were on useful public works; but in Mysore the numbers on relief works were, in a way that has not been explained, reduced as the pressure of the famine increased; and large sums are now being spent on infructuous alms, instead of being devoted to improving by relief labour the many irrigation works of the province.

9. It is not supposed that the relief works managed by revenue officers are absolutely useless, or are wholly unsupervised; but I fear that much of the roadwork done under revenue officers can be of no lasting value, while its cost is from twice to twenty times the ordinary rates; whereas, on the other hand, the irrigation and railway works executed under professional supervision, will be of permanent good in improving the country, and averting future famines; while some of these works (so far as imperfect information has reached the Government of India) are being executed at only from 20 to 50 per cent. above ordinary rates. At the present time of writing, the proportion of relief labourers employed under professional supervision on large works in Madras has risen, by the latest returns, to about 21 per cent. on the total number of workpeople.

10. Gratuitous relief on a large scale began early in the present famine. By the end of December there were in the receipt of gratuitous relief

110,000 persons in the Madras districts.
3,000 „ „ Bombay „
30,000 „ „ Mysore „

These numbers were somewhat reduced in January and February; but since the end of February they have increased enormously, and have risen by the end of July to

839,000 in the Madras districts.
160,000 ,, Bombay ,,
151,000 ,, Mysore ,,

In Mysore the number of persons in receipt of gratuitous relief is more than three times higher than the number of the relief labourers; and it appears that in this Province relief works have not been properly managed. The persons on gratuitous relief in Madras and Bombay belong to three categories, thus—

	Children of labourers on the relief works.	Persons fed at relief houses and relief camps.	Persons relieved at their homes through village agencies.
Madras (according to the latest detailed return for the beginning of July) - -	149,000	207,000	218,000
Bombay - - - - - -	83,000		
		66,000	

The Mysore returns do not distinguish the several classes of charitable relief. So long as relief wages are kept at subsistence rates, the small allowance of 3 pie ($\frac{3}{8}$ of a penny) per diem must be continued to the infant children of relief labourers. The inmates of relief camps and the daily recipients of food at relief houses are ordinarily fit subjects for charity, provided that able-bodied people are drafted to relief works as soon as they are strong enough to labour. Relief through village agencies may become unavoidable where famine presses severely; but its administration must be very carefully supervised, in order that the needy may be really relieved, and that there may be as little fraud as possible. In Bombay, the numbers so relieved in each district vary according to the pressure of distress and the numbers on the relief works. But the figures for Madras lead to a belief that different systems are pursued in different districts; for instance, in Kurnool, where severe distress afflicted the whole district, only 5,519 persons were receiving village relief at the beginning of July; whereas in Salem, a part only of which district was severely distressed, 88,020 persons were on village relief.

11. In regard to the main object of relief operations, viz., the saving of human life,—much, but not complete success has been attained. In some tracts relief operations began too late; at centres of population, like Madras and Bangalore, and on some of the roads leading to such centres, starvation deaths have occurred; the death rate from cholera, dysentery, and such like diseases, has greatly increased over large areas; but, on the whole, the worst evils of famine have, so far, been successfully averted over the vast tracts visited by failure of crops. According to the standard of mortality during the Orissa famine, from three to five millions of people (instead of only half a million) must have died of famine in Southern India during the year 1877, if the guaranteed railways had not existed, and if Government had incurred no outlay on relief operations. Nothing of this sort has occurred; and on this result the Governments, and the local officers, who have exerted themselves admirably, deserve the acknowledgments of the Government of India. I fear, however, it may hereafter be found that over large tracts relief operations were, for considerable periods, conducted without sufficient system, and without due regard to economy.

12. Regarding what is past, I have been obliged to say this much, because it is only after a consideration of the past that we can frame improved plans for the future. During the spring and early summer of 1877, it was hoped that the season might be favourable; that spring showers might bring forward some small extent of early food crop in June; that bountiful summer rains (south-west monsoon) would enable the people to secure a large food harvest during August and September; and that favourable October rains (north-east monsoon) would fill the irrigation tanks, and restore plenty to the districts of the Madras Presidency. The October rains are not yet due, but our spring and summer hopes have been disappointed. Had they been fulfilled, there would have been no present need for special aid from the Government of India; some millions sterling would have been spent, there would have been some waste, but in the main the great object of all this expenditure would have been obtained; the difficulty would have been over, and the Government of India would, at the proper time, have placed on record for future guidance the lessons taught by the famine of 1877.

13. But so far as the season has gone our hopes have not been fulfilled; the spring showers came not, the summer rains have, until the last week of July, been very scanty and irregular; the main food crops of part of the black soil country in the Deccan are still in great jeopardy; it is feared that the unirrigated food crops of Madras and Mysore

must be lost, unless the good rain of the past week continues during August; the local officers report that already an unascertained, but large, proportion of these crops are dried up; the irrigation tanks of the Mysore country are still dry, and no fresh food crops, can be reaped on any large scale in Southern India before December next. If there are favourable rains in August and September, and if the October rainfall (north-east monsoon) is full, then plenty may perhaps be restored by January 1878, though the people will feel the effects of the famine for some years to come. But, even under the most favourable circumstances the pressure of famine in many districts of Madras and Mysore cannot abate greatly before January 1878; at the best, the tension in Bombay may lessen in September, and may cease altogether in December. But unless the rainfall of August and September is unusually heavy, there must be another year of famine in parts of Bombay, of the Deccan, and over a great part of Mysore; for in none* of these tracts can a heavy downpour be expected in October. A great part of Bellary and Kurnool also, where the October rains are scanty, must suffer another famine, if the summer rains are not plentiful during August and September; while if the October rains, the main rainfall of the Madras littoral, should be scanty, there must be another year of famine over a great part of the Madras Presidency.

14. Thus the present situation in Southern India is that, at the end of the season of famine, one of the great food crops of the present season is everywhere in jeopardy, and in some parts is almost irretrievably lost. Prices of food over the famine country are higher than ever, four or five times the ordinary rate; 2,500,000 people are being directly supported by State charity, of whom barely 450,000 are performing work that will have useful results. The present pressure of famine, and the present rate of expenditure, (considerably above half a million sterling per month), cannot at the best be greatly lessened before December next; whereas, if the season turns out unfavourably in any part of the famine country, that tract with its stocks already depleted must suffer from a second year of famine, more severe and more difficult than the year through which it is now passing.

15. The position in Southern India, grievous as it is, becomes much aggravated by the fact that the summer rains have hitherto been extremely scanty in the North-western Provinces and the Punjab. Vast areas of these provinces are protected by irrigation; the surplus food in stock from the bounteous harvests of the last few years is said, in the Punjab at any rate, to be very great; the autumn crop in these provinces has not yet been lost; and the seed time of the main food crop has yet to come. There is no present ground for fearing actual famine in Northern India, although I fear there may be serious scarcity and suffering in some districts; but the surplus food available for export thence to the famine country will be greatly reduced. In Bengal, Burma, and Central India, there is, according to present prospects, no reason to anticipate that the winter crops will not be full ones. But the main crops of Bengal and Burma can hardly be estimated before October at earliest.

---

* The rainfall statistics for parts of Southern India are not very complete. So far as they go the meteorological returns give:—

	Average rainfall in inches during the months of		
	June to September.	October to December.	The whole year.
Poona	22½	6	31
Belgaum	36½	5	47½
Secunderabad	20¾	3	30
Bellary	11½	3	17
Bangalore	19	7¾	34½
Mean of eight districts in Mysore	17	8	—
Madras city	15	29	48½
Salem	17	8¼	34¾
Coimbatore	6	8½	21
Negapatam	9	24¼	35¼
Trichinopoly	12½	11½	29½
Madura	15	14¼	26

It seems therefore that in the Deccan, and in the ceded districts of Madras, the summer rainfall (south-west monsoon) is the mainstay of the crops; that in Mysore the heavy rain which fills the tanks and saturates the soil comes with the summer monsoon, but that the October (north-east) monsoon also gives a considerable rainfall, especially in the south of the province; and that in the districts of the Madras littoral the October monsoon yields the main rainfall of the year.

Though the north-east monsoon may be merely the rebound of the rain clouds which travel up the Bay of Bengal with the south-west winds, still we need not fear that scanty summer rains in Madras must necessarily be followed by equally scanty October rains. For the cloud currents which have this year shed plentiful summer rains over Burma and Bengal may return with the north-east winds to water the Madras littoral.

16. The prospect in Southern India, more especially in Madras and Mysore, is therefore as serious as it could possibly be. If a second famine has to be encountered over this large portion of the Empire, the duty of saving the lives of the people, and of utilising to the utmost the vast expenditure which must be incurred, will impose on both the Supreme and Local Governments as arduous and gigantic a task as any Government could be called upon to undertake. Before entering on this task, it may be well to state shortly what are in my opinion the main principles which Government should follow on an occasion of this kind. Many of these principles were laid down by the Government of India in its instructions to Sir Richard Temple, but I think it desirable to repeat them.

17. In the first place, the Government of India, with the approval of Her Majesty's Government, and of the people of India and England, are resolved to avert death from starvation by the employment of all means practically open to the resources of the State, and to the exertions of its officers. Thus far there can be no room for doubt or difference of opinion.

18. When harvests fail in an Indian province, considerable old stocks of food are left in the hands of the landholding and mercantile classes; but these stocks are often held back from sale. Markets have therefore to be supplied with grain imported from a distance. I consider that, except under most peculiar and exceptional circumstances, the function of supplying the demand for imported grain can be best, and indeed alone discharged by private trade; and that private trade should be left to do its work in this respect with as little interference from Government as practicable. The Government and its officers should, however, give all possible information, and should give where necessary additional facilities to private trade. Early and correct information as to prices and means of carriage should be published. The carrying power of railways and canals leading into the famine tracts should be reinforced; tolls and other restraints on free intercommunication should be removed, roads into the interior should be improved and kept in order; rates of railway or other carriage might be reduced; and in cases of extreme necessity, temporary railways or tramways might be laid from main railway lines into populous tracts, whereto means of communication failed or where insufficient. These will indeed be the most useful of all works, if we have to meet another year of famine. Grain required by Government for alms to the helpless poor, or for labourers on relief works, or for any tract where supplies were deficient, should be obtained through the trade, at or near the local markets, and should not be imported from a distance by Government itself. Experience has shown that Government operations in the grain market disorganise and paralyse private trade to an extent out of all proportion to the operations themselves. Moreover where the carrying power of a country by rail, canal, or cart is limited, and is fully utilised, Government grain importations must necessarily displace a corresponding quantity of privately imported grain. My view, therefore, is that under no circumstances which are likely to occur ought the Government itself to engage in the business of importing grain. Free and abundant private trade cannot co-exist with Government importation. Absolute non-interference with the operations of private commercial enterprise must be the foundation of our present famine policy. Trade towards the famine country from Bengal and Northern and Central India is at present active; and there is every reason to believe that the Indian sources of supply are still considerable. But even if these should fail, the interference of the Government would be a ruinous error. It could only have the effect of decreasing the total amount of food available, and thus aggravating the catastrophe. I am confident that more food, whether from abroad or elsewhere, will reach Madras, if we leave private enterprise to itself, than if we paralyse it by Government competition. These remarks refer to the famine we are now dealing with. I do not of course intend to assert that famines cannot occur in which Government interference for the importation of food may not be absolutely necessary. Indeed, the Orissa famine was one of those cases.

19. Before scarcity of food deepens into famine, there is a large and increasing section of the population who are out of work, and have no means of buying food at dear rates. It is the policy of Government to employ such people on relief works; and my view is, that relief employment, at a subsistence rate of wage, should be provided on large fully supervised works, which will be of permanent benefit to the country. The advantage of large works of this kind over petty local works is twofold—firstly, the obligation to do a full day's work, at a low rate of wage, and to go some distance to work, keeps from seeking relief people who can support themselves otherwise; and, secondly, the money expended on such works bequeaths permanent benefits to the country.

20. On this point, the following passages from Sir Richard Temple's excellent report of his recent mission to the distressed tracts of Southern India are very valuable. When discussing the lessons to be deduced from Indian famine experience, he writes—

"It seems to me that from these events we forcibly and positively learn—

"To determine beforehand, as soon as any forecast of the coming distress can be made, the large public works upon which relief labour can be employed, and upon which task-work can be exacted, or piece-work established under professional supervision;

"To notify generally, and to intimate to all concerned, especially to the Civil officers, the particular public works to which the relief labourers in each distressed district are to be drafted;

"To organise an engineering staff in readiness for undertaking vigorously these particular public works when the time for active operation shall arrive, and to prepare for devoting to this purpose all the professional establishments which can be obtained;

"To prohibit absolutely, in the beginning of the distress, the opening of petty works under Civil officers, or non-professional establishments, among the villages close to the homes of the people;

"To refuse relief to strong able-bodied persons of both sexes in any form, save employment on the large public works;

"To allow petty village works to be opened only when severe and widespread distress has declared itself at a comparatively advanced stage in any district, or part of a district, and even then to reject all, save those who cannot reasonably be expected to proceed to the large public works,—in short to reserve these petty works for the weakly, the sickly, the advanced in life, and for those who have any just claim for indulgence;

"To keep the wages on relief works at the lowest rate compatible with the health of the labourers; this being necessary, not only in the interests of economy, but also to prevent demoralisation of the people."

I do not think it would be possible to define more clearly than is done in the foregoing extracts those principles which seem to me the right ones for the organisation of famine relief works.

21. At the beginning of a famine there are some, and before the end of a famine there will be many, people who, from physical infirmity, or from social custom, or from some other reason, are unable to earn wages on relief works, and who have no means of buying food. For persons of this class the State must, when the sources of private benevolence are dry, provide gratuitous relief, if it undertakes to provide for them at all; an undertaking which, if it assumes wide dimensions, must impose upon the State operations of peculiar difficulty and delicacy. For it is the inevitable tendency of all gratuitous relief afforded by the State, if it be not supervised and restricted with the most scrupulous exactitude, to intrude injuriously on the field of relief labour, and thus demoralise large masses of the population. Such relief may be given in the shape of grants-in-aid of private charity; in the shape of cooked or uncooked food, distributed at relief centres, at camps, or poor-houses, where the recipients of relief are housed and cared for; or (if complete means of supervision exist) in the shape of money alms distributed to paupers at their homes through village agencies. One or other, often more than one, of these forms of gratuitous relief must, sooner or later, be dispensed in every famine tract. At large centres of population relief camps are useful; for the inmates are prevented from wandering about the streets, and starving for want of miscellaneous alms. On great roads and lines of traffic out-door relief centres are more suitable. Where a good indigenous village agency exists, it is advisable to register and relieve, at an early stage of a famine, the helpless paupers in their villages; so that they may be prevented from starving at home, or from wandering forth in quest of charity. But, in whatever shape gratuitous relief be given, the ordinary district organisation must be greatly strengthened to secure its due and honest administration. No other form of famine relief is more open to abuse and malversation. Every rupee spent in providing effective, trustworthy supervision is saved over and over again, not only in preventing wasteful and unnecessary expenditure, but in securing that the relief given reaches the classes and persons for whom it is intended, without being turned aside into the pockets of people who can do without State aid.

22. The principles and the policy described in the four preceding paragraphs should, in my judgment, guide the operations of Government, not only at the beginning of a famine, but throughout its continuance. Disregard of these principles must, assuredly, and indefinitely, aggravate the serious financial difficulties in which even a well-conducted campaign against a great famine involves the Government. If we have departed from

these principles in parts of the famine-stricken country, then we should now strain every nerve to return to them as speedily as possible. Famine relief expenditure must, I fear, continue on a very large scale for some months to come. And it may be that we are on the threshhold of another, and much more terrible, year of famine. It behoves us, therefore, to lose no time in re-organising and strengthening the forces with which Government hopes to contend against famine.

23. The amount of grain carried daily into Southern India will have to be greatly increased. The present estimate, founded on the figures of the Local Governments, is that into the Madras, Mysore, and Hyderabad districts alone, from 4,500 to 5,000* tons of food may have to be carried daily; whereas 2,500 tons a day was the greatest quantity carried during the past season. I believe this full task, if it be required, can be accomplished. During the Bengal famine the railways, working from three directions, carried at times as much as 4,000 tons of food a day; and the railways into Madras and Mysore work from four different ports, besides the fifth line from the Bombay direction. No time should be lost in framing, in publishing to the trade generally, and in bringing into effect on the guaranteed railways, a scheme whereby 4,500 to 5,000 tons of food can, if consigned by the trade, be carried daily into the famine districts of Madras and Mysore. When the railway has brought the required supply of food into the country, the question will arise, whether the famine-stricken cattle can suffice for the task of distributing by cart the large quantities required in the interior of the districts. And the problem will have to be faced and decided at once, whether it will be best to lay down rough tramways for carriage of grain, or to bring the destitute poor to places near the railway lines, or to promote their emigration into other provinces.

24. Next, all the best engineering skill available in the many provinces of India should, I think, be lent to the Madras Government, so that a sufficient number of large public works may be opened in all parts of the Madras as well as of the Mysore famine country, at which the largest possible proportion of the two and half millions of people now supported by the State may be employed under proper supervision on works which will help to protect the country from future famines. The districts of Madras and Mysore are studded with irrigation tanks, and are traversed by rivers, many of which are already bridled and turned into irrigation channels. Much great work of this kind remains to be done. The projects and estimates for such works may not be everywhere ready in full detail; but it would be better for the people and for the country that the Government should accept a moderate proportion of failures in such works than not to attempt them at all. It would be wiser to lay out one million sterling on irrigation channels and reservoirs, which will store water for future needs, or on other works of lasting utility, than to spend half a million on petty works, which cannot be adequately supervised, and are of no permanent usefulness. Of the famine roads which in 1874 were undertaken in Bengal, about one-half had to be left unbridged and unfinished. These have since fallen into a condition of utter uselessness, owing to the inability of local funds to complete and maintain them. I believe that it would be highly desirable to sanction for Madras a special Chief Engineer for famine works, as was done for Bengal in 1874. Nothing is more essential to successful administration in such a crisis as the present, than the concentration of authority in the hands of a single man of energy and judgment, who shall be responsible to the head of the Local Government alone. I am satisfied that the great success which has attended the operations for the relief of the present famine in Bombay has been mainly due to the fact that this principle has been strictly acted on. The Chief Engineer, Major-General Kennedy, has been virtually responsible to no one but the Governor himself; and I believe that both the late and present Governors of Bombay have thus been able to carry out their orders with a vigour, promptitude, and success, which would otherwise have been impossible. Of course, however, this arrangement might have been as injurious as it has proved beneficial, had the officer on whom the result of it depended been deficient in experience, judgment, or energy.

25. When the employment of relief labourers shall have been thus made over to professional agency, the Civil officers will be able to give their time to organising and supervising gratuitous relief, and to saving the helpless poor from starvation.

26. The two main objects to which the best endeavours, and all the available power, of the Government of India and the Local Governments must now be directed, are,—firstly, the framing and working of a scheme whereby 4,500 to 5,000 tons of food may be carried daily into the famine country; and, secondly, the selection and commence-

* This quantity would give subsistence to about 10,000,000 people.

ment of large public works of lasting utility, on which all the able-bodied relief recipients of either sex and any age should at once be employed. If the rainy season, which has begun so badly, should happily end well, these special exertions on the part of the State, of the railways, and of public servants, may not be required beyond December next. If the season ends badly anywhere, then these exertions will have to be continued on behalf of such afflicted tracts until August 1878. In any case, the lives of millions, and the useful expenditure of large public funds, must depend, during the next five months, on the arrangements that may now be made. If matters are allowed to drift, there may be terrible loss of life, and there must be a wasteful expenditure of vast sums of public money, which might, under proper arrangements, bequeath great and useful works to the district wherein it is incurred.

27. The beneficial effect of money expended on well-considered and well-organised public works will be felt in the future. But for the immediate relief of the present distress, the creation and supervision of new means of transport are urgently needed. I have every reason to believe that our reserve of grain is amply sufficient to meet the increasing demand, and that, even if it runs short, we may reckon with confidence on the enterprise of private trade to supply the deficiency. But the arrangements which must now be made for distributing over large tracts of country, where no sufficient means of transport yet exist, that quantity of grain which their population requires, and the trade is able to supply, will be as difficult and delicate as they are necessary.

28. I have not included the Bombay districts in the tracts where special joint effort by the Supreme and Local Governments is at once required; because prospects in Bombay are not so bad as in the south-eastern districts, and because the management of relief works and relief operations in Bombay has, during the past season, been such as to warrant a confidence that famine there, if it comes, will be more easily met, and that relief labourers will be employed on well-organised works of permanent usefulness. I wish to take this opportunity of placing on record my opinion that the difficult task of administering famine relief in the Bombay Presidency has been at all times performed by the Local Government with a sagacity, judgment, and firmness that cannot be too highly commended. The Government of Bombay has been especially fortunate in having at its command, for the superintendence of this most arduous work, an officer of such rare intelligence and energy as Major-General Kennedy.

29. I am afraid that the situation in Mysore is, in proportion to its area and population, even more critical than in Madras. The Mysore demand for imported grain has, throughout the famine, been larger with reference to the distressed population than in the Madras Presidency. The fate of the crops now in the ground is more doubtful in parts of Mysore than anywhere else. The employment of the destitute poor on useful public works has, since April last, been quite inadequate to the occasion. At the present time the persons on gratuitous relief are three times as many as the relief labourers on public works. In Bombay the numbers on gratuitous relief are now little more than half the total of relief labourers. In Madras the total number on gratuitous relief is somewhat less than the total on works. Reports have been received from more than one Madras district that people in the last stage of distress flock over from Mysore to British relief houses for help. It would seem that Mysore relief arrangements are at present neither efficient nor sufficient. In this Province immediate steps must be taken for reorganising the relief administration.

30. As my colleagues are aware, it is my intention to visit Madras and Mysore immediately. Before starting on this journey, I have thought it desirable to place on record my reasons for undertaking it. These will be found in the foregoing general statement of the main facts of the present condition of the famine-stricken districts in Southern India. I cannot contemplate such a condition of things without the most serious anxiety, and the deepest sympathy with all those local authorities who, after prolonged and arduous exertion, are now confronted with new administrative difficulties.

31. It is unnecessary, and indeed undesirable, to discuss in the present Minute any of the particular measures which have been, or may have to be, adopted for meeting those difficulties. The teachings of experience would be as barren as they are bitter, were it impossible to derive from study, not only of the phenomena of the late famine in Bengal but also of the course of the present famine in Madras and Bombay, a clear apprehension of certain general principles of famine management. The soundness of these principles is, I think, established both by the beneficial results of their timely and intelligent application, and also by the disastrous consequences which have attended the disregard of them. I cannot doubt that they should everywhere guide our action. But it is obvious that the application of them must always be easier in some localities than in others. My object, therefore, in now proceeding to Madras is, not to urge upon the

administrative authorities of that presidency the adoption of any system of operations devised, *á priori*, without due reference to local peculiarities, but to endeavour by frank unprejudiced personal conference with his Grace the Governor, to ascertain how far it may be practically in my power to place unreservedly at his disposal, for the furtherance of measures approved by his judgment and experience, all those resources which are commanded only by the Government of India.

32. Two or three such measures are, indeed, already foreshadowed by the Duke of Buckingham in an important and suggestive Minute, which has only just reached me. In this Minute his Grace has practically overruled the opinion of those who wanted to give extraordinary diet and comforts, costing about several rupees a month per head, to all inmates of relief camps. He has also wisely decided that none who can work shall be relieved except on public works; and he has indicated some large public works, mainly of irrigation, which will supply labour for all applicants in six districts and parts of two others.

33. Should it be found possible to develop yet further the salutary principles on which these decisions are based, by bringing the whole of that portion of the relieved population capable of work under a well organised engineering supervision, one of the great dangers with which the Madras Presidency is now threatened will have been successfully averted. But, even to carry out with complete efficiency the wise measures already announced by his Grace, the local Public Works Department will, I should think, require some addition to the strength of its staff, and some relaxation of departmental rules. The Governor of Madras has, no doubt rightly, preferred schemes for storing surplus water to projects for carrying it away; and the Madras engineers are, perhaps, the best hydraulic engineers in all India. It will be my earnest endeavour to afford the Government of Madras every encouragement and assistance in my power, for the prompt and bold development of large local public works of every useful kind. In the circumstances we have now to deal with, it is not absolutely necessary that such works should be remunerative in the ordinary sense. Since relief labour must now be employed, and employed on an enormous scale, it is, in my opinion, a matter of primary importance that it should be employed on works of the greatest possible permanent utility, even though such works be wanting in the remunerative conditions requisite to justify our sanction of them in ordinary times.

34. So long as we might reasonably hope that the worst difficulties and dangers of the Madras famine would by this time be passing over, I have purposely refrained from visiting that Presidency, lest my presence there should, however unintentionally, prove embarrassing, rather than helpful, to the efforts of the local Government.

35. But, in face of the facts recorded and reviewed in the preceding paragraphs of this Minute, I can no longer question the urgency of my own duty, and that of all concerned, under the pressure of a natural calamity greater than any which, so far as I know, has in modern times afflicted India. It is now clear that the humane efforts of the Madras Government have proved insufficient to diminish the intensity, or reduce the area, of this calamity. The distress, which appears to be increasing with frightful rapidity, must, even under the most skilful, the most economical, and the most energetic management, strain to the utmost the administrative abilities of the local Government, and the financial resources of the Empire. Therefore I cannot doubt that the Governor of Madras is entitled to receive from the Viceroy the unreserved assistance of all the technical skill and special experience this Empire can furnish, for the relief of the people and the revenue by a vigorous prosecution of the wisest measures that can be devised. In short, we are now fairly engaged in a terrible conflict with nature: our line of battle has been broken at Madras and Mysore; and it is therefore at these points we should now concentrate all our reserved force.

36. Nothing could be further from my intention than to interfere unduly with the local authorities, and the devoted officers, who have so long and zealously been combating the growth of a gigantic catastrophe. Although, up to the present moment, the result has not equalled the assiduity of their untiring efforts, yet the energy and devotion of the district officers throughout Madras, during the protracted and increasing strain upon their physical and mental faculties, cannot, I think, be too highly or gratefully appreciated. It is not to inadequate energy or intelligence, but to inadequate numbers and inadequate executive powers, that I attribute the incompleteness of their success.

37. My journey, therefore, to the famine-stricken districts of Southern India, and more especially my journey to Madras, is prompted by the hope that it may enable me to strengthen and augment the means on which his Grace the Governor of that Presidency is now dependent for the satisfactory solution of a problem as serious as any which has ever occupied the mind, or taxed the abilities, of an Indian statesman.

38. I think that the highest expert talent procurable from any part of India should now, at once, be placed unreservedly at the disposal of the Duke of Buckingham. His Grace will be able to supplement and direct the special knowledge of experts by the large generalisations of a varied experience. Such a combination can scarcely fail to ensure ultimately to the Government of his Grace an administrative success commensurate with the magnitude of those difficulties which nothing short of the coolest judgment and most resolute firmness can now overcome.

(Signed) LYTTON.

Telegram, dated 14th August 1877.

From VICEROY to SECRETARY OF STATE.

Please order immediate compliance with entire indent for Western Rajputana line, forwarded with Despatch 182 of 1876, shipping everything to Bombay till further advised. The essential materials first wanted are rails and fastenings, sleepers, points, and crossings, locomotives, break-vans, trollies, low sided and covered waggons, for at least 100 miles of line; the continued drought in parts and difficulties of distributing food may call for temporary lines of railway, and this material will be kept in Bombay till wanted. We have no spare material at present, and therefore no reduction should be made in this indent in consequence of our wish to carry out southern section of Western Rajputana Railway on broad gauge. Your approval of our proposal on this last head is also earnestly solicited, so that earthworks may be commenced.

Let me know your views after inquiry at Madras.

No. 137.

Telegram, dated 15th August 1877.

From VICEROY to SECRETARY OF STATE.

Your telegram of the 10th. We do not fully understand the object of it. Our instructions about publicity refer only to local purchases from trade. We decided at outset that private trade would import grain more efficiently than Government, and we have lately reasserted publicly our determination not to interfere.

Do you intend to say that you think it probable that Government ought to make large import of grain? We can foresee no circumstances under which such Government interference with private trade would not be ruinous mistake. Trade towards famine country from Bengal, Central and Northern India is most active, and we see no reason to doubt that the necessary supplies will be furnished. We are convinced that far more food from abroad or elsewhere will reach Madras if we leave private enterprise to itself, and we should paralyse it by Government competition. Free trade cannot co-exist with Government importation.

Even if we anticipated failure in source of supply, we should still believe that Government interference would only decrease total amount of food available, and aggravate catastrophe. If Her Majesty's Government should think differently, we request we may receive distinct intimation of the fact. We cannot take upon ourselves any responsibility for a course which would be, in our opinion, fatal, nor can we usefully give calculations. Local estimates say from four to five thousand tons of grain must be imported daily. Grain actually ready for export on Great Indian Peninsula Railway reported to be 120,000 tons. Stocks in Bengal, Central India, Northern India, believed to be large.

No. 138.

Telegram, dated 15th August 1877.

From Viceroy to Secretary of State.

General improvement in prospects of season in Madras, Mysore, Bombay, and North-West maintained during present week. In Madras, moderate rain in Chingleput, Salem, Trichinopoly, North Arcot, Kurnool, Bellary, Nellore, and Kistna, and also in parts of Cuddapah, Madura, Tinnevelly, but light in Tanjore, South Arcot, Coimbatore. In Mysore good showers, in Coorg abundant rain.

Rain still much wanted in Punjaub, Rajputana, and western part of North-West Provinces.

Of Bombay, Temple telegraphs: message begins,—rain good in Southern Collectorates, continues partial and uncertain in rest of famine area; Concan and western tracts light, but sufficient for cultivation. Some autumn crop lost, but much still preserved by frequent light showers. Anxiety still felt regarding Guzerat and Kattywar. Prices of grain slightly easier, still very high; coast and all imports increasing, improvement of situation retarded by want of general rain; people feeling still more continued pressure of high prices. Difficulty in Bombay aggravated by state of Madras Presidency and Nizam's dominions, and by inabilities of railway to bring forward grain sufficient for great demand. Message ends.

Prices of grain continue exceedingly high throughout famine districts, but in Madras are slightly easier than in week preceding, and still are lower in every part of that presidency than in worst parts of Bombay and Mysore. The question of grain stocks and supplies continues to cause anxiety. Regarding stocks in Calcutta, previous information confirmed. Eden reports, after full conference with Calcutta firms, that trade is most active; ninety thousand tons shipping engaged, monsoon not likely to interfere much.

Condition of Mysore continues critical. We have sanctioned as relief work earthwork of railway from station to town of Bangalore.

Numbers relieved generally increasing in Madras, further increase one hundred eighty-nine thousand, making three hundred eighty-five thousand increase in last fortnight. This appears partly owing to village money dole system, of which we have requested reconsideration. In Mysore labourers on works decreasing, and charitably relieved increasing. In Bombay reverse occurring, but slight general increase in totals relieved.

In Madras 983,000 on works, 1,001,600 charitably. In Mysore 45,000 on works, 164,000 charitably. In Bombay 265,000 on works, 119,000 charitably.

No. 139.

Telegram, dated 16th August 1877.

From Viceroy to Secretary of State.

Please order immediate completion of State Railway broad gauge engines for which we have indented, and let us know by what dates first deliveries can be made in England, and at what rate continued. Also, if more of same type be now ordered, when and at what rate can deliveries be made. On receipt of this information, which we would wish to have early, we shall be better able to make final recommendation on Peninsula Company's demand for 100 engines.

No. 140.

Telegram, dated August 16, 1877.

From VICEROY to SECRETARY OF STATE.

I start to-morrow for Madras and Mysore. No change in position of affairs. I consider the present state of things frightful, and future prospects most alarming. There is everywhere the greatest zeal and devotion, but want of unity in administrative authority. My desire is to introduce into Madras a system similar to that which has worked with admirable success in Bombay, to employ the people on great works of permanent value, and, while relieving as far as possible all real distress, to apply proper tests. We have in the excellent administration of the Bombay famine a model for imitation in Madras. My plan is to induce the Duke to take into his own hands the entire management of the Famine Department, with General Kennedy as his chief executive officer. I will place at his disposal the best ability and experience that India can furnish, to act in any way that he desires in co-operation with his own officers, and will then leave him entirely unfettered by interference of Supreme Government. The strong local officers are admirable, and I desire that the Duke should give his orders to them without intervention of Council or Revenue Board. He would be his own Famine Dictator, as Lord Northbrook virtually was in 1874.

MR. A. C. LYALL to COLONEL BURNE.

MY DEAR COLONEL BURNE, 16th August 1877.

I AM very much afraid that the whole of Rajpootana, north and west of the Travellis, from near Deera in the extreme south-west to Ulnur in the north-west, is threatened with serious dearth. Up to this date, if rainfall of two or three inches in the middle of July be excepted, the south-west monsoon has failed altogether, and we have had much less rain than in the season of 1868, which was followed by the famine of 1868–69. The crops are already damaged widely, and what is almost more important in the great pastoral plains of the west the grass is withering up. Nevertheless, if rain falls before the end of August, and plentifully, we shall escape (the natives tell me) a famine; but if the drought continues, it will go hard with the country. Eastward and southward of the Travellis the condition of the country is not so precarious, but it is bad everywhere, though in the south-east there is less to be feared, because that part of Rajpootana usually gets some of the later rain from the Bay of Bengal.

I leave Aboo in a few days, as soon as my baggage has got ahead, and I go first to Jodhpur, then to Ajmere, where I shall take up my quarters. Unless matters mend, we shall be obliged to begin relief works soon; and it will probably be of great use to push on the Western Rajpootana Railway into Marwar. Perhaps the Public Works Department may be instructed to give very early consideration to any proposals of that nature which I may send from Ajmere.

I remain, &c.
(Signed) A. C. LYALL.

No. 142.

Encl. in No. 215.

MR. C. A. DANIELL to MR. C. ROBERTSON, Secretary to the Government, North-West Provinces and Oudh.

MY DEAR ROBERTSON, Jhansi, 16th August 1877.

I am afraid we are drifting into a condition which must very soon call for unsual measures.

Our last rain fell on the evening of the 6th, and up to last Saturday, 11th, we were just holding our own. Since then we have had nothing but sunshine, dry air, occasional high wind from the south and west, with no present appearance of any change for the better.

I have no doubt but that, if we get a reasonable fall of rain by the 25th, we may hope to pull through so far as to save a fair amount of crops sown in Jhansi, and a good amount in Lalitpur, and to admit of even some being sown during the last week of the month.

In the Jalaun district, however, the failure is more than in this district (Jhansi), and unless we get there in Jalaun good healthy rains within a week, I doubt if there will be any kharif crop at all.

In the whole division the difficulty which presents itself now is this. The poorer class of cultivators, the ploughmen and labourers, cannot get food except with great difficulty. The Banias close their advances to the cultivators, and the labourers have no work to do.

The Banias are in the habit of feeding the poorer class of cultivators on the strength of, and on the security of, the crops in the ground; whenever there is little or no crop sown, or when the sown crop is endangered by drought, the Banias close their money bags and refuse food or its equivalent. The people are then thrown on their own resources, which are *nil* in so many cases, and it is with regard to these people I now write.

We have at present fair stocks of grain, and prices at this moment are not very high, but the prices may rise at any time, and I expect a very rapid rise at the end of eight or nine days from now, unless we have good rain.

I have just had a long talk with Porter, and have to-day heard from White and Adams.

I shall, no doubt, I fear, in a few days have to recommend that works be thrown open for employment of those who are ready to come; and of necessity the question of funds must arise.

Lalitpur for the present can get on with the Saugor road, for which we have sanction.

In Jhansi Porter recommends the Mow and Jalaun road to begin with. This is a very desirable work, cutting the worst part of the district; plans and estimates have been prepared on the rough for some time, but have not been sent on; the work has been too much for the regular division funds.

White will in due course state his projects.

I write now to you to say that I fear I shall in all probability have to come up to you very soon for a demand for money.

May I now obtain demi-official sanction to make emergent advances within certain limits should our troubles come upon us too quickly to admit of regular sanction in time to save real distress.

The case will be reported officially directly I obtain from the Deputy Commissioners their official proposals.

I have to-day issued the circular for stock of food grains to the Deputy Commissioners.

Yours sincerely,
(Signed) C. A. DANIELL.

MEMORANDUM presented to the Viceroy by his Highness the MAHARAJA of JEYPORE, dated Agra, 17th August 1877.

THE Maharaja's object in asking the favour of this interview with his Excellency the Viceroy is to acquaint his Excellency of the signs which are now visible on all sides of the fearful famine which is fast developing itself, not only in the Jeypore territory, but throughout Rajpootana, and even beyond it. The calamity, which was not at all apprehended two months ago, is now assuming so serious an aspect that his Highness has felt it necessary to wait on his Excellency for the favour of his Excellency's valuable advice as to the precautionary measures the Durbar should adopt for saving its people from the impending danger.

The following measures are now under consideration, and the Durbar will carry them out as soon as it is assured of their efficacy, and submit to Government its official reports on the subject :—

1. As the cultivating classes are already under the necessity of borrowing money and corn to save themselves from starvation, the Durbar would offer every inducement to the Bowras, or money-lenders, to lend money and corn to the subjects without hesitation. The Durbar would promise to help such money-lenders to recover the loans they may give as soon as the times are changed for the better. Should any money-lender hereafter find cause to bring any civil suit against any Raj subject, for the recovery of any such loan, the usual court-fees will be wholly remitted.

2. The Durbar would issue orders to the effect that the greatest discretion and lenity be used in realising all arrears of revenue and the dues for the current year, so that the cultivating classes may not be put to any inconvenience or difficulty.

3. At places where there may not be any Bowras, or money-lenders, the Raj would offer to lend money to the subjects from the State treasury without charging interest.

4. The agricultural classes are now keenly feeling the want of provender for the live-stock in their possession; the Raj would, therefore, pass orders that the cultivating classes be allowed to raise green vegetables on land surrounding wells, tanks, and on the sides of canals without any land-tax or dues of any kind. All pasture lands which are usually reserved for the Raj be thrown open to the agricultural and pastoral classes for grazing cattle.

5. In order to provide for day-labourers the Raj would undertake extensive irrigation works within the State and other works of public utility, and would commence working the stone quarries on an increased scale. It would also take in hand the preparation of all marble pillars and cut-stones which may hereafter be required for the Albert Hall and other public buildings proposed to be erected.

6. Preliminaries are now being arranged for opening almshouses for the aged and infirm, as well as others unable to earn their livelihood.

7. As increased distress of this kind is likely to cause increase of crimes, the Raj would add to the police force located at every station and issue special instructions for the guidance of police officers towards effectual suppression of plunder and theft.

8. All feudatories, jaghirdars, and other tenure-holders should be strictly ordered to adopt the same measures within their respective jurisdictions for relieving their own people.

9. The Durbar would pass orders to the effect that arrears of tribute and other dues should not, for the present, be demanded from these tenure-holders, so that they may be better able to take care of their people. The Durbar would also offer to lend money to such of them on indulgent terms as may already be in pecuniary difficulties.

The Maharaja would beg to submit the above measures to his Excellency the Viceroy for the benefit of his Excellency's valuable opinion as to their efficacy, and would also beg of his Excellency to favour him with further instructions which will enable the Durbar to save its subjects at this crisis. Should the rains unfortunately still hold off, the calamity will certainly become very serious, and in such a case the Durbar's exertions will scarcely be sufficient to cope with it. The Maharaja feels it his duty to inform his Excellency of the present state of affairs, and of his apprehensions for the future, before things assume a serious aspect, so that his Excellency may have sufficient time to think over the question, and that his Excellency's Government may be prepared to lend its kind assistance whenever the Durbar stand in need of it.

Encl. in No. 215.

No. 146.

MR. H. B. WEBSTER to MR. C. ROBERTSON, Secretary to Government, North-Western Provinces and Oudh.

MY DEAR ROBERTSON, Mainpuri, 17th August 1877.

I DARESAY Sir George would like to know something about the state of this division at once; so, without waiting for the detailed information which Collectors are gathering for me, I will give you a brief statement of the present condition and prospects of the country as far as I have knowledge, personal or acquired, from interrogation of Government officers, traders, and Zemindars.

The staple food of the common people for a portion of the year (say, roughly, from October to March) consists in this part of the country of bajra, juwar, and pulses (moong, mote, and oord). Of these grains juwar alone has been sown to any extent; it has germinated and at least 50 per cent. of the crop has escaped drying up and would now yield an average produce, *if rain should fall within* 12 *or* 15 *days*. Bajra has as yet been but little sown, but in the Agra Division (I am assured on all hands) it will not be too late to sow it with every prospect of an average yield if rain fall within a fortnight; this would not be the case in Meerut, for there the seed sown now would produce little as it would surely be nipped before the perfect formation of the ear by the early frosts; there is no such danger here. The pulses cannot be sown now.

To sum up, if rain fall within the next fortnight about half of what has been sown will produce a fair return, and the sowings, which will then become possible, will yield an average amount of produce.

All the prospects of the kharif harvest then depend upon the weather of the next fortnight; at present the sky is cloudless, the wind steadily in the west, and the heat intense.

Prices are on the rise, wheat is here at 16 to 16½ seers, and at Etawah 14½ seer per rupee.

On the other side of the Jumna, in Gwalior and Bhurtpoor, the pressure of the drought is beginning to be felt by the people who are immigrating in weekly increasing numbers with their cattle in search of food and forage. These immigrations have not yet reached important dimensions; I am carefully watching them, for they will (as they were in 1868) be a source of some embarrassment to us, and they certainly will, if they increase much, render it necessary for us to open relief works earlier than we should be compelled to do for the sake of our own people alone.

If we do not get rain in abundance in September to enable the ground to be prepared and sown for the rabbi, the day labourers and the smaller class of cultivators will be in distress, and it will be necessary to find employment for them on useful public works.

My experience in the famines of 1860 and 1868 has convinced me of the immense importance of affording assistance to the labouring classes in the shape of employment on public works *early*.

The thing is to get all such persons at work on ordinary rates *before they have had time to become enfeebled and emaciated by want.* You thus (setting aside the merely humane view of the question) secure a fair day's work for a fair day's wage from your labourers employed on relief works, and avoid the pitiable waste of money which is the invariable result of letting men, reduced and weakened by insufficient nutriment, to labour for wages, even if those be fixed at the minimum which will support life. There are two works which, I am informed by the Collectors, have received administrative sanction, and for which allotments have been made, which appear eminently suited to become relief works for Etawah and Mainpuri. These are—(1), the new canal cut starting from somewhere in the Mustafabad Tahsili in the Mainpuri District, and running through the Shekoobad Tahsili down through the Etawah District to a place called Bhognipoor in Cawnpore, (in fact I believe that the projected cut is known by the name of the Bhognipoor Branch); and (2), the extension of the Lower Ganges Canal which (already partially excavated) passes through the northern and eastern parts of the Mainpuri District. I think that in the present very doubtful state of the agricultural prospects of the neighbourhood it would be *most advisable* to call on the Canal Department to have matters so arranged that it should be possible to begin operations on these two works with large gangs immediately on the first appearance of distress.

I will, as soon as possible, in consultation with district officers, prepare other projects for immediate commencement in case of need in other districts.

The two works above mentioned will, I think, suffice for the possible needs of Etawah and Mainpuri, and their nature renders them most appropriate relief works.

I hope I have not made it appear that I am an alarmist, or that I take an unnecessarily gloomy view of affairs in thus asking that we may be prepared with relief works, matured and ready for the immediate commencement of work should the necessity arise. I do not take at all a gloomy view in reality, but I wish to be ready for the work; I fully share the hopeful frame of mind in which, I am glad to say, both land-owners and cultivators still are; they are a long way from the beginning of despair, and the predictions of the Pundits, that timely rain will fall are fortunately believed in by all classes of natives, with the result of keeping them in spirits and preventing them falling into that dull and apathetic state which was among the worst of the effects of the drought of 1868 in the cultivating classes; who (in the Saharanpore District at any rate) were so dispirited at the approach of misfortune that they would hardly make an attempt to help themselves; in many places they would not even attempt to dig kutcha wells, though the soil was in all respects suitable to them and I offered to pay the expense of the operation.

With regard to grain stocks, the detailed inquiries ordered by Government are going on, and I will report the result as soon as they are complete; but I can say that all classes of persons whom I have interrogated in the different parts of the division I have visited, are agreed that the grain stock now in the hands of the Zemindars and of the corn-dealers is very large, in spite of the heavy exportation which has been going on for some months past. *Apropos* to this subject I may mention that the dealers who had already sent grain for despatch to the railway stations are now (induced thereto by the rise of prices) removing such portions as the Company has been unable to carry up to date.

This retention of the stock of grain originally intended for exportation has caused a slight fall in prices.

The health of the people is generally good. I will write a detailed official account of matters when I return to Agra a week hence, by which time I shall have seen a very large proportion of the division and have received the reports of Collectors of the inspections they and their Assistants are now making under my orders.

Yours sincerely,
(Signed) H. B. WEBSTER.

No. 147. Encl. in No. 215.

No. 3357, telegram, dated 17th August 1877.

TELEGRAM from the DEPUTY COMMISSIONER OF LUCKNOW to the COMMISSIONER OF LUCKNOW DIVISION.

Subject.—Agricultural report for the week ending the 16th of August 1877.

There were eight-tenths of rain in Mohanlalgunj on evening of the 12th, and one inch and two-tenths in Malliabad. No rain in Tehsil Lucknow except some slight showers which could not be measured.

Prospects of kharif crops unfavourable. Hot winds blowing.

No. 148. Encl. in No. 215.

TELEGRAM from the DEPUTY COMMISSIONER, UNAO, to the COMMISSIONER OF LUCKNOW.

Hot winds. Unirrigated crops burnt up. Koari hopeless. Aghani daily more critical.

No. 149. Encl. in No. 215.

No. 1,602. From the DEPUTY COMMISSIONER, KHERI, to the COMMISSIONER, SITAPUR DIVISION. 17th August 1877.

I am unable to send you a more favourable report this week. Excepting two-tenths of an inch at the Sadar on Tuesday, about noon, and a drizzle on Tuesday night at Mohamdi, there has been no rain gauged at any of the three Tehsil rain gauges.

There was good rain on the other side of the Chauka, at Jankinagar, in the Bhow Taluk between the Singhai and Dhaurehra Parganahs, in Tehsil Nighasen, and the police at the Dhaurehra Thana give favourable accounts of the crops in the Terai Parganahs of Dhaurehra and Firozabad. The Singhai report is not so favourable.

Lightning was observed on Sunday evening a great distance off due south, but I have been unable to learn that it reached this district.

Speaking generally, excepting in the Terai portion of the district, the prospects are gloomy. The crops in the highlands are reported to be rapidly drying up, and those in lowlands even to be suffering much from want of rain. During yesterday and to-day hot winds from the west have commenced to blow.

One curious feature in the present drought is shown in the drying up of jowar this year, which has acquired in the process a poison which is fatal to any cattle eating it. The Tahsildar of Mohamdi reports the death of 60 head of cattle from this cause, and his account of the fatality to animals eating is confirmed by Messrs. Hearsey and Carnegy, landowners in that Zillah.

No. 150.

Telegram, dated 17th August 1877.

From Governor of Bombay to Secretary of State.

Have journeyed South Mahratta country; crops excellent there, August rains being favourable, but prices continue extremely high, though trade is active. Regret no good news of rain elsewhere, and monsoon still scanty everywhere, save in Concan, where rains somewhat better. Renewed tendency decrease numbers relief works, but pressure of prices augments numbers on gratuitous relief; no trouble in any district save Kaladgi, where deficient monsoon has reduced people generally, and caused numbers on relief to rise excessively. Great anxiety and difficulty in meeting demands for carriage of grain by rail for want of enough engines. Demands of famine supplied by suspending general traffic, but engines and drivers overworked.

No. 151.

Telegram, dated 17th August 1877.

From Viceroy to Secretary of State.

Dhond Railway. Our first object in indenting for rails and sleepers is to use this line, even temporarily, for facilitating carriage of grain to famine-stricken districts of Southern India, and to guard against a possible break on the Western Ghâts, a catastrophe which would be attended at this crisis with the most disastrous results. We would press for an immediate compliance with our indent, which, in any case, need not embarrass us in any subsequent decision with reference to other railways that may be projected.

No. 152.

Mr. R. M. Edwards to Mr. C. Robertson, Secretary to Government, North-western Provinces and Oudh.

My dear Robertson, Budaon, 18th August 1877.

The enclosed will show his Honour that matters are very bad here; far worse than in Bareilly. The whole way, 22 miles, from the Ramganga to this place there is scarcely a green field to be seen.

The area prepared for the kharif is sown in Tahsil Sahaswan, the same as in usual years, but in only two Tahsils and one Pargana; of a third has half the tilled area been sown; the remaining five parganas only exhibit one-ninth, one-eighth, or one-third. The unsown area is already for seed, and, if rain falls within the next eight or even ten days, an immense quantity of bajra will be put into the ground; if rain holds off beyond that period, then all becomes dark and gloomy. The scarcity, as yet, is mainly confined to the common labourers, for whom there is none of the usual field weeding. These men cannot last beyond 10 days without assistance, and neither Mahajans nor Zemindars will

give any. The latter have all the Assamees' grain, and refuse even a chittack, rejecting all Tumussooks, promises to pay, &c. There is, I believe, ample grain in the "Kathis," but the only thing likely to make the Mahajan open his store is the fear of his having it looted —a far from improbable contingency. The people are applying to the Collector to force the Zemindars to give them grain on their bonds, and I have heard of Assamees distinctly telling their Zemindars that the grain intended for the market town should not leave the village. A party of 29 men were sent in to-day for looting grain which was being despatched; the poor emaciated fellows one and all admitted it saying they got five seers each and took it to save their own lives and those of their families. The best disposed find that their strenuous efforts to irrigate are foiled by the dry west wind, which literally burns up the soil and everything in it. The heat is terrific, but the health of all good. What is wanted is labour. I have told Sandys to start all his road repairs at once. The dry weather is opposed to good and effective work, but we must not delay until the people get too weak to work or until they are forced to support life by theft and violence.

Authority should be sent to Sandys here to commence relief-works the very hour he finds it is absolutely necessary. I have arranged what they shall be, and they can be started at 12 hours' notice. I give a list further on. Should it be necessary to have more extensive ones, I would suggest that the earth-work of the Oudh and Rohilkhund Railway continuation from Moradabad towards Bijnour be commenced. Employment will fill bellies and keep the people out of mischief and prevent their sitting idly, brooding over their future. If this is not done within the next 10 days, so far as this district is concerned, there will be serious and general crime and an overflowing jail, unless, of course, rain falls in sufficient quantity. Hitherto the little that has fallen has been so partial that only a very general tour through the entire district will procure the necessary acquaintance with the actual facts. Sandys and Robinson go out in accordance with the last Government circular received to-day. The enclosed shows the crop probable three days ago; but the cane is losing an anna every day of this west wind. All yesterday it blew very strong; to-day is almost still. I find the Pillibhit sub-division to be far better off than was anticipated, and Major Parsons is straining his canals to the uttermost. The alarm here is very general with too good reason, but I still look hopefully for rain. None of the other district reports have reached me here, and I hope they have been sent direct. I go back to Bareilly to-night, and will send fuller details on Monday. I hurry this to save the Dâk, which goes inconveniently early. I have closely examined all the Tahsildars and have interviewed many natives. One and all have the same cry: "If we get good rain within eight or at most ten days, we shall "pull through; but any longer delay will here cause a vast deal of suffering," and we must be prepared for the sad contingency.

Yours sincerely,
(Signed) R. M. EDWARDS.

Proposed works on which to employ the poorest—
Repairs to second-class roads.
Do. to third-class do.
Construction of road from Kulrala to Oosehut, 25 miles.
Consolidation of Budaon and Aounla road, 19 miles.
Increase width of this road by 10 feet (earth portions).
Construction of a bund to prevent the Ganges running up the Maharananuddi and flooding numerous villages. 10 feet at top, 80 at base. Probable cost 12,000 rupees.

These will employ a great many. Authorities at Narora have been asked if they can utilise labour.

Works will have to be simultaneously started in other districts or the poor and starving will flock into Budaon.

(Signed) R. M. EDWARDS.

For what Period.	Weather and Rain-fall.	Agricultural Operations and Prospects.	Prices.	Health.	General Conditions and Prospects of People.
		BUDAON.			
From 10th August to 18th inclusive.	Hot and strong wind from west blowing throughout district. Rain-fall— Budaon, 14th Aug. ·1 Bisauli - - ·3 No rain elsewhere.	The showers on 14th allowed of some sowing for kharif and ploughing for rabbi. All the young crops much injured by the hot wind and irrigation almost abandoned as useless. Almost all kharif area tilled, but less than one-half sown.	s. c. Wheat - 16 3 Barley - 21 9 Rice, first - 9 9½ Do., second 12 0 Gram - - 17 6 Urd - - 15 9½ Moong - 15 0 Urhur - 16 12½ Prices falling fast. Wheat, 13½ seers on 18th.	Good -	Prospects very gloomy. Agricultural labourers already in great straits as there is no field-weeding or other employment for them. Loads of wood or grass brought from the jungle, which usually fetch 2 annas per load, are sold for 2 pice. Zemindars and Mahajans storing their grain expecting higher prices, and will not assist Assamees. Extensive or wealthy Zemindars are scarcely known in district. Last rabbi was excellent and plenty of grain said to be in district. Crime increasing.
		MORADABAD.			
Up to 17th August, by telegram.	Very damaging west wind prevailed during week, injuring all crops, especially sugar and checking ploughing and spring crops.	Ploughing for rabbi partial. Prospects bad.	Prices rising fast -	Do. -	People said to be losing heart.
		BIJNOUR.			
Up to and including August 14th. No telegraph station.	No rain. Wind mostly westerly during week, strong and very hot, drying up the young crop and sugar-cane. Prospects more discouraging weekly.	Prospects very gloomy	Prices rising - - Wheat has risen to 17*s.* 7*c.* from 19 seers Government weight.	Do. -	The Collector is in the interior of the district making personal inquiries. Nothing good to report, but no direct intelligence from Collector of very late date.
		SHAHJEHANPUR.			
By letter and telegraph. Up to 18th August.	No rain: violent hot winds from west.	The general rain-fall throughout the district since 1st July has been 2·9. The average for the same period for the last five years has been 19·8. Save where irrigation is plentiful, sugar and cotton crops are in an almost hopeless state. Other crops scarcely exist, save in Tahsil Pamayan, which has had 3·6 of rain.	On 13th wheat fell to 15 seers, but has since been selling at 16*s.* 7*c.* s. c. Barley - 23 to 24 Gram - 20 to 21 Rice - - 8 to 12	Do. -	The area usually cultivated for the kharif is about 327,421 acres; area tilled this year, 222,789; area sown, 138,608; area in which the seed has germinated, 112,617. Prospects best in Tahsils Pamayan and Jelalabad; worst in Shahjehanpur and Tilhur.
		BAREILLY.			
Up to 19th August	No rain - - Strong westerly winds throughout week, burning up the sugar-cane and young crops.	The drying properties after continuous high west wind defeats all efforts at common irrigation.	Prices rising - - Wheat, 13 seers; Bareilly, weight 102.	Very good.	Collector says there is nothing new to report. Prospects are becoming worse daily.

(Signed) R. M. EDWARDS,
Commissioner.

Encl. in No. 215.

No. 153.

MR. C. P. CARMICHAEL to MR. C. ROBERTSON, Secretary to North-Western Provinces and Oudh.

MY DEAR ROBERTSON, Benares, 18th August 1877.

LOOKING to the fact that we have had no rain here since Saturday week, and that for the last four days a hot and strong westerly wind has been blowing, I had hardly hoped to have been able to send to you anything like a cheerful report. But Basti excepted (for the western portion of which district I have great fears), we are

as yet safe. But I cannot say what may not happen if another week of this hot wind continues.

Benares.—Church writes:—"Notwithstanding that no rain has fallen since my last report, and that at the present moment a high westerly wind prevails, I see no reason at present to apprehend any serious failure of the kharif provided we have rain in the next few days. Travelling down the rail the other day to Phulpur (this is in the direction of Jaunpur), I was surprised at the fine condition of the crops, especially cane and flax. The rice also looked green and good, but it is of course likely to suffer unless timely rain should come."

Mirzapur.—Lumsden writes:—"Rain-fall from 7th to 13th August was as follows; Mirzapur nine notches, Chunar *nil*, at Robertsganj 11 notches, at Chakia 46 notches, at Kourh 10 notches. More rain required for the kharif crops, especially in the Chunar Tahsil. If it keeps off much longer, prospects will be as bad as before.

Azamgarh.—Gardener writes:—"The early kharif crops are suffering from want of rain. The planting out of rice is being effected wherever irrigation is practicable, but the full area will in no case be planted. Fear is entertained that the sugar cane will be deteriorated. Rain anxiously awaited."

Ghazipur.—Barstow gives a very full report. The pith of it is that prospects are good in those Tahsils which border on the Ganges, or more properly speaking, in the low lands of those Tahsils. Tahsils Balia, Kooruntadih, Saidapur, and Zamaniah are all good. Ghazipur not so, and Rasrah decidedly bad; the rice crop there as also the cane being seriously injured. Prices of grain, however, stationary; barley being 28 seers and wheat 18 seers for the rupee. Urd 21 seers, urhur 32, bajara 18, rice 14. The abundance of rain they have had in Patna adjoining evidently keeps down the prices. I fear the kharif in the Rasrah Tahsil is all but gone.

Gorakhpur.—Moens writes:—"After I had written my last report we had fair showers of rain on the 8th and 9th, since then to 15th great heat and bright sun which did much damage to the young crops. To-day (15th, date of his report) we are having a heavy shower. It is the first really heavy monsoon like rain we have had, and it will do much good. The crops to the east and north of the district looking very well on the whole. To the west and south, where there has been but little rain, the crops are poor and backward." He concludes by saying that "on the whole to-day's rain, if general, will make things look brighter than they did last week."

Basti.—In a demi-official dated yesterday (the 17th) from Markham, he writes:—"Nothing could possibly look worse than at present. Yesterday and to-day we have hot westerly winds. To-day it is like the *loo* of April. Half a tornado, and loaded with dust." In his official report simultaneously received, he writes:—"To the west the crops are in a very bad way, and in parts the people have begun to graze their cattle on the rice. Everywhere, except in Bansi, and in parts of Khalilabad, the general outlook is distinctly worse than at date of last report. In Bansi things are improved and to the north-east of Khalilabad a recent copious shower has revived the face of the country. The vitality of the crops is proverbial, and I have reason to think that if good rain were even now to set in, taking one tract with another, a good eight-anna crop would still be realised. Prices stationary, and health of district good."

The above will show you that in Benares we are as yet safe. In Mirzapur the same, the Chunar Tahsil excepted, where rain is much wanted. Ghazipur good, all excepted the Rusrah Tahsil. Azamgarh critical and shaking for want of rain. Gorakhpur a great improvement on last week's report; and Basti fairly good to north and east, bad to west. All will depend on the next ten days, or say fortnight at the outside. If rain comes by then, the kharif crop is saved, if not lost, and our thoughts must be turned then to wishing for late rains for the sowing of the rabbi. I go over to Mirzapur on Wednesday, and shall stay there for three or four days and confer with Lumsden and his Tahsildars. After my return here I shall leave for Ghazipur, Azamgarh, Gorakhpur, and Basti. I can hardly expect to get back here much before the 15th proximo unless rain sets in, when I shall terminate my travels abruptly. The heat is something fearful.

Yours sincerely,
(Signed) C. P. CARMICHAEL.

MR. A. FRASER to all COLLECTORS and DEPUTY COMMISSIONERS, North-Western Provinces and Oudh.

EXTRACT from the PROCEEDINGS of the GOVERNMENT, North-Western Provinces and Oudh, Nos. 372—418 A.C., dated Naini Tal, the 18th August 1877.

Read the following:—

To all Collectors and Deputy Commissioners, North-Western Provinces and Oudh.

DEAR SIR,

IT is within the bounds of possibility that the want of rain this year may result in at any rate a partial failure of the kharif crop, and the Lieutenant-Governor is of opinion that, although there is no immediate danger of famine, or even of scarcity, yet it would be advisable to be prepared (in the event of the continued dry weather resulting in the destruction of the crops) with matured projects to meet the requirements of relief to a small or large extent.

2. I am, however, to impress upon you that the preparation of these projects is only a precautionary measure to meet a contingency that the Lieutenant-Governor trusts is only remotely possible, and as it would be inadvisable that a mistaken impression should get abroad that his Honour considers a condition of scarcity to be imminent, I am to request that you will consider this communication as confidential, and prepare, with the aid of your District Engineer, the necessary projects to meet all possible contingencies, without making public the views of Government.

3. I am to refer you to the annexed extracts* from Chapter XIIIA. of the Public Works Code, paragraphs 36 and 37, and to observe that the object of the Government is, in adopting the gradual scale of work therein enjoined, to start relief by executing works of use to the State at ordinary rates, with full task of labour.

4. Your project should take the form of separate lists of works under the following heads, and should be progressive, being graduated to meet the requirements of your district in stages of less or greater distress.

* 36. It is important that the means of obtaining work and food should be brought within the reach of the people of a distressed district as early as possible, and that the offer of relief should not be delayed so long as to lead to their strength being destroyed by continued want before they are provided with employment. All danger of creating any objectionable interference with the natural demand for labour on these occasions is at once rendered impossible by properly limiting the wages offered on relief-works. If the rate is fixed so low as merely to give a bare subsistence, it is certain that no one will seek employment on the relief-works who can do better for himself in any other occupation. When a real pressure begins, the real sufferers will be led to the works, and, as soon as that pressure is taken off, they will leave them.

37. The distinction between employment in time of famine on ordinary works, where a full rate of wages is given, and a full quantity of work is exacted in return,—and on relief-works, where a bare subsistence is given for whatever work the labourer can perform,—must be distinctly remembered. The two classes of works may, with perfect propriety, be going on at the same time, not only without interference, but with mutual advantage. The relief-house at which support is given without labour, the relief works at which a subsistence is given for a minimum of labour, and the ordinary works where ordinary wages can be earned for the full day's work, provide for the labouring population a gradation between the most complete pauperism and misery, and the healthy state of self-supporting labour.

5. The works that should first engage your attention should be those connected with repairs to communication, and might be enumerated under the heading:—

A. Repairs—

I.—Repairs to first-class roads.

These would comprise the collection of a supply of metal sufficient for the repair of the road for the next three or four years, and the thorough repairs to the patris or unmetalled portions.

II.—Raising and improving second-class roads, so as to place them in a condition to require but trifling repairs for some years to come.

III.—Improving third and fourth class roads.

IV.—Improving approaches to boat bridges, and ferries.

V.—Repairs to canals, tanks, bunds, &c.

VI.—Repairs to drainage works.

6. In the event, however, of these projects not affording sufficient work for the needy population, and of the necessity arising for instituting relief works at reduced rates, so as to meet the principles laid down in the paragraphs of the Code above quoted, it would be necessary to turn to original works as a source of relief, and I am therefore to request that you will supplement the repairs list with others, under the head of—

B. Original Works—which should comprise—

I.—Works for which projects, which have received the sanction of Government in either this Department or in the Irrigation branch, exist, and which have been postponed for want of funds.

II.—Works which have received the administrative sanction of Government in the General or in the Public Works Department, in either of its branches.

III.—Works that have not received the sanction of Government, but for which projects have been more or less considered and matured by you.

IV.—Works which have as yet been unconsidered, but which in your opinion would at once form an efficient mode of affording relief, and be subsequently of use to the district, and for which you could prepare projects without additional agency.

V.—Works, the preparation of projects for which would require your obtaining additional assistance from the department.

N.B.—The list for repairs and original works should be separate under each head in the Buildings and Roads, and Irrigation branches, and the list of projects under head V. might be submitted hereafter should the necessity of greater relief become obvious.

7. Looking forward even to the worst contingency, viz., the absence of rain in September, resulting in the loss of the rabi crops. It may be presumed, considering the excellence of the cold weather crops of 1876-77, that there are large stocks of grain in the country; and that consequently the increase of distress in your district could only be very gradual; and it is with a view to meeting the possible gradually increasing demands for relief, without incurring unnecessary expenditure to the State, that you have been requested to arrange your proposals on a progressive system, so that the requirements of the district, so far as relief works are concerned, may be met at every possible stage.

8. The form that accompanies this letter will enable you to fill up a statement that will furnish all the necessary information to enable Government, in the event of the initiation of relief works becoming necessary, to instruct you as to the way in which relief can be afforded with the greatest advantage to the inhabitants of your district, combined with a minimum of direct loss to the State; and in view to this desirable end, I am directed to impress upon you the necessity for giving the preparation of this return your most serious attention.

9. Having completed your return, you will submit it to the Commissioner of your division, who will be instructed to forward it (with such remarks as his experience and knowledge of your district may dictate) to Government; and it is hoped that armed with ample data, such as will be furnished by these reports (if carefully prepared), his Honour will be in a position to meet most satisfactorily the requirements of your district, should scarcity or even famine render the direct intervention of Government necessary for its relief.

10. I am directed to reiterate the assurance that Sir George Cooper sees no immediate cause for alarm, and to impress upon you the necessity for avoiding any action that might lead to the impression that scarcity in any of the districts of the North-

Western Provinces and Oudh was in any way anticipated by the Government; but, I am finally to request that you will carefully bear in mind the principles for relief in time of famine laid down in Chapter XIIIA. of the Public Works Code.

Yours, &c.
(Signed) ALEX. FRASER.

No. 158.

Telegram, dated 18th August 1877.

From GOVERNOR OF MADRAS to SECRETARY OF STATE.

After fullest consideration of railway famine requirements, possible aid from India, and consultation with railway officials, we have decided that 20 locomotives, 600 high-sided waggons, and 80 break-vans are urgently and immediately required for Madras Railway. Railway officers' estimate much greater. Locomotives should be Trevethick's design, not similar to new Kitson's; waggons carrying 12 tons each, break-vans weighing 10 tons. Please sanction and communicate to Directors for immediate execution and despatch.

No. 159.

Telegram, dated 19th August 1877.

From SECRETARY OF STATE to VICEROY.

(Replying to telegram from Viceroy, dated 15th August 1877, p. 117.)

I do not understand your objection to making calculations. Situation is one requiring extreme vigilance, and Government should possess all attainable information which can enable it to forecast probable necessities of people and available sources of supply. The importation of grain into any district will only become incumbent on Government where it appears probable that trade will fail to provide food necessary for keeping population alive, and where Government is able to supply the deficiency. Except in this exigency, I admit that competition with private trade would discourage it, and therefore would be dangerous. Such exigency is not probable because obstacle which will hinder private trade will usually hinder Government also, but in an utterly abnormal calamity such exigency is not impossible, and should not be excluded from your consideration. It will be well to ascertain how far probable arrivals of grain correspond with estimated need.

Encl. in No. 215.

No. 160.

MR. R. M. EDWARDS to MR. C. ROBERTSON, Secretary to Government, North-Western Provinces and Oudh.

MY DEAR ROBERTSON, Bareilly, 19th August 1877.

I ENCLOSE the District Weather and Agricultural Report. Alas! it is in every respect gloomy and unsatisfactory. I only got back from Budaon at midnight, and am off again to-morrow night to Shahjehanpur. Heat terrific, but wind back to east; sky as clear as ever, so it will probably be west again in an hour or two.

No Collectors have yet applied for relief works, so I trust the state of things I yesterday reported from Budaon is not universal, and the big Zemindars and Talukdars of the two western districts will, I expect, listen to advice and counsel, and enable the tenants to tide over the difficulties.

In haste, &c.
(Signed) R. M. EDWARDS.

From SECRETARY OF STATE to PRESIDENT, Simla.

Broad-gauge locomotives. 20 under Railway Letter 14 of 1877; delivery, one in November, one a week afterwards, possibly faster. 20 under letter 87 of 1877; three probably in January, three a week afterwards for remainder of indent and for any addition, if orders given immediately.

No. 162.

Telegram, dated Danowle, 20th August 1877.

From VICEROY to SECRETARY OF STATE.

In the north-west no rain or prospect of rain. Throughout the whole of Rajpootana serious scarcity now imminent; crops widely damaged and grass withering. Famine impending in Gwalior. In Hyderabad, resources of State, after expenditure of over 12 lakhs, said to be nearly exhausted, and scarcity increasing, as also in Baroda. Native States beginning to stop their export trade; if dearth continues, as seems likely, the condition of the northern provinces may affect the whole of India more seriously even than the present severe famine in Madras, where, for this reason, it is more than ever necessary to prevent wasteful expenditure if possible.

No. 163.

Telegram, dated 20th August 1877.

From the SECRETARY OF STATE to the GOVERNOR OF MADRAS.

The Viceroy has communicated to me proposals for administering famine business in Madras, which appear to me wise. The essential point of it is that the management shall be centred entirely in your hands, your staff being strengthened by Secretaries who have had famine experience elsewhere. It will relieve me of much anxiety if you can see your way to agree. We have complete confidence in you, but some of your administrative machinery is circuitous and cumbersome. Such a calamity should be dealt with by your undivided authority free from any impediments of customary routine.

Enclosures Nos. 83, 94–5, 97–9, 101–2, 109, 126.

We have the honour to report that in view of the renewed failure of the south-west monsoon in many quarters, and of the circumstances set forth in the accompanying Minute by his Excellency the Viceroy, it has been thought advisable that his Excellency, accompanied by Sir Alexander Arbuthnot, should visit Poona, Bangalore, and Madras for the purpose of conferring with the local Governments and the Chief Commissioner of Mysore on the condition and prospects of the three Provinces, and on the measures necessary to enable them to deal effectively with the situation. We trust that this determination will meet with your Lordship's approval.

We have, &c.

No. 165.

Telegram, dated 21st August 1877.

From VICEROY to SECRETARY OF STATE.

Your telegram 19th, grain calculations; will reply from Poona. Our great deficiency is not in grain, but the means of carrying and distributing it. At Jubbulpore, which I have just left, 24,000 tons of grain waiting to go south, and equal quantity ready to replace it, but railway can only carry 1,000 tons weekly.

Merchants are beginning to send their grain northwards to Agra, in consequence of increased scarcity in north-west and deficiency in crops.

Government is of course collecting information and making calculations, but my reasons for not sending them were, first, they cannot be implicitly relied on, second, they cannot influence principles of our policy. Government grain useless unless rapidly distributed, and in that case mischievous, because it would monopolise means of transport already of insufficient strength. Trade will import grain when necessary and know when and how to do this better than Government. Even therefore in event you refer to we should not import, but have authorised local authorities to purchase by public tender for supply of any places not reached by trade. I fear even this is liable to dangerous abuse.

Government of Madras has been considering supply of betel nut and tobacco for paupers, and has sanctioned indents for condensed Anglo-Swiss milk for infants, has also raised allowance to children under seven from 3 to 6 pice. On arrival at Poona I shall meet railway authorities to discuss remedy of alleged defects in railway affairs.

No. 166.

Telegram, dated 21st August 1877.

From SECRETARY OF STATE to VICEROY.

A firm offer to ship to Bombay or Madras, in about eight weeks, 300 miles light tramway, four feet eight and a half gauge; 60 engines; 1,800 waggons, carrying each four tons; to lay tramway, erect engines and waggons, at cost inclusive of 1,350*l.* per mile.

Further undertake working of lines at price to be agreed for every ton carried, and to supply engineers and drivers. Would accept in payment Indian Exchequer bonds, carrying four per cent. interest. Government to supply sleepers, and pay carriage from Indian port to interior.

What reply shall I make?

No. 167.

Telegram, dated 21st August 1877.

From SECRETARY OF STATE to VICEROY.

Suggested traction engines may be of service.

The steam sapper is said to be most approved of, owing to light weight, simplicity, and drawing power. Weight when working, 116 cwts. 3 qrs., width of track, 5 feet 9 inches; consumes 49 pounds of coal per hour on ordinary roads, and 35 to 48 gallons of water. It can draw on roads, with slopes not exceeding 1 in 11, 10 tons. Carriages for grain would weigh 2 tons each, and carry 3 tons. Speed on fair roads, 2½ to 3 miles an hour.

No. 168.

Telegram, dated Callian, 21st August 1877.

From VICEROY to SECRETARY OF STATE.

Yours of 19th. I thank your Lordship for supporting our view that, save under exigencies of which in our opinion there is not the slightest probability, Government should not engage in importing grain. In our telegram about Saigon offer, we stated that existing private importation occupied all available means of internal transport; this is still the case, our object is to increase these means for special local exigencies. Where supply is short, Collectors are authorised to obtain grain through trade in ports of three districts, this is already doing.

Our information and calculations of probable arrival of private grain are,—total demand for Madras and Mysore, 4,500 tons daily; average daily despatches of rice from Bengal to Madras ports during past two weeks, 3,050 tons per diem; steam freight from Bengal for additional 90,000 tons, reported by Eden to be taken up. Burmah despatches only 170 tons daily, 300 tons daily despatched inland from Beypore, where increase expected. Great Indian Peninsula delivers 800 tons a day at Raichore for Madras district, some part of 750 tons delivered daily at southern port reaches Western Mysore and Bellary; excluding this last, calculations give altogether 4,320 tons daily, by this week's discussion I hope to raise Raichore deliveries for Madras to 1,200 tons daily. Supply waiting despatch on Great Indian Peninsula enormous, as already explained. Madras Railway power to receive will increase when new and borrowed engines come into work.

See Nos. 142–4, 146–9, 152–7, 160.

From C. ROBERTSON, Esq., Officiating Secretary to Government, North-Western Provinces and Oudh, to the SECRETARY TO THE GOVERNMENT OF INDIA.

I am directed to report, for the information of his Excellency the Viceroy and Governor-General in Council, that owing to the deficiency in the usual rain-fall there is every prospect of a most serious and extensive failure of the kharif crops in the North-Western Provinces and Oudh.

2. In the beginning of July it seemed as if the rains were commencing, and there was between the 1st and 3rd of that month a fall which was pretty general throughout the province. During the rest of the month very little rain fell except in the eastern districts of the Benares Division, and serious apprehensions were excited which were, however, for a time allayed by what seemed a recommencement of the regular rains in the first week of August. The fall during this week did not, however, extend to all districts in the Provinces, the Meerut and Agra Divisions, part of Rohilkhund, and the greater part of Oudh having received a very scant supply of rain. It was sufficient, however, to let agricultural operations be resumed everywhere, and had the fall continued all would have gone well. Unfortunately, the wind again went round to the west on the 6th, and a few days later it became a high scorching blast which raged for a week and did immense mischief, checking agricultural operations, drying up the crops which had germinated, and threatening to kill even those which were irrigated.

3. At present there is no prospect of improvement. The state of the crops is daily becoming worse, and, if rain do not fall in a few days, there can be no kharif, except perhaps in parts of the Benares Division, or where irrigation may avail to save the crop.

4. This serious failure affects the Meerut, Agra, Jhansi, and Rohilkhund Divisions, and the greater part of Oudh. As yet the prospects in Allahabad and Benares Divisions

are better, but there also, unless rain fall soon, the hope of a harvest, except on irrigated land, must be abandoned.

5. The measures taken under the Lieutenant-Governor's orders to ascertain the extent of the calamity that is impending, and the provision there is for meeting it, have been separately reported. But as illustrating generally how grave the situation and the prospects are, I am desired to forward copies of some of the latest reports from Commissioners.

6. With reference to matters mentioned in these reports, I am to state that the Commissioner of Jhansi has been directed to report at once the character of the emigration which is taking place from that division, what classes are leaving, and where they are going. Authority has also been given to all Commissioners to begin at once to give employment on public works of Class A., described in the accompanying circular, to persons who, for want of it, may be in distress.

7. The Commissioner of Rohilkhund has also been directed to impress on the Collector of Budaun the importance of urging on the Zemindars of his district the duty of aiding their tenants in the present state of affairs.

8. Further details of the state of the Provinces will be communicated hereafter when the detailed reports, which have been called for, are received.

9. In conclusion, I am to say that, while every endeavour will be made to observe economy, his Honour trusts that he will be authorised to incur the expenditure which, judging from the present aspect of affairs, appears to be inevitable.

No. 170.

Telegram, dated Gunneshkhind, 22nd August 1877.

From VICEROY to SECRETARY OF STATE.

Your two messages of 21st.

Traction engines already tried in India and failed; unsuitable for famine work.

We decline offer of light tramways; we urge instead immediate despatch of materials indented for Rajputana Railway, metre gauge.

No. 171.

Telegram, dated Gunneshkhind, 22nd August 1877.

From VICEROY to SECRETARY OF STATE.

Good showers in parts of Kistna, Kurnool, South Arcot districts; light showers in parts of Bellary, Tinnevelly, Salem, and elsewhere. Prospects of autumn crop improved in part of Kurnool; worse in Madura and coast districts.

Numbers on works 1,077,682, on gratuitous relief 958,160. Prices not easier; supplies sufficient, save in a few small tracts.

Mysore crop prospects improved by continuance of light showers, and heavy rain in Coorg. Numbers on works 46,231; on gratuitous relief 187,175. Prices from twelve to eight pounds per rupee. Bombay, 6 inches rain in Carwar. Temple reported, on 17th, good rainfall, and autumn crops thriving in Dharwar, Belgaum, Sattara, and Sholapore; on western Ghâts and Concan rain sufficient; anxiety increasing in Kattywar and Guzerat, where rainfall withheld. Numbers on works 257,450, on gratuitous relief 121,072. Temple adds to-day good rain in Concan, elsewhere none worth mentioning. Strain on people in Deccan increasing; condition of crops in Khandesh and Guzerat critical. Kattywar agriculture suspended, failure apprehended. No sign of monsoon returning, but time yet for rain to come and restore everything.

Grain trade intensely active; total now supported by Government in all famine provinces 2,647,775.

Bengal and Burmah accounts good. Available rice surplus in Bengal estimated at 350,000 tons, if crop now in ground continues good. Central provinces crop prospects good; North-west and Oudh no rain, except at Benares; hot winds; autumn crops withering where sown without irrigation: much anxiety about condition of north-west, and effect of failure there. Prices dear, scarcity of fodder felt in Agra Division. Punjab crops suffering much from drought; in South Indore no rain. Gwalior threatened with famine. Malwa crops need early rain; Rajputana, no rain; crops damaged, position very critical; Baroda autumn crops part lost, rest in danger. Prices very dear. Hyderabad, Deccan, no rain.

[illegible]s [illegible]th Dharwad Marmagoa Railway [illegible]ect[illegible]n i[illegible]ed under Ahmednagar
For details and notes see tabular appended

R 4

Good rain has fallen in Khandesh, Nasik, three talukas of Ahmednagar, one taluka of Sholapur, and two talukas of Belgaum. In the rest of the famine area more is much wanted, and the crops are suffering. The fall in Khandesh has been very heavy, and removes almost all anxiety regarding that collectorate.

2. The average price of jowari continues to be 12½ lbs. per rupee; the only noticeable rise is in Satara, from which district crop reports are now not quite so favourable as they have hitherto been.

3. The number of people upon relief works in the nine affected districts is 278,731 against 264,122 last week, and there are also 802 hill-men and immigrants employed in Ratnagiri. The increase is general, except in Khandesh and Poona, and is due chiefly to the continuance of high prices and the absence of general rain. The increase shown against Ahmednagar is, however, partially due to the recent introduction of piece-work upon the Dhond-Manmar Railway. This piece-work is paid for according to a scale founded upon the famine wage, but the introduction of the system enables an industrious labourer to earn rather more than a mere subsistence. The plan has been introduced with a view to completing the railway at the earliest possible date, in order to facilitate the transport of grain into the famine districts of this Presidency and of Southern India.

4. Cholera appears to be decreasing.

5. The table showing the rainfall and prices in each taluka is appended.

6. The following table gives the expenditure by Government, during the week ending 11th August, upon charity in the relief of the aged and infirm poor, and in payments made to the young children of labourers employed upon relief works. Comparing the results shown in the table below with those shown in the last summary, it will be seen that the number of persons in receipt of Government charitable relief has decreased from 51,166 to 45,572, while the number of children under 7 years of age has increased from 80,292 to 80,388. During the week referred to, there was again a slight increase in the number of people upon relief works.

The number of people charitably relieved was 17 per cent. of the number of labourers upon relief works during the same week.

Districts.	Collector's Discretionary Grant.			Expenditure incurred under the authority of Government Resolution No. 312 C. W.— 1,116, of 26th December 1876, on account of children under 7 years of age whose parents are upon Relief Works.		
	Average number of persons relieved during the week.	Expenditure during the week.	Total expenditure up to date.	Average number of children, and of women taking care of them.	Expenditure during the week.	Total expenditure up to date.

8. Tables (A.) and (B.) are appended as usual. It will be seen that during the week ending 18th August the number of people upon Civil works in the nine affected districts was 23,601, the number upon works under Public Works Department Agency being 239,423. The proportion of people upon the former continues, therefore, less than 10 per cent. of the total. It is to be noted that the figures given in these tables are taken from the progress returns of the works, and are brought up to the week ending 18th August, while the figures in the table prefixed to this summary are taken from the Collectors' telegrams, and refer to the week ending 25th August. It will be seen that the net decrease in the number of people on relief works during the 10 weeks subsequent to 9th June has amounted to 142,101.

9. Maps are not sent with this summary.

10. A table is appended, showing the condition of the affected Native States.

11. With regard to the movements of food-grains, 748 tons were exported from Bombay to the Southern Mahratta ports during the week ending 25th August, and

during the same period 5,038 tons were carried by the Great Indian Peninsula Railway to stations upon the Poona-Sholapur and Nasik-Bhusawal lines, making a total of 5,786 tons for the week. The table below shows the quantities of grain sent by sea and rail from October till the 25th August to the Southern Mahratta ports and the railway stations in the distressed districts. It will be seen that the total amount delivered up to the 25th August was 384,161 tons:—

Food-grains sent to	In October, November, and December 1876.	In January, February, and March 1877.	In April 1877.	In May 1877.	In June 1877.	In July 1877.	In August (up to 25th).	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Southern Mahratta ports	44,215	46,332	21,399	28,657	4,491	857	13,048	158,999
South-Eastern line, from Poona to Sholapur.	67,195	41,708	12,856	12,594	20,348	20,484	15,958	191,143

12. During the week very good rain has fallen in Khandesh and parts of Nasik, fair rain has fallen in the rest of Nasik and in parts of Ahmednagar, Sholapur, and Belgaum, while in the remainder of the famine area the showers have been light where they have fallen at all. This has been chiefly eastern rain, the south-west monsoon on the coast still continuing to be very inadequate. There has also been very favourable rain in Surat, and the fall in Broach and Kattywar has not been unsatisfactory. More rain is required in Kaira and Ahmedabad, but, upon the whole, anxiety regarding Guzerat and Kattywar, Khandesh, and Nasik, is very materially lessened.

Prices of food-grains continue almost stationary.

Imports of grain on the coast show a very marked decrease, due probably to two causes, viz., the celebration of Cocoa-nut day by the seafaring population, and the diminution in the number of steamers engaged in the trade owing to the recent loss of two of their number. Imports by rail again show a slight decrease, due to the cause already more than once noticed.

There has been a net increase in the number of people upon works of 14,350 and an increase of 96 in the number of young children. On the other hand, there has been a decrease of 5,594 in the number of people upon charitable relief, but this result is due in some measure to the non-receipt of complete returns.

A distinct improvement in the general situation has taken place since last week. Anxiety is to a great extent removed regarding Kattywar, Guzerat, Khandesh, and Nasik, but the continuance of high prices, and absence of general rain, in the seven famine collectorates south of Nasik, retard improvement in the condition of the people of those districts.

Cholera appears to be decreasing.

(Signed) C. J. MERRIMAN,
for Major-General, R.E., Secretary
to Government.

The monsoon set in on the 19th June above Ghauts.

No. 173.

Encl. in No. 15.

From Major-General M. K. Kennedy to Colonel O. T. Burne.

My dear Colonel Burne, 22nd August 1877.

I think that Jeypore Durbar should be advised not to be in too great a hurry to commence public works for relief purposes; the fact of the failure of rain does not mean that the people at once become helpless and without resource; they can subsist for some time on their means, and it is an error, calculated to lead to needless outlay, to assume they are without any means.

Even if favourable rain had fallen, or should fall, there is still an interval, *i.e.*, until the crops can mature, during which the people would have to subsist on the resources I assume them to have; later on, if the scarcity be clearly developed, and when the people begin to show signs of distress, the State might open well-selected public works; these should, if possible, be works of irrigation, particularly large tanks, such as are capable of holding at least two years' supply of water.

The earthen dams of such tanks must very generally be heavy works on which large bodies of unskilled labourers can be profitably employed and efficiently superintended. On these works the scale of wages and tests that we have found effectual should be introduced, and I shall be most happy to furnish the Governor-General's Agent with copies of all our orders bearing on the subject.

But if the dearth and the consequent distress be not very great, and very widely extended, I think Mr. Lyall's proposal for carrying through the Western Rajpootana Railway a very good one, and it would probably supply nearly all the relief work that may be needed, and of a very suitable kind.

The Durbar should very carefully avoid small scattered works near the homes of the people needing relief.

As to the specific measures proposed by the Durbar, No. 1 is good in so far as it may encourage the "Bowras" to grant credit; but the Durbar should enter into no engagement on this head, which they might hereafter find it difficult to fulfil. The remissions of court fees would imply no pledge; but if the Durbar were to encourage loans under a promise to the lenders that they would assist in their recovery, they would, to a great extent, become responsible for such recovery.

Should there be a drought it would be a fair and proper arrangement to use discretion and lenity in collecting arrears of revenue.

As regards the third proposal of granting loans, *i.e.*, Tuccavi, I doubt the wisdom or necessity of such an arrangement, except for purposes of land improvement, such as digging or deepening wells, at all events at so early a period of the distress. Such a

plan would only be needed when the time for the next sowing occurs, to enable the cultivators to procure seed or cattle; even then Tuccavi should be granted very cautiously, and only to those who may be small holders, and presumably without capital or credit.

All waste pasturage belonging to the State might be freely opened by grazing.

Alms or poor houses should not be opened too soon; at an early period of drought, the people are able to maintain their own poor.

From the above it will be seen that, on failure of a season's crops, I think that, for some time, the people should be left to their own resources, which they must possess, and that relief, either in the way of employment or charity, should only be given after a time when the people begin to feel distress, and have exhausted their own means.

That when relief is given it should, as regards charity, be very closely controlled, and, as regards works, be afforded on large undertakings, where labour can be properly concentrated and overlooked, and which, when completed, are likely to be of permanent use.

That Tuccavi, except for land improvement, should be sparingly given, and only at that period of the distress when preparations for renewed cultivation are being made; if this be not attended to, there is danger in "Tuccavi" being merely another name for alms.

No. 174.

Telegram, dated Gunneshkhind, 23rd August 1877.

From VICEROY to SECRETARY OF STATE.

Madras indent on you for locomotives and waggons not sent to us; irregularity causes inconvenience. In July we questioned sufficiency of Madras rolling stock; they did not fully explain plans, but asked for 16 engines and 200 waggons; we borrowed and have partly arranged for engines, but difficulty about waggons. Shall meet Duke in three days, and after inquiry will telegraph definitely. Additional supply of engines and waggons probably necessary; present information incomplete.

No. 175.

Telegram, dated Simla, 23rd August 1877.

From PRESIDENT to SECRETARY OF STATE.

We have decided, for reasons explained by letter and with Viceroy's approval, after consultation at Poona, to obtain 60 additional engines on behalf of the State, and not for exclusive use of Great India Railway, though specially to meet its wants should they continue. We therefore request that immediate orders be given for 60 additional broad-gauge engines of same type as the only engine now under construction. The contracts should provide for delivery as rapidly as is consistent with good work. The deliveries on previous order and of any new demand stated in your message of 20th compare very unfavourably with delivery of Great Indian engines stated in your message of 14th, and every effort should be made to expedite deliveries. Perhaps bonus might be offered for earlier deliveries.

No. 176.

Telegram, dated Gunneshkhind, 23rd August 1877.

From VICEROY to SECRETARY OF STATE.

I earnestly beg immediate sanction to project for laying rails on Dhond and Munmar line, and to early despatch of material. See my telegrams of 2nd and 3rd and our Despatch of 6th August. This line will immensely shorten famine traffic and relieve transport difficulties. The Bombay Railway officers estimate that it will set free 36 Great Indian Peninsula engines.

No. 177.

Telegram, dated 23rd August 1877.

From Secretary of State to Viceroy.

Your telegrams Dhond and Munmar Railway.
Construction on broad gauge sanctioned. Materials will be sent out as soon as possible.

No. 178.

Encl. in No. 215.

Telegram, dated the 23rd August 1877.

From Resident, Hyderabad, to C. Bernard, Esq., Viceroy's Camp.

As affairs in Hyderabad territory are becoming critical, I beg to report as follows for Viceroy's information:—His Highness' Government has already expended 10 lakhs on famine relief, and a further sum of 15 lakhs is now under allotment. Revenue for past year short by 37 lakhs, owing to failure of crops. Present forecast contemplates necessary relief of minimum number of 120,000 persons in four worst districts, being 15 per cent. of their full population, for 18 months at 5 lakhs per mensem; the districts are Lingsagar, Raichore, Shorapore, and Goolburga. The above per-centage of persons is, in my opinion, an under estimate; on the other hand, if next season be of ordinary character, full relief will not be required for the whole of estimated term; should failure of rain continue during rest of year throughout the whole of the Hyderabad territory, the demand on Government will be little short of three crores, including loss of revenue; and to meet this, it is understood that no funds are now, or are likely to be, available. At present the number receiving relief in the four districts named above is 70,000, but this does not represent the real number of sufferers, many of whom will not leave their homes for relief. In these districts jowari and rice are about 8 lbs. the Government rupee; if fair rain falls generally throughout territory within a short time, there will, of course, be a great change in present prospects; but any such change in those of four named districts will depend on rainfall in the east monsoon, the effects of which can be felt till March next. At present weather hot, sky clear, and no signs of rain. 300 tons of grain daily coming from Bombay to capital, and it is believed that there are considerable stocks in the territory, except in the four districts, but holders keep their stores back, and prices continue at famine rates, rice being 8 lbs. per Government rupee.

No. 179.

Encl. in No. 215.

Telegram, dated the 23rd August 1877.

From Resident, Hyderabad, to C. Bernard, Esq., Commerce.

Referring to clear message of this day, I deem it right to report that Nizam's treasury is empty, and that efforts made by Minister to raise money locally have failed. Looking at present and future requirements, and probable difficulties from continuous failure of rain, I quite expect that his Highness' Government will be compelled to solicit a loan from British Government to enable famine expenditure.

No. 180.

Encl. in No. 215.

No. 8-B., dated Hyderabad Residency, 23rd August 1877.

From the Second Assistant-Resident, Hyderabad, to C. Bernard, Esq., C.S.I., Additional Secretary to the Government of India.

I am directed to report, for the information of the Government of India, that late reports from Berar betoken some uneasiness on account of want of rain, especially in the

Rainfall from 1st June up to 1st August, since which no returns yet received, but it may be stated that there has been no rain in Akola. A fall in Mulkapur, however, has been alluded to in a late report.

	inches.
Akola District - - -	9½
Mulkapur (Buldana District)	4½

Akola District and the Mulkapur taluka of the Buldana District, where the rainfall, as shown in the margin, has been unusually scanty. In the other districts, though rain is urgently required everywhere, there have been showers more or less copious, and generally speaking the prospects of the kharif crops, even in Akola, are not very bad. Indeed, except as regards crops on the high ground and poorer soils, they will, it is anticipated, be good, should the next fortnight bring timely rain. It is of course impossible to say what may be the consequence of an entire absence of rain during the next month.

2. But so far, though distress has set in, it would not appear to be caused by anything like a want of grain, as exportation of grain is still going on, but by high prices and want of work. The failure of forage and brushwood has thrown many people who used to cut and sell grass and wood out of employ; weeding operations are at a stand-still, and thus a number of persons have nothing to do; and cases are reported of several persons who have only one meal in two days. The class chiefly affected are the poorer Mahomedans; but of course when wheat and jowari are selling as at Akola, all persons of small means who depend mainly on these staples for food must suffer.

AKOLA DISTRICT.

Average Prices per Rupee.

	This year.	Former year.
Wheat -	8 seers.	23 seers.
Jowari -	10 „	40 „

3. Some time ago, in view of scarcity, certain works were selected for relief purposes in the event of an influx of persons from the Bombay famine districts rendering it necessary to find employment for them in Berar, and these and others will now be taken in hand as relief works as may be found most convenient.

To provide labour in the Akola district, Sir R. Meade has, on the urgent recommendation of the Commissioner of the assigned districts, sanctioned the commencement of earthwork on a project for water supply at Sheagaon, which is estimated to cost rather more than Rs. 40,000, and which will be duly submitted in the Public Works Department for the approval of the Government of India. The whole sum that has to be subscribed by the people for this work is Rs. 18,435, of which Rs. 10,441 have already been contributed, and the greater part of the balance can, it is believed, be realised without difficulty.

4. To alleviate distress in the Akola district very considerable liberality has been shown by private individuals, and the efforts of the local officers in organising relief measures are both diligent and judicious. At Akola many persons have subscribed to open a store of grain, to be sold at a fixed moderate rate to the poor—an excellent form of charity for all who are not absolutely destitute. To encourage the liberality manifested in this district, the Resident has, on the application of the Deputy Commissioner and Commissioner, sanctioned a grant of Rs. 5,000 from the general revenue of the Province, to be expended under the supervision of the Commissioner, if found absolutely necessary in such way as may be deemed most desirable.

5. The Resident hopes the action taken by him, as noted in paragraphs 3 and 4 of this letter, will be approved by the Government of India.

No. 181.

From COLONEL O. T. BURNE to MR. A. C. LYALL.

MY DEAR MR. LYALL, Gunesh Khind, 24th August 1877.

I HAVE laid before the Viceroy your letter of 16th August expressing your fears of severe distress being imminent in Rajpootana. The Maharaja of Jeypore, who was admitted to an interview with his Excellency on Sunday last, also expressed great apprehension on the subject, and laid before Lord Lytton a memorandum of the measures which he proposed to adopt.

It is with great concern that Lord Lytton hears of the probability of this severe distress, which is not only deplorable on its own account, but aggravates grievously the difficulties caused by scarcity in other parts of India. I am directed to forward the Maharaja's memorandum for your consideration, and to give you an outline of the views which Lord Lytton has arrived at on the main point of the memorandum, and which may be communicated to his Highness. You will find, in the accompanying copy of Lord Lytton's Minute of the 12th August, a distinct enunciation of the general principles which, in the Viceroy's opinion, should guide the authorities in dealing with

the various stages of famine. Applying these principles to the suggestions contained in the Maharaja's memorandum, Lord Lytton would deprecate any very early adoption of a " vigorous " policy. It is necessary to be prepared with schemes of works of permanent public utility, but it is not desirable to open them in the very early days of scarcity. It seems to Lord Lytton that the result of this season's failure ought not *primâ facie* to be felt in anything like an extreme shape for some months to come, in fact, till the kharif crop would in ordinary course have come into the market; and consequently it should not be readily assumed that the people's own resources have failed before that time, nor should the State be called upon to assist before the inability of the people to live on their own resources is apparent.

Then avoiding, as far as possible, the pernicious system of employing people on petty local works near their homes, and the still more pernicious system of giving relief at their homes to any save those who are absolutely helpless and infirm, the Maharaja should be advised to concentrate his efforts, in the first instance, in providing adequate large works of permanent utility to give employment to large numbers from whom a full, or nearly a full, day's work should be exacted, and these works should be placed under careful and strict professional control. If works of irrigation—such as large tanks, holding two years' supply of water—are possible, and are suited to the country, they have a great advantage, not only in offering profitable employment for unskilled labour, but in the facility with which they can be superintended. The question of going on with the railway through Western Rajpootana is one on which Lord Lytton can give no decisive answer till the papers come before him in due course; but if you find any large relief work really and urgently necessary, this line, which has been already sanctioned by the Secretary of State, and for which indeed the permanent way has, I understand, been ordered out, seems to be the sort of work which should be undertaken, though beyond the attraction of some surplus labour, it will not be of much direct use in the Maharaja of Jeypore's famine difficulties. I have sent a copy of your remarks on this head to the Public Works Department.

To come now to the specific proposals of the Maharaja: Lord Lytton rather deprecated the idea of the Durbar making itself in any way responsible for the recovery of loans granted by money-lenders. So far as the credit of the cultivator goes, the money-lender will tide him over the difficulty without any inducement from the State, and if the State creates an artificial credit, by inducing the money-lender to extend his operations, the State practically becomes security for the loan. Now, experience has shown us that, if a loan can at all be recovered from a cultivator, the money-lender is the person who has the greatest facilities for recovering it, and if he cannot do it the State will only be able to do it by ruining him. The same objection perhaps does not apply to the remission of court fees, which is a matter of detail on which the Durbar can best decide for themselves; but any interference with the business of the money-lenders—any State advances at this stage, however disguised—any interference with the usual process of recovering debts, and therefore with the whole fabric of credit—and, above all, any interference with the natural prices of grain, Lord Lytton emphatically condemns as a false and mischievous policy.

The Viceroy has no objection to the suggestion made in proposal No. 2 for exercising great leniency in the collection of revenue.

In regard to No. 3, for the reasons above given, Lord Lytton deprecates any competition by the State with the ordinary business of the money-lender. Where (if anywhere in the world) money-lenders are not, the State would do well to undertake the work only on such terms as to interest as may prevent too ready a resort to its coffers, and may protect the State from loss by bad debts. To the fourth proposal the Viceroy can have no objection in principle. It is a matter of detail which the Durbar can best decide about.

I have already explained his Excellency's views as to the undertaking of works generally, and need not recapitulate them in reference specially to the fifth proposal. The opening of almshouses may become a necessity, and it is as well that the preliminary arrangements should be made; but in Lord Lytton's opinion these should not be opened while the people can support their own poor; nor, when opened, should any be admitted to them, save under stringent tests and checks; it is a matter of extreme difficulty to move people, who have been once fed at an almshouse for nothing, to public works, where they are forced to give labour in return for subsistence.

On proposals 7 and 8 it is scarcely necessary for Lord Lytton to pass an opinion; nor on No. 9. In fact, his Excellency wishes to confine his advice to matters of principle,

not of detail; and I am to repeat that, in the long run, the Maharaja will find it the more humane and beneficent course to take stringent measures for testing and controlling the issue of alms and gratuitous relief generally; to concentrate all relief labour on large works under professional superintendence, to interfere as little as possible with the business of the money-lender, and give no advances except with an immediate view to the renewal of cultivation.

I am to request that you will convey to the Maharaja Lord Lytton's high appreciation of his humanity and far-sighted consideration of the responsibilities which the threatened distress have thrown upon him. I am to add, that if the Maharaja will communicate with General Kennedy, who has been directing most successfully the measures of relief in Bombay, he will find the rules and tests there introduced of the greatest assistance to him. I enclose copy of a letter addressed by General Kennedy to me on the subject raised in the Maharaja's memorandum.

Yours truly,
(Signed) O. T. BURNE.

No. 182.

Telegram, dated 24th August 1877.

From SECRETARY OF STATE to VICEROY.

Yours to-day.

President's message yesterday asks for 60 additional engines for State railways, which we assume cancels Great Indian Peninsula indent for 100 engines, including 10 ghât engines.

May these 60 be of Great Indian Peninsula type if that construction will expedite delivery?

No. 183.

Telegram, dated Gunneshkhind, 24th August 1877.

From VICEROY to SECRETARY OF STATE.

Famine conference held with Temple and railway officials. Pressing need for additional engine power, Bombay. I urge earliest possible despatch of all five foot six gauge State Railway engines for loan to Peninsula line—extra payment probably necessary for quicker delivery and despatch of each engine when ready. Telegraph probable dates of arrival at Bombay; early receipt of engines important on famine, financial, and commercial grounds. Probably shall be obliged to suspend all general, in favour of famine, traffic, which cannot otherwise reach famine districts. Unless we can formally assure trade that general traffic will be renewed by beginning of next year at least, commercial crisis at Bombay is inevitable. To justify this assurance, engines must be delivered not later than 1st of January, in which case crisis can be averted. Can we reckon on delivery of whole by that period? Please tell me what is present condition of State engines already ordered.

No. 184.

Telegram, dated Gunneshkhind, 25th August 1877.

From VICEROY to SECRETARY OF STATE.

Yours yesterday. It must be distinctly understood that the 60 engines for State Railways are additional to the 40 engines previously ordered. This cancels indent for 100 engines, including 10 ghât engines for Great Indian Peninsula Railway, but has no

reference to 40 engines under construction for Great Indian Peninsula Company. Your sanction to Dhond-Munmar Railway renders 10 ghât engines unnecessary. All the 60 to be of State Railway type five foot six gauge.

No. 185.

Telegram, dated 27th August 1877.

From Secretary of State to President.

Dhond-Munmar Railway. Engine turntables and traverses in store at Kanoo Junction, East Indian. Will they do?

No. 186.

Telegram, dated 27th August 1877.

From Governor of Bombay to Secretary of State.

Since my telegram of the 17th there has been good rain in eastern part of Kattywar, in districts of Surat, Khandesh, and part of Nassik, also showers in parts of Poona, and Sholapur; light rain only in Concan; and one rainstorm in Dharwar. All this constitutes clear improvement in situation in Bombay Presidency, but monsoon still irregular, and distress considerable. Crops far from secure, but may yet be mainly saved if more rain comes.

No. 187.

Telegram, dated Simla, 27th August 1877.

From President to Secretary of State.

If wooden sleepers be sent for Dhond-Munmar Railway neither chairs nor keys will be required, but spikes wanted.

No. 188.

Telegram, dated 28th August 1877.

From Secretary of State to Viceroy.

Yours 25th.

Will order at once 60 engines, State Railway type, but wish you distinctly to understand that this will probably involve considerable delay, as engines of Great Indian Peninsula type could be delivered more rapidly.

No. 189.

Telegram, dated 28th August 1877.

From Secretary of State to Viceroy.

Yours 23rd.

If waggons wanted 500 can be delivered here in ten weeks from date of order; cost about 150*l.* per waggon in India.

EXTRACT from the Proceedings of the BOARD OF REVENUE, Madras, No. 3,989, dated 28th August 1877.

READ again—

G. O., dated 3rd August 1877, No. 2,441, recorded in Board's proceedings, dated 13th August 1877, No. 3,778.

p. 153. The accompanying demand, collection, and balance statement of land revenue as compared with the average of the past three Faslis is submitted to Government, with reference to the requisition contained in the telegram of the Government of India embodied in the Government order read above. The particulars are given for the Fasli year ending 30th June 1877 as the demand is fixed for that period.

2. The demand shown in the statement for Fasli 1286 is only approximate, as the jamabundy has not yet been completed in all the districts.

No. 192.

Telegram, dated Madras, 29th August 1877.

From VICEROY to SECRETARY OF STATE.

Your telegram, 28th. Early arrival of engines most important. If four weeks saved in time of delivery by adoption of Peninsula type, please order 30 engines of that type for Company, and 30 of State Railway type for reserve. Please telegraph progress of 40 engines for State previously ordered, and probable date of arrival.

Encl. in No. 215.

No. 193.

No. 755, dated Madras, 29th August 1877.

From C. BERNARD, Esq., C.S.I., Additional Secretary to the Government of India, to the RESIDENT AT HYDERABAD.

Your letter, No. 8-B., dated the 23rd August, regarding anticipated distress in the Akola District of Berar, has been laid before his Excellency the Viceroy, who has (since the receipt of your letter) been glad to learn from yourself that good rain has fallen in Berar, and that the crops thus far promise well.

2. But, in the event of difficulties recurring, I am to explain his Excellency the Viceroy's views to the following effect. Though there may be some distress among the poor, yet it is to be hoped that general distress would not be felt in a rich province like Berar, so early in the season as August, after a good harvest last year, and at prices not dearer than 10 seers the rupee. Until real distress becomes felt among a considerable section of the population it is generally undesirable to open relief works or to begin relief measures. Paragraphs 19 and 20 of the enclosed Minute by the Viceroy express his Excellency's views as to the way in which relief employment ought to be prepared and given. If, or when, distress threatens in Berar, no time should be lost in preparing projects for large useful works; and when necessity arises, such works should be opened under strict professional supervision. If at centres of population, like Akola or Sheagaon, relief employment is required before general distress declares itself, such employment should be given under stringent professional supervision, and the wage-rate should be kept very low.

No. 194.

Encl. in No. 215.

No. 756, dated 29th August 1877.

From the SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY TO THE GOVERNMENT, North-West Provinces.

I am directed to acknowledge the receipt of your letter, No. 1,754, dated 22nd August, with enclosures, concerning the effects of the recent drought on the autumn crop of the North-Western Provinces. The present condition appears to be in brief that the unirrigated autumn crop has already been lost over a great part of the Meerut, Agra, Jhansi, and Rohilcund Divisions, as well as over the greater part of Oudh; that the autumn crops of the Benares and Allahabad Divisions are in a critical state; and that even the irrigated crops have suffered much from the hot dry winds. No. 169.

2. His Excellency the Viceroy is much concerned to learn that already the loss of crop in the North-Western Provinces should have been so great. Telegrams received from the Secretariat at Allahabad since the date of your letter (22nd August) show that rain still holds off everywhere, save in the Benares Division. It is satisfactory that the reports now received confirm the general impression that, notwithstanding the large exportation of the past season, the food stocks in the hands of landholders and dealers are unusually large.

3. His Excellency the Viceroy has been much interested in reading Colonel Fraser's letter, which conveys his Honour the Lieutenant-Governor's views to the Commissioners and Collectors; and he thoroughly approves the warning against undue alarm. Your seventh paragraph mentions that authority has already been given to all Commissioners to begin at once giving relief employment on public works of Class A., that is to say, on repairs to main roads, on collecting metal, on improving cross-roads, on repairs to canals, tanks, and drainage works. If this authority does no more than permit Commissioners to begin earlier than usual the ordinary works of this class, for which funds are provided in the local or provincial budgets, then the Viceroy will not interfere with the discretion of the local Government; though his Excellency advises that the relief wage on such works be fixed at the lowest subsistence rate, and that full professional supervision be exercised over such works from the very first.

4. If, however, the authority spoken of in your seventh paragraph permits Commissioners to begin at discretion famine relief works of the type described under Class A. of Colonel Fraser's letter, and if the request for sanction, made in your ninth paragraph, imports that the cost of these works is to be charged as famine expenditure against the Government of India, then his Excellency the Viceroy must request that the matter may be reconsidered. His Excellency's most decided opinion—that opinion is confirmed by the experience of the past year—is that at the very beginning of a scarcity relief employment should be given on large, professionally supervised public works only, and that no relief policy can be financially more dangerous than to open all over the country scattered relief works on which adequate supervision must be practically impossible. Lord Lytton's views on this subject—views in which his Excellency's colleagues fully concur—will be found in the annexed extracts from a Minute recorded by him on the present condition of famine affairs in Southern India.

5. In accordance with the views expressed in the extracts in question the Government of India must request that, if relief employment is given at the cost of the general treasury in any part of the North-Western Provinces, such employment shall from the outset be given on large public works and under professional supervision only. His Excellency the Viceroy believes that the North-Western Provinces and Oudh Government already possesses many* great and useful projects, which, though hitherto postponed on financial grounds, would be of permanent benefit to the country, and might fitly be selected for execution either wholly or in part, in the event of a heavy expenditure, as famine relief becoming necessary. His Excellency therefore requests that some such work may be selected for each district or division, as the first relief work to be opened in each tract. All persons requiring relief employment would then be sent to, and employed on, large, adequately supervised undertakings of permanent utility.

* For instance—
The Ganges Canal improvement.
The Lower Ganges Canal (Rajunpore) Scheme.
The Sarda Canal Project.
The Rohilcund Canals.
Branch railways in Oudh, Rohilcund, and parts of North-Western Provinces.

No. 195.

Telegram, dated 30th August 1877.

From VICEROY to SECRETARY OF STATE.

20th to 28th, Madras. Insufficient rain in Kistna, Northern Circars, Bellary, North Arcot, Kurnool, Cuddapah; light showers elsewhere. Rainfall not general. Situation not improved anywhere; distinctly worse in Madura, Salem, Coimbatore, Nellore; prices high; supplies from seaboard sufficient. Double line open. Arconum railway working from Madras improving; Raichore supplies short.

Numbers on works, 919,771; on gratuitous relief, 1,326,971. Many people left works for village relief.

In Mysore, crop prospects worse; showers less frequent; prices dear as before; 49,200 on works; 194,083 on gratuitous.

Bombay, plentiful rain in Khandesh, good general rain in Tanna, Kolaba, Broach, Surat, Nassik, in greater part Kattywar, parts Ahmednagar, Belgaum; showers in Dharwar, Sattara, Sholapore, part of Kaladgi, some places in Guzerat. Prices very dear. Deccan crop prospects on whole better; number on relief, as before. North-West autumn crop nearly lost in Agra, Mirut, Jhansi, Rohilkund Divisions; greater part Oudh crop on irrigated land suffering from hot wind, no rain. Telegram to-day says, good general rain in Meerut and Rohilcund will do much good. Crops in Allahabad, Benares Divisions critical.

Punjaub, condition of crops critical. In South Bengal, Burmah, Central Provinces, crop prospects good; also in Berar, where recent rain. Central India, good rain at Indore. Rutlam, much benefited. Gwalior, no rain, prospects bad. Rajputana, no appreciable rainfall, failure crops and pasturage expected. Hyderabad no rain, much failure and distress reported south of Nizam's dominions.

No. 196.

Telegram, dated Madras, 30th August 1877.

From VICEROY to SECRETARY OF STATE.

Have inquired into Madras Railway requirements and recent indent on your Lordship. I consider that 20 locomotives, 600 waggons, and 40 break-vans should be despatched promptly. Locomotives should form part of State reserve, and should be of State Railway five feet six inch gauge type. Molesworth wishes additional quarter inch thickness of engine framing. We will accept engines of Madras Railway type, as designed by Madras Locomotive Superintendent, if these can arrive sooner, but we object to engines of type recently received in Madras. Waggons to be of State Railway type to carry 10 tons, break-vans of type indented by Madras.

No. 197.

Telegram, dated 31st August 1877.

From SECRETARY OF STATE to PRESIDENT, Simla.

Yours, 14th. Western Rajputana Railway.

Railway materials and rolling stock for 100 miles will be provided at once as stock.

Encl. in No. 289.

No. 198.

No. 2,619, dated Fort St. George, 31st August 1877.

From ADDITIONAL SECRETARY TO THE GOVERNMENT OF MADRAS to ADDITIONAL SECRETARY TO THE GOVERNMENT of INDIA.

With reference to the telegram from the Honourable T. C. Hope, dated 31st July 1877, and in continuation of my letter No. 2,511 C., dated the 16th instant, I am directed to submit, for the information of his Excellency the Governor-General in Council, a statement prepared by the Madras Board of Revenue showing the approximate demand, collection, and balance of land revenue for Fasli (revenue year) 1,286 compared with the average of the preceding three years.

STATEMENT showing the APPROXIMATE DEMAND, COLLECTION, and BALANCE of LAND REVENUE for FASLI 1286 compared with the average of the preceding THREE YEARS.

DISTRICTS.	DEMAND, COLLECTION, AND BALANCE ON THE AVERAGE OF THREE YEARS ENDING 30TH JUNE 1876.

No. 199.

No. 772—(Famine).

From the Additional Secretary to the Government of India to the Secretary to the Government of Bengal.

Governor-General's Camp, Madras,
the 31st August 1877.

The attention of his Excellency the Viceroy has been drawn to certain correspondence which has passed between the Lord Mayor of London and the General Committee, Madras Famine Relief Fund, in regard to a private meeting held in Calcutta for forming a Famine Relief Committee; and from this correspondence it appears that considerable misapprehension exists as to his Excellency's views on the subject of appeals to the public in aid of famine relief. I am, therefore, directed to communicate to you, in continuation of the Viceroy's telegram of the 12th August, the views of the Government of India on this important subject.

2. The Madras Government have undertaken to keep people alive by all available means within their power; they undertake to relieve the famine-stricken by giving work to those who can work; by giving food and attendance either in relief camps or kitchens to famine-stricken people who cannot work, and they distribute relief in the shape of a money-dole to nearly half a million of people at their villages; but in order to do this the whole available organisation of the country is strained to the very utmost, and it is impossible to place the organisation at the disposal of any irresponsible committee.

3. Before, therefore, the Government of India could properly ask for, or even accept, the charitable assistance of the public, it would be necessary to ascertain what measures of relief, other than those already adopted by Government, the Central Committee propose to adopt, and what organisation, other than the Government organisation, is at their disposal for carrying out those measures.

4. The Viceroy in his telegram of the 12th explained that he was unwilling "to "appeal for public subscriptions in aid of the efforts which Government was making to "keep people alive," that is to say, he was unwilling to ask for public subscriptions in order to supplement the Government expenditure on the same lines, for the same ends, and through the same channels of organisation as the Government had already occupied. To have done this would be merely asking for public subscriptions in aid of the Indian revenues, and it was unlikely on the one hand that the public would have cared to subscribe for this purpose, while on the other the assistance which such subscriptions could have given would have borne but an infinitesimal proportion to the expenditure of half a million sterling a month which the Government has already to defray on account of famine.

5. There was another consideration which, in his Excellency's opinion, rendered it specially inopportune to appeal to the Indian public for subscriptions in aid of Imperial expenditure on famine, so long especially as the objects and agency of such charity are not distinctly and definitely separated from the objects and agency of Government expenditure. It had become manifest that, in order to meet the heavy drain on the finances of India, which the Madras and Bombay famines were already causing, the Government would sooner or later be obliged to resort to increased taxation over the whole country, and it followed necessarily from the nature of the case that the very class from whom subscriptions might be expected would have to bear the burthen of taxation; the Viceroy was, therefore, unwilling to ask for public subscriptions from the same persons, who would hereafter have to bear a heavy burthen of taxation for precisely the same objects as those to which their subscriptions were to be devoted.

6. This last consideration of course applies only to subscriptions raised in India, and in no way to appeals made in England; but its importance is increased by the fact that, in addition to the destitution in Madras, the Government have to face anticipated scarcity also over a great portion of Northern India.

7. His Excellency in his telegram of the 12th instant added that "if any definite "objects can be specified which are beyond the scope of the operations of Government, "and to which the subscriptions of the public can be usefully applied, there can be no "objection." At that time the Government of India had received no communication

on the subject from the Government of Madras, and the newspaper reports of the public meetings left it quite uncertain whether the objects to which the Committee destined their funds were those already provided for by Government or not; in fact, the telegram ultimately sent home by the Committee to the Lord Mayor leaves the question still open to the utmost doubt, and points rather to the assistance being devoted to relief works and relief camps than to any fresh field of action. His Excellency has now, however, had an opportunity of conferring with the Government of Madras, and learns from his Grace the Duke of Buckingham that the Committee propose to devote the funds received by them to special objects not coming within the scope of Government relief, two of which objects are understood to be the relief of those who are not yet so reduced as to leave their villages or to apply for Government assistance, and the support of orphans and destitute children not reached by Government agency. His Excellency is now in correspondence with the Government of Madras with a view to formulating somewhat more precisely the objects to which private charity will be devoted and the agency through which it will be applied.

"Committee earnestly solicit your Lordship's powerful influence, support, appeal, assistance, for afflicted population Southern India * * * Property sold for food; villages largely deserted; poor wandering search sustenance; resources lower middle class exhausted owing famine prices; prompt liberal assistance sympathy may mitigate suffering."

8. While, therefore, it remains in the Viceroy's opinion undesirable for the Government itself to ask those who will hereafter have to bear the burden of taxation on account of famine expenditure to give their private subscriptions also towards the same object, his Excellency desires that every encouragement may be given to spontaneous efforts which may be made in this direction. Lord Lytton is very far from desiring to impede the flow of private charity, and is only anxious to secure that it should be devoted to useful purposes apart from those already taken up by the State, and that it should not be diverted into a simple contribution to the revenues of the State.

No. 773—(Famine).

Encl. in Nos. 215, 253.

From the Additional Secretary to the Government of India to the Secretary to the Government of Madras, Famine Department.

Governor-General's Camp, Madras,
31st August 1877.

I am directed to forward, for the information of the Governor of Madras in Council, the accompanying copy of a letter which, under the direction of his Excellency the Viceroy, I have this day addressed to the Government of Bengal, in regard to the question of applying to the public for subscriptions in aid of famine relief.

2. The immediate object of this letter was to explain to his Honour the Lieutenant-Governor of Bengal somewhat more fully than had been done in the telegram of the 12th of August the views and wishes of the Government of India in regard to appeals by Government for public subscriptions, and it is desirable that his Grace should also be informed of the considerations which led his Excellency to adopt these views.

3. With reference to paragraph 7 of the enclosed letter, I am directed to state that his Excellency finds on the proceedings of the Committee* held on the 24th August, a resolution that the Fund should be devoted (1) to contributions in aid of local Committees for the relief of necessitous poor, not reached by the Government; (2) to contributions towards the care of destitute children; (3) to making allotment towards any other special objects which seem to come within the scope and ability of the Fund. The whole discussion tends to show that it was the desire of the Committee to adapt its work to objects and measures of relief other than those already covered by the action of Government, but in considering the terms by which the Committee define the objects to which their funds will be devoted the Viceroy fails to gather such complete and specific information on the point as he could desire. He has no objection whatever to the benefits of private charity being directed towards those necessitous poor whom the action of Government cannot reach, and accepts it as quite probable that among women of respectable classes, among persons on very small fixed incomes, and even among agriculturists who are struggling to remain at their homes, there may be cases which ought not to come within the scope of Government action, but which may very properly be relieved by private charity wherever private charity has the necessary agency at its disposal. Similarly, in regard to children, though Government is in one

* General Committee, Madras Famine Relief Fund.

way or another endeavouring to keep alive all destitute or orphan children that may be thrown on its hands, there may well be room for private charity in regard to children not within this category, and moreover the work of providing for and supporting such children hereafter, either by grants to orphanages or to those who will receive such children, is obviously a fit subject for private charity. His Excellency understands that it was not the object of the Committee to express, in a general resolution, specific rules or detailed instructions, but doubtless these will be drawn out hereafter. In the meantime, as Lord Lytton learns that the subject has been under the consideration of his Grace the Governor, he will be glad to receive information as to the conclusions which the Madras Government have come to, and to learn not only what are the specific objects in detail to which funds are to be devoted, but also what agency the Committee propose to employ, both in large towns and in the interior, for the attainment of those objects. In large towns there will, no doubt, be plenty of volunteer agency available, but in the villages his Excellency apprehends that outside the chain of relief organization subordinate to the Collector it will be difficult to find the requisite agency, and Lord Lytton deprecates the diversion of this organization to purposes other than those of Government relief. This objection is not based on imaginary grounds. Experience has shown that, when the Government relief organization has been placed under the orders of a Central Committee, it has led not only to the Collectors being burdened with additional work, having to submit double sets of returns, and to correspond with an additional master, but also to a considerable amount of friction and some unseemly discussions between Government officials and their superiors. His Excellency hopes, therefore, that the Government of Madras will be able to direct the operations of the Committee into some line where the agency to be employed will not be that of the overworked establishment already employed by Government.

No. 201.

ADMINISTRATIVE ARRANGEMENTS.

No. 2,232, dated Fort St. George, 31st August 1877.

From the Honourable D. F. CARMICHAEL, Chief Secretary to Government, Madras, to C. BERNARD, ESQ., C.S.I., Additional Secretary to the Government of India.

His Grace the Governor having had the advantage of a conference with his Excellency the Viceroy respecting the control of future famine operations in this Presidency, I am directed to report, for the information of the Government of India, the steps which the Madras Government has decided to take, and the respects in which his Grace the Governor in Council desires the assistance of his Excellency the Viceroy of India.

2. In the first place his Grace the Governor has resolved to frame a rule under section 28 of the "Indian Councils Act," providing that all famine questions coming before the Government of Madras shall be laid before his Grace the Governor, and disposed of by him. Orders issued under this rule will thus have the force of orders of the Governor in Council.

3. Next, it has been decided that to his Grace the Governor shall be attached a high officer, possessing the confidence of the Government of India, who shall be a personal assistant to the Governor in famine management.

4. The Chief Engineers in all departments, the Collectors of districts, and other controlling officers engaged in famine management, will be instructed to address, for the future, all their references and reports to Government on famine matters (including relief works) to the Additional Secretary in the Revenue Department direct, and not through the Board of Revenue. Such reports, and the orders passed by Government thereon, will be communicated in the ordinary course to the Board, in order that the Board may be kept fully informed of all that passes, and that its members may be competent to advise the Government whenever their aid may be asked. If the work thus thrown on the Secretariat should prove excessive, his Excellency the Viceroy will, the Governor understands, be willing to sanction an additional Under Secretary or other requisite staff in the Government Famine Department.

5. His Grace the Governor proposes that members of the Board should be deputed, as heretofore, to visit the distressed districts, inspect relief operations, and report to Government the manner in which orders are being carried out.

6. His Grace the Governor was glad to find that his Excellency the Viceroy is in accord with himself as to the main principles which ought to guide the famine policy of

Government; but it seems advisable that these principles should be briefly recapitulated here. They are,—

I. *Grain-Supply.*—That, as was decided by the Government of India at Delhi in January last, this Government should abstain from importing grain on its own account, and from any measure which might interfere with the activity of private trade. As the proposal to supply seed-grain to ryots might be held to traverse this general rule, it was noted at the conference that the Government of Madras would be free to buy a supply of such seed-grain if his Grace found such an arrangement better than advancing to ryots money for the purchase of seed.

II. *Public Works.*—A large scheme of useful public works under departmental supervision should be the backbone of the relief system; all other forms of relief being subsidiary to the main scheme, and all relief-works of any magnitude being directed and controlled by agency belonging to the Public Works Department.

Large works under professional agency should not be limited (as has under standing orders been hitherto the case) to works which are deemed directly remunerative, nor even to works which may probably be finished during the continuance of the famine. The Governments of India and Madras will be prepared to accept a proportion of unremunerative and unfinished public works at the end of the famine.

III. *Gratuitous Relief.*—All gratuitous relief should be, as far as possible, temporary, and subsidiary to the main object of getting the distressed people on to the works, or back to their homes and ordinary occupations. It will be necessary to maintain relief-camps in order to receive and support the starving, the helpless wanderers, and infirm persons, with a view of getting them into condition to labour. But the ultimate object of these relief-camps as receiving places only for people hereafter to be drafted to works, or to their homes, should ever be kept in view.

Secondly.—Village relief, other than casual relief to famine-stricken travellers, should be confined to resident villagers who are house-ridden, or otherwise unfitted for or incapable of labour.

7. In order to give effect to these principles, his Grace the Governor desires a very considerable temporary addition,

(*a.*) To the engineering staff of the Presidency;

(*b.*) To the European staff for the supervision of gratuitous relief.

His Grace the Governor would ask the Viceroy to lend him from other parts of India,

(*a.*) ten 1st or 2nd Grade Executive Engineers, ten 3rd or 4th Grade Executive Engineers, twenty Assistant Engineers of not less than one year's standing, twenty Upper Subordinates of the higher class;

(*b.*) one hundred active young European officers belonging to one or other of the following classes:—

Staff Corps, Artillery, or other Military Officers not more than 35 years of age.
Assistant, or Acting Assistant Superintendents of Police.
European Inspectors of Police of the better class.
Assistants in the Forest Department of not less than 18 months' service.
Assistants from the Engineering Department of the railways.

The extra allowances to be granted to these officers will be governed by the rules already in force regarding officers deputed for famine duty from other Presidencies.

8. For the due control and direction of relief-works, it will be necessary that the two Chief Engineers now serving under this Government should from time to time be deputed into the interior. And his Grace learns that the Government of India is willing to sanction a third (temporary) Chief Engineer, in the event of such an additional officer being wanted. If his Grace finds it necessary to establish temporarily additional district engineerships on the footing of Superintending Engineership in Bengal, he understands that such temporary appointments will, within moderate limits, be sanctioned.

No. 216.

No. 202.

No. 775, Governor-General's Camp, Madras, the 31st August 1877.

From C. BERNARD, Esq., C.S.I., Additional Secretary to the Government of India, Revenue, Agriculture, and Commerce Department, to the CHIEF SECRETARY TO THE GOVERNMENT OF MADRAS.

I am directed to acknowledge the receipt of your letter, No. 2,232, of to-day's date, describing the measures which the Government of Madras, in pursuance of the conclusions arrived at in the conference held yesterday between the Viceroy and the Governor, proposes to adopt in order to secure promptitude of action and unity of control in famine administration, now that a second failure of the rains has greatly aggravated the pressure of distress throughout the Madras Presidency.

2. The Viceroy is greatly pleased to find that the Government of Madras has decided that the Famine Department shall be under the immediate guidance and control of the Governor; and that some shortening of the administrative chain has been found possible. The Viceroy believes that much benefit to the afflicted populations, in whose behalf his Grace has done so much, as well as great financial advantage to the public treasury, cannot fail to result from the increased efficiency of action and the improved unity of control which will be secured by the arrangements now made.

3. The Viceroy and Governor-General highly appreciates the motives which, in recognition of the great imperial interests concerned, have induced the Governor of Madras to associate with his personal administration, in the manner indicated in paragraph 3 of your letter, the services of an officer possessing the special confidence of the Government of India. I am, however, to point out that it is essential to the efficiency of this arrangement that all famine papers and questions submitted to the Government shall pass though the hands of the personal assistant, as was settled at the conference above referred to. It is, of course, by no means suggested, nor is it at all desirable, that any obstacle should be placed in the way of the personal relations of the Secretariat with and access to the Governor of Madras. But it is absolutely necessary that the personal assistant to the Governor, accredited as he is by the Government of India, should have full opportunity of stating his views to the Governor at the proper time.

4. The Viceroy and Governor-General, in accordance with the proposal formulated in your letter, and after due consultation with the Duke of Buckingham, is hereby pleased to attach temporarily to the Government of Madras, in the capacity of personal assistant to his Grace in famine matters, the Honourable Major-General Kennedy, R.E., who possesses the full confidence of the Government of India.

5. It is a source of much satisfaction to the Viceroy and Governor-General that the recent conference between himself and the Governor of Madras has established complete accordance in their views as regards the general principles of famine management, and the special measures best fitted for the application of those principles to the pressing difficulties, which now call for prompt and decisive action. I am to take this opportunity of forwarding a Minute (already communicated privately to his Grace) which was recorded by the Viceroy prior to his departure from Simla. This Minute will now be circulated to local Governments for their guidance in the administration of famine relief.

6. With reference to the clause in paragraph 6 of your letter, which touches on the possibility that seed-grain may have to be bought by Government for distribution to ryots, the Viceroy understands that, in those rare and special cases, where such purchases may be necessary, they will be made in the local markets, and that seed-grain will not be imported by Government from a distance.

7. His Excellency the Viceroy fully appreciates the importance of not detaining the people from their customary home avocations whenever the revival of agriculture shall have enabled them to resume those avocations without further dependence on State aid. But with reference to clause iii. of your sixth paragraph, I am instructed to point out, that until matters improve, and people can really support themselves by labour or from credit in their villages, it is most inexpedient that they should be sent back to their homes to live there on gratuitous relief;—when they might be earning wages on large works, which would permanently benefit their country, or when if incapable of labour they might be better kept in in relief camps. Village relief in the shape of a money dole, or in any other form, should be granted only to those who are both incapable of work and without other adequate means of support. The Viceroy would be glad that this point should be made quite clear in any orders which the Governor in Council may now issue to local officers.

8. The Viceroy presumes that the standing orders, cited as requiring that large public works should be remunerative, are the instructions issued regarding the selection of reproductive irrigation works in ordinary times. During the present famine this requirement, so absolutely necessary in ordinary years, has been relaxed in the Bombay Presidency, with the concurrence of the Supreme Government.

9. Steps are being taken to procure from other parts of India the additional engineering and other European assistance indicated in your seventh paragraph, as required by the Government of Madras. And it is hoped that the officers selected for Famine duty will shortly report themselves at Gooty or at Madras. The additional temporary appointments described in your fourth and eighth paragraphs can be made by his Grace the Governor, as soon as they are necessary, in anticipation of formal sanction, for which application, with full particulars of salary and allowances, should be made in each case.

10. In conclusion I am to express the hope of his Excellency the Viceroy that the arrangements now determined on will greatly facilitate the attainment of the objects with which his Excellency undertook his journey to Southern India. He trusts that they will strengthen the hands of the Madras Government; that they will secure full agreement on principles between the two Governments; and that they will combine, with the efficient relief of the afflicted population, that economy which is imperatively demanded by the financial interests of the empire.

NOTIFICATION of the GOVERNOR-GENERAL.

In pursuance of the arrangement described in the foregoing correspondence, the Viceroy is pleased to appoint the Honourable Major-General M. K. Kennedy, R.E., to be Personal Assistant to his Grace the Governor of Madras in famine matters as a temporary arrangement.

By order of the Viceroy and Governor-General of India.

C. BERNARD,
Additional Secretary to the Government of India.

No. 204.

Telegram, dated 1st September 1877.

From GOVERNOR OF BOMBAY to SECRETARY OF STATE.

Since my telegram of 27th, rain in Malwa and Hyderabad, which further improves position in Bombay Presidency. Some rain Broach, Baroda, Ahmednagar, Belgaum, and Poona; more rain Surat and East Kattywar; condition of whole district Kaladgi bad. Situation critical in West Kattywar, Ahmedabad, Poona. Good rain in Concan, but monsoon irregular and defective. Drought north of India stopping influx of supplies by Jubbulpore; prices fallen in some places, but generally high, but stock large. Distress continues severe.

PROVINCE OF MYSORE.—SPECIAL FAMINE REPORT.

(No. 29.)

For the week ending 25th August 1877.

(To avoid confusion, the tabular statement and letterpress refer only to returns closed at midnight on Saturday the 25th August. From that date to the despatch of this Return, any noteworthy incidents are briefly noted hereunder.)

Interim Report.

Bangalore, 1st September 1877.

The weather has given promise of rain during the last three days, but, with the exception of light showers, none has fallen, and high westerly winds have set in again.

Bangalore District.—Markets fairly supplied; prices rose in six taluks. Rain fell in the Bangalore, Hoskote, Devanhalli, and Closepet taluks, the quantity registered varying

from 20 cents to 2·10 inches. Crops in fair condition in some localities. Extended cultivation generally prevented from want of rain. Fevers, dysentery, &c. prevail.

Kolar District.—Markets continue supplied, except in the Gudibanda and Gumnayakanpalya taluks, where the supply was limited; prices fluctuating, and show a tendency to rise. Rain fell in five out of the 10 taluks in the district, the quantity gauged at their head-quarters ranging from 56 cents to 2·25 inches. The standing crops are suffering from want of sufficient rain, and ryots appear disinclined to risk more seed. Some of the crops irrigated by wells were harvested. Public health is bad, owing to the prevalence of fevers, cholera, and small-pox.

Tumkur District.—Markets pretty well supplied; prices unsteady. Rain fell in the Sira, Kadaba, and Maddagiri taluks, the maximum quantity registered at their head quarters being 1·20 inches. Irrigated crops are doing fairly well, but the dry crops are fast withering. Prospects are gloomy to a degree, and distress is on the increase Diarrhœa and dysentery are still prevalent.

Mysore District.—Markets sufficiently supplied, except in the Ashtagram, Gundlupet, and Malvalli taluks, where importation was rather slack; prices rising. Light showers of rain have fallen in all the taluks, the maximum quantity registered at the head-quarters of which amounted to 1·48 inches. The wet crops, especially those under river channels, are reported to be thriving, but the dry crops are withering. Javari is being harvested. Water-supply in wells is failing. Prospects remain unchanged. Cholera is abating.

Hassan District.—Markets fairly supplied, except in the Nagamangala, Harnhalli, and Narsipur taluks; prices fluctuating. Light showers of rain fell in all the taluks except Arkalgúd and Belur, and from 10 cents to 1·15 inches were registered at their head-quarters. Crops in Manjarabad and in parts of the Hassan taluk, as well those below channels in the Attikuppa and Narsipur taluks, are thriving; but elsewhere they are suffering from the drought and from the ravages of insects. Javari raised in the beds of tanks has been reaped in the Nagamangala taluk, and horse-gram was sown in Arkalgúd. Fever and dysentery prevail generally throughout the district, and cholera also in two taluks.

Shimoga District.—Markets continue fairly supplied, except in the Honnali and Nagar taluks; prices pretty steady. There was no rain during the week except at Nagar and Shimoga. The standing crops, except in the purely Malnad taluks, are withering for want of rain. Baragu (a kind of millet) was harvested in parts of the Honnali taluk. Cholera, fever, and dysentery are still prevalent.

Kadur District.—Markets fairly supplied, except in the Múdgere, Tarikere, and Lakvalli taluks; prices fluctuating. Light showers of rain fell in all the taluks except Tarikere and Lakvalli. Crops in the Malnad taluks and those under irrigation below tanks are doing well, but in other places are withering for want of rain. Public health is bad owing to the prevalence of fevers, small-pox, dysentery, and cholera.

Chitaldroog District.—Markets sufficiently supplied, except in Davangere and Budihal taluks, where importation was slack; prices fluctuating. Excepting a light drizzle at Davangere, there was no rain in any of the taluks, in consequence of which the crops in many places are fading, and will be destroyed if no fall of rain occurs shortly. The water supply in the tanks has diminished considerably. Dysentery and fever are still prevalent, and cholera in some places.

General Remarks.

The district reports for the week ending 25th August, of which an abstract accompanies this narrative, show that there has been no improvement in the prospects. The rainfall was scanty, and the young crops were to a great extent suffering from drought.

2. The crops in the Malnad are reported to be doing well, but even in the Shimoga District the wet crops in the maidan taluks are, it is said, failing. In low lands the dry crops are holding on, but would, it is feared, seriously suffer should no rain fall in the course of a week.

3. The mortality returns show that cholera is somewhat on the decline, though public health continues to be bad owing to the prevalence of other diseases. The number of deaths from cholera reported during the week was 71, or 66 less than in the previous week.

4. The number of works in progress under revenue officers was 1,719 as against 1,710 of the preceding week, and the daily average number of persons employed on them was 25,644, or 701 less than in the previous week. The decrease was chiefly in the Bangalore, Kolar, and Hassan Districts. The amount sanctioned for works under civil officers was Rs. 18,07,349, of which Rs. 12,22,973 were expended, leaving an available balance of Rs. 5,84,376. As has been remarked in a previous report, the returns of expenditure do

not appear to include all works actually in progress, and the attention of Commissioners and Deputy-Commissioners will again be drawn to the very large sums shown in the taluk accounts as remaining unutilized. The expenditure during the week under review was Rs. 18,486, or Rs. 1,176 less than in the previous week, as shown below :—

	Past Week.	Present Week.
Bangalore District -	6,386	6,186
Kolar „ -	3,383	2,902
Túmkúr „ -	962	1,865
Mysore „ -	1,105	535
Hassan „ -	1,501	1,362
Shimoga „ -	1,748	1,676
Kadur „ -	643	1,457
Chitaldroog „ -	2,894	1,739
Bangalore Municipality -	933	643
Mysore „ -	107	121
Total -	19,662	18,486

5. The average daily number of persons employed on works carried on by the Professional Department was 22,975, showing a small increase of 120 over that of the previous week; but, taking the figures by districts, it will be seen that the decrease was general in all the districts excepting Túmkúr, Hassan, and Chitaldroog. The decrease on irrigation works is attributed partly to the completion of some of the works and partly to the ryots being employed on agricultural operations. In No. II. Subdivision, Bangalore Range, there was a falling off in the number owing to the persons who were relegated from the Krishnarajpur kitchen last week not having been sent this week. The attention of the officer in charge of the kitchen will be drawn to this, with a view to such of the inmates as are able to do light work being regularly deputed to the works which are close by. In the Hemavati Division, it is said, there is a difficulty in procuring labour at present, as the ryots are employed in the cultivation of lands lately taken up. It is, however, anticipated that there will be a steady rise in the numbers on works, as transplanting operations have now ceased, and as failure of rains has thrown many of the ryots out of employment, and who as a class are too independent to willingly enter our kitchens. In the Roads and Buildings Branch the numbers are slowly increasing. On the Nelamangala road in the Bangalore Division the labour, it is said, was nearly double what it had been during the previous week, and the coolies were, it is reported, working fairly. In the Kolar range the assistant engineer reports that labour had to be reduced for want of water. Further explanation has been called for on this point. It would appear that on the Bangalore-Bellary road, *viâ* Devanhalli, many men and women coolies have offered to collect and break metal provided they were paid daily, and without a rigid task being exacted from them.

6. The total number employed daily on works, both under civil and departmental public works officers, was 48,619, or about one per cent. on the total population and 1·86 per cent. on the population of the affected area.

7. The number charitably relieved is still on the increase. The daily average number fed in kitchens and camps was 213,710, or 19,627 more than in the previous week, as shown under :—

	Increase over past Week.	Decrease.
Bangalore District -	4,054	—
Kolar „ -	1,726	—
Túmkúr „ -	7,510	—
Mysore „ -	—	1,444
Hassan „ -	1,223	—
Shimoga „ -	260	—
Kadur „ -	—	77
Chitaldroog „ -	2,345	—
Bangalore Municipality -	4,169	—
Mysore „ -	—	139
Total -	21,287	1,660
Deduct decrease -	1,660	
Net increase -	19,627	

8. There has been an enormous increase in the Bangalore District (including the town and cantonment); and as regards the large accession to the number in the Túmkúr District, which had risen from 35,868 to 43,378, the Deputy Commissioner writes as follows:—

"It is feared this figure will rise even higher, as the distress in the district is assuming an alarming aspect, and the house-to-house visitation is being strictly insisted on. The poor seem now to welcome the relief which not long ago they would on no terms have accepted. Works have been sanctioned throughout the district on all the district fund roads, a measure which will keep many from the kitchens; but once these roads are brought up to standard, it will be imperatively necessary for some large imperial work to be taken in hand, as, judging from the strides the famine is now taking, there will be thousands seeking work, which, if not at hand, will simply necessitate our feeding them at the kitchens. The road works now undertaken will probably suffice till the end of September."

9. In the Hassan District also distress is rapidly increasing, and arrangements are being made by the Commissioner to establish additional relief camps, and to carry on suitable relief works to afford employment to the distressed, and to prevent them from deserting their villages.

10. Of those relieved gratuitously 52,295 were men, 82,895 women, and 78,520 children. The proportion of the number in receipt of charitable relief to the total population and population of the affected area was 4·23 per cent. on the former and 8·206 on the latter. Excluding the Nundydroog Division, the number gratuitously relieved in the other districts was about 1·06 per cent. on the total population, and 2·06 on affected population. The attention of the Commissioner of Nundydroog Division is again drawn to the very large increase in the number charitably relieved in the three districts under his supervision, as compared with the numbers relieved in the other districts.

11. The total expenditure incurred up to date on account of gratuitous relief, is Rs. 15,20,539, of which Rs. 1,32,114 were spent during the week, as shown below:—

	Rs.		Rs.
Bangalore District -	36,441	Kadur District - -	1,420
Kolar „ - -	11,106	Chitaldroog District -	23,507
Túmkúr „ - -	30,422	Bangalore Municipality -	16,771
Mysore „ - -	1,780	Mysore „ - -	1,220
Hassan „ - -	7,521		
Shimoga „ - -	1,926	Total -	1,32,114

12. The physical condition of the persons who have been fed in the kitchens for some time is said to be improving, and the Commissioner of Ashtagram Division considers "that a portion of those receiving relief are either now, or will be soon, fitted for light "labour;" but it is said there is a great difficulty in providing these, owing to the large proportion of women and children as compared with men. The district officers have been called upon to furnish a return of the number of persons fed in kitchens and camps from whom work of any kind is exacted. In the Bangalore District many are, as already reported, relegated from the kitchens to the nearest works to do some light work according to their capacity.

13. The weight of grain imported by rail during the week, including consignments to the Kolar road station, was 3,787 tons, being 1,493 less than in the previous week, as shown below:—

	Past week.	Present week.
From Madras - - - - -	4,139	3,125
„ Beypore, Malabar, and Coimbatore Districts	521	174
„ Trichinopoly, Tanjore, and Negapatam -	582	473
„ other places - - - -	38	15
Total -	5,280	3,787

14. The quantity exported by road, from Bangalore to the interior of the province and the frontier taluks of the Madras Presidency, amounted to 2,438 tons, being 698 less than in the preceding week, as noted below:—

	Tons.		Tons.
Towards Túmkúr District - -	822	Towards Oossoor, in the Salem District - - - -	149
„ Bellary and Chitaldroog Districts - -	435	To taluks adjoining Bangalore -	640
„ Mysore District - -	392		
		Total -	2,438

15. The average prices of food grains were somewhat steady during the week, and the maximum and minimum rates which prevailed in the taluks were as shown in the following abstract:—

	Maximum in lbs. 2nd sort Rice.	per Rupee. Ragi.	Minimum in lbs. 2nd sort Rice.	per Rupee. Ragi.
Bangalore District -	10½	13	8½	10
Kolar „ -	11¼	13½	8½	11
Túmkúr „ -	9½	12	8	10
Mysore „ -	10	12	8	10
Hassan „ -	9	11	8	8
Shimoga „ -	10	9½	6½	8
Kadur „ -	9	10	7	9
Chitaldroog „ -	9½	12½	8	10

16. The Commissioner of Ashtagram Division having reported that occasional difficulties occur in the prompt supply of grain in the relief camps in the Mysore District, the Chief Commissioner has approved of tenders being invited for the supply, weekly, of the required quantity of ragi, till the end of November next, as it is apprehended that there will be an increased demand for the supply of grain to the kitchens for the next three months.

17. The Committee for the examination of grain brought by rail to Bangalore report that during the month of July out of about 280,000 bags received 541 suspected to contain damaged rice were examined, of which 402½ were passed, and the remainder, 138½ bags, condemned.

18. The Director of Public Instruction has recently reported that a considerable number of pupils in both taluk and hobli schools have in certain places gained admission to relief kitchens or camps, and that in other places admission is denied to boys attending schools. In the case of those admitted to relief it would seem they are apparently required to leave school altogether, and to do a certain amount of task work in return for the rations received. The Chief Commissioner has ruled that, if the parents of the boys in schools are not themselves in need of relief, the boys should not be relieved gratuitously, as they should look to their parents for support, exception being made only as regards orphans; and that the boys who are deserving of relief may be exempted from work on the production of a certificate from the head master of the school that they attend and prosecute their studies regularly.

19. As a measure of relief to the poorer classes of pensioners of the Mysore State, who were reduced to great straits owing to the prolonged drought and high prices of the necessaries of life, the Chief Commissioner has directed that the usual famine allowance of Rs. 1—8—0 per mensem be disbursed to them from 1st August till further orders. The concession is limited to those whose pensions do not exceed Rs. 8 per mensem.

20. In consequence of the great increase in crime caused by the present famine the work of the Deputy Commissioners in the three districts of the Nundydroog Division and of the sessions judge has considerably increased, and, on the urgent representation of the Judicial Commissioner, the Chief Commissioner has, in anticipation of the sanction of the Government of India, decided on appointing an additional sessions judge for the Nundydroog Division, under the provisions of Section 17 of Act X. of 1872, to relieve, temporarily, both the Commissioner and his deputies of a greater portion of their criminal work, and to enable them to devote more attention to famine operations.

NOTE.—1. The expenditure entered in column 24 includes the amount contributed by private subscriptions, as well as the Government grant-in-aid thereto.
2. The figures entered in columns 17 and 18 are based on the latest accounts received from the Examiner, Public Works Accounts.
3. The figures against the Shimoga District under columns 15 and 16 have been corrected according to a revised return recently submitted, and those in columns 19 to 24 include those of the Kavaledurga taluk, where a relief kitchen has been recently opened.

No. 206.

Telegram, dated 2nd September 1877.

From Governor of Madras to Secretary of State.

Famine matters fully discussed with Viceroy. No difference of opinion; all arrangements made perfectly satisfactory. Viceroy will leave me General Kennedy. Council leave famine matters to me. Viceroy will give us the needed staff in works and for inspection.

No. 207.

Telegram, dated Madras, 2nd September 1877.

From Viceroy to Secretary of State.

I have sent the following telegram to President in Council. Message begins,—

Governor and myself are in full accord on the famine policy to be pursued in Madras in present emergency, and in personal conferences we have decided upon following action. Governor has addressed me a letter, dated 31st August, containing following headings:—

First. Governor, under section 29 of India Councils Act, purposes to take famine portfolio, and to dispose absolutely of famine questions; his orders to have force of orders issued by Governor in Council.

Second. An officer possessing the confidence of the Government of India to be attached to the Governor, in the position of personal assistant to Governor in famine management.

Third. All engineers and district authorities to address all references and reports on famine matters, including relief works, to the Famine Secretary direct, and not through Board of Revenue. Board will be kept fully informed of all orders passed, and their advice asked when necessary.

Fourth. Members of Board of Revenue to be deputed to visit the distressed districts, inspect relief operations, and report to Government on them.

Fifth. Grain supplies. As decided in January last, Government not to interfere with private trade, but Government of Madras has permission to buy seed-grain if such arrangements be found better than advances of money.

Sixth. Public works to be the backbone of relief system, all other forms of relief being subsidiary to main scheme; all relief works of magnitude to be directed and controlled by Public Works Department agency.

Seventh. Gratuitous relief to be temporary, and subsidiary to main object of getting distressed people on to works. Necessary to maintain relief camps to receive the starving, helpless, and infirm; ultimate object to keep relief camps as receiving places only for people to be drafted on to works or to their homes.

Eighth. Village relief to be generally confined to resident villagers who are bed-ridden or otherwise incapable of labour.

Ninth. To give effect to these principles, Government of Madras asks for a considerable temporary addition to the engineering and supervising staff of Presidency, consisting of 60 engineers and 100 active young European officers of army, police, or forest.

Tenth. The two chief engineers of the Presidency to be deputed from time to time into the interior. Government of India to sanction a third temporary chief engineer, if necessary.

In reply, dated 31st August, I have expressed satisfaction at results of our personal conferences, and at the measures adopted in the present crisis for promptitude of action and unity of control. I have appointed General Kennedy personal assistant to the Governor in famine matters, through whom all famine questions will be laid before his Grace. The object of this appointment is that the views of the Government of India may be permanently represented on the spot in the person of an officer possessing its full confidence. Viceroy and Duke are entirely agreed as to necessity of this arrangement, in order to unite and cover responsibility of both Governments without causing friction. I have signified pleasure of Government of India that the views of the Madras Government in questions of famine policy are now so entirely in accord with those of the Government of India. I have communicated to Madras Government officially my Famine Minute of 12th August, and urged general expedience of getting full proportion of relief recipients to employment on large public works of permanent usefulness to the country, and greater stringency in conferring gratuitous relief of all kinds to those who are unable to work. I have sanctioned purchase of seed grains

in those rare cases where it may be necessary, on condition that such purchase be made through trade. I have promised to furnish the required engineering and other European staff necessary for giving effect to our policy, and have agreed to sanction such extra temporary appointments, engineer and other, as the Madras Government may require.

This correspondence will be published in a Gazette to be issued on Monday. Message ends.

I trust you will approve the action above recorded. My relations with the Duke are most cordial, and I take this opportunity of expressing to you my grateful appreciation of the frank and efficient manner in which his Grace has met and seconded my efforts. The present arrangements, which have removed all cause of possible misunderstanding or divergent action between the two Governments, could not have been thus promptly and amicably concluded without this valuable co-operation to which I feel greatly indebted. I am confident that, under the personal direction of his Grace, the famine will be managed with a vigour and sound discretion not otherwise attainable, and that great advantage will accrue both to the permanent welfare of this Presidency and to the public treasury.

No. 208.

Encl. in No. 216.

No. 780, dated Madras, 2nd September 1877.

From Additional Secretary to the Government of India to the Secretary to the Government of Bombay.

The Viceroy's telegram of yesterday's date asked that the services of Major-General Kennedy might be temporarily placed at the disposal of the Government of India for employment in connexion with the famine in the Madras Presidency. During the Governor-General's stay at Poona his Excellency Sir Richard Temple was good enough to agree to General Kennedy's accompanying the Viceroy on his present journey to the Madras Presidency. Formal notification of the arrangement therefore is now solicited.

2. The Viceroy and Governor-General desires to express his high sense of the public spirit and loyalty which have prompted the Government of Bombay thus to spare, for service in another part of India, an officer who has under their direction so well controlled the operations for mitigation of the famine which unhappily still afflicts the Bombay Presidency. His Excellency the Viceroy is confident that the Government of Bombay, under its far sighted and energetic Governor, will, with the help of the officers of the Bombay services, meet famine difficulties in the future as successfully as they have done in the past. Meanwhile General Kennedy's personal experience of the Bombay famine management will be of the greatest value to his Grace the Governor of Madras.

No. 209.

Telegram, dated September 3, 1877.

From Governor of Bombay.

Since telegram of 1st, further improvement situation Bombay Presidency, from rain—Baroda, Ahmedabad, Concan, and several parts Deccan.

No. 210.

Encl. in No. 253.

No. 2630 B, dated Fort St. George, September 3, 1877.

From J. H. Garstin, Esq., Additional Secretary to Government of Madras, to S. C. Bayley, Esq. C.S.I., Additional Secretary to the Government of India.

I am directed to acknowledge receipt of your letter of the 1st instant, No. 776, and to state that the Madras Government have taken no part in the matter of applying to the public for subscriptions in aid of famine relief, although, at the request of the citizens of Madras, the head of the Government consented to preside at a public meeting convened by the Sheriff to consider the advisability of appealing to England for such aid.

2. I am to add that your letter will be communicated at once to the General Committee of the Madras Famine Relief Fund, with whom rests the duty of administering the funds raised, with an intimation that the officers of Government in their official

capacity will nowhere be allowed to be disbursers of any funds which may be placed at the Committee's disposal, although the Government have no reason to suppose that the Committee are relying on the agency of State establishments for the administration of their private funds.

THE GAZETTE OF INDIA EXTRAORDINARY.

Governor-General's Camp, Madras, September 3, 1877.

GOVERNMENT OF INDIA, DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

FAMINE.

The subjoined papers describing—

Nos. 201, 202. (i.) Administrative arrangements adopted after conference between the Viceroy and the Governor of the Madras, for meeting the increased pressure of famine in the Madras Presidency;

Nos. 199, 200. (ii.) The views of the Government of India regarding the collection of public subscriptions, and their expenditure by means of private organizations on the relief of distress outside the compass of Government operations,

together with a minute recorded by his Excellency the Viceroy on the 12th August, are published for general information.

By order of the Viceroy and Governor-General of India.

C. BERNARD,
Additional Secretary to the Government of India.

No. 212.

Telegram, dated September 5, 1877.

From GOVERNOR OF BOMBAY to SECRETARY OF STATE.

Though famine prospects are improving there is great want of revenue officers, as some are ill and some lent to Madras. The Bombay Government beg your Lordship will order the following officers to proceed to Bombay by the first mail in October:—J. E. Oliphant, R. Elphinston, J. R. Middleton, E. G. Sharkey, W. Ramsey, G. W. Vidal, G. B. Reid, W. G. Peddar, J. Macleod Campbell, G. Waddington, W. Forman.

No. 213.

Telegram, dated Madras, September 5, 1877.

From VICEROY to SECRETARY OF STATE.

Season telegrams as follows:—Madras 1 to 1½ inches of rain in Bellary, Cuddapah, Kurnool, much benefit; good rain in Ganjam, Vizagapatam, Kistna. Thunderstorm and 1 inch rain in Madras on 4th, only ½ inch elsewhere, save occasional heavy showers. Crops improved by rain, except South Arcot, Coimbatore, Salem, Madura. Prices dearer.

On works 901,227: on gratuitous 1,430,875. Grain importations large. Railway transport improving.

Bombay, showers throughout week everywhere: 4 inches of rain all over Guzerat; continuous heavy rain all Concan districts; good rain throughout Khandesh, Nassik, Sattara, Belgaum, and greater part of Poona and Sholapur; partial rain in Dharwar, Kaladgi; prospects much improved; prices not yet cheaper.

Numbers on works 278,731; on gratuitous 125,960.

Mysore, bad week; occasional light showers; good rain in Bangalore in night of 2nd September, gauging 1½ inches. Dry crop, prospects worse in all districts. Gratuitous numbers 213,000; works, number 49,000.

Hyderabad, three days good rain, over 4 inches, much benefit; good rain in Berar, Rajputana; heavy rain in Aboo and south-west States; good rain in Jeypore; heavy showers in Ajmere, Meywar, and east States. Lyall telegraphs: general prospect very materially improved; more rain needed in Ulwar, Meywar, Central India. Good rain in Rutlam, Indore, and all Malwa; 2 inches rain in Neemuch, Gwalior, Bundelkund. Too late to save much autumn crop in Gwalior; still prospects everywhere improved.

North-western Provinces: moderate rain in Allahabad, Benares divisions, 4 inches in Jhansi division; ½ an inch in Agra; good rain, one day, in Meerut and Bareilly, rest slight partial showers. Autumn crop lost in many parts.

Punjab: dry hot weather up to 2nd, then heavy universal rain over Province, gauging 9½ inches at Loodhiana, too late to save autumn crops in parts. Lieutenant-Governor telegraphs, prospects immensely improved, spring crop sowings secured over the important grain producing districts.

Bengal, Central Provinces, Burmah, Assam; seasonable weather, good prospects.

No. 214.

Telegram, dated Madras, 5th September 1877.

From VICEROY to SECRETARY OF STATE.

Have verified Madras railway requirements. I consider matters might be safer if we get 20 engines, besides Madras railway supply and indent for 20 sent by Madras Government and confirmed by me; but no good unless additional power available in short time. Please telegraph when the 20 locomotives asked for by my message of 30th will reach, and when the extra 20 now proposed could arrive. Make preliminary arrangements for extra 20. I will confirm order when I hear how quickly they can reach. Type to be State Railway, unless "Trevethicks" type comes much sooner. Also say how quickly State locomotives for Bombay can reach with half bonus.

No. 215.

No. 33 of 1877.

From the GOVERNOR-GENERAL OF INDIA, Department of Revenue, Agriculture, and Commerce (Famine), to the SECRETARY OF STATE FOR INDIA.

Madras, September 5, 1877.

In a letter dated the 20th August your Lordship was informed that I was about to leave Simla, accompanied by Sir Alexander Arbuthnot, and the officers named in the margin, on a journey to Poona, Madras, and Bangalore for the purpose of conferring with the Local Governments and the Chief Commissioner of Mysore on the measures rendered necessary by the failure of the early rains (summer monsoon), and the alarming character of the prospects described in a minute by myself which accompanied that letter.

Mr. S. C. Bayley, C.S.I.
„ C. Bernard, C.S.I.
„ Guilford Molesworth, C.E.

2. I now desire to lay before your Lordship a short account of what I have heard and seen, and of some of the more important references in famine matters, which have come before the Government of India during the past fortnight. In a separate letter of to-day's date will be found an account of my conference with the Governor of Madras, upon the lines of famine policy laid down by the Government of India, and of certain special administrative arrangements adopted by his Excellency in Council, for giving to that policy the fullest and most prompt effect. The following remarks on the condition of the crops and the prospects of the season, as they have appeared to me in the course of my journey from Simla to Madras, must be taken subject to correction by the light of more recent information. Our latest intelligence on these points is embodied in a telegram despatched to your Lordship to-day; and a copy of that telegram will be found in the last paragraph of this letter. No. 216.

3. Leaving Simla on the 16th August I met at Amballa the Commissioner of that division of the Panjab; who gave a very bad account of the prospects of the autumn crop. Over great tracts of the dry loose soil of the Cis-Sutlej country there had been no appreciable rainfall since early in July; a great part (the proportion could not be exactly stated) of the land prepared for autumn crops had not been sown, and much of what had been sown had withered. But there were still some weeks to the time for sowing the spring crops which yield the great food harvests, and should rain fall within that period these crops would be sown over a larger area than usual. Water in the irrigation wells was not failing, though the hot dry winds scorched the crops and made irrigation less efficacious than in ordinary years. The appearance of the land round Amballa was for the season of year extremely dry and arid.

4. On the morning of the 18th I met the collectors of Agra and Allyghur in the North-West Provinces. Prospects in the Agra district were then as bad as in any part of the North-West Provinces; and they were said to be less hopeful than in the Amballa Division. In the Allyghur district there is more well irrigation and more canal irrigation, so that a considerable autumn food crop will be secured. In both districts there seemed to be already some fear about fodder for the cattle. In Allyghur, with its many canal channels, this difficulty will probably be not so great. But in the Agra district if rain holds off there must be great loss of cattle. The River Jumna there flows between high banks, unclad by verdure, and differs in this respect from the Ganges, which annually floods a broad belt of low ground beside its bed.

5. At the Agra junction station I was met by His Highness the Maharaja of Jeypore with some of his chief officials. The Maharaja is most laudably anxious about the prospects of his territory, and he placed in my hands a memorandum describing some of the measures he proposed to take for the prevention or relief of anticipated distress. The position in Jeypore was in brief, that crops had failed to a large extent, that the grass was withering, and that already dearth was beginning to be felt.

6. Simultaneously with this memorandum a letter was received from Mr. Lyall, the Governor-General's agent, stating that the whole of Rajputana, north-west of the Aravelli mountains, was threatened with serious scarcity; that the crops were widely damaged, grass withering, and pasturage already insufficient. In a subsequent letter Mr. Lyall stated that he had reason to believe there were large stocks of grain on hand, and that the people were hopeful. Opportunity was taken when answering these papers to explain at some length to the agent the famine policy which should be inculcated on the Maharaja of Jeypore, as well as on the Governments of other Native States similarly situated. As the Maharaja's memorandum, and my Secretary's reply to it, form Enclosure No. 1 to this letter, I need not here describe either the measures proposed by His Highness, or those which I have commended to his adoption.

Nos. 141, 145, 173, 181.

7. At Allahabad the local officers reported that though some of the autumn crops had suffered much from drought, yet prospects in the Allahabad and Benares divisions were not nearly so gloomy as in the northern commissionerships. It was said that in all parts of the Panjab and the North-West Provinces grain-stocks in the hands of dealers, zemindars, and substantial ryots, were unusually large, and that prices had not yet grown so dear as might have been expected.

8. On the 19th August I met at Jubbulpore the Chief Commissioner of the Central Provinces, who was able to give a good account of the agricultural prospect throughout those provinces. He drew my attention to the very large and still increasing stocks of grain and seeds awaiting despatch from Nagpore, Jubbulpore, and other stations on the Great Indian Peninsula Railway; most of the grain, he explained, was consigned to the famine districts. He reported also that certain cases of corruption in the matter of allotting waggons had been brought home to station-masters on the two railways near Jubbulpore. The offenders had been or would be punished on conviction by the courts. Both those points—the grain block and the alleged misconduct of station-masters—were discussed with the proper authorities at Poona under circumstances which will be mentioned in a subsequent paragraph.

9. In the Khandesh and Nasik districts the country looked green, though the crops were backward. Much anxiety had been expressed about the condition of these two districts, and the local officials assured me that unless rain fell within ten days most of the crops then looking so well would wither. Happily from three to five inches of rain has since fallen in Khandesh; Nasik has also had good rain; and Sir Richard Temple's last report (30th August) says that "almost all anxiety regarding the Khandesh Collectorate" is removed.

10. I reached Poona on the night of the 19th August, and during five days stay there I had full opportunity of conferring with the Governor of Bombay, and with the chief Government and railway officials of that Presidency. Here I also met the collectors of Poona and Sholapore, as well as the Commissioner of the Southern Division. The prospects of the crops in the Bombay Presidency are now, save only in the Kaladgi District, much better than they were during the time of my stay at Poona; and therefore I need not trouble your Lordship with an account of the impressions I received in this respect. I visited a relief camp containing 3,000 inmates a few miles out of Poona. This camp had been recently opened, and several hundreds of its inmates were in process of transfer to relief works. The camp was well ordered; and the instructions under which it is managed will prevent its growing into an abuse. I have every reason to believe that, notwithstanding the very high prices now ruling in the Deccan and Canarese Districts, famine and distress are being met in the Bombay Presidency as successfully and econo

mically as the means and circumstances permit. Save in the Kaladgi District, the crops to be reaped during the next five weeks will give a sensible relief to the people, and must reduce prices. It is worthy of note that in the districts of Kaladgi, Dharwar, Belgaum, and Sholapore the price of the commonest food-grain rules dearer than in any district of the Madras Presidency. The latest weekly report received from the Bombay Government forms Enclosure No. 2 to this letter. It shows that, as yet, the improved prospects have not caused reduction in the numbers on relief. There was an increase in numbers during the week, and there were at the end of August 278,731 on relief work, and 125,960 on gratuitous relief. No. 172.

11. One very important subject which was much discussed at Poona, both with the Governor and at a conference of all his railway officials, was the carrying power of the Great Indian Peninsula Railway, by which food-grain is sent, not only into the Bombay Deccan, but also into the Nizam's Dominions, and into the Ceded Districts of the Madras Presidency. Briefly stated the case stands thus. The sources of grain supply drawn from by the Great Indian Peninsula Railway are the city of Bombay, in which Sir Richard Temple reports the stocks to be very large; the Nagpore and Berar country; the Nerbudda valley districts; and the East Indian Railway, which despatches grain waggons through the Jubbulpore junction. This grain is consigned to Khandesh and Nasik, the districts above the ghats; to Bombay city; to the Bombay Deccan stations for the supply of Poona, Sholapore, Kaladgi, Sattara, and the Southern Mahratta feudatories; to the Hyderabad country; and, lastly, to the Madras Railway for the Ceded Districts. The quantities of grain which the Great Indian Peninsula Railway ought to deliver daily are :—

To the Khandesh section - - -	300 tons.
To the Bombay Deccan Stations - -	800 to 1,000 tons.
To the Hyderabad branch line - - -	300 tons.
To the Madras Railway at Raichore - -	900 tons.

The Great Indian Peninsula Railway authorities have after much pressure delivered these quantities, on the average, at each section, except at the Raichore end, where they have recently delivered an average of barely 600 tons a day. Now the Madras Government absolutely require the 900 tons a day to be delivered at Raichore, otherwise they cannot arrange for throwing into the interior the quantity of grain actually needed. The Bombay Government and the railway officers agreed that by starving all other railway traffic, and by practically stopping the export* trade, it would be possible, with the present rolling stock, to maintain on an average the grain deliveries demanded. Suggestions were made for additional crossing stations, for longer sidings, and for other traffic facilities; but, in the end, it was quite clear that the carrying power of the Great Indian Peninsula Railway was at present limited by its engine power, and that, adequately to meet the present emergency, additional engines were needed. Sir Richard Temple at the conference represented strongly that without additional engines the railway would be quite unable to serve the export trade, which would certainly demand accommodation in the cold season; and that, if produce could not be carried to the port of Bombay, shipping would go away empty, heavy mercantile losses must occur, the trade of Bombay would be injured, and the rate of exchange might suffer. If the engine power on the Great Indian Peninsula Railway could be largely increased by January next, then the railway could serve both the famine and the export trade. It seem clear that no sufficient relief could be given by borrowing engines from other lines. The Dhond and Munmar Railway, which, by shortening the railway route from Northern to Southern India, will relieve the pressure of famine traffic to the extent of thirty-six engine power, could hardly open soon enough to meet the urgency of the case. And, accordingly, I telegraphed to your Lordship for the earliest possible despatch to Bombay of 100 engines to work on the Bombay Peninsula line. The letter, No. 117, Railway, dated 25th August, sent by my honourable colleagues from Simla, explains at length the reasons on which we recommend that these engines shall be purchased on account of the State and treated as the State reserve; and that they be hired only to the Great Indian Peninsula Railway. The telegrams from Simla and from Poona ask that these engines may be sent out as they are ready, and that extra payment be made for early deliveries. The alleged corruption among station-masters was discussed at our conference; it appeared that the evil had not been so general as I had been led to suppose. The establishment of a syndicate of traders at every large station to watch and regulate the allotment of waggons is said to be acting as a safeguard against corruption. Such syndicates were recently formed in the Central and North-west Provinces under the orders of the Government of India, and their usefulness will doubtless increase.

* By the latest Custom House return about 400 tons of seed and grain were leaving Bombay daily by sea.

12. Since leaving Poona I have learned by telegraph that the deliveries of grain to the Madras Railway at Raichore are still below the stipulated 900 tons. The Bombay Government explain that the higher prices ruling in the Bombay Deccan induce dealers to consign grain thither rather than to Madras. Market quotations undoubtedly show that prices in the Deccan and Hyderabad country are dearer than in the Bellary district; and while this continues there is soundness in Sir Richard Temple's deduction that Bellary food-stocks must be larger than the Deccan stocks. The recent very favourable rain in Khandesh and Guzerat has been followed by a heavy fall in wheat quotations in Bombay; and the improvement in crop prospects caused by showers in parts of the Deccan may partially bring down prices there. But for the present all we can do is to give preference, up to a certain extent, at Nagpore and Jubbulpore stations, to grain consigned for the Madras Railway. This we have requested the Bombay Government to do. But meanwhile, until relief comes, either from fresh harvests or by the arrival of additional engine power, the working of the Great Indian Peninsula Railway, and its due delivery of the required quantities of grain in the famine country, cause anxiety, and require careful watching. The Government of India and your Lordship may confidently rely on Sir Richard Temple's efforts to secure a good result; and I may add that the officers of the Great Indian Peninsula Company are actively exerting themselves in co-operation with the Governor.

13. On the 25th August I was met, on my way to Bellary, by the Resident at Hyderabad, who confirmed personally what he had a few days previously reported by telegram and letter regarding the distressed condition of four districts in the south of the Nizam's Dominions. Copies of the Resident's communications, respecting the Hyderabad country and Berar, form Enclosure No. 3 to this letter. Those papers show that the autumn food crop has absolutely failed in the districts of Raichore, Lingsagur, Goolburga, and Shorapore with a population of 800,000; that the price of the commonest grain is 7 lbs. per rupee; that 70,000 people are now supported by the Nizam on relief works, or gratuitously; that the pressure must last till February; while if the October rains fail it may endure until August 1878; that the Nizam's expenditure on famine relief, and his loss of revenue, already amount to nearly 50 lakhs of rupees; that, if the worst comes, the total cost of the famine may reach three millions sterling; that the Nizam's treasury is empty; and that the Minister will probably apply to the British Government for a loan wherewith to defray his famine expenditure. The proposal for a loan will be considered by the Financial Department when it is actually made. If good rain comes during September and October the situation in Hyderabad will greatly improve; and until fuller information is received we may hesitate to accept the estimate that the famine can under any circumstances cost three millions sterling. But, even if the coming monsoon be more favourable than the past, still the distress in the Nizam's Dominions materially aggravates the difficulties of Kurnool, Bellary, and Sholapore.

Nos. 178–9.

14. The Resident had previously reported that distress was impending in the Akola District of Berar. Copy of his report and its enclosure, with the orders passed thereon, forms Enclosure No. 3 to this letter. Happily good rain has fallen in Berar since the Resident's report was written; and Sir Richard Meade was able to assure me, at our meeting on the 29th August, that fears of scarcity in Berar were for the present removed. The caution I have given against beginning relief works too early, and against opening scattered petty relief works at the commencement of a scarcity, will, I trust, be observed if threatenings of drought should again appear.

Nos. 180, 193.

15. I reached Bellary on the 25th August, and the next day visited the large relief camp in that district, which then contained about 4,000 inmates. Among them, especially in the hospital sheds, was a considerable proportion of children and old people, who had been much reduced by want and its attendant diseases. Among the small children were some in a very pitiable condition; they had manifestly suffered from hunger; and it was said that in some cases parents had intentionally abstracted the meal supplied to the children. Nearly half of the inmates were apparently in good condition, and ought to have been at work. The weekly death-rate was very high, over 500 per mille per annum; but then it is to be remembered that into these camps are collected the sickly, the very old, the very young, and in fact the people who in ordinary years furnished the mortality of the whole community. In immediate executive charge of the camp was a Bengali Assistant Surgeon, who seemed to be doing his part of the work admirably.

16. I was impressed by the fact that the Bellary District had in the ground a certain amount of early crop, which, if fertilized by rain during the fortnight following our visit, would yield a substantial addition to the food supply of the country. The reports show that the breadth of this early crop in the southern and western taluks of Bellary is large, and its condition more flourishing than in the parts we visited. Telegrams received since we left Bellary report that good rain has fallen there. Fortu-

nately the prospect of Bellary for next year does not depend on the crop now in the ground; the great food (millet) crop of Bellary, and also its cotton crop, are sown in September and October; the millet ripens in January and the cotton is plucked in March. If the rainfall of September and October is good, Bellary (and the rest of the Ceded Districts) will be again prosperous by the end of February.

17. Leaving Bellary on the 28th I reached Madras on the following day. That evening I visited the relief gangs on the short junction canal near Government House. The labourers were in very good physical condition. On this, as on other relief works in the Madras Presidency, task work is practically not exacted; the hutting and conservancy system was good, but the labourers were supplied with food considerably in excess of their customary diet in ordinary years. Before passing from the subject of the relief arrangement at Madras, it may be mentioned that, in company with the Governor, I inspected the Palaveram Relief Camp with its 8,000 inmates, the Monegar Choultry Relief Camp with 3,400, and the Red Hills Camp with 6,000 inmates. At each of these relief camps, and especially at the first two, the arrangements were good, the camps were clean, the people were orderly, the hospitals were well kept; but, at the very least, half the inmates were strong enough and well enough to have been employed on relief works, instead of living in almost enforced idleness on, what is to them, a high diet. In this respect the Madras relief camps appear to me to fall far short of what economically managed relief camps should be. The weekly mortality in the camps is high, as at Bellary; and this mortality is principally among new comers; persons who are found dead or dying outside the camps being reckoned into the death-rate of the camp. These deaths betoken insufficient relief in the tracts from which the people come wandering into Madras. From the South Arcot district wanderers have recently begun to flock into Madras in considerable numbers, and to that district the Madras Government is now despatching Mr. Puckle, a member of the Revenue Board, to inquire into the matter.

18. One subject which engaged my attention while at Madras was that of soliciting private subscriptions in aid of relief funds. A telegram had been sent to the Lieutenant-Governor of Bengal on 12th August, in which the Government of India in brief terms deprecated any such appeal on the part of Government, and it appeared from some correspondence between the Lord Mayor of London and the Local Relief Committee at Madras that misunderstanding existed as to the real views of the Government on the subject.

19. A copy of the letter, which, in continuation of the telegram of 12th August I caused to be addressed to the Lieutenant-Governor of Bengal in elucidation of these views, forms Enclosure No. 4 of this letter. It is briefly to the effect that while the Madras Government have undertaken to save life by all available means in their power, and while their own organization is strained to the very uttermost in the attempt to carry out this object, it is not desirable that any committee for the distribution of private charity should attempt to carry out the same objects on the same lines and through the same agency as the Government. In other words, it is undesirable that a relief committee should interfere with the ordinary relief organization of Government. Further, it is not proper or expedient that the Government should ask for private subscriptions to supplement its own expenditure on famine, especially as it is clear that such subscriptions can make no appreciable difference in an expenditure which exceeds half a million sterling a month; and because general taxation, falling chiefly on the very classes who might be expected to subscribe, must in the end be required to provide for this expenditure. No. 199.

20. It must here be observed that, although the meeting held at Madras for the purpose of appealing to private charity in aid of famine relief was presided over by the Governor of that presidency, and attended by all the members of the Local Government, yet this meeting took place without the knowledge of the Government of India, or any intimation by the Governor to the Viceroy of the motives and objects of it. These the Government of India was left to gather from the newspaper reports of the proceedings on that occasion; according to which it had been stated or implied by the majority of those who addressed the meeting that the Government of Madras could no longer hope to feed the increasing number of its famine-stricken population; that, in its efforts to do so, it was inadequately supported by the Government of India; and that, thus, necessity had arisen for appealing to private charity in aid of those efforts. It was impossible to know how far these views and statements were approved by the high authorities of the Madras Government in whose presence they had been forcibly expressed. But the Government of India was bound to repudiate all concurrence in them when called upon by other Local Governments to declare its own opinion on the subject of private charity in connexion with famine relief.

21. This was done by the Government of India in the telegram above referred to; but in that telegram the Government distinctly stated that, if private charity could be applied to other methods of relief, and could be made to reach other classes than those which came within the reach of State agency, and if this could be attained by a volunteer organization apart from that of Government, then there could be no objection to unofficial meetings for the furtherance of such objects. In our opinion, however, the interests of the public, no less than the duties of the State, required that these objects should be strictly defined, and intelligibly announced, in connexion with some previously ascertained and well considered means of securing their attainment before the authority of Government could be legitimately or conveniently associated with the collection of private charity for the relief of national distress. This view has now been reiterated; and it has been again explained that, while it is not desirable in the circumstances above mentioned for the Government itself to take any part in the collection or distribution of subscriptions, every encouragement should be given to the spontaneous flow of private charity. It has also been pointed out that our objection to inviting subscriptions from those who will hereafter have to be taxed for the same object does not apply to subscriptions from England; and finally, as the Madras Committee, of which the Duke of Buckingham is the chairman, has expressed its intention of directing the money subscribed to objects other than those which come within the scope of Government agency, his Grace has (Enclosure No. 5) been invited to formulate definitely and in detail what those objects are to be, and the agency through which they are to be attained.

No. 200.

22. Much discussion has taken place during the past week on the working and the requirements of the Madras Railway. Seventeen additional engines and one hundred waggons have during August been borrowed from other lines and sent to Madras; one hundred more waggons will shortly arrive from the Baroda line. The Madras Railway is receiving from England six to eight new powerful engines per month; 200 metre gauge waggons are on their way (some have actually arrived) from State lines for work on the South Indian Railway. The double line from Madras to Arconum has been opened for traffic. The despatches of grain from the Madras Terminus are reaching 1,800 tons a day, while the despatches inland from Negapatam and Beypore are keeping up to the mark. I anticipate that the several Madras railways will, if grain be consigned in sufficient quantities, despatch inland the full quantity required daily, namely:—

	Tons.
From Madras Terminus by the Madras Railway - - -	1,800
„ Beypore - - - - - - -	400
„ Raichore - - - - - - -	900
By the South Indian Railway - - - - -	800
„ canal and road from Madras - - - -	600
Total - - -	4,500

Under these circumstances the Government of India have for the present refrained from compelling other guaranteed lines, by forced Government requisition, to lend more rolling stock than they can willingly spare to the Madras Railway; and we are the more anxious not to make requisitions, if it can possibly be helped, because the other railways have loyally obeyed our request for loans of rolling stock as far as they possibly could; and because we do not know what urgent need may spring up for grain transport in other parts of the empire which are threatened with scarcity.

23. Though the Madras Railways, by working full power, can thus almost meet the necessities of the case, yet it is by no means certain that they can continue to do so, or that they will be prepared for new demands which may arise if the north-east monsoon fails. Some of their engine and waggon stock is very old, and may become unserviceable before the crisis is over; the northern railways may, if difficulty comes in Upper India, have to reclaim the engines they have lent. In order, therefore, to provide against possible difficulties we have telegraphed to your Lordship supporting the Madras Government in their indent of the 17th August for 20 more engines, 600 waggons and 40 break-vans; and we have asked for 20 more engines in addition to the Madras indent. You have informed us by telegraph that 500 of these waggons will reach India within ten weeks time. We hope that this additional stock, together with 30 new heavy engines now arriving, will enable the Madras Railways to meet all emergencies. We have asked that the 40 new engines should, for reasons explained in my colleague's railway letter, quoted in paragraph 10 of the present letter, form part of the State reserve of engines.

24. It has been mentioned that the railways will carry the required amount of grain, if only it is consigned by the trade. And upon the question whether private trade will

send into the famine country all the grain that is required, the safety of the people depends. It cannot be said that the trade sends all the country can take; for the dear prices ruling in so many districts would show that more grain would be readily bought, if sent. But this much is certain, private trade is still consigning to the famine country much more grain than the railways can carry into the interior. In previous letters we have reported that more than 100,000 tons of grain are awaiting despatch at or near the railway stations in the Central Provinces. The Bengal exportable surplus, if the crop now in the ground turns out well, will not fall short of 350,000 tons. Already 100,000 tons of freight, chiefly steamer freight, has been taken up for despatch of grain from Calcutta to Madras ports during the present month. The actual despatches of rice from Bengal to Madras were 53,225 tons, or an average of 3,800 tons daily, during the fortnight ending on the 29th August. The despatches from Burmah to Madras were only 400 tons during the same period; so that there would seem to be truth in the opinion generally expressed by merchants, that the Burmah rice ports have no more grain to send till next crop comes to market in December. From Saigon it was reported that 150,000 tons were ready for export, but that most of this would go to China, where also there is a large famine demand. But a telegram from the Governor of the Straits Settlements, dated the 1st September, has told us that the Siamese Government has prohibited the export of rice from Bankok until the 30th September, on account of the threatened dearth in those territories. At the same time the Persian Government has prohibited grain exportation from Bushire. It would seem, therefore, that for the present India cannot expect food supplies from further Asia, but must send the surplus of the north to supply the deficiency of the south. For the present, and so far as we can foresee, any grain imported by Government would occupy railway waggons to the exclusion of private despatches, and would paralyze trade to an indefinite extent.

25. On my way to Madras I received a report from the Lieutenant-Governor on the prospect of the autumn crops in the North-West Provinces and Oudh. His account was, in brief, that the early (July and August) rains had failed over large tracts of the North-west Provinces; that over the Agra, Meerut, and Jhansi Divisions, and over a great part of Rohilkund and Oudh, the unirrigated autumn crops either had not been sown, or had withered, and that the irrigated crops had been much scorched by the hot dry westerly winds. The redeeming features of the situation were, that the autumn crop in the Allahabad and Benares Divisions, though in jeopardy, would still be saved if rain came; that the food stocks in the country were very large, and that there was still ample time for the rain to come and secure good spring crops, which yield the larger food harvests of the year. It was explained that Sir George Couper had given direction to Commissioners to open relief works of certain classes as soon as they deemed such a course necessary. The Lieutenant-Governor's report will be found in Enclosure No. 6, No. 169. together with the orders passed by the Government of India on the subject. It will be No. 194. seen that, while commending the North-West Provinces Government for its foresight and the caution given against alarmist views, I have desired a reconsideration of the orders permitting the commencement of petty relief works in many parts of the country; and directed that, if relief employment is to be a charge against the general treasury, such employment should be given on fully supervised large works of permanent usefulness. It was mentioned that the Government of the North-West Provinces possessed ready to its hand complete projects for several such works, on which, if need be, relief employment could at once be given.

26. From the Resident at Baroda I learnt that a serious failure of the autumn food crop was impending, and that prices were already rising to famine rates (twelve pounds per rupee). An interesting and suggestive letter was received from Sir Madhava Rao, the Baroda Minister, on the same subject. The Minister's recommendations were, in effect, that relief works should be opened simultaneously, and a uniform famine policy adopted all over the Baroda country, over British Guzerat, and over the Kattywar Chiefships. It was urged that trade in grain should be everywhere exempted from transit dues, and that nowhere should grain exports be prohibited. The Minister went further, and recommended that Government should purchase and import grain from other parts of the world. In my Secretary's reply the Resident was furnished with a copy of the orders sent by Sir Richard Temple to the officers of British Guzerat, directing that projects for well-considered public works should be at once prepared, but forbidding the opening of relief works so long as the people could support themselves. The Resident was reminded that the ryots of Guzerat were exceptionally prosperous; that last season they had excellent harvests and high prices, and he was cautioned against opening petty relief works or beginning gratuitous relief at all for the present. The attention of political officers attached to the neighbouring States was called to the

desirability of all the Chiefs adopting the British principle of admitting free passage of grain from, as well as to, tracts threatened wth scarcity. At the same time the Minister was thanked for his suggestions; he was told of the steps taken by the Government of India to make known the state of prices in Southern India throughout adjoining provinces and countries; and it was explained that the Government would not engage in the business of importing grain. The advice given to Native Chiefs regarding free trade in grain has already borne some fruit; for Major-General Sir Henry Daly telegraphs from Indore that his Highness Maharaja Holka has agreed to withdraw the prohibition against grain exports from his territory, and that at least one other Chief of Central India has followed the Maharaja's example.

27. I propose to start to-night for Bangalore, in order to confer with the Chief Commissioner on the state of affairs in Mysore, the actual condition of which, as well as the future prospects of that State, are subjects of very grave anxiety to me. Since the date of the last weekly telegram the prospects have not improved; and day by day the burden of the telegrams has been that no rain has fallen. Last evening, however, brought better news, good rain being reported to have fallen on the 2nd instant. Prices of food-grains show no material alteration. The last report received from Mysore shows the number on relief works slightly diminished, and the number on gratuitous relief considerably increased. The following are the totals: on relief works 49,000 persons, on gratuitous relief 213,000. These figures, no less than the reports previously received, indicate very clearly that the famine organization in Mysore is unable efficiently to cope with the distress; and the radical error of the system may be gathered from the fact that, out of a total of 264,000 persons receiving relief less than 23,000 are on works professionally supervised. The latest Mysore weekly report forms Enclosure No. 7 to this despatch.

28. As a first step towards introducing improved organization, I have deputed two selected officers from the North-West Provinces—Mr. C. A. Elliott, Commissioner of Meerut, and Major Scott Moncrieff, R.E., to assist the Chief Commissioner, and I have also deputed five military officers to assist in controlling relief operations. A detailed scheme for providing public works, and for reorganizing gratuitous relief, will be framed after discussion with the local administrative officers at Bangalore.

29. The Chief Commissioner of Mysore has made an application to the Government of India for a loan of 50 lakhs to meet the famine expenditure. The expenses of the famine have hitherto been defrayed by the proceeds of the invested funds, amounting to 46,16,000 rupees. This source of supply will be exhausted by the end of the current month, and the budget shows no balance to fall back upon. The Government of India have agreed to grant the loan, as, otherwise, the Mysore State would be compelled to borrow in the open market, a policy which the Government is not prepared to accept in the case of any Native State; and the loan will be granted on terms to be fixed hereafter, in the following instalments:—

In October - - - - -	20 lakhs.
„ November - - - -	15 „
„ December - - - -	10 „
„ January or February - - -	5 „

30. Until the beginning of September, the condition of affairs in some of the Central India States, especially Gwalior and the Bundelkund country, was getting worse and worse. Already there was a demand for relief labour in Gwalior; emigration was beginning, and strings of emigrants were passing down the Indore road, some hundreds of whom received a meal at Goona. To relieve this pressure, relief employment has been opened on the further section of the Agra and Gwalior railway. Sir Henry Daly, the Resident at Indore, telegraphed on the 29th August that the commencement of work on the railway had temporarily checked the emigration. Work on the Pahlunpore railway, recently sanctioned by your Lordship, was also arranged, as a relief measure to relieve the pressure in that part of the country; which pressure is, according to latest telegrams, now much enlightened by the favourable rainfall of the past week.

31. The season telegram despatched to-day to your Lordship is as follows:—

Madras.—One to 1½ inches rain. Bellary, Kurnool, Cuddapah, much benefit; good rain Ganjam, Vizagapatam, Kistna; thunderstorm at Madras; one inch rain at Madras on 4th. Only half an inch elsewhere, save where occasional heavy showers, crops improved by rain, except in South Arcot, Coimbatore, Salem, Madura; prices dearer; 901,227 on works, 1,430,885 on gratuitous; grain importations large, railway transport improving.

Bombay.—Showers throughout week everywhere; four inches rain all over Guzerat; continuous heavy rain all Konkan districts; good rain throughout Khandesh, Nasik,

Sattara, Belgaum, and greater part Poona, Sholapore. Partial rain, Dharwar, Kaladgi. Prospects much improved. Prices not yet cheaper. Numbers on works 278,731, on gratuitous 125,960.

Mysore.—Bad week, occasional light showers; good rain Bangalore, night second September gauging 1½ inches; dry crop prospects worse in all districts, gratuitous numbers 213,000, works number 49,000.

Hyderabad.—Three days' good rain, over four inches. Much benefit. Good rain Berar.

Rajputana.—Heavy rain Aboo and South-West States. Good rain Jeypore. Heavy showers Ajmere, Meywar, and East States. Lyall telegraphs general prospect very materially improved. More rain needed Ulwar, Meywar.

Central India.—Good rain Rutlam, Indore, and all Malwa. Two inches rain Neemuch, Gwalior, Bundelkund, too late to save much autumn crop Gwalior. Still prospects everywhere improved.

North-West.—Moderate rain Allahabad, Benares Divisions; four inches Jhansi Division; half inch Agra; good rain one day Meerut and Bareilly; rest slight partial showers. Autumn crop lost many parts.

Panjab.—Dry hot weather up to second, then heavy universal rain over province, gauging 9½ inches at Loodhiana, too late to save autumn crop in parts. Lieutenant-Governor telegraphs prospects immensely improved, spring crop sowings secured over the important grain-producing districts.

Bengal, Central Provinces, Burmah, Assam.—Seasonable weather, good prospects.

It has given me great pleasure to be able to address to your Lordship so satisfactory a telegram. But I cannot forget that, although our prospects are almost everywhere so much better than they were when I left Simla, yet everything in the Madras Presidency depends mainly on the October rains (north-east monsoon). The condition of Mysore is still a matter for much anxiety; and our hope for the future can only be fulfilled by a continuance of the present favourable change in the weather.

I have, &c.
(Signed) LYTTON.

No. 216.

No. 34 of 1877.

From the GOVERNOR-GENERAL OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA, Madras, September 5, 1877.

In my letter, No. 33, of to-day's date, I have laid before your Lordship some account of the journey I have undertaken to Madras accompanied by my colleague, Sir Alexander Arbuthnot, together with a brief summary of the latest changes in agricultural prospects over the several provinces of the Indian Empire. In the present letter I shall confine myself to a description of the arrangements concluded, after personal conference with the Governor, for the purpose of systematizing the policy and strengthening the administration of State relief throughout the famine-stricken districts of the Madras Presidency.

2. My Minute dated the 12th August submitted to your Lordship with our letter of the 20th August, contained a review of the situation which the Government of India had been dealing with up to the date at which that Minute was written, and of the famine policy pursued by us in reference thereto; with a general indication of those changes in the relief operations of the Madras Government which appeared to myself and my colleagues urgently needed by the protracted duration and increasing pressure of the famine in this part of Southern India. No. 131.

3. The general rules of famine policy set forth in my above-mentioned Minute are in complete conformity with the views previously expressed in the instructions to Sir Richard Temple of the 16th January last, which were approved by your Lordship. Abstention from interference with private trade and from Government operations in the grain market; employment of the destitute upon useful well-supervised public works; careful supervision of gratuitous relief, and the restriction of it by applying needful tests to recipients, are principles which have been steadily inculcated by the Government of India as opportunity arose since January last. But, although from the facts and figures laid before us by the Madras Government, it appeared to us that its conduct of relief operations was not in complete accordance with the principles thus laid down by the

Government of India, we had nevertheless many reasons for believing that the partial disregard of those principles would be on the whole less mischievous in its ultimate effects than the friction, irritation, and general paralysis of effort likely to arise from authoritative interference with the action of the Local Government. From such interference therefore, in reference to all matters not of paramount importance, we purposely abstained so long as it was possible to do so; that is to say, until the failure of the summer rains of 1877 had made it clear that famine relief and famine expenditure on a large scale must continue in the Madras Presidency till December or January next.

4. The Madras famine then assumed dimensions which placed it altogether outside the category of local calamities. It had become one of the most serious imperial disasters which the Supreme Government had ever been called upon to deal with. Under the existing constitution of the Government of India there must always be a certain amount of divided responsibility in dealing with any great catastrophe of this kind. For while a large executive responsibility is advantageously exercised by the Local Governments, the financial responsibility of the Government of India remains inalienable. In ordinary circumstances this financial responsibility involves the severest and most minute scrutiny of all expenditure. But in exceptional circumstances such as those created by the pressure of a great famine, that scrutiny cannot be enforced without extreme inconvenience. Owing to the delay caused by the requisite investigation of details, and protracted correspondence between the Supreme and Local Governments irremediable disasters might occur before the measures necessary for preventing them could be sanctioned and undertaken. Thus on occasions like the present we find ourselves placed in the anomalous position of a Government which is practically obliged to relax the exercise of its financial control in proportion to the increasing gravity of its financial liabilities. Such relaxation of control, however, is only justifiable so long as the limits of expenditure can be foreseen. When this is no longer the case, when uncontrolled expenditure threatens serious and imminent peril to the finances of the Empire, then the Government of the Empire cannot suspend or transfer to any other authority that financial supervision which constitutes its most essential function without repudiating the paramount duty of an Imperial Government. How to reconcile due guarantees for the discharge of the financial responsibility devolving exclusively upon the Supreme Government with adequate provision for the freedom and celerity of action so greatly needed to ensure the success of the Local Government in coping with the present grievous calamity is a problem which pressed for early solution, and I am hopeful that it may have been adequately solved by the arrangements now concluded with the valuable advice and assistance of the Governor of Madras.

5. The object to be attained was twofold. On the one hand it was necessary to secure for the Government of India that consideration of its views on the part of the Government of Madras, which is strictly demanded by the impossibility of transferring to the latter any portion of the financial responsibilities of the former. On the other hand, it was no less necessary to do this, in some manner involving the minimum of friction and delay, and calculated to strengthen rather than weaken the executive action of the Local Administration.

6. Great rapidity of reference would doubtless have been secured, and much time saved in the conduct of official correspondence between the two Governments, by temporarily transferring the seat of the Supreme Government to this Presidency. But to the Duke of Buckingham and to myself such a measure seemed open to many and grave objections which heavily counterbalanced the advantages of it in that respect. On the other hand, it appeared to me, after much anxious consideration, that if some means could be devised of placing at the command of the Local Government all the higher consultative and executive ability and experience which, owing to its unrestricted field of selection and authority, are in ordinary times commanded only by the Government of India, then the Government of India would be justified in reducing to a minimum all checks upon the action of the Local Government; because its own responsibility in reference to such action would under these conditions be sufficiently represented and practically secured by the selection of subordinate agents.

7. For the adoption of this latter alternative, which commended itself no less to the judgment of the Duke of Buckingham than to my own, I placed myself in personal communication with his Grace. The Duke informed me that he would gladly receive in pursuance of our common object the assistance of Major-General Kennedy, who had accompanied me from Poona, and whose services Sir Richard Temple was kind enough to place temporarily at my disposal. Major-General Kennedy, who is favourably known to your Lordship and to the Government of India as Public Works Secretary to the Bombay Government, has under two successive Governors successfully directed all

famine relief operations in the Bombay Presidency. I considered that Major-General Kennedy's advice would be of great use to the Government of India, and that were his services accepted by the Government of Madras he would be most valuable in helping to organise and carry out the difficult but necessary operation of transferring to large and permanently useful works the greatest possible proportion of the $2\frac{1}{4}$ millions who were being supported by the State in the Madras Presidency, and of whom barely one-quarter of a million were doing useful work. The Government of India is under great obligations to Sir Richard Temple for thus sparing the services of his chief famine officer, and a copy of a communication conveying to his Excellency the expression of our thanks for this loyal service forms Enclosure No. 1 to my present letter. No. 208.

8. On the evening of the 25th I met the Governor of Madras by appointment at Bellary. Before meeting his Grace I had sent him a copy of my Minute of the 12th August, and had confidentially communicated to him my views as to the necessity for certain changes in the relief management which could only be effected by improved unity and directness of control. In that opinion his Grace fully concurred, and our interview at Bellary left no essential difference between us as to either principles or measures. On the following day the Duke of Buckingham returned to Madras, where he had to attend a meeting of Council, and where I rejoined him on the 27th.

9. The day after my arrival at Madras I had a long conference with the Governor, at which my colleague Sir Alexander Arbuthnot, Major-General Kennedy, and some of my secretaries were present. We considered, proposal by proposal and clause by clause, a memorandum with which I had furnished the Duke, on the principles and measures commended to his adoption by the Government of India. These measures included only one important change of system which the Governor of Madras was unwilling to accept, viz., that the famine districts should be divided into two or more commissionerships, each under a Commissioner acting as chief executive officer in his division. The Governor of Madras held that it was unwise to take his best Collectors from their districts to be Commissioners; that it was doubtful whether functionaries with such extensive charges as those assigned to the Madras Collectors would work well under Commissioners, and that what was required in the way of inspection and enforcement of Government orders could be done by deputing members of the Board of Revenue from time to time to visit particular districts, without assigning to them any definite territorial charge. On that point my own opinion and that of my colleague Sir Alexander Arbuthnot is unchanged; but we did not deem the point essential, and have not pressed it.

10. With this single exception, complete concurrence of opinion and purpose was happily established between the Government of India and the Government of Madras, whose final conclusions were expressed in their Secretary's letter No. 2,232, dated the 31st August. The letter, together with the orders passed thereon by the Government of India, will be found in the "Gazette of India Extraordinary," published on the 3rd September, Nos. 201–3. which forms Enclosure No. 2 to this letter. The principles of famine policy thereby affirmed are:—

I. *Grain Supply.*—That the Madras Government should abstain from importing grain on its own account, and from any measure which might interfere with the activity of private trade.

II. *Public Works.*—A large scheme of useful public works under professional supervision should be the backbone of the relief system; all other forms of relief being subsidiary to the main scheme, and all relief works of any magnitude being directed and controlled by agency belonging to the Public Works Department. Large works under professional agency should not be limited to works which are deemed directly remunerative, nor even to works which may probably be finished during the continuance of the famine. The Governments of India and Madras will be prepared to accept a proportion of unremunerative and unfinished public works at the end of the famine.

III. *Gratuitous Relief.*—All gratuitous relief should be as far as possible temporary, and subsidiary to the main object of getting the distressed people on to the works or back to their ordinary occupations. It will be necessary to maintain relief camps in order to receive and support the starving, the helpless wanderers, and infirm persons, with a view of getting them into condition to labour. But the ultimate object of these relief camps as receiving places only for people hereafter to be drafted to works should ever be kept in view. Village relief, other than casual relief to famine-stricken travellers, should be confined to resident villagers who are house-ridden, or otherwise unfitted for or incapable of labour.

11. To carry out this policy the hitherto existing system of administration in Madras was indisputably too cumbrous. Under that system the Collectors reported on most famine subjects to the Board of Revenue; the Board, and in some instances the local officers, reported to one or other of four different branches of the Secretariat; the references so received from the Board or the local officers were then minuted upon by the two members of Council; and not till they had thus at last reached the hands of the Governor could they receive the orders of his Excellency in Council. It seemed to the Government of India, and in this view the Government of Madras entirely concurred, that under such a system the administrative chain was too long, that control was weak, and that uniformity and promptitude of action was hopelessly unattainable. In presence therefore of the increased and increasing difficulties which the action of the Madras Government, thus retarded and dispersed, had been unable to counteract, it was deemed absolutely necessary to concentrate the direction and simplify the process of its famine business by placing it within the immediate control of a Famine Dictator, who, acting under the general authority of the Government of India, should be solely responsible for the administration of this department.

12. By none but the head of the Local Government could such a task be properly assumed or adequately discharged. It was therefore decided, that by rules passed under the India Council's Act, the Governor of Madras should take the famine business into his own hands, as was done by Lord Northbrook during the famine of 1874 in Bengal; that Collectors and executive officers should correspond with the Government on famine matters direct, and not through the Revenue Board as heretofore; and that Major-General Kennedy, acting as the accredited agent of the Government of India, should be appointed personal assistant to the Governor in all famine affairs. The object of this arrangement (to which great importance is attached by his Grace the Governor and by myself) is to associate the authority of the Supreme with that of the Local Government without abrogating the responsibility of the former or hindering the action of the latter.

13. These measures, as settled between the Governor and myself, have been loyally accepted by the other members of the Madras Government. I do not expect from them, either now or hereafter, a complete recovery of the whole ground already ravaged by the growth of famine; but I feel assured that they will greatly facilitate remedial operations and restrain the progress of positive pauperism. The Government of India has given to the Government of Madras the services of one of the very best famine officers in India; and we have arranged for the immediate despatch of all the engineering, executive, and medical* assistance required by the Local Administration. The Supreme Government, relieved from all necessity for detailed supervision or vexatious interference, will spare no effort to assist the free and more vigorous action of the Madras Government, in following out the broad lines of famine policy now accepted. The Governor of Madras becomes virtually a dictator in famine affairs, so far as the constitution permits such an arrangement, and I have every reason to anticipate great amelioration in the social and financial conditions of the Madras famine from his Grace's more direct control of the operations which will now be commenced.

* On our journey an urgent demand reached me by telegraph for 100 additional medical subordinates for Madras. Bengal had already lent 88 such officials. At the present time of writing over 62 out of the additional 100 have been arranged for, and some 20 have actually arrived in the Madras Presidency.

14. The letter from the Government of Madras, which will reach your Lordship by the present mail, gives the latest available information on relief affairs. It will be seen from it that there are now in this Presidency two and a quarter millions of persons in receipt of gratuitous relief, and on relief works; most of which works are under no adequate control, nor are they of such a character as to promise any great permanent benefit to the country.

15. It only remains for me to express the hope that the arrangements reported in this letter and its enclosures will meet with your Lordship's approval, and to record my warmest acknowledgments of the cordiality and ability with which I have been assisted by the Duke of Buckingham in bringing these arrangements to a prompt, and I trust a satisfactory, conclusion.

I have, &c.
(Signed) LYTTON.

No. 217.

Telegram, dated 6th September 1877.

From PRESIDENT, Simla, to the SECRETARY OF STATE FOR INDIA.

Viceroy approving, we wish public works engineers on furlough, under rank of superintending, and medically fit, warned to be ready to return to India on further intimation.

No. 218.

Telegram, dated 6th September 1877.

From SECRETARY OF STATE to DUKE OF BUCKINGHAM.

Yours 2nd instant. I am very glad to learn the satisfactory arrangements that you have made with Viceroy. We hope much from concentration of famine administration in your hands. I understand Viceroy has urged on you greater stringency in confining gratuitous relief to those unable to work. I have no doubt of the propriety of this recommendation, but, as it implies requirement of task work from all who can do any work at all, the greatest care in executing it will be necessary in the case of those who have been reduced to feebleness by long privation. Mortality may result if sufficiency of nourishment is made to depend on work beyond their strength; moreover, amount of nourishment which was sufficient when they were strong may not be sufficient now.

No. 219.

Telegram, dated 6th September 1877.

From SECRETARY OF STATE to VICEROY.

I have heard with great satisfaction of judicious arrangements concluded between you and the Duke of Buckingham. I believe that concentration of famine management in his hands will be of greatest advantage. The appointment of General Kennedy, in whom you repose well-grounded confidence, will also be very beneficial. I approve generally of your arrangements, reserving any observation I may have to make on matters of detail. Greater stringency in confining relief to those unable to work is no doubt in many places necessary, but every precaution should be taken that consequent requirement of task work is not allowed to press dangerously on those who by privation have become partially incapacitated for labour. I have telegraphed in this sense to Duke of Buckingham.

No. 220.

Telegram, dated 7th September 1877.

From SECRETARY OF STATE to VICEROY.

State locomotives ordered for delivery here: in October, 10; November, 13; December, 44; January, 27; February, 19; March, 7. These fill up four largest makers, who have in consequence shunted English orders.

Additional 20 locomotives specified in yours 5th, being novel type, cannot be made quickly. If quick delivery desirable, discretion must be left with me in selection of type, for which drawings and patterns are ready to hand, for instance, Great India Peninsular type; new pattern locomotives cannot be delivered under 16 weeks from date of completion of drawings; complete drawings of State type not yet copied.

Additional engines that type cannot be delivered before 2nd of January. On all present orders extra price is given for quickest possible delivery.

No. 221.

Telegram, dated 8th September 1877.

From VICEROY to SECRETARY OF STATE.

Yours 7th. Type locomotive left to your discretion. When could 20 additional for Madras be delivered?

From VICEROY to SECRETARY OF STATE.

I have arranged with Arbuthnot to take the management of the famine business of the Government of India into my own hands.

Encl. in No. 239.

No. 223.

No. 821 (Famine), dated Bangalore, 8th September 1877.

From S. C. BAYLEY, Esq., C.S.I., Additional Secretary to the Government of India, to the CHIEF COMMISSIONER OF MYSORE.

I am directed by his Excellency the Viceroy and Governor-General, in pursuance of the result arrived at in this day's conference, to issue the following instructions for the guidance of your administration in famine affairs.

2. His Excellency deems it unnecessary to criticise the action of the past; but he finds from recent returns that the numbers now on gratuitous relief are 213,710; that there are on works managed departmentally 22,975, and on works managed by civil agency 25,644. It appears very doubtful if any considerable proportion of the people employed on departmental works can be considered as "relief labourers" in the ordinary sense of the term, and the works under civil agency are petty works, which experience has shown to be but little suitable to famine operations, and to be specially difficult of supervision.

3. It is also manifest that, owing to the want of sufficient relief works, the relief camps or kitchens (as they are called) have become crowded to an extent incompatible, under existing organization, with proper discipline or control; that vast numbers are relieved at those places who are quite capable of working; that, in some of them, no nominal register is kept; that different scales of rations are in force in different kitchens, rendering the maintenance of the more economical standard a task of unnecessary difficulty, and that, altogether, there is a serious want of organized and systematic control over them.

4. The principles on which famine relief should be administered are laid down with sufficient distinctness in the Minute of his Excellency the Viceroy dated the 12th August, a copy of which is herewith enclosed, and Lord Lytton gladly acknowledges that the orders issued by you from time to time have been generally in accordance with these principles. It is only necessary that such orders should be more fully developed and acted on.

5. The Viceroy desires that the attention of your administration should be specially directed to the maintenance of a sufficient scheme of large works of public utility for the relief of the destitute population. The works should be managed as relief works, on the task work system, on relief wages, and under stringent tests, such as those in force in the Bombay Presidency, and to these works all persons capable of labour should be drafted both from relief camps and, hereafter, from petty works under civil agency. Petty works under civil agency should also be brought under the general supervision and control of the Public Works Department. The above-mentioned scheme must be the backbone of the relief system, all other forms of relief being subsidiary to it. The entire energy and strength of your Public Works Department, unhampered by the rules and restrictions which ordinarily regulate its employment of labour and expenditure of money, must be devoted to the object thus defined. This must be done at the expense, if necessary, of other works, which may have been sanctioned in the annual budget, but which may not be suitable for relief works. It is not absolutely essential that such works should be remunerative, nor even that they should be such as can be finished during the continuance of the famine; but preference should, of course, be given where possible to works coming under these two categories.

6. The Viceroy is not unaware that, in carrying out this duty, alien as it is to the every-day work of the Department of Public Works, much disturbance of the machinery must take place, involving some deterioration in the discipline of the regular coolies on the establishment, and in the efficiency of the departmental staff, of which Colonel Sankey is now justly proud. But in times of famine, as in war, all ordinary administration must give way to the one main object of the campaign; and the Viceroy cannot permit the convenience or even the efficiency (for ordinary purposes) of any single department to become an obstruction to what he deems the essence of a sound system of relief.

7. His Excellency regretted to find at the conference that Colonel Sankey, notwithstanding the previous explanation of the views of the Government of India, which the Viceroy had personally given to him, still failed to grasp this principle. Colonel Sankey was apparently not prepared to close any of his ordinary works or convert them into relief works, nor was he willing to divert any of his ordinary departmental staff from these works to the duty of controlling relief works. The scheme of works, moreover, submitted to the Viceroy, was insufficient in itself to receive the numbers which ought, as shown by your returns, to be drafted on to them, whilst at the same time it was mainly made up of petty works ill adapted to the concentration of control, and consequently to the discipline essential to the due execution of relief works.

8. Lord Lytton, therefore, in order to obviate any failure of the policy hereby entrusted to your execution, desires you to forego your budget scheme of public works during the present crisis. Those of the sanctioned works, which are adapted for relief purposes, should be carried on as relief works, and those that are not so adapted must be closed, the departmental establishment employed thereon being transferred to relief works properly so called. His Excellency looks with confidence to your co-operation in carrying out these instructions, which he has every reason to believe are not out of harmony with your own views.

9. All gratuitous relief should be as far as possible understood to be a temporary concession, subsidiary to the main object of getting people when in condition to labour on to the relief works or back to their ordinary avocations. At relief kitchens, *i.e.*, unenclosed feeding places, it is certain that neither can proper tests be applied nor can efficient discipline be maintained. It should be an object, therefore, to confine the gratuitous distribution of food to properly enclosed relief camps where the people may be kept under strict discipline and properly registered, and set to such light labour as they may be able to do. The efficient organization of these camps should receive early attention. It will be necessary to maintain them for some time to receive and support the starving helpless wanderers and infirm persons, with a view of getting them into condition to labour. But the ultimate object of these camps, as receiving places only for people hereafter to be drafted to works or to their ordinary occupations, should ever be kept in view.

It is essential that all relief camps, whether in Bangalore or elsewhere, which are kept up by Government money, should be placed under Government organization, so that one system of control and one scale of rations may be applied to all. The responsibility of Government in this matter cannot with propriety be delegated to an irresponsible committee.

The Viceroy learns that the people in relief kitchens have through long idleness become so demoralized that there will be much difficulty in keeping them on works. It will be necessary for your civil subordinates to give the assistance of the police (taking on if necessary extra men) to maintain discipline in the camps attached to the works. It will also be the duty of those in charge to prevent aimless and uncertain wandering, and to see that people do not leave the works without some security for their being able to support themselves in other ways.

10. Village relief is not given in Mysore. Should it become necessary to give village relief at all, it should be confined to resident villagers who are houseridden or otherwise unfitted for or incapable of labour, and should on no account be given in the shape of cash.

11. In order to assist you in the arduous task of introducing these changes, and of supervising the famine administration of Mysore generally, the Government of India have been pleased to place at your disposal as Famine Commissioner, Mr. C. A. Elliott, C.S., with Mr. Wingate, of the Bombay Civil Service, as your Additional Secretary in the Famine Department.

12. The Famine Commissioner will assist you in directing all famine operations in the provinces of Mysore and Coorg, and, subject to your approval on matters of importance or principle, will issue orders on your behalf through the Commissioners or through the ordinary official channel under the signature of the Famine Secretary. He should have authority when travelling in the interior to give instructions in your name to the local officers, in accordance with the policy of the Government of India and of the Chief Commissioner, such instructions being of course reported to you, and being likewise communicated to the Commissioners of Divisions. The Famine Commissioner should, moreover, have an opportunity of laying his views before you on all correspondence connected with famine matters that may come up to you for orders.

13. The Government of India have already caused to be placed at your disposal the services of five military officers to assist in supervising relief organization, and in addition

to this the Government will endeavour to procure such assistance in the Department of Public Works as may be necessary, and will also obtain the services of as many medical officers as may be necessary to supply the deficiencies of your staff in this respect.

No. 224.

No. 822 (Famine), dated Bangalore, 8th September 1877.

From S. C. BAYLEY, Esq., C.S.I., Additional Secretary to the Government of India, to the CHIEF COMMISSIONER OF MYSORE.

In paragraph 9 of my letter No. 821 of this day's date I conveyed to you the instructions of his Excellency the Viceroy and Governor-General that all relief camps, whether in Bangalore or elsewhere which are supported from Government funds, should be placed under the responsible organization of Government officers.

2. I am to take this opportunity of requesting you to convey to the President and Members of the Relief Committee at Bangalore the sincere thanks of his Excellency the Viceroy for the gratuitous supervision they have hitherto bestowed on some of these camps. More especially does Lord Lytton desire to acknowledge publicly his obligations to Mr. J. D. Gordon, C.S.I., the President of the Committee, who ever since January last has, with unwearied self-devotion, and not without injury to his health, given up his scanty leisure to the difficult and depressing task of controlling these camps, and has continued the work in the face of overwhelming difficulties, caused by the ever increasing numbers of applicants, and the deepening severity of their destitution.

No. 225.

Telegram, dated Bangalore, 9th September 1877.

From VICEROY to SECRETARY OF STATE.

Yours of 6th. With reference to latter portion I may say that system now established at Madras provides that only those capable of labour are sent to relief works; those who are weakly are kept apart and specially treated, others are tasked at first lightly until perfectly fitted for full work. Bombay people thus treated; experience shows they improve more rapidly than those left idle and demoralized in relief camps. Every attention will be paid to the important consideration enjoined by you.

Encl. in No. 239.

No. 226.

No. 5,788.—Genl. 154, dated Bangalore, 10th September 1877.

*No. 223.

Order.—Ordered that copies of the above letter* be communicated to the Commissioners of Divisions, Deputy Commissioners of Districts, the Deputy Surgeon General, Indian Medical Department, and all executive officers engaged in famine relief operations.

2. The Minute of his Excellency the Viceroy, dated the 12th August last, referred to in paragraph 4 of Mr. Bayley's Despatch, will be published in the supplement of the Mysore Gazette, and the attention of the executive officers of the Administration is directed to the principles therein laid down.

3. The object which the Government of India have in view in their present instructions is, it will be observed, to withdraw from the Government kitchens as large a number as possible of those who are now in the receipt of charitable relief, and to employ them on large public works of permanent usefulness under professional supervision.

4. The duties of Mr. C. A. Elliott, who has been appointed as Famine Commissioner in this province, are stated in paragraph 12 of Mr. Bayley's despatch under reference, and it is necessary only on this point for the Chief Commissioner to direct that all written, or in minor matters of detail, verbal instructions which may be given by that officer direct to the Deputy Commissioners should be promptly carried out. The Chief Commissioner relies on the hearty and loyal co-operation of the Division and District Commissioners in affording to the Famine Commissioner that support which will be needed for the successful accomplishment of his duties.

5. In future all correspondence immediately connected with the administration of famine measures will be conducted in a Special Famine Department to which Mr. A. Wingate, Bombay Civil Service, has been attached as secretary, and reports will be addressed to that officer as "Additional Secretary to the Chief Commissioner, Famine Department."

No. 227.

Telegram, dated 11th September 1877.

From the GOVERNOR OF BOMBAY to the SECRETARY OF STATE.

Since my telegram 3rd, further seasonable improvement in situation in Bombay Presidency. More rain fallen Sind, Kattywar, Guzerat, Deccan, South Maratha Country, Concan. In some parts of Deccan rain extraordinarily favourable; Poona itself alone suffers protracted drought; good rain in neighbouring territory, Rajputana, Malwa, Hyderabad. Public anxiety much mitigated, but prices high, and severe distress continuing among some classes.

No. 228.

Telegram, dated September 13, 1877.

From SECRETARY OF STATE to VICEROY.

I am very glad you have taken famine business into your own hands. It is far the most important business before you.

No. 229.

Revenue, No. 64.

From the SECRETARY OF STATE FOR INDIA to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 13th September 1877.

Para. 1. The Despatch of your Excellency in Council, dated 16th July, No. 29 of 1877, relative to the famine in the Presidencies of Madras and Bombay, and the Province of Mysore, has been considered by me in Council. No. 79.

2. The general prospect indicated in the Despatch is very gloomy, but recent accounts received by telegraph are more favourable, and I trust that all the affected districts will soon manifest improvement.

3. The discussion between Dr. Cornish and Dr. Lyon on the subject of famine wages, which is based to a considerable extent on theoretical grounds, does not demand remark from me. The local governments possess full discretion to adapt the wages given to the actual necessities of the people.

4. I approve of your orders to the Commissioner of Mysore for the abandonment of the practice of paying labourers on relief works once in 15 days; and for the early substitution of bi-weekly, and when distress is extreme of daily, payment.

5. Your Excellency has taken the wisest course in leaving the question of the reduction of the numbers in the relief camps to the discretion of the Government of Madras, and I have no doubt that the measures suggested in the resolution of the Government of Bombay, a copy of which has been transmitted to Madras, will receive the careful consideration of the Government of the latter Presidency.

6. I fully approve of the instructions issued to the Government of Madras for the publication, in the Government Gazette, of such information as may be procurable as to the details of stocks and of consumption at the various inland markets in the famine districts, and also for the publication of the weekly relief reports. Such information will be of the greatest value in guiding merchants in their conduct of the operations of trade.

7. I need hardly assure your Excellency in Council of the deep interest and sympathy with which I regard the exertions of your Government, and of the Governments of Madras and Bombay, to mitigate, as far as human foresight, judgment, and resolution can mitigate, the terrible and, it may be, increasing evils of the calamity before you.

I have, &c.

(Signed) SALISBURY.

No. 230.

Telegram, dated 14th September 1877.

From VICEROY to SECRETARY OF STATE.

12th September. Chief Commissioner, Mysore, issued Gazette Extraordinary containing Government orders on Mysore famine affairs as settled after conference with Chief Commissioner and inquiry on spot. Out of 260,000 relief recipients it is doubtful

if a single man of the nominal one tenth of the whole number hitherto supposed to be on properly arranged relief works is a *bonâ fide* relief labourer; about one twelfth are on Civil Agency works. Persons relieved gratuitously are under no sufficient order or control. Public Works Department in Mysore have persisted against orders in confining all the works at its disposal to able-bodied coolies employed under contract system, and in repudiating its duties on behalf of famine relief; orders are that system of large useful works be framed for employment, under ample safeguards, of all relief recipients capable of any work; public works budget programme to yield to pressing need just as in war. Undertakings not suitable for relief work must be suspended; as sufficient irrigation works not available in Bangalore district, earthworks of Mysore railway sanctioned as relief measure. Gratuitous relief to be temporary and subsidiary to works; as people able to labour are drafted to works, relief camps must be brought into order, inmates registered, disciplined, and kept indoors. One system and scale of food for all camps; volunteer committee managing Bangalore relief, 50,000 persons at Government expense, thanked, and business transferred to Government agency. Village relief not now given. If hereafter granted, to be restricted and not to be in cash.

Mr. C. A. Eliot appointed Famine Commissioner, to assist the Chief Commissioner and direct famine operations; he will inspect famine districts and give orders on spot. Mr. Wingate, a skilled Bombay famine officer, appointed temporary Famine Secretary to Chief Commissioner. Major Moncrieff, in whom I have much confidence, acts as Chief Engineer for Colonel Sankey, temporarily transferred to Simla. Additional engineering and medical staff being arranged for, also young military officers for relief supervision.

Encl. in No. 288.

No. 231.

Dated 14th September 1877.

From Doctors T. R. Lewis and D. D. Cunningham, Special Assistants to the Sanitary Commissioner with the Government of India, to Dr. S. C. Townsend, Officiating Sanitary Commissioner with the Government of India.

We have the honour to acknowledge the receipt of the "extract" from paragraph 4 of a despatch from the Secretary of State to the Government of India, No. 53 (Revenue) dated 26th July 1877, intimating that the further report promised in a communication by one of ourselves to your office regarding the fever then prevalent in Bombay* would be awaited.

* Report by Dr. T. R. Lewis, dated Calcutta, 16th May 1877.

2. The proposal to submit this further report was in great measure made on the supposition that the statements then current regarding the wide distribution of a like fever in Madras were correct. Personal inquiry, however, made it evident that fevers, so far from being exceptionally severe, were decidedly in abeyance.† No opportunity was therefore afforded for instituting the suggested comparisons.

† Report by Dr. D. D. Cunningham, dated Calcutta, 18th June 1877.

3. We have however availed ourselves of the opportunities which the various hospitals and jails of Calcutta afford of carefully observing the forms of fever which have prevailed during this season, but as yet have not observed any which could be regarded as fairly comparable with those which were prevalent in Bombay during the earlier part of the year—the fevers here being for the most part manifestly "intermittents" and "continued."

4. Since our reports were written Surgeon-General Hunter, of Bombay," has submitted to the Local Government an exhaustive account of the leading features of the fever recently prevalent in that city, accompanied by numerous charts of temperature. This report corroborates the inferences which were made in the communication regarding this fever referred to in the despatch, viz., that—(*a*) in none of the cases in which the blood-spirillum had been observed "could the origin of the fever have been directly attributed "to want;" and that (*b*) the clinical history of the fever presented "no well-marked feature "which would be sufficient to distinguish it from the class of fevers usually referred to as "remittents" in this country. German authorities also state that the fever in which the blood-spirillum was originally found "manifested a distinctly remittent character."‡

5. With regard to the first cited of these conclusions we beg to draw special attention to the circumstances that it is in complete accordance with the experience hitherto acquired in connexion with the presence of spirilla in the blood. None of the observers who detected these organisms in Europe have in the remotest manner implied that their

‡ Geissler in Schmidt's Jahrbücher, 1875.

presence in the blood was associated with want; on the contrary, Geissler expressly states that the fever in which they occur (commonly referred to in Germany as recurrent typhus) is not a famine fever. Indeed it so happened that at the time of one of the epidemics the wages of the labouring classes were exceptionally high.*

No. 232.

Telegram, dated 16th September 1877.

From VICEROY to SECRETARY OF STATE.

Season telegram, 4th to 14th. Madras, all districts save Coimbatore, Madura, Tinnevelly, good rain, averaging over 2 inches; much improvement to growing crops, pasture, and general prospects. Small harvests reaped, averaging nearly half ordinary yield. Prospects worse in Madura, Coimbatore, Salem, where all depends on October rains. Prices stationary and very dear.

On works, 773,094; on gratuitous, 1,513,555; grain importations by sea maintained at 3,600 tons daily; railway despatches by Raichore short.

Bombay improvement continues; favourable rain everywhere, save part of Poona, Nassik, and Ahmednagar. Autumn crops revived, and mostly saved; winter crops progressing; prices very dear; severe distress continues among poor.

On works, 280,727; on gratuitous, 158,733.

Mysore, showery weather everywhere, much good to crops; autumn millet lost in parts; distress very severe. On works, 52,000; on gratuitous, 227,000.

Hyderabad—heavy rain in Hyderabad, and worst district gauging seven inches; very great benefit. Berar prospects good.

Central India, good rain in Bundelkund; Malwa prospects fair.

No rain in Gwalior, whence migration southwards. General rain of previous week not continued. Rajputana, rain much needed in Ajmere and Eastern States, some showers; less cause for anxiety elsewhere. North-west, good rain in Fyzabad, Shahjehanpore, Humeerpore; elsewhere only partial showers. Prices rising; prospects bad; much autumn crop lost.

Punjaub, general but not sufficient rain, except in Multan, where floods. Unirrigated autumn crop failed generally; ploughing for spring crop proceeding; prices rising. Bengal, Burmah, Central Provinces, Assam, prospects favourable on whole.

No. 233.

Telegram, dated Ootacamund, 16th September 1877.

From VICEROY to the SECRETARY OF STATE.

Yours 7th. Altered prospects season render unnecessary 20 additional locomotives proposed for Madras Railway in my message of 5th. Please do not confirm arrangement begun thereon.

No. 234. Encl. in No. 239.

No. 846 (FAMINE).

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF MADRAS, Revenue Department.

Governor-General's Camp, Ootacamund,
dated the 16th September 1877.

A deputation of Wynaad planters waited upon the Viceroy yesterday and represented, among other things, that relief works were greatly needed in both Wynaads for the employment of the immigrant poor from Mysore. They said that tens of thousands of people, over and above the requirements of the coffee estates, had come and were coming into the Wynaad; and they feared that many of these poor immigrants must

---

* "*Der Recurrens-typhus ist Kein Hunger-typhus Gerade die Tagelohnarbeiten waren damals gut bezahlt.*" Geissler, op-cit.

die and were dying before they could be deported back to Mysore and relieved there. The planters represented that, if relief road-work was opened, these people could earn wages; they offered to supervise the work and to arrange for the supply of grain.

2. The Viceroy and Governor-General, in his reply, expressed the opinion of the Government of India that relief works for the employment of the immigrant Mysore poor were required in Coorg and the Wynaad; and he intimated the willingness of the Government of India to defray a part of the cost of such relief works, provided the Madras Government could also contribute and the local planters would bear a share of the cost. It appeared that about 80 miles of district roads had been made, and that the object now was to lay gravel on as much as possible of this length. Metal was, it was said, easily obtainable; its collection, breaking, and stacking would form good relief labour.

3. It appears to his Excellency the Viceroy that the settlement of all details as to the manner and kind of relief work is entirely within the discretion of the Local Government. He understands from his Grace the Governor that the Madras Government is ready to sanction relief works in the Wynaad for Mysore immigrants, provided a part of the cost is contributed by the Government of India from the Mysore revenues or from elsewhere. Accordingly the Viceroy is pleased to direct that a grant of Rs. 30,000 be made by the Government of India to the Madras Government towards relief roads in the Wynaad, provided that at least a corresponding sum is contributed from Madras local and provincial resources; provided that the planters contribute a further sum in money or supervision or labour, or in all three, as the Local Government may decide; and provided that the whole sum now to be available for relief roads is expended between this time and the month of May 1878. The Government of Madras will take such steps as may seem fit for opening the relief roads and relieving the pressure on Mysore as soon as possible.

Encl. in No. 239.

No. 235.

MEMORANDUM by MR. C. A. ELLIOTT ON PROGRESS made from the 10th to the 19th September 1877.

Bangalore, 19th September 1877.

It was decided first of all to take in hand the worst and largest of the Bangalore kitchens—those at the Siledar Lines and the Petta. The former, which is an enclosed place, was first weeded of its able-bodied residents, and their places were filled by drafts of the worst cases relieved at the Petta kitchen. The able-bodied paupers were all put on the railway works close by. At first some difficulties were experienced owing to the great numbers which had to be dealt with and their want of discipline, the unpreparedness of the Public Works Department officers to receive such large additions, and the want of tools and overseers and establishment. By great labour and patience on the part of Mr. Wingate and Major Cole, to whom this duty was specially entrusted, these difficulties were successfully overcome, and we now have about 5,000 labourers on this work, all doing fair work, and brought into good order and system, paid in cash and able to house and feed themselves; and our kitchens are relieved to a more than corresponding extent of the crowds which thronged to them. A special officer has also been put in charge of the Binnamangala camp, and the conditions of residence and labour have been enforced there, and 1,000 people have been sent to work, and are paid in cash and struck off the kitchen rolls. One kitchen (that at Shúle) has been abolished. The following table shows how the Bangalore numbers stood on the 10th and the 19th September :—

	10th September.	19th September.
Petta	11,615	5,548
Siledar Lines	2,675	2,747
Shúle	1,709	—
Cleveland Town	4,159	2,247
Binnamangala	10,575	2,759
Total	30,733	13,301

2. The decrease is probably due to three causes—(1) the seasonable rain and the prospect of field employment in weeding, ploughing, &c.; this cause had already begun to operate in the week ending September 8th, and the numbers had fallen from their highest point; (2) the employment of about 6,000 people on public works, and the

dread of others, who had accepted food without being really in want, that they would be compelled to work; (3) the enforcement (though as yet only partial) of the rule of residence in the camp. A further cause has perhaps operated here, and will certainly operate when the outlying kitchens are taken in hand, viz., the stoppage of peculation under close supervision.

3. Besides the railway, the chief engineer has notified his readiness to receive about 18,000 people on 15 works in different districts, and his separate note attached to this memo. shows that by the 8th October he will have made arrangements for starting three other works, and will be able to employ 24,000 more. The district officers have been informed about the works which are ready to be started, and they are arranging for the transfer of labourers from their relief camps; but no facts are at present known as to what has been done up to date, except in the case of the road from Bangalore to Túmkúr through Nelamangala.

4. The Famine Commissioner has just visited this road and the Nelamangala relief camp and three others in the neighbourhood. The system of transferring the paupers from gratuitous relief in camps to works under the Public Works Department has been started here with such remarkable success that it deserves to be narrated with some particularity. The Nelamangala relief camp professed to have fed 2,653 persons on the 13th, 2,479 on the 14th, and 2,505 on the 15th. On the morning of the 17th he found about 1,700 people assembled to be fed. Of these he picked out 488 as able-bodied and sent them to the overseer in charge of the road. Of the rest he found only about 20 to be too infirm for work (besides about 200 in the hospital and convalescent ward) and he divided 956 into gangs, and apportioned light work to them. Of these more than half (487) were children whose parents sent them to be fed, but did not come themselves. On the morning of the 19th the overseer had all the 488 drafted from the kitchen on his work, besides a few more drafted on the 18th, and 279 more, volunteers from the neighbourhood; and he had many more applicants, but no tools for them. He had treated them kindly, tasked them with due consideration for their strength, and paid them punctually, and in consequence numbers were flocking to his work. The relief camp on the other hand presented a very changed appearance, and its capacious sheds looked all too wide for its shrunk numbers. Of the 956 people retained as fit for light labour, only about 360 remained; the rest had refused to submit to the conditions of residence and work. Possibly some of them will be unable to find subsistence in their homes, and the system of village inspection will be actively worked to prevent any undue distress arising from the stubbornness of the more impoverished. But the great majority of those who have gone home have done so because they could afford it, and because they preferred it to living in the relief camp under the altered conditions.

5. Similar inspections of three other large relief camps in the neighbourhood produced and are producing similar results. It is not too much to say that all of these were organized in such a way as to create the impression that the *raison d'etre* of the place was to provide for all comers one or two meals a day in the manner most agreeable to the applicants and least laborious to the distributors. No practical effort was made to get the people to work or to retain them in the camp, and when these conditions are enforced the numbers will greatly diminish. Large numbers also of Brahmans and other people of good caste have received rations of raw food without being in distress. To all of these employments suitable to their caste can be offered, to the men as overseers and gangsmen, to the women as rice cleaners and grinders, and their gratuitous rations will be stopped.

6. The Famine Commissioner and the chief engineer are satisfied that those officers were mistaken who believed that the kitchen paupers would refuse to go to public works or would not do a fair day's work on them. On the contrary they believe that the opening of these works will be a real blessing to the famine-stricken population, and that when once they are convinced that the work is lasting and is fairly paid for they will flock to them in large numbers, leaving the relief camps almost empty.

7. During the 10 days since September 10th some important orders have been issued which may be recapitulated here. A circular has been issued prescribing a uniform ration of cooked food for all occupants of relief camps, as well as rates of pay for labourers on public and on civil relief works, accompanied with a sliding scale so as to provide for each labourer's receiving $1\frac{1}{3}$ lbs. of food, with a small sum for condiments—nine pies per man on works where the heavier task is performed, and three pies where the lighter. Instructions have been issued (after consultation with the district officers) for closing nine relief kitchens in the Bangalore District, two in Kolar, and 19 in the two districts of the Ashtagram Division; those kitchens being chosen which are not at

Taluk headquarters, and which are near enough to other relief camps for the sick and infirm to be transported. A plan has been sketched out for a house-to-house visitation of Bangalore itself, and for the provision of employment for needy artizans by supplying them with materials for their own profession. Orders have been issued to wind up the small civil relief works, finishing off at once those which it would be unwise to leave incomplete and stopping the rest, and to make preparation for starting other and larger civil relief works—the minimum being fixed at 300 people for one month, to supplement where necessary the works undertaken by the Public Works Department; but these are only to be used as safety-valves for labour in cases of emergency. A code is also being prepared for distribution to district and relief officers, laying down the main rules which it is conceived will be found necessary for the establishment of a sound and uniform system.

No. 236.

NOTE BY MAJOR C. S. MONCRIEFF, R.E., Chief Engineer.

19th September 1877.

It is rather soon to report any very marked results from the change made last week in the Public Works Administration of Mysore, but the following measures have been taken which it is hoped will soon begin to bear fruit.

2. The first thing was to issue orders that famine relief was to be the main duty of the Public Works Department, that all budget assignments for works in progress were cancelled, and that whether any particular work was to go on or not was to depend on whether or not it was fitted for famine relief. The limit was fixed that each single work should give employment to at least 1,000 unskilled labourers for at least three months. The system of petty contracts was ordered to cease, so that no labourer should get more than a subsistence however strong, nor less than a subsistence however weak, a task at the same time being required from each. Superintending engineers were directed to send in at once list of works that might be taken up for relief, and to consider where new works could be begun.

3. Earnest efforts have been made to empty the kitchens of Bangalore and to transfer the inmates to the new railway. Contiguous to this work is the site of the proposed Agrahara tank embankment. These have both been laid out, and day after day an increased number of labourers are employed. To-morrow there will be about 5,000 on these works, and a week hence there should be as many more.

4. In the Bangalore district arrangements are making for beginning work at once on the Hoskote and Bhadram tanks, where 2,000 might be employed in a week and 4,000 a few days after. Work has begun on the repairs of the road to Túmkúr, and 800 labourers will find work there for the next three months. In a few days 1,000 labourers will be employed on the repairs of the Mysore road. On the Bangalore-Bellary and Yelhanka-Ballapur roads 2,000 labourers will find employment.

5. In Kolar arrangements are being made to receive at once 4,200 people on four tanks.

6. In the Túmkúr District work has begun on the Shimoga road, and 1,400 labourers will be employed for three months. On the Bellary road work will be started in a few days for 1,000 labourers.

7. In the Chitaldroog District the Public Works Officers have been ordered to take over a large tank work at Timmanhilla, lately started by the civil officers. No exact details have been received about this yet, but it is believed that about 3,000 can be employed on it.

8. In the Kadur District, an irrigation channel is being laid out at Keresanté, and the Executive Engineer will be prepared to take on 1,000 labourers by 1st October and 2,000 more a few days after. By the same date work will be ready in that neighbourhood for 1,000 labourers on a new road. Later on their numbers will be increased.

9. In a fortnight work can be given on the Mandigere Channels in the Hassan District, and there too the numbers may be increased in a few days, while the Annaiyanakatte tank works in the same taluk will be put in hand whenever required.

10. On the Mysore waterworks about 2,000 labourers have been employed up to now. The Executive Engineer has orders to convert this into a relief work, and to prepare for 3,000. The Ane Irrigation Channel near Maddur will be started at once with 1,000 labourers, and more can be received, if required.

11. To sum up, relief works have been begun and will expand, day by day, until by the beginning of October there should be 32,400 employed as below :—

In Bangalore District	- - - -	15,800
„ Kolar „	- - - -	4,200
„ Túmkúr „	- - - -	2,400
„ Chitaldroog „	- - - -	3,000
„ Kadur „	- - - -	2,000
„ Hassan „	- - - -	1,000
„ Mysore „	- - - -	4,000
	Total -	32,400

Should the demand arise this number can be increased a week later to 42,000. Nor is the list exhausted. The postal service in Mysore is not very rapid, and reports are coming in daily from executive engineers of new works suitable for poor relief.

12. In the western districts, Shimoga, Hassan, and Kadur, abundant work can be found on the Malnád roads, but the country is said to be so feverish just now that it would not be judicious to send weakly gangs there until the close of the N.E. monsoon, *i.e.*, the 1st November. Nor is the distress very severe in those tracts.

13. The Túmkúr District is suffering severely, and the Public Works Department can as yet suggest no large work to employ the people. Search is being made for suitable tank sites; should that fail it may be necessary to move the population to the banks of the Cauvery in the Mysore District, where most useful irrigation channels can at once be put in hand, extensive enough to employ from 10 to 15,000 people.

14. The heavy rain of the last fortnight will now greatly reduce the number of poor in the kitchens. But in case further labour should still be required, the Mysore railway can be started for 12 miles beyond Bangalore, giving a large field for labour.

No. 237.

Encl. in No. 289.

No. 856, dated Bangalore, 20th September 1877.

From the Additional Secretary to the Government of India to the Additional Secretary to the Government of Madras.

I am directed to acknowledge the receipt of your letter, No. 2619, dated 31st August, forwarding a statement in which the Revenue Board show approximately the demand, collections, remissions, and balances of land revenue of the year 1876–77 as compared with the three previous years.

2. The Viceroy and Governor-General gathers from this statement the following main facts :—

	Lakhs.
(*a.*) The land revenue current demand for the year 1876–77 was only - - - - - - -	355
Compared with an average current demand of the three previous years of - - - - - -	449
(*b.*) The total collections current and arrears for the year 1876–77 was only - - - - - - -	278
Compared with a previous average of - - -	449
(*c.*) The actual remissions of the year 1876–77 are only - - on account of the arrear demand, no remissions having yet been granted on the current demand.	3
(*d.*) The balances of the year 1876–77 are - - - - -	130
Compared with a previous average of - - -	60

3. It thus appears that the deficiency in the year's* land revenue collections amount to 449 minus 278 lakhs, that is to 171 lakhs. This total is considerably in excess of previous estimates. If more than 45 lakhs out of the outstanding balance of 130 lakhs should be collected hereafter, then the deficiency on the year will be proportionately reduced. But if the arrear collections of the present year fall short of 45 lakhs, then the deficiency of the year 1876–77 will practically be increased above the total of 171 lakhs.

* July, 1876 to June 1877, inclusive.

4. The partial failure of the south-west monsoon of 1877 has made the collection of arrears more difficult, and may in some cases necessitate a reduction of the current year's demand below the average of previous years. His Excellency the Viceroy has confidence that the Government of Madras will not permit sacrifice of revenue, either by reduction of the demand or by remissions, beyond what is absolutely necessary. But he desires to invite the attention of his Grace the Governor in Council to the extreme gravity of the losses which the public treasury has, according to these papers, to bear.

No. 238.

Revenue No. 65.

From the SECRETARY OF STATE FOR INDIA to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 20th September 1877.

No. 103. Para. 1. The despatch of your Excellency in Council, dated 30th July, No. 31 of 1877, on the subject of the famine in the Presidencies of Madras and Bombay, the territory of His Highness the Nizam, and the province of Mysore, has been considered by me in Council.

2. The Despatch gives a very clear statement of the situation throughout India on the date on which it was written. It also submits some useful information both as to the probable requirements of the famine districts of Madras, Bombay, and Mysore, and as to the stocks of grain in other parts available for exportation.

3. I fully approve of the intimation which your Excellency in Council has made by telegraph to the Governor of the Straits Settlements as to the importance of encouraging importation of rice into India, and, through the Straits Government, to the Governor General of Cochin China, and the King of Siam, on the same subject.

4. I shall await with interest a detailed account of the arrangements which your Excellency in Council has under consideration for securing a more united action between the several railway companies for the facilitation of the transport of grain.

I have, &c.
(Signed) SALISBURY.

No. 239.

No. 35 of 1877.

From the GOVERNOR-GENERAL OF INDIA, Department of Revenue, Agriculture, and Commerce, Famine, to the SECRETARY OF STATE FOR INDIA.

Bangalore, the 20th September 1877.

In my last letter, dated 5th September, I informed your Lordship that it was my intention to proceed to Bangalore for the purpose of taking, in communication with the Chief Commissioner, such steps as might then, after adequate inquiry, appear to me necessary to improve the Famine Administration of the Mysore Province.

2. From my minute of 12th August, and from our regular despatches, it will have become known to your Lordship that the state of affairs in this province has long been a source of grave anxiety to the Government of India; and I had, in anticipation of my visit, despatched from Poona two selected officers, Mr. C. A. Elliott and Major Scott Moncrieff, to study the actual condition of the famine administration in Mysore, with a view to the eventual employment of these officers, under the Chief Commissioner, in the introduction of an improved system.

3. I regret to inform your Lordship that from the statement laid before me by these gentlemen, and from the communications I have now held with the chief civil officers of the province, as also from what I myself saw at Bangalore, I was forced to the conclusion that matters were even worse than I had anticipated; that the provision of proper relief works had been entirely neglected; that gratuitous relief, which had increased to an inordinate extent, had been administered in a lax and unsystematic manner; that crime had greatly increased; that people were wandering from Mysore into other districts in vast numbers; and that the mortality both in hospitals and among the wanderers was terrible.

4. The annexed statement will show your Lordship how the numbers relieved, respectively on works and under the system of gratuitous relief, have varied during the

past six months; and how utterly disproportionate is the former to the latter class. But even this statement does not adequately represent the whole evil. I found while at Bangalore that the people employed on works under the organization of the Department of Public Works were not, properly speaking, relief labourers at all. The works were not special relief works, but were those sanctioned in the ordinary way under the annual budget allotment; and the labourers employed on them were the ordinary able-bodied coolies, paid by piece work, and engaged by the ordinary petty contractors of the Department. That these works kept a number of the labourers so employed from the necessity of applying for relief cannot be doubted, but in no other sense can they be called relief works, and the system under which they were employed had been already emphatically condemned by the Government of India in its communications with the Chief Commissioner of Mysore.

	On Works under D. P. W.	On Works under Civil Agency.	Gratuitously relieved.	Total.
March - - - -	31,081	41,735	43,592	1,16,408
April - - - -	31,495	29,740	74,569	1,35,804
May - - - -	32,499	30,011	1,03,392	1,65,902
June - - - -	26,807	28,066	1,14,109	1,68,982
July - - - -	20,777	26,325	1,44,861	1,91,963
August - - - -	22,644	25,981	1,99,375	2,48,000

5. I was anxious to introduce an improved system of management without any undue interference with the ordinary administration of the country, and I found that the Chief Commissioner was fully prepared to accept and carry out my views. Mr. Saunders had, in fact, previously issued instructions in accordance with the general policy of the Government of India; and these instructions, had they been obeyed, would probably have ensured the timely introduction of a proper system of relief works in Mysore.

6. His chief engineer, however, had objected to the employment of the Public Works establishment otherwise than on the ordinary contract system, and had omitted to provide any special works for relief purposes. Even on the brief extension of the Bangalore Railway, which had already been sanctioned by the Government of India, the Department had declined to employ more than 300 out of the thousands who were ready to labour, and whom the civil officers were anxious to draft from gratuitous relief to works.

7. Colonel Sankey, the chief engineer, is an officer of much experience in Mysore, and has the reputation of being a very able engineer. He has under him an unusually strong departmental staff in proportion to the size of the Province; and I had hoped that he would prove a valuable assistant in carrying out my policy of making large relief works, under departmental supervision, the backbone of the whole relief system. I accordingly explained my views to him at some length, first in a private interview, and afterwards at the conference which I held with the Chief Commissioner and other officers.

8. To my regret Colonel Sankey persisted in objecting to the employment of his departmental organization for the supervision of real relief works; he brought forward a scheme of works which were, he said, ready to be put in hand; but these, when examined, proved insufficient to give employment to more than one half the requisite number; and even for this instalment, Colonel Sankey repeated his unwillingness to employ any of his regular staff, or to divert them from the ordinary sanctioned works. Those works opened for relief purposes he proposed to start with only such additional assistance as the Government of India might be able to afford him from other provinces.

9. It thus became clear to me that to entrust Colonel Sankey with the execution of our famine policy was to ensure the failure of it. It will, in any circumstances, be a matter of great difficulty to withdraw people from the loose, undisciplined, idle life of relief kitchens (where they are fed gratuitously, and having got their meal may employ the rest of their time as they think best) to the strictly enforced tasks and regular discipline of properly supervised public works; and I felt that I could not justly, or with due regard to the interests of the public, rely upon the exertions of Colonel Sankey for the successful prosecution of a policy which he seemed unable to accept in principle and unwilling to adopt in practice. I therefore took advantage of a wish expressed by Sir Andrew Clarke for the temporary assistance of a deputy secretary during the pressure caused by famine work in the Central Office of the Department Public Works, and Colonel Sankey has been appointed to this duty. I have transferred Major Scott Mon-

crieff, R.E., to the temporary chief engineership of the Province, and I am quite satisfied to leave in his hands the execution of the Government policy.

No. 223. 10. The other arrangements which I have made for improving the famine administration of Mysore will be found in the letter (No. 821, of 8th September) from my Additional Secretary to the Chief Commissioner, which forms Enclosure No. 1 to this letter.

11. In addition to the main object of providing sufficient relief works on a proper system for the destitute poor I directed the Chief Commissioner's attention to the necessity of re-organising his relief kitchens, and maintaining them as enclosed camps under proper discipline and control. I ordered that those in Bangalore which are supported from Government funds, and which had quite out-grown the supervision of the volunteer committee by whom they had hitherto been administered, should now be placed under the responsible control of Government officers, and to assist the Chief Commissioner in carrying out these instructions I placed at his disposal the services of Mr. C. A. Elliott as Famine Commissioner, and of Mr. Wingate, of the Bombay Service, as Additional Secretary. Both these officers have been carefully selected on account of their special qualifications. In the lower grades I have strengthened the hands of the Chief Commissioner by appointing five military officers to assist in relief works, and by obtaining for him the services of the additional medical engineering staff entered on the margin.

34 medical subordinates in addition to the 14 previously sent.
2 executive engineers.
7 assistant engineers.
6 subordinates.

12. I have determined, after consulting Mr. Molesworth, as well as the most experienced local officers, to sanction the commencement of the earthwork of the Bangalore and Mysore Railway as a famine work. It is specially suitable for this purpose from its situation, the line of country through which it passes, and the facilities it affords for supervision. When considering the scheme for Mysore relief works I bore in mind the despatches regarding the Mysore Railway, which conveyed your Lordship's instructions that the Mysore savings should be spent on irrigation works rather than on the railway; and I only sanctioned the railway earthwork, when it had become quite clear to me that sufficient irrigation works were not ready in and near the Bangalore District, where 90,000 people are receiving relief. In estimating the necessity and probable effect of this measure it may be well to remember the character of the irrigation works in Central and Northern Mysore; they are all rain-fed tanks, and their waters fail in a season of drought, so that the Mysore Railway is perhaps a more effective work of famine-protection than the ordinary irrigation works of the country. The railway work will be begun in two principal sections, the length which will be put in hand in the first instance being 46 miles, 36 miles at the Bangalore end of the line, and 10 at the Mysore end. The intervening space will be put in hand, if necessary, as soon as some questions concerning its alignment have been re-considered.

13. I explained in my letter No. 33 of 5th September to your Lordship (para. 29) the circumstances under which the Government of India had consented to sanction a loan to the Mysore Government of 50 lakhs of rupees. Finding on my arrival at Bangalore that the Chief Commissioner was much pressed for funds, and that the balance of his invested surplus (9 lakhs) could only be sold out, at the present moment, at a sacrifice of from 8 to 10 per cent. discount, I sanctioned his drawing at once on the Madras treasury (which I had ascertained to be amply supplied) for a first instalment of 10 lakhs on account of the loan, postponing the sale of his invested surplus till a more favourable opportunity.

14. I could wish that the Mysore administration had been able to show some useful works for the many lakhs which have already gone in famine relief; but, as it is, I doubt not that but for this expenditure the loss of life, severe though it be, would have been indefinitely multiplied. I trust that the arrangements I have now made will be instrumental not only in saving many lives, but also in giving to the Mysore State some useful return for the vast sums which must still inevitably be expended by it in order to preserve the social and material sources of its future agricultural prosperity.

15. Before leaving Bangalore I determined, in consultation with my colleague, Sir A. Arbuthnot, to take into my own hands the administration of the Famine Department of the Government of India. This arrangement was proposed to me by Sir A. Arbuthnot as the natural corollary of the changes, which the Duke of Buckingham had adopted in the Madras administration; but the proposal commended itself for various reasons to my judgment. The paramount importance of famine administration at the present time has obliged me in practice to give to the details of it the closest and most constant personal supervision; it therefore seemed desirable on public grounds that I should openly and definitely acknowledge the responsibility I have virtually undertaken for the

success or failure of the policy I have laid down, and am endeavouring to enforce, in the conduct of relief operations. The arrangement tends also to a speedier disposal of business, and diminishes the frequeney of references.

16. Sir A. Arbuthnot on receiving my assent to the above-mentioned proposal, returned, at his own request, to Simla, where his presence was much needed in consequence of the illness of Sir J. Strachey, who had during Sir Alexander's absence taken charge of the Department of Revenue, Agriculture, and Commerce.

17. I left Bangalore on the evening of Sunday the 9th instant, and halted the following morning for a few hours at Coimbatore where, in company with the Collector, Mr. Wedderburn, I inspected the relief camps, work, and hospital. The condition of these institutions does not differ materially from those I had inspected at Bellary and Madras. There was a large proportion of people gratuitously maintained who were perfectly competent to labour, but for whom no work was found; the scale of diet was high, and for some classes unnecessarily luxurious. The rainfall of the district is always small (10 to 12 inches), and this year is no exception to the rule. The state of the crops, however, near the town of Coimbatore was fair, as irrigation was available, but in the interior of the district the early autumn crops have failed.

18. I continued my journey the same day to Coonoor, a European settlement on the edge of the Neilgherry hills; and on the 11th I proceeded to Ootacamund. At each of these places I was waited on by deputations who urged the wants of their respective municipalities, and both of them laid special stress on the necessity of a railway, on the Rigi mountain principle, to the Hills; for which a guarantee of 4 per cent. on the outlay was demanded. I informed the above-mentioned deputations that whenever the Madras Government are prepared to forward to the Supreme Government a practical scheme for the construction of such a railroad, it will receive my earnest consideration, but that in the meantime I was unable to give any definite expression to the view which might ultimately be taken of it by the Government of India. I received at Ootacamund a deputation from the coffee planters of the Wynad, whose address dealt with various subjects now under the consideration of the Madras Government, but who also made some special requests, which I may properly bring to your Lordship's notice. The most pressing of these was in regard to wanderers from Mysore seeking employment in the Wynad. The coffee estates in the Wynad habitually give employment to large numbers of labourers from Mysore; but this year in consequence of the famine the numbers thus seeking employment are infinitely in excess of the labour requirements of the estates. Numbers of these wanderers, too, arrive in a weak and emaciated condition which renders them utterly unfit for labour. Many of these, as soon as they are fit to travel, are deported back to Mysore by the Madras Government; but several of them, it is feared, die, and others linger on, fed either by private charity or in relief houses. The Planters' Association urged the expediency of starting relief works for these people in the shape of preparing and collecting metal for 80 miles of road, already made, and they offer to contribute in money and supervision. After personally consulting his Grace the Duke of Buckingham I came to the conclusion that their request was a reasonable one; and I determined to grant a sum of Rs. 30,000, to be recovered ultimately from the Mysore State, as a contribution to the estimated expenditure, on condition that the Madras Government and the Planters' Association provided the rest. I have left the details in the hands of the Madras Government, and my Secretary's communication (No. 846, dated the 16th instant) to that Government forms Enclosure No. 2 to this letter. No. 234.

19. The other requests submitted to me by the Wynad planters were for the unifaction of the coffee districts under one administrative head, and for the simplification of extradition between Mysore and British territory. The first question involves the transfer to the Madras Government of the Coorg District which is now administered by the Chief Commissioner of Mysore, and it cannot, therefore, be settled till it has been discussed with both authorities. The latter is a simpler matter; and, as there is no reason whatever why Mysore, while it is under British administration, should not be treated in respect to the service of the processes of our courts precisely as if it were British territory, I propose to communicate my wishes on this subject to the Chief Commissioner without delay.

20. I left Ootacamund early on the morning of the 16th September and reached Mysore late in the evening of the 17th, after inspecting some large cinchona and coffee plantations on my way thither. A considerable portion of the Madras territory through which I then passed is largely auriferous, and I was informed by an experienced expert, who has for two years been investigating its mineral resources, that neither in California nor in Australia, all parts of which he had previously visited, do there exist gold deposits

more capable of being remuneratively worked. This statement appears to me an important one, and I may perhaps take an early occasion of addressing to your Lordship a special communication on the subject of it. Meanwhile I may mention that silver is also found, as well as considerable quantities of small diamonds, in the Wynad.

21. The political incidents of my visit to Mysore will be recorded in a separate letter, but in this I desire to report what I learnt of the condition of Coorg in relation to the famine-stricken immigrants from Mysore.

22. The coffee planters of Coorg, like those of the Wynad, are mainly dependent on Mysore for their labour supply, and, as in the Wynad, multitudes of immigrants unable to find work, or unfit to work, are to be found in Coorg in a state of extreme destitution, and the mortality among them has been very grievous indeed. A memorial purporting to come from the Planters' Association at Coorg was submitted to my Private Secretary for presentation to me, but, as it was not presented through the local authorities, and in fact had been refused by them, I declined to accept it formally as a memorial, but expressed my willingness to receive the two gentlemen who had come as a deputation to present it, and to hear all they had to urge.

23. These two* gentlemen accordingly waited on me on the 18th, the Chief Commissioner of Mysore and the Superintendent of Coorg being present at the interview.

* Rev. A. Fennel. Mr. Hunt.

They dwelt specially in the conversation that ensued on the great mortality among the wanderers from Mysore, a mortality which had they asserted been greatly underestimated by the local authorities; they complained that no relief works had been established, and said that the planters were through poverty unable to support the starving wanderers. Many of their assertions were traversed by the local officers, but it was clear that, as a matter of fact, relief works had not been established in Coorg, and that there was urgent necessity for them. I learnt that while roads were numerous in the province a considerable portion of them require to be metalled, and that one or two good roads, the need of which is admitted, still remain to be made. Finally I offered to grant either from Mysore or from imperial revenues a sum of Rs. 50,000 if the planters would consent to contribute one third of that amount either in money or supervision. Finding however that the two gentlemen forming the deputation had no authority to accept such an offer, and that they did not actually represent the whole body of planters, I undertook to depute either the Famine Commissioner, Mr. Elliott, or Major Scott Moncrieff to visit Mercara, and to ascertain personally what the actual wishes of the planters are, and what may best be done with their co-operation in the way of starting relief works.

24. I am greatly pleased to be able to inform your Lordship that, on returning to Bangalore (which I reached last night), I found most satisfactory evidence of the beneficial results of the system of relief operations, which I had established before leaving this town on the 9th current. These results are recorded in a most interesting memorandum by Mr. Elliott, which forms Enclosure No. 3 to the present letter. Your Lordship will perceive from this very suggestive paper that uniform rates of wage on relief works and rates of food ration in relief camps have been laid down; that orders have issued for closing superfluous and unsupervised relief kitchens, the really necessitous recipients of relief being brought into well supervised relief camps; that petty relief works under civil officers are being wound up and closed; that in and around Bangalore town one relief kitchen has been closed, while from the other kitchens persons capable of labour are being drafted to relief works, that already 5,000 have been so drafted and are doing good work on the railway bank instead of being fed in idleness at the kitchens; that the relief recipients who cannot labour are being kept inside the camps and tended until they recover, in-door being thus substituted for out-door gratuitous relief; that relief employment of a kind suitable to destitute artizans and higher caste people is being arranged in Bangalore town, and that partly in consequence of these measures, and partly in consequence of the favourable change in the season the number of inmates in the Bangalore kitchens has fallen from 30,733 to 13,301. Great care is taken by the officers in charge to treat specially persons who come on the works in an enfeebled state of body.

Nos. 235–6.

25. On the 16th I despatched to your Lordship a telegram reporting on the state and prospects of the season. On the 22nd I shall send from Poona a further telegraphic report. I am glad to say that over the whole of Southern India prospects have continued to improve; rain has fallen everywhere except in parts of the Madura District and a small tract round Poona. The numbers receiving relief in the Madras Districts have begun to decrease by reason of people going away to their fields, but it is not yet certain that the reduction in numbers will be permanent. Prices are somewhat cheaper both in Bombay and Madras; but prices in the interior have fallen but little

and are still very dear; and the pressure on the poorer classes is still very severe. Even under the most favourable circumstances the pressure cannot greatly abate until the middle of November, by which time the prospects of the great winter food crops will be ascertained. The condition of the North-West Provinces and Oudh is still very critical, no sufficient rain has fallen in the Agra, Rohilkund, or Meerut Division, or over a great part of Oudh. And there is still cause for much anxiety abont the States of Gwalior, Meywar, and of North-eastern Rajputana. The chiefships of Kattywar and the Baroda country are happily out of danger for the present.

I have, &c.
(Signed) LYTTON.

No. 2,810, dated Fort St. George, the 20th September 1877.

From J. H. GARSTIN, Esq., Additional Secretary to Government of Madras, Revenue Department, to S. C. BAYLEY, Esq., C.S.I., Additional Secretary to the Government of India.

In continuation of my letter of the 3rd September 1877, No. 2,630-B., I am directed to forward, for the information of his Excellency the Governor-General in Council, the accompanying copies of a letter from the Secretary to the General Committee of the Madras Famine Relief Fund, and its enclosures, setting forth the objects on which, and the agency through which, it is proposed to expend the funds raised by public subscription in aid of sufferers by the present famine. No. 210.

2. It will be seen from page 4 of Enclosure A. to Mr. Digby's letter that the General Committee propose to expend the money placed at their disposal in the following manner:—

(1.) In aiding by contributions local committees for the relief of the necessitous poor not reached by Government.
(2.) In giving contributions towards the taking care of destitute children and the like.
(3.) In providing clothes for destitute women and children.
(4.) In making allotments towards any special object which seem to come within the scope and ability of the fund.

And as further information is received, the Committee hope the objects on which they propose to spend the money will be more specifically defined.

(5.) The agency on which the Committee largely rely is that of missionaries, but they had apparently hoped that the officers of Government would have greatly assisted them also, and they earnestly beg that they may be allowed to do so.
(6.) On this point I am directed to solicit the early orders of his Excellency the Governor-General in Council.

No. 241.

Encl. in No. 253.

EXTRACT from the Proceedings of the Government of Madras, Revenue Department, No. 2,810, dated 20th September 1877.

Read the following paper:—

From W. DIGBY, Esq., Honorary Secretary, General Famine Relief Fund, to J. H. GARSTIN, Esq., Additional Secretary to Government, Revenue Department, Fort St. George.

In reply to your letter of 18th instant, in continuation of office docket No. 2,630 A., dated 3rd September instant, and the reply of the General Famine Relief Committee thereto, I am instructed by the Committee to submit the accompanying papers, marked A.,* which indicates the objects on which the Committee propose the relief funds should be at present expended.

As information which the Committee have taken active steps to procure is received, their operations will be more definitely directed and widely extended; and at the same time will be capable of more distinct definition; attention is particularly drawn to the resolution recorded at page 4 of Enclosure A.

2. The allotments that have already been made in pursuance of the abovesaid objects are stated at page 7 of Enclosure A. The Committee regret that much more has not

* These were not forwarded from India.

been done, but difficulties over which they had no control have impeded their operations; these will be alluded to farther on.

3. The circulars already issued by the Committee, requesting collectors and other influential officers to aid by forming local committees, have elicited little response. The General Committee have accordingly resolved to send deputations in the persons of the Rev. Dr. Strachan and F. Rowlandson, Esq., to assist present efforts and arrange for further operations. A copy of the instructions given these gentlemen (who are proceeding forthwith to the distressed districts), marked B., herewith enclosed, will explain the Committee's intentions in employing them. It may be observed that missionary agency and co-operation is very largely relied upon.

4. Special difficulties in promptly utilizing the Famine Relief Funds have been alluded to above. These have arisen from the impression produced by what appeared in the public prints with respect to the suspension of public meetings, and by the official correspondence recorded in the "Gazette of India Extraordinary," dated 31st August, and the action that was taken thereon. It is obvious that officials generally have felt themselves debarred from co-operating in the objects of the Committee.

5. I am therefore to express the earnest hope of the Committee that Government will be pleased to inform its officers that it is the desire of Government that public servants of all grades should give all the assistance they can render, without detriment to their official duties, to the formation of local committees, and generally to promote the objects which the Famine Relief Committee, and subscribers to the Famine Relief Fund, have in view. The Committee respectfully suggest that a Gazette announcement to this effect be published forthwith.

B.

INSTRUCTIONS.

To organise, as far as possible, local committees in different parts of the various distressed districts to be in direct communication with the General Relief Committee at Madras for the distribution of Famine Funds.

2. Also to organise special agencies where local committees cannot be formed or sub-agencies are likely to be more efficient.

3. The fund is designed to relieve the necessitous poor whom Government cannot, or do not, reach, and care is necessary to avoid even indirect interference with Government operations.

4. Under the above designation may be included those who are not ordinarily reckoned "poor," but who are rendered dependent by the present distress.

5. While Government operations have for their object the salvation of life, the funds may be legitimately applied to the mitigation of intense suffering.

6. Whatever agency may be employed, proceedings to be reported and accounts rendered by that agency to the General Committee.

7. The General Committee will be prepared to make pecuniary provision, if necessary (within reasonable limits), for preparing local accounts.

8. It is important to impress upon those who are invited to give their services that the object is not to collect funds, but to secure promptitude, economy, and efficiency in dispensing the funds placed at the General Committee's disposal.

9. The deputations to keep the General Committee informed of the local arrangements made.

10. These points are noticed to indicate generally the Committee's wishes, but they leave the deputations a wide discretion and rely on their making the best arrangements which the circumstances in each locality admit of within the scope of the funds, and the general principles above enunciated.

11. The Committee look to the deputations for practical suggestions for the more efficient and prompt distribution of the funds, and the object to which they, as the local committee, desire to apply them.

No. 242.

Telegram, dated Poonah, 22nd September 1877.

From VICEROY to SECRETARY OF STATE.

Referring to Simla financial telegram of 14th, I have now following figures regarding famine expenditure in Madras:—

Actuals to end of August 409 lacs; estimate for September 60 lacs; October to March 150 lacs; total 619 lacs. Short revenue receipts to end of August 200 lacs;

estimate of further loss not received. I take additional 80 lacs; total for Madras 900 lacs.

Bombay total estimate 200 lacs. Mysore and Hyderabad expenditure and deficient revenue 100 lacs a-piece. Grand total 11 crores for British India and two crores for feudatories.

Madras estimate will be largely exceeded if north-east monsoon fails, or if further delay occurs in executing orders of 31st August; delay of three weeks allowed by Madras has caused much unnecessary expenditure.

No. 243.

Telegram, dated Poonah, 22nd September 1877.

From VICEROY to SECRETARY OF STATE.

Before leaving Madras Presidency I had interview with the Duke, and approved draft instructions which he will issue to give effect to policy agreed on between us. Delay, however, has been most detrimental both to population and finances. During past fortnight good rain has everywhere put people in heart and provided work in fields, affording admirable opportunity for weeding relief camps, but three weeks were wasted before issuing instructions. The Duke's orders provide for drafting destitute persons who are capable of labour on to works. Every precaution has been taken to prevent loss of life in effecting this, and to prevent overtasking feeble persons on works. Effect has already been given to similar orders, dated one week later, in Mysore, with admirable results.

Separate telegram on Mysore affairs despatched to-day. Prospects in both Madras and Mysore much improved.

No. 244.

Telegram, dated 22nd September 1877.

From SECRETARY OF STATE to GOVERNOR OF MADRAS.

Following for your information.

A merchant reports Native merchants have arranged for delivery of rice at Tuticorin, Madras, and Negapatam before 15th October or after 30th November to prevent recurrence of loss from rains, thus leaving ports in question without supplies for six weeks. He suggests Government should pay compensation at market value for rice destroyed, upon importers proving that warehouse accommodation is insufficient.

No. 245.

Telegram, dated 22nd September 1877.

From VICEROY, Poona, to SECRETARY OF STATE.

My letter 20th September gives your Lordship full details of my orders regarding famine administration in Mysore; immediate effect given to those orders, with following results:—

Uniform rates of wage on relief works and uniform scales of rations for relief camps have been laid down; relief kitchens are being closed or converted into organised and disciplined camps. In Bangalore 5,000 persons drafted from gratuitous relief to work on railways; in Bangalore town, numbers in relief kitchens have fallen from 30,000 to 13,000. Neighbouring district Kolar, in three relief kitchens, numbers fallen from 6,500 to 1,450; of these, 1,600 gone to works, rest to fields, because recent rain renders cultivation possible. Great care taken to prevent loss of life in carrying out these steps, feeble persons treated specially; overtasking avoided.

No. 246.

No. 36 of 1877.

From GOVERNOR-GENERAL, Department of Revenue, Agriculture, and Commerce, Famine, to the SECRETARY OF STATE FOR INDIA.

Governor-General's Camp, Poona,
22nd September 1877.

In paragraph 3 of your Lordship's despatch, No. 62, dated 9th August, is expressed approval of the orders issued by us, enjoining publicity in rare cases, where district officers find it necessary to purchase grain for the supply of any landlocked foodless tract. And the same paragraph counsels vigilance in watching the operation of our orders restricting the purchase of grain.

The words of this paragraph were telegraphed to me by your Lordship on the 10th August and we submitted by telegraph the reply given in the margin. Since the despatch of that telegram my minute, dated the 12th August, has given (paragraph 18) a general statement of the principles which should guide the Government of India when any question arises of importing grain on Government account. That paragraph gives expression to views in which all my colleagues concur; it runs thus:—

"18. When harvests fail in an Indian province, considerable old stocks of food are left in the hands of the landholding and mercantile classes; but these stocks are often held back from sale. Markets have, therefore, to be supplied with grain imported from a distance. I consider that, except under most peculiar and exceptional circumstances, the function of supplying the demand for imported grain can be best, and, indeed, alone discharged by private trade, and that private trade should be left to do its work in this respect with as little interference from Government as practicable. The Government and its officers should, however, give all possible information, and should give, where necessary, additional facilities to private trade. Early and correct information as to prices and means of carriage should be published. The carrying power of railways and canals leading into the famine tracts should be reinforced, tolls and other restraints on free intercommunication should be removed; roads into the interior should be improved and kept in order; rates of railway or other carriage might be reduced, and in cases of extreme necessity temporary railways or tramways might be laid from main railway lines into populous tracts whereto means of communication failed, or were insufficient. These will, indeed, be the most useful of all works if we have to meet another year of famine. Grain required by Government for alms to the helpless poor, or for labourers on relief works, or for any tract where supplies were deficient, should be obtained through the trade, at or near the local markets, and should not be imported from a distance by Government itself. Experience has shown that Government operations in the grain market disorganise and paralyse private trade to an extent out of all proportion to the operations themselves. Moreover, where the carrying power of a country by rail, canal, or cart is limited, and is fully utilised, Government grain importations must necessarily displace a corresponding quantity of privately imported grain. My view, therefore, is that under no circumstances which are likely to occur ought the Government itself to engage in the business of importing grain. Free and abundant private trade cannot co-exist with Government importation. Absolute non-interference with the operations of private commercial enterprise must be the foundation of our present famine policy. Trade towards the famine country from Bengal and Northern and Central India is at present active, and there is every reason to believe that the Indian sources of supply are still considerable. But even if these should fail, the interference of the Government would be a ruinous error. It could only have the effect of decreasing the total amount of food available, and thus aggravating the catastrophe. I am confident that more food, whether from abroad or elsewhere, will

Telegram dated 14th August 1877.

Your cypher message of 10th. We do not fully understand the object of it.

Our instructions about publication referred only to local purchases from trade. We decided at outset that private trade would import grain more efficiently than Government, and we have lately re-asserted publicly our determination not to interfere.

Do you intend to say that you think it probable that Government ought to make large importations of grain?

We can foresee no circumstances under which such Government interference with private trade would not be a ruinous mistake. Trade towards famine country from Bengal, Central and Northern India is most active, and we see no reason to doubt that the necessary supplies will be furnished. We are convinced that far more food from abroad or elsewhere will reach Madras if we leave private enterprise to itself, and we should paralyse it by Government competition. Free and abundant private trade cannot co-exist with Government importations. Even if we anticipated failure in source of supply, we should still believe that Government interference would only decrease the total amount of food available and aggravate the catastrophe.

If Her Majesty's Government should think differently, we request that we may receive distinct intimation of the fact. We cannot take upon ourselves any responsibility for a course which would in our opinion be fatal. Nor can we usefully give calculations. Local estimates say that from 4 to 5,000 tons of grain must be imported daily: grain actually ready for export on Great Indian Peninsula Railway reported to be 120,000 tons and stocks in Bengal, Central and Northern India believed to be large.

reach Madras if we leave private enterprise to itself, than if we paralyse it by Government competition. These remarks refer to the famine we are now dealing with. I do not, of course, intend to assert that famines cannot occur in which Government interference for the importation of food may not be absolutely necessary. Indeed, the Orissa Famine was one of those cases."

2. In addition to what has been urged in the telegram and extract quoted above I would add a short further explanation of the principles which guide the Government of India, and of the position we take when we decline, under present circumstances, to purchase and import grain for the supply of the famine districts.

3. If prices do not greatly rise after a failure of harvest, and if imports are inactive, then the natural conclusion would be that there must be considerable old stocks in the country. These are of course difficult, if not impossible, to trace. When prices in a province approach famine rates, then we presume that if surplus food exists in other provinces, and if communication by water or railway be fairly good, private traders will carry that food to the famine districts more cheaply, more promptly, and more directly than Government could possibly do. If there is one branch of internal trade which Indian traders fully understand, it is the grain trade; they know what grain is wanted, whence it can be bought most cheaply, and where the need is sorest. Among the many contrasts between the system of Government importations adopted in 1874 and the private trade system of 1877, it may be mentioned that the Government importations in 1874 consisted, with some small exceptions, of rice, mostly of Burmah rice;—while private trade has in 1877 brought under contribution every province and every food staple in India;—wheat, barley, grain, two kinds of millet (jowar and bajra), and pulses have come from scores of railway stations in the Punjab, the North-western Provinces and Behar, from the River Chenab on the north to the Soane on the south; rice, pulses, and marwa millet (the ragi of Madras) have come from Bengal and Orissa; millets and pulses have come from Guzerat, Berar, the Central Provinces, and even from Rajputana. Burmah has sent a small quantity of rice; but Burmah rice generally rules dearer than the common varieties of Bengal rice, and so traders have drawn but little from that source of supply, so long as Bengal stocks were large.

4. Not only could private traders do the work of supplying grain to Southern India better than Government could do it; but it was obvious that the trade, as a whole, could make much larger importations than Government could effect by itself. If once the Government were to begin importing grain, the first rumour of any impending intrusion of Government action into the field of private enterprise would paralyse the confidence of the whole trade, would send up prices at the source of supply, would keep up prices in the famine country below the natural trade level, and would thus, indirectly as well as directly, check imports. The Government having once entered on such an undertaking there would be no half-way stage at which we could arrest our ruinous course. The Government would soon find itself responsible for providing grain enough for every village, not merely in Madras and Mysore, but also in tracts of Northern India to which famine might spread. Any partial substitution of Government agency for private trade was impossible. We had to choose between either leaving private trade alone or taking upon ourselves the whole of its natural work. If we had adopted the latter alternative, it would probably have cost the Government more to lay down one ton of grain than it would have cost the trade to lay down two. We had before us the financial results of the Bengal famine of 1874, where the cost* of buying and transporting Government grain came to 6,474,000*l.* out of a gross expenditure of 9,177,000*l.*, or to 4,259,000*l.* out of a net cost of 6,402,000*l.* The famine of 1877 has been severer, and has extended over a far larger area than the famine of 1874; if we had taken the grain supply into our own hands, the cost of famine relief in 1876–78, alarmingly great as it is, must have been indefinitely increased. If Government had undertaken to import grain for the supply of Southern India, we should, even if we had succeeded in our undertaking—which is doubtful—have made a stride, of which the magnitude can only be conjectured, on the road to national bankruptcy.

* NOTE.—These figures are taken from the approximate statement of the Bengal famine charges given in Part V. of Sir Richard Temple's final Report, submitted at the close of the Bengal famine of 1874.

5. The financial argument indeed, in the present condition of the Indian treasury, carried its due weight in deciding us to adopt what, on other grounds, seemed to us the wiser alternative. Still, apart from financial considerations, we were convinced that the safety of the afflicted populations would be best secured by the adoption of the course we took. It must, I fear, be admitted that Government cannot avert all death from famine when the drought is so severe and affects so large an area as in the present season has been the case. And I am convinced that under present circumstances there

would have been more misery, more death, and a less constant supply of food in the districts of Southern India if Government had undertaken to import grain on a large scale than have happened under the policy which the Government of India, after full consideration and with your Lordship's approval, have adopted.

6. These were some of the considerations which influenced our decision when the question of importing grain arose in the autumn of 1876. When the same question came before us in July 1877, such considerations gained renewed force from the experience of the preceding eight months. The proposal to import grain largely by Government agency had been put forward during the autumn of 1876, both at Bombay and Madras. The Governor, Sir Philip Wodehouse, fully and specifically discussed the question with his colleagues; and they decided not to buy grain, but to trust entirely to private trade for the supply of the country. This decision, cordially approved as it was by the Government of India, was at once made public. Grain was forthwith consigned to the Deccan by private traders in enormous quantities; insomuch that the Great Indian Peninsula Railway was blocked with grain early in November. By strenuous effort the block was gradually cleared, and the supply by rail and seaboard to the famine districts of Bombay has since November sufficed for the needs of the country. Prices have indeed been very dear; but, though some parts of the Bombay famine tract drew their supplies from railway stations or seaports 130 miles off, still there has always been enough grain in the markets.

7. The Madras Government, about the same time as the Bombay Government considered the question, decided to buy 30,000 tons of grain as a beginning. This decision was not known to the Government of India until the transaction was concluded and the bill had to be paid. The purchases were effected with just so much secrecy as served to alarm the trade; and in Calcutta, the chief source of the Madras rice supply, dealers were, until the middle of February, possessed with a fear that further large purchases by Government were imminent. Interference with the grain market was stopped by the Government of India; and, whatever may have been the views of the Madras Government at the time, I believe the Governor of Madras is now, and has for some time been of opinion that further Government purchases of grain were inexpedient. The Madras Government made their purchases in October, and as no further action of the kind was taken the stream of private trade set in during December, and has continued ever since. Private trade has sent by sea to Madras, or has consigned from marts in Northern India, more grain than the railways and other means of transport could carry into the interior. During the last two months (August and September) since the failure of the summer rains and the occurrence of a second famine, private trade has carried into the districts of Madras and Mysore a daily average of 4,000 to 5,000 tons of food. This great result must be largely due to the assurances, published by the Governments of India and Madras in June last, to the effect that Government would not interfere in the grain trade. These were the assurances to which we referred in our telegram quoted in the first paragraph of the present letter.

8. The grain bought by the Madras Government is being kept in reserve, and so its presence does not operate to keep prices low, and thereby to check importations. I am aware that the Members of the Madras Government, though they do not now advocate Government purchases, are strongly of opinion that their purchase of 30,000 tons, and their placing the greater part of that supply in depôts up the country, paved the way for private trade, and encouraged its steady flow. It is true that private trade increased after the Government purchases had been made; but trade did not acquire its full stream till August 1877, and it did not flow freely at all till December 1876, that is to say, some weeks after the Government transactions had been concluded; whereas the Bombay importations set in with full tide early in November. I do not say that the purchase of 30,000 tons permanently affected the flow of private trade in the face of the enormous demands of the Madras and Mysore country; but I fear the transaction must (for the time) have checked private importations; it is certain that the Government grain occupied railway waggons to the exclusion of merchants' consignments, and I can see no practical or theoretical ground for the contention that the Government purchases galvanised private trade into active exertion.

9. Though the considerations stated in the foregoing paragraphs guided our unanimous decision on the occasions when the question of purchasing grain came before us during the present famine, yet we must not be understood to say that occasion never did, and never can arise, when Government purchases of grain might be necessary. The Orissa famine of 1866 may have been such a case. Orissa was a small province; it had then few transactions with other parts of India; its marts were not frequented by merchants from other provinces; there were practically no land communications between

Orissa and other provinces, save for pilgrims; and communication by sea was at that time cut off during the most critical season of the year. The famine of 1866 in Orissa may have been a case in which Government might in some way have effected or promoted grain importations. In the famine of 1874 the Behar famine tract, with its population of 19 millions, was divided by the Ganges into nearly equal parts; one part, south of the Ganges, possessed two railways, metalled and bridged roads, and large trading populations; the other part, north of the Ganges, had no railways, not a single metalled and bridged road, and comparatively few traders. Thus the Government was able to occupy North Behar with its agency and with its grain imported from the east; while the wants of South Behar were sufficiently met by private trade with supplies from the west. The circumstances and characteristics of the two tracts were so different that Government trade in North Behar did not interfere with private trade in South Behar; and furthermore all the Government grain came by railway or river from the east, while the railway from the west was left exclusively for private traders. The famine tracts of Southern India, on the other hand, are not landlocked like Orissa; nor are their seaports closed for months together as were the Orissa roadsteads. There are several railway lines in the south of India; a number of seaports are available on the east and west coasts; Madras possesses a better system of metalled and bridged roads than any part of India; much of the Bombay and Mysore country is also well supplied with roads. There was thus every facility for the free action of private trade. Nor was there any section of the famine country so separate and distinct from the rest that Government agency could have imported grain thither, while private trade supplied the remainder of the country without let or hindrance.

10. I have laid before your Lordship thus at length an expression of my views on the subject of this letter, because I think its importance is very great. If your Lordship were able to concur generally in the views now expressed, the hands of the Government of India would be greatly strengthened when hereafter the problem of supplying food to a famine-stricken province again arises.

11. In any case the traders of Southern and Northern India will have learnt an important lesson of self-help. Private trade will be more prompt than heretofore to supply the wants of provinces where scarcity of food may prevail. I anticipate also that, after the brisk and lucrative trade of this year, traffic on the Madras guaranteed railways will never fall again to the low ebb of former years. And I hope that the opening of the Dhond and Munmar Railway will do much to produce free interchange of commodities between the north and the south of India, which now for the first time have traded on a large scale with each other.

I have, &c.
(Signed) LYTTON.

No. 247.

Encl. in No. 253.

Telegram, dated 22nd September 1877.

From the GOVERNOR, Madras, to VICEROY.

Clear line. Charitable relief committees to remove misapprehension on part of officers which is doing harm, propose to issue following notification:—

"It is the desire of Government that public servants of all grades should give all the "assistance they can render, without detriment to their official duties, to the formation "of local committees, and generally to promote the objects which the famine relief "committee and subscribers to the famine relief fund have in view." Oblige by acknowledgment.

No. 248.

Telegram, dated Guneshkhind, 23rd September 1877.

From VICEROY to SECRETARY OF STATE.

Season telegram, 15th to 23rd. Madras, good general rain in all districts, except parts of Coimbatore and small part of Salem, Tinnevelly, Madura; tanks filling, crops reviving; petty harvests being reaped, moderate outturn, prices slightly cheaper in some districts, elsewhere stationary.

Numbers on works, 698,476, gratuitous, 160,501. Grain supply maintained. Bengal despatches to Madras 3,800 tons daily; Peninsula Railway delivers to Madras 960 tons daily; railway working better.

Bombay, good rain, prospects improving everywhere, except large parts of Khandesh, Nassik, Ahmednagar; prices slightly falling; autumn crops small in area, but thriving; winter crop sowings progressing. Number on works, 242,860; gratuitous, 160,380. Pressure of prices and scarcity still severe.

Mysore, good rain over province, 5 to 8 inches during month of September, tanks filled, crop prospects improved greatly.

North-west Provinces, little rain anywhere; hot winds. Lieutenant-Governor telegraphed yesterday, unirrigated autumn crop ruined in Meerut, Rohilcund, Agra, Lucknow, Seetapore divisions; condition critical in Rai Bareilly, and part of Benares division, remainder barely half average yield expected, irrigated autumn crop small, fodder scarce, spring crop sowings in northern divisions possible if rain comes in 20 days. Price of wheat, 20 pounds per rupee. West of Allahabad relief works opening in Rohilcund and Agra divisions.

Punjab, only partial showers. Lieutenant-Governor telegraphed yesterday, autumn crop almost lost, save on irrigated land which are large, spring crop sowings possible till December, if yield good; distress from loss of autumn crop very large. Prices remain high in Indore. No rain in Central India States; pressure in Gwalior increasing greatly, and continuous emigration thence. Rajputana, few light showers; much failure of crops and pasture in north and east. In Ajmere prices very dear. Hyderabad, good rain everywhere, prospects much improved. Bengal, Assam, Burmah, Central Provinces, prospects generally favourable.

No. 249.

Telegram, dated 24th September 1877.

From Secretary of State to Viceroy.

Yours 22nd.

Do figures given include loss of revenue and famine expenditure in 1876–77 as well as in current year, thus representing total cost of famine?

Encl. in No. 271.

No. 250.

Extract from the Proceedings of the Government of Madras, Revenue Department, No. 2,847, dated 24th September 1877.

Revised Instructions for the administration of Famine Relief in the Madras Presidency.

His Grace the Governor in Council is pleased to issue the following instructions for the guidance of all officers concerned in the administration of famine relief:—

1. Under the successive orders of the Madras Government relief has been sanctioned to famine-stricken people—

(1st) in the form of wages for work done;

(2nd) gratuitously in camps, relief-houses, and villages to those unable to labour or temporarily incapacitated for work.

2. It has been determined that both relief by employment on works for the strong and gratuitous relief to the infirm shall be continued.

3. To enable employment on large public works to be more extensively and systematically carried on, the Government of India have agreed to lend a large additional force to the Public Works Department, and to enable collectors to duly watch the distribution of gratuitous relief, the Government of India have placed at the disposal of this Government a large number of European officers to supervise relief operations in the several taluks of the distressed districts.

4. In order that the wishes and instructions of his Grace the Governor in Council may be clearly understood, the conditions under which relief has been sanctioned and is to be continued are subjoined.

5. Collectors and civil officers are responsible for sending to relief works or for providing gratuitous relief, under the orders now issued, to all who have not adequate means of supporting life. The Public Works Department officers are responsible for providing a sufficiency of work in every distressed district for the employment of the persons who may be sent to them by the civil officers, and shall employ thereon all those so sent.

Relief Works.

6. The intention of his Grace the Governor in Council is that all relief shall be eventually given through relief works, closed camps, and village relief.

7. Relief works affording to indigent persons capable of some labour the opportunity of earning money with which to buy food constitute the backbone of the relief system.

8. These works are of two classes—

(*a.*) Those under the supervision of the Public Works Department or other professional supervision which may for the sake of brevity be called professional agency works;

Professional agency works.

(*b.*) Those not requiring to any great extent professional supervision, and which may for the sake of brevity be called civil agency works. These works will be under the superintendence of the Public Works [redacted] of the Civil Department according to circumstances.

Civil agency works.

9. Every district engineer will prepare a list of works in his district which may be made available as relief works. These lists should show approximately—

(*a.*) the probable cost of each work;

(*b.*) roughly the proportion of the total cost required for earthwork;

(*c.*) the number of persons who can be employed upon each, and for how long.

10. These lists will be submitted to Government through the chief engineer or the chief engineer for irrigation. His Grace the Governor in Council will sanction them provisionally either wholly or in part, and the works thus provisionally sanctioned may be taken up from time to time as need for affording relief arises, except large works, the commencement of which will be decided by his Grace the Governor in Council. The opinion of the collector should decide which of the works in the list so sanctioned shall be first proceeded with. Estimates to cover such works as may be approved by Government in these lists should be prepared and submitted for final sanction as soon as possible, but the commencement of no such work shall be delayed, where its commencement is necessary, for the reason that a plan and estimate have not been sanctioned. Lists of works which have been commenced, specifying the approximate number of persons who can be received thereon, will be furnished by the district engineer from time to time to the collector, who will send copies to every revenue, police, and famine officer.

11. The very widest publicity of the locality of relief works must be given; the responsibility with regard to this point rests upon the collectors and their assistants.

Publicity of relief works.

12. The distinction between budgeted works and famine relief works is abolished in the following districts:—

Nellore.	Chingleput.	Madura.
Cuddapah.	North Arcot.	Tinnevelly.
Bellary.	South Arcot.	Coimbatore.
Kurnool.	Trichinopoly.	Salem.

And all works whatever therein (Imperial, provincial, or local, excepting only buildings) shall be considered famine relief works, and shall be carried out under all the rules, tests, and restrictions applicable to famine relief works. Any relief works which may be necessary in any of the remaining districts will be carried out as special works under special arrangements.

13. All establishments at present employed under civil officers in supervision of, or in accounting in respect of, relief works should be transferred, with the charge of the several works, to the Department Public Works as soon as the district engineer is in a position to take them over.

14. All persons capable of labour, who are in fair health and condition, must be drafted to professional agency works, and with them must also be drafted such members of their families as are willing to accompany them.

People to be drafted to professional agency works.

15. Weaker people, who are nevertheless capable of some work, should be employed upon civil agency works, but should, as they recover strength, be drafted to professional agency works, the object being to employ the largest possible number of people to whom it may be necessary to afford relief upon works of this latter description.

People to be employed upon civil agency works.

16. Work is to be exacted and musters taken for six days in every week; payment for the seventh day is, however, included in the following scales of wages.

Off-day.

17. The rates of pay to persons who perform their allotted tasks shall be for each working day:—

Upon Professional Agency Works.

		Rates of Pay. Rs.	A.	P.
For a man the value of 1 lb. of grain - - -	Plus	0	1	6
For a woman ,, ,, - - -	,,	0	1	0
For a child of 7 and upwards, ½ lb. of grain - -	,,	0	0	9

Upon Civil Agency Works.

For a man the value of 1 lb. of grain - - -	,,	0	1	0
For a woman ,, ,, - - -	,,	0	0	9
For a child of 7 and upwards, ½ lb. of grain - -	,,	0	0	6

18. By grain is meant grain of medium quality and of the description in ordinary use at the time of payment among the labourers on the works. The price to be taken at the re[illegible]e grain ruling at the cusba of the taluk on the previous week.

Grain.

19. When work is interrupted by rain to such an extent that the tasks ordered cannot be exacted, professional agency labourers should be paid civil agency rates and civil agency labourers should be paid the civil agency rate, less 2 pies all round.

Interruption from rain.

20. No work is to be taken from children under seven years of age, nor are such children to be allowed to remain among the labourers while they are working. Such children, belonging to parents or natural guardians employed upon works, must be mustered at a convenient spot at some little distance from where the work is in progress, and placed under the charge of a sufficient number of the women drafted to the works who will be employed as nurses. At large works, and where working camps are established, kitchens must be provided, and these children supplied with rations of cooked food not exceeding ½ a lb. of grain per diem. The nurses must receive their full ration of cooked food, *i.e.*, 1 lb. grain plus the money portion of the wage. On small works officers in charge must make suitable arrangements for effecting the same purpose.

Children under 7.

21. To prevent relief works becoming unduly attractive, three tests are necessary, viz., 1st, *primâ facie* evidence that the individual really requires employment upon a relief work ; 2nd, distance of the work from the home of the labourer ; and, 3rd, tasks.

Tests.

22. The task to be exacted upon professional agency works is 75 per cent. of what the individual would be able to perform if he worked to the full extent of his ability ; upon civil agency works 50 per cent. of what the individual would be able to perform if he worked to the full extent of his ability.

Tasks.

23. In settling and exacting these tasks it will be necessary for the officers concerned to use great judgment, discretion, and firmness so as to avoid oppression of the people upon the one hand or encouragement to idleness and laxity on the other.

24. It may probably be expedient in many cases to take, as the unit for tasking, a gang composed of all the members of one family who are on the work, or a portion of the inhabitants of any one village ; and it is the wish of his Grace the Governor in Council that, as far as possible, consistently with economy and discipline on the works, members of the same family should not be separated in their employment. But these points of detail, varying as they will with the size and nature of the work and other circumstances, must be left to the discretion of the executive officers acting under the general orders of Government.

25. The employment of contractors directly or indirectly is absolutely prohibited on relief works.

26. Masonry work requiring skilled labour, such as culverts, tunnels, sluices, calingulahs of tanks, and similar works found essential to the completion of relief works, may be performed by contract in the ordinary way. In selecting works to be placed on the list, Public Works officers will bear in mind that the beneficial effect of the work, as a relief measure, is the principal object ; therefore works, of which a large proportion of the estimate is for masonry or compensation for land, should generally be at once laid aside as unsuitable.

27. The distance test is necessarily to a great extent enforced by concentrating relief labour upon a comparatively small number of large works, and until further instructions this test may be deemed to be complied with when the labourer goes to professional agency works and performs the tasks exacted there.

Distance.

28. The question whether persons are fitting objects for employment upon relief works must be decided by the civil officers, who will refuse employment to all persons except those who are destitute.

Persons not destitute.

29. The civil officers will despatch such applicants for employment as they consider eligible with written duplicate nominal rolls, and the production of such rolls will be the authority to the Public Works Department officers to employ the persons named in them. The rolls shall specify the name and father's name and village of each person, and shall be dated and shall bear the signature of the despatching officer.

Rolls for employment.

30. Where camps are necessary on works these camps will be under the charge of the Public Works officer directing the work, who will make arrangements and enforce rules for strict conservancy and sanitary measures, and select suitable persons from the relief coolies for the various duties of scavenging, water drawing, &c.

Sanitary precautions.

31. In transferring people to works at a distance exceeding 10 miles, it will be necessary under some circumstances to pay them batta. The amount and nature of this batta will vary with local circumstances, but it should never exceed 16 oz. of uncooked grain for each day's march.

Batta.

32. There will probably frequently be exceptional cases arising on works requiring special treatment. It is obvious that what may be sufficient for the vast majority may be unsuitable in quantity or quality in individual cases. Such cases, which will include also those of people arriving on the works worn out and in low condition must, as far as possible, be specially treated under medical advice; and they may be fed in accordance with the scale laid down in G. O. No. 2372 of July 24th, 1877, for people under such treatment. The extra allowance must cease as soon as the person, in the opinion of the medical officer, regains strength.

Special cases.

33. Persons not permanently incapacitated for labour will probably regain health, as soon as convalescent, more rapidly upon a relief work than amidst the surroundings of a relief camp.

34. All labourers must be warned that they are liable to fine and dismissal from relief; but these punishments should be enforced with care and judgment.

Punishments.

35. Short work from idleness should in the first place be met with a small fine, and a repetition of the offence should be punished with greater severity. But, until further orders, the effect of the fine in the case of weakly people must never be to reduce the wages of an individual upon professional agency works below civil agency work rate, nor to reduce those of an individual upon civil agency works below the relief house scale.

Fine.

36. Incorrigible idleness or insubordination on the part of persons in fair physical condition should be met by immediate dismissal.

Dismissal.

37. Payments upon relief works must be made at least twice a week, and oftener if necessary. New arrivals should for the first few days be paid daily.

Frequency of payments.

Charitable Relief.

38. All previous orders relating to gratuitous relief, so far as inconsistent with the following rules, are hereby cancelled.

39. Relief officers will be appointed to the charge of one or more taluks or parts of taluks according to size and local circumstances.

40. Their duties will be to supervise all relief operations within their charges except public works. Their especial duty is to see that the orders of Government are strictly carried out; that relief reaches all who need it; that waste, abuse, and fraud are prevented, and the utmost economy, consistent with due relief, enforced throughout.

41. They are expected to be constantly on the move, and to visit the several villages and relief camps as frequently as possible and at uncertain times.

42. They will furnish to the collector every Saturday information on the following points:—

(1.) The number of cases in which relief has been granted, refused, or stopped.

(2.) Any case of failure of duty, inattention, or inefficiency on the part of any officer or servant.

(3.) The physical condition of the people generally on relief, whether failing, improving, or stationary.

(4.) They will submit any general remarks.

43. Village relief shall be given either in the shape of cooked food or in money according to the discretion of the collectors and local circumstances, and shall, subject to the provisions of paragraph 53, be confined to destitute resident villagers, who are house-ridden, or otherwise unfitted for or incapable of labour. This class will include such persons as are idiots, cripples, blind, or so old or decrepit that they are not able to support themselves; or young children living with and wholly dependent on such persons; women in an advanced state of pregnancy, or who have been recently confined; and further to qualify for this relief these persons must be without well-to-do friends or relatives on the spot on whom their support would ordinarily and rightly devolve.

44. Immediately on the receipt of these orders officers in charge of taluks shall cause each village to be inspected by an officer not below the rank of a village inspector, and, after careful inquiry into the circumstances of each individual case, shall strike off the register any persons who, from condition and circumstances, do not come within the above description. The relief officer in charge of a taluk or part of a taluk shall visit each village as early as practicable and satisfy himself that his instructions have been properly carried out. No fresh admissions to the register shall subsequently be made, except under the orders of the village inspector, who, whenever he may authorise any such admissions, shall, in his next weekly return, report them to the taluk relief officer, who shall transmit an abstract, showing increase or decrease of numbers in each village of his charge, to the collector weekly, for preparation of the weekly tabular statement for Government. The taluk officer shall take the earliest practical opportunity of inspecting the persons who have been newly admitted.

45. Persons, who, under the operation of the above order, are struck off the registers of village relief, shall at the same time, if capable of labour, be sent to work, and if temporarily incapacitated by illness or any other cause shall be sent to the nearest relief camp to be there maintained and treated until able to work or found permanently incapable.

46. All open camps other than works-camps shall be abolished, and in their place such number of closed camps as may be necessary shall be established. On this point collectors should at once take such steps as may be needed.

47. Until further orders are published for the regulation and interior administration of closed relief camps, the arrangements now in force should continue; but it should be distinctly and clearly understood by the officers in charge that no person capable of labour should be received into a camp, and that as soon as any inmate of such camp recovers strength and condition sufficient to enable him to undertake labour on professional agency works, he should at once be drafted off to such works, which should not be situated within 10 miles of the village of which he is an inhabitant.

48. Officers in charge of camps will recollect that the primary object of the camp is that the strength of its residents should be restored therein, and that they may be thus rendered fit for work. Food and shelter, but no money payment will be given therein. Camp diet is prescribed in G. O., 24th July 1877, No. 2372; but all camps must be so divided as to render it impossible for those not actually requiring it to obtain the special diet allowance sanctioned for those under medical treatment. No person shall in any case be admitted to the higher scale of diet except under the written order of the medical officer of the camp.

49. Collectors will take care and watch carefully the effect of relief operations, and if it should appear that any camp has a tendency to draw to it those who should be relieved in their villages, or any undue tendency is observed on the part of those on works to seek camp relief, the diet must be so adjusted, in accordance with the discretion given by the Government order referred to, as to counteract such tendency.

50. No outside relief shall be given at any closed camp.

51. All able to work will at once be sent to a suitable relief work with a list as described in paragraph 29. In carrying out these instructions, however, the officer will exercised a careful discretion in cases where husband or wife, mother or child, may be ill in camp, and should not enforce separation in such cases. Any able-bodied person so retained temporarily in camp will be required to do suitable work in or about the camp.

52. The collector should keep superintendents of camps informed of all works in progress, and to what extent labour can be accommodated on each work, and the order of the superintendent of the camp to the officer in charge of the work shall be sufficient authority to the latter to receive the persons who may be sent from the camp.

53. Wanderers who present themselves at any village in a state of destitution shall be provided by the village head with one meal, *i.e.*, 10 oz. grain, and he will be held

strictly responsible that no person manifestly in need of assistance to prevent starvation shall remain unrelieved; but such persons shall only receive one meal and shall be passed on to the nearest relief camp where they shall receive support, or, if needed, medical treatment, or if in a fit condition to support themselves by labour be at once sent to suitable works. In special cases, where necessary, village heads may incur such charge as may be needed to convey to the nearest relief camp destitute persons who cannot travel. But whenever this is done an immediate report must be made to the village inspector.

54. In laying out relief camps, sanitary requirements, especially position of hospital, water supply, and latrines should be very carefully attended to.

55. With the exception of those in hospital, persons in relief camps are not to be allowed to remain idle; they must be employed in all the necessary duties of the camp, its conservancy, water supply, cookery, hospital attendance, &c., or in spinning, weaving, rope-making, or other similar light work. No extra allowances are to be given for work performed in or about the camp.

56. This order, except as regards scales of diet, does not apply to the Nilgiris district, in which the Commissioner's arrangements to meet the special circumstances will continue in force subject to further instructions.

No. 251.

Telegram, dated Allahabad, 25th September 1877.
From Viceroy to Secretary of State.

My telegram, 22nd, gives estimated total Madras and Bombay famine, both expenditure and revenue loss, eleven crores from beginning of famine to March 1878. Estimated loss of Madras revenue, 280 lacs may be exceeded. Madras Government has furnished no figures. Feudatory and possible North-west Provinces expenses are outside the eleven millions.

No. 252.

Encl. in No. 253.

From the Additional Secretary to the Government of India to the Additional Secretary to the Government of Madras. No. 863.

G. G.'s Camp, Amballa, the 25th September 1877.

Your letter No. 2810 of the 20th instant has been laid before the Viceroy, and by his Excellency's instruction I have already in the telegram, marginally quoted, conveyed to you the assent of the Government of India to the issue by the Madras Government of a notification, calling on the local officers to assist in the formation of local committees, and generally in facilitating the objects of the fund.

Telegram dated 24th September.
From the Viceroy to the Governor of Madras.
Charitable relief committee. Your letter of 20th instant reached me before leaving Poona. Under conditions there explained I do not object to your publishing notification proposed in your telegram of 22nd. Am communicating further on the subject by post. The committee's instructions to their deputation have my full approval.

2. The information, however, for which his Excellency asked in my letter No. 773, dated 31st August, as to the specific objects in detail to which the committee propose to devote their funds, is still, I am to point out, but incompletely supplied.

3. Your letter directs the attention of the Government of India to the resolution passed by the committee on the 24th August, and from that resolution you recapitulate the objects of the committee in the following terms:—

"(1.)—Aiding, by contributions, local committees for the relief of the necessitous poor not reached by Government.

"(2.)—Giving contributions towards the taking care of destitute children and the like.

"(3.)—Providing clothes for destitute women and children.

"(4.)—Making allotments towards any special object which seems to come within the scope and ability of the fund."

4. In regard to this recapitulation I have to point out that object No. 1 still needs some further specification and definition, as to the classes of the necessitous poor, which are indicated as not being reached by Government; there may be, as suggested in my previous letter, many such classes, but without further specification of them there is an obvious danger of the operations of the committee overlapping, and, at some points, clashing with, those of Government.

5. In regard to No. 2 it is to be observed, as already remarked, that Government is endeavouring to maintain all destitute children that may come on its hands during the famine, and there is room for further discrimination between the objects of the committee and those of Government in this respect. The question of providing for the maintenance of these destitute orphan children, after the famine has ceased, is one which may perhaps be deemed worthy of the consideration of the committee.

6. To the third class of operation which the committee propose to undertake, the Government of India have no objection to make; and the fourth merely provides for any exceptional cases which may not happen to fall under any of the former categories.

7. There is still therefore much room for more definite specification of the purposes of the committee, and the Viceroy observes that the committee propose, as further information is received, to complete the work of formulating the objects of their expenditure.

8. In addition to the points above noticed the Viceroy learns from the instructions, which the committee have given to their delegates, that in a general way the committee accept, as the field of their operations, the mitigation of suffering, as distinguished from the duty of saving life which the Government has undertaken through its own agency. The committee also inculcate on their local agents to avoid even indirect interference with Government operations. His Excellency is satisfied, therefore, that so far as in their power the committee will act on different lines, and for other objects, than those already covered by the operations of Government, and in this assurance has consented to the services of local officers being enlisted in aid of the committee; but having regard to what has been said as to the want of definiteness in the scheme of operations hitherto laid down, and the promise of the committee to remedy this hereafter, I am to express the hope, on the part of the Government of India, that the Madras Government will communicate with the committee, and will assist them not only in defining and systematising the aims and objects to which their expenditure may be most usefully expended, but also in regulating the assistance to be given by Government officials so as to reduce to a minimum the anticipated dangers of friction, of increased labour, and of having to satisfy conflicting claims on their time and attention.

9. Having disposed of the main subject of your letter his Excellency desires me to advert to one or two subsidiary matters which have arisen in the course of this correspondence.

The concluding paragraph of my letter of 31st August was perhaps the subject of some misapprehension by the Government of Madras. It was by no means meant to convey an absolute prohibition against Government officers taking part in the disbursements of the committee's funds. It was simply an expression of the Viceroy's hope that the committee would be persuaded to use their own agency as far as possible, and thus to avoid imposing double burthens on the collectorate establishments. The Madras Government, it was anticipated, would have communicated with the committee, would have assisted them in formulating their scheme of operation, and, if these proved ultimately to be at variance with Lord Lytton's suggestions, would have either sought for some means of reconciling them, or else have again addressed the Government of India.

10. Had this course been followed much valuable time would have been saved, much misapprehension would have been avoided, and the Madras Government would not have been misled into believing* that the committee was not relying on the agency of State establishment for the administration of their private funds.

*No. 210. * See paragraph 2 of your letter, No. 2630, dated 3rd September 1877.

11. I am also to point out, with reference to the scantiness of the additional information furnished in your letter, that the resolution of 24th August to which you now refer the Government of India, as exhibiting in a definite form the scope and objects of the committee's expenditure, was the identical resolution referred to, and quoted almost in the same terms, in my letter of 31st August in the paragraph reproduced in the margin. The only divergence is that the third head—regarding the provision of clothes for destitute women and children—was omitted in my letter, under the impression that it was finally negatived after discussion in the meeting of 24th August.

"His Excellency finds on the proceedings of the committee held on the 24th August, a resolution that the fund should be devoted (1) to contributions in aid of local committees for the relief of necessitous poor not reached by Government, (2) to contributions towards the care of destitute children, (3) to making allotments towards any other special objects which seem to come within the scope and ability of the fund."

12. As these very resolutions were specified in my letter, as failing to convey to his Excellency the specific and detailed information which he desired, the Viceroy cannot forbear expressing some disappointment at being again referred to them, after the lapse

of three weeks, as conveying the requisite definition of the committee's action; but, without dwelling further on the past, his Excellency desires me to express his confident assurance that the Madras Government will accept the responsibility which necessarily attaches to them as administering imperial finances, of ascertaining, and, if need be, of guiding the action of the committee; and that they will, while labouring to further to the utmost the legitimate action of the committee, endeavour, in free and frank communication with them, to regulate its demands upon local officers, and to define and systematise the scope and objects of its expenditure.

No. 253.

No. 37 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, Commerce, and Famine, to the SECRETARY OF STATE FOR INDIA.

Camp Dhurmpore, 27th September 1877.

In my letter* to your Lordship I reported the action I had taken for the improvement of famine administration in Mysore, and the communications which I had held with the Planters' Associations of Coorg and Wynad. No. 239.

* No. 35, dated Bangalore, 20th September.

2. I may mention that, in accordance with the arrangement reported in the 23rd paragraph of that letter, I directed before leaving Bangalore that Major Scott Moncrieff, the Chief Engineer of Mysore, should at once visit Coorg, and arrange for a proper system of relief works in communication with the Planters' Association; and I instructed him to take the opportunity of ascertaining and reporting to me the real wishes, not only of the planters, but of the people themselves, on the question of the absorption of Coorg into the Madras Presidency, and its unification with the other coffee-planting districts.

3. Referring to the results of the recent measures in the Bangalore district, which were reported in paragraph 24 of that letter, I have subsequently had an opportunity of conferring with the Deputy Commissioner of the neighbouring district of Kolar, and I found that he was able to assure me of similarly favourable results in his district. In three relief camps, out of 6,500 inmates, 1,600 had been drafted to works, and a similar number remained in the camps; the rest, when told to go to the works, had preferred to take advantage of the recent rain and return to their agricultural pursuits. The state of affairs in this district has greatly improved; tanks have been filled, the rice crop secured, prices have fallen a little, and ryots are no longer coming to the markets so generally as heretofore to purchase imported grain, there having been an increase of their home supply by the incoming of the small ragi harvest* of September. These circumstances have greatly facilitated the weeding of the relief kitchens, and the general execution of my recent orders; and I should have thought it a matter of much congratulation if I could have informed your Lordship that advantage had been taken of the equally favourable weather in Madras to carry into effect with similar promptitude the orders regarding that Presidency which were issued on 31st August.

* Millet.

4. Leaving Bangalore on the morning of the 21st, I was joined at Jollarpett junction by the Duke of Buckingham and General Kennedy; and it was then I learnt, to my disappointment, that during the three weeks which had elapsed since the Government of Madras had publicly announced their entire adhesion to the principles of my famine policy, no subsidiary orders of any kind had been issued with a view of applying those principles to the problems in hand.

5. Even the correspondence of the district officers on famine subjects continued, I learnt, to go through the Board of Revenue as heretofore; and in the more important matters of drafting people from camps and from village relief, on to works, I could not learn that district officers had received any orders whatever. The delay was attributable to the Duke's visit to Ootacamund; but, none the less, it is to be lamented that such an admirable opportunity, as the recent rain has given, of reducing the number of those gratuitously relieved, and of introducing more economical management, was allowed to pass by. The Madras Government are now spending 60 lakhs a month, the greater part of which goes in maintaining a system of relief, at once wasteful, demoralising, and above all others open to peculation. It is not too much to say that if, when the rain of

the early part of September again made agriculture possible and hopeful, the masses on gratuitous relief had at once been put to work, a great majority of them, as in Mysore, would have preferred devoting their labour to their own fields, and a sum equal to a quarter or a third of the monthly expenditure might at once have been struck off without danger or difficulty.

6. Before the Duke of Buckingham left me to return to Madras I had examined with him and approved the code of instructions which, with General Kennedy's assistance, had been drawn up for the guidance of officers engaged in famine relief, and which the Governor was then about to issue. I have since learnt that these instructions have been published; and as they provide fully for all the principal objects on which the policy of the Government of India lays stress, I have no doubt that the desired reforms will be introduced, and that the main object of my journey will at length be accomplished. Without this security for obtaining some practical result to our deliberations I should have hesitated about returning to Simla, and was prepared to remain some further time in Southern India.

7. Reaching Poona on the evening of the 22nd I was received by Sir R. Temple, and learnt from him that the state of affairs in Bombay was continuing to improve.

8. While at Poona I received from the Madras Government a letter on the plan of operations proposed for adoption by the General Relief Committee of Madras with reference to the questions I had previously asked—(1.) as to the main objects to which the funds were to be devoted; (2.) as to the agency through which the committee proposed to operate. I had deprecated the employment of these funds for objects already undertaken by the State, and I had expressed a hope that, so far as possible, they would make use of other agency than that of the collectorate establishments, whose whole time and attention are already devoted to the relief operations of Government. That your Lordship may have the correspondence before you at once, I enclose the letters noted on the margin for your perusal; it will be seen that, though no sufficient endeavour has been made strictly to formulate the objects to which the committee will devote their funds, and though they do rely to a great extent on the assistance of State establishments, I have been unwilling in any way to hamper them in the work of expending to the best advantage the large sums subscribed, and have therefore sanctioned the issue of a notification directing local officers to give their best assistance to the committee; but at the same time I have requested the Madras Government to assist them in defining, with some attempt at precision, the objects to which their operations can be devoted, without clashing with those of Government; and in regulating the demands to be made on the time and attention of the collectorate establishment.

Nos. 199, 200. Letter of 31st August to Madras.
„ 210. Their reply of 3rd September.
„ 247. Duke of Buckingham's telegram of 22nd.
„ 240, 241. Madras Government's letter of 20th.
„ 252. Viceroy's telegraphic reply of 24th. Official reply of the 25th September.

9. I have now completed my visit to Southern India, and hope to arrive at Simla to-morrow. I have kept your Lordship fully informed from time to time of what I have seen and done; and I trust that my visit may not have been without effect in an improved system of famine administration, in a better economy of our finances, and in the saving of life. Before closing this, the last of the series of letters which I have been addressing to your Lordship during my absence from my colleagues, I wish to place on record my deep sense of the obligations I am under for the ever ready assistance I have received from Sir A. Clarke, who has displayed a loyal anxiety to meet my wishes by placing at my disposal the whole resources of the Public Works Department, on which department I have mainly relied for a trustworthy system of relief works, and who has rendered valuable advice and assistance on all matters in which I have consulted him. I have already informed your Lordship of the admirable readiness with which Sir R. Temple, notwithstanding the difficulties against which he is struggling in the Bombay Presidency, has placed at my disposal some of his ablest officers, and has responded to all my calls for assistance in the way of medical and other establishments. My thanks are also due to his Excellency the Commander-in-Chief, and to the several local governments and administrations for their ready response to the indent I found it necessary to make on their resources, in order to supply the deficiencies in the medical, engineering, and supervising staff in the famine-stricken districts of Madras and Mysore.

10. The latest accounts I have received as to the rainfall and state of crops show that over the Madras and Bombay Presidencies and over the Province of Mysore there has been favourable rain throughout September, and prospects continue to improve; in Burmah and Assam, as well as in Bengal Proper, there has been abundant rain; in one district of Burmah the rain has been excessive; in Behar, the Central Provinces, Berar, the Hyderabad country, and Malwa, the crops are so far

in good condition, but rain is again required to render them secure; in the Punjab rain is much wanted to enable the people to sow the spring crops; in the North-west Provinces, north of Allahabad, over a great part of Oudh, in Gwalior, and in Northern Rajputana there is already great and daily increasing scarcity, which, accompanied as it is by a failure of fodder for cattle, cannot but cause severe distress during the coming season; indeed, the Government of the North-Western Provinces has already had to open relief works, and already there is daily a large multitude of emigrants leaving Gwalior. Unless, moreover, rain should come within a few weeks, so as to permit of sowing the spring crops, scarcity will probably deepen into famine in large parts of the North-west Provinces, of Oudh, of Rajputana, and of Gwalior. My season telegrams will, however, have told you how matters stand before this letter arrives.

I have, &c.
(Signed) LYTTON.

No. 254.

Telegram, dated 28th September 1877.

From Governor of Madras to Secretary of State.

Yours, 20th. Fears of insufficient warehouse room groundless. Tuticorin storage considered equal 20,000 tons; Negapatam 35,000; confirmed on present inquiry. Rail removal cannot exceed five hundred each; ample shelter Madras. Rains have much improved prospect of crops generally.

Imports to Madras good; insignificant elsewhere. Tank bursting destroyed half mile main line near Moorapore in Salem, Wednesday; expect restoration to-morrow.

No. 255.

Encl. in No. 271.

Statement No. 33, regarding Famine Relief Operations in the Province of Mysore, for the week ending the 22nd September 1877.

Bangalore, 29th September 1877.

The weather during the last week has been all that could be desired; there have been frequent showers of rain with bright sunny weather between. The rainfall has averaged about 2 inches and has been universal, the dry tract mentioned in the previous week's report having received a liberal downfall. Such of the early (dry) ragi as survived the drought has revived beyond all expectation and may yet produce a good crop, but it is not ripe yet. The irrigated ragi and rice are being cut in many parts. The late ragi is looking as well as possible, and the sewing of horse-gram and other rabi crops is proceeding under favourable conditions.

	Inches.
Bangalore	2·6
Kolar	3·1
Túmkúr	1·5
Mysore	1·8
Hassan	2·
Kadur	2·
Shimoga	1·7
Chitaldroog	2·2

The markets continue to be well supplied. The imports by rail have been 4,200 tons, or 1,027 tons more than in the previous week: such temporary ebbs and flows appear to be due to accidental causes. The imports have been sent from the following quarters:—

	Tons.
Madras	3,520
Beypore, Coimbatore, and Malabar	267
Trichinopoly, Tanjore, and Negapatam	379
Other places	34
Total	4,200

On the other hand the exports from Bangalore Municipality, as registered by the octroi officials, have been 1,896 tons, or 33 tons more than in the previous week. They were despatched to the following quarters:—

	Tons.
Túmkúr	346
Bellary and Chitaldroog	279
Mysore	571
Usur (Salem District)	272
Round Bangalore	428
Total	1,896

3. Prices are again a little easier than in the preceding week. The following statement shows the maximum and minimum prices in the districts of the province :—

	Maximum in lbs. per Rupee.		Minimum in lbs. per Rupee.	
	Rice.	Ragi.	Rice.	Ragi.
Bangalore District - -	10½	13	8	11
Kolar „ - -	11½	16	9	11½
Túmkúr „ - -	10	16	9	10
Mysore „ - -	9	14	8	10
Hassan „ - -	10	14½	8	9
Kadur „ - -	9	14	8	10
Shimoga „ - -	10½	12	6½	8
Chitaldroog „ - -	10	16	8½	10

In rice there is a fall of about ½ lb. per rupee, both in the maximum and minimum scales. In ragi the minimum rate is almost unchanged, but in the maximum there is a great fall, in Túmkúr, for instance, the maximum was 12 lbs. per rupee and now it is 16 lbs.

4. The number of labourers on civil relief works has increased from 28,803 to 31,280, a rise of 2,477. The increase runs through all districts except those of the Nagar Division, in all three of which there is an unexplained decrease. In the others the increase is as follows :—

Bangalore - - - - -	236
Kolar - - - - - -	568
Túmkúr - - - - -	1,946
Mysore - - - - - -	128
Hassan - - - - - -	920

But the Bangalore Deputy Commissioner in his own return shows an increase of 2,640. The discrepancy will be inquired into.

5. The Public Works Department returns show 25,271 labourers against 24,942 previously, an increase of only 329. There is a decrease everywhere, except in the Bangalore district, where the large number of relief labourers put on the State Railway and the Túmkúr road brings up the total. A good many of the works are on tanks and have been stopped by the water; in many cases it is reported that the labourers have left to work on their fields.

6. The numbers gratuitously fed in relief camps have fallen from 208,683 to 161,892. The decrease is very general and almost universal, but it is largest in the Bangalore District and Municipality in Kolar, Tùmkúr and Chitaldroog; in fact, in those districts where the numbers were most overgrown.

	Week Ending—			
	September 15th.	September 22nd.	Decrease.	Increase.
Bangalore District - -	61,873	45,795	16,078	—
Do. Municipality - -	26,467	15,342	11,125	—
Kolar District - - -	17,865	8,698	9,167	—
Túmkúr - - - -	46,848	41,297	5,551	—
Mysore - - - -	2,381	2,575	—	194
Do. Municipality - -	680	707	—	27
Hassan - - - -	12,398	12,147	251	—
Kadur - - - - -	3,033	2,828	205	—
Shimoga - - - -	4,204	3,984	220	—
Chitaldroog - - -	32,934	28,519	4,415	—
		Total	46,791	

The decrease is partly due to the improvement in the prospects of field employment, and would have occurred in any case. It is partly due also to the enforcing of the conditions of residence and labour, and to the effects made to relegate the paupers to works. Of the numbers in the relief camps of the Bangalore Municipality, which have fallen by 19,000 in the last fortnight, over 5,000 have been put on the State Railway and the adjacent embankment; about 2,000 on the embankment of the Alsur lake; and about one thousand more on different projects, the waterworks, and two lines of road. The improvement in the condition of the labourers is already obvious; they are cheerful, healthy and contented, and those who a fortnight ago were thought hardly able to lift a pickaxe are now doing a fair day's work. Of the rest, some have left for their villages, some prefer to beg about the town, but these will be collected and brought in by the

police. To every applicant either labour or food is offered: if labour cannot be provided their food is given till the applicant can be set to work. The want of tools is still one of the greatest difficulties.

7. The cost of gratuitous feeding is returned as follows:—

	Per Head.
Bangalore District - - - -	0 13 0
Do. Municipality - -	Not returned.
Kolar - - - - -	0 10 6
Túmkúr - - - - -	0 12 3
Mysore - - - - -	0 15 3
Do. Municipality - - -	1 14 8
Hassan - - - - -	0 12 9
Kadur - - - - -	0 15 8
Shimoga - - - - -	0 8 4
Chitaldroog - - - -	0 10 7

An explanation will be called for of the excessive figures received from the Mysore Municipality.

PROVINCE OF MYSORE.

EXTRACT from the PROCEEDINGS of the GOVERNMENT of BOMBAY, Public Works Department, No. 590 P., dated the 2nd October 1877.

Read—

Memorandum from the Chief Engineer for Irrigation, No. 5,887, dated 28th September 1877.

Submitting, for consideration and orders, a letter from the executive engineer for irrigation, Belgaum and Dharwar, requesting instructions, now that prospects of the season are quite assured, and there is no probability of there being any great demand for relief labour, as to the policy Government intend adopting with regard to the Gokak canal works. If it is intended to complete the canal up to the ninth mile, and to construct the main weir and the head works, there will be sufficient employment for his establishment, which is large, well trained, and capable of the management of 20,000 labourers, but to attract labour the canal must proceed as an ordinary public work, and piece-work and the petty contract system must be introduced. Requesting early orders on the subject, as the 5,000 labourers now employed on the canal have expressed their intention of leaving within a month for their homes.

RESOLUTION.—Government at the present time cannot authorise any measures that will tend to keep up the numbers upon this or any other relief work in Belgaum.

2. The chief engineer for irrigation should be requested to submit the complete project for the Gokak canal at an early date in order that the Government of India may be invited to classify the work as extraordinary.

Encl. in No. 288.

No. 256*a*.

Endorsement by the Commissioner of the Pegu Division,—No. 963–1, dated the 2nd October 1877.

Copy of the following, with copy of enclosure, forwarded to the Secretary to the Chief Commissioner, British Burma, with reference to his letter No. 1615–421, dated the 12th instant.

RECENT FLOODS IN THE HENZADA DISTRICT.

From the DEPUTY COMMISSIONER, Henzada, to the COMMISSIONER OF THE PEGU DIVISION, No. 40–2, dated the 27th September 1877.

With reference to your docket, Revenue Department (Miscellaneous), No. 889–1, dated the 17th instant, I have the honour to submit a detailed statement showing the probable extent of the destruction of crops caused by the recent floods, aggregating 59,100 acres, or nearly one-fourth of the entire rice crop of this district.

The return is made up roughly, and is founded on information furnished by the Thoogyees and others, and upon my own observations in the course of a visit to the inundated lands in Tharrawaddy, from which I have just returned. Although the water of the Irrawaddy was, I believe, little over a foot higher than it was in 1875, the Meit-ma-kah rose some four or five feet higher than upon that memorable occasion, and the destruction has in consequence been very much more widespread; added to this the first replanting in that quarter was entirely destroyed by the rise of the end of August, thereby using up the greater part of the stock of reserve seedlings, and leaving insufficient for a second complete crop.

I regret to have further to state that the prospects of a supplementary crop are much less favourable now than they appeared a fortnight ago. The want of rain and hot weather which has prevailed are against the chance of the seedlings (which are becoming too mature for transplanting) surviving or attaining to vigorous maturity. Of the damage caused by the three breaches in the embankment, that near Zaloon is accountable for about 8,561 acres; that at Kyanghin has permitted the flooding of the whole of the "protected" land, 2,900 acres; the third breach on the Laymyethna embankment, near Dambee, has caused danger to but 160 acres.

The river is again full up to the brink, and the flow through the breach near Zaloon is renewed to the utter destruction of the seedlings put in since the flood abated.

I believe the figures given in the statement submitted, though as near as can be at present ascertained, represent the outside estimate of the damage; and I think that one fourth may be deducted from it for lands which will be still utilized by planting out or broadcast hand-sowing.

The remaining crops in the district promise remarkably well.

Floods in the Bassein District.

From the Commissioner of the Pegu Division to the Secretary to the Chief Commissioner, British Burma,—No. 953–135, dated the 1st October 1877.

I have the honour to forward herewith for the Chief Commissioner's information copy of letter No. 36–13, dated 17th September last, together with a memorandum in original by Mr. A. L. Hough, Extra Assistant Commissioner, containing a complete account of the breaches made in the Nga Woon embankment in August last.

2. It will be seen from Mr. Hough's memorandum that there is very little, if any, foundation for the report made by a subordinate of the Public Works Department that the first breaches were intentionally or maliciously made.

All the damage would appear to be due to the intrinsic weakness of the bund in places where its foundations are composed of loose friable soil. Although the water in the Nga Woon rose one and a half foot higher than it has ever been known to rise before, the bund did not give way because it was overtopped by the water, but because its foundations were sapped and carried away.

The Deputy Commissioner remarks from personal observation :—" In many places the " water percolated through nearly the thickest part of the bund, and it was with the " utmost difficulty that the workmen and villagers could prevent the underneath part of " the bund sliding away in a liquid mass."

Mr. Hough's experience is the same. The foundations first were eaten away. The superstructure naturally subsided, and then the water rushed in and carried everything away.

The bund, therefore, appears to have been deficient in breadth of base rather than in height.

Out of the 15 breaches in the Bassein district, 13 were made before the water reached its highest level.

3. Notwithstanding the immense volume of water which poured through the breaches, and submerged the villages inside, it is satisfactory to learn that no lives were lost, though many must have had narrow escapes, and amongst a less amphibious population loss of life would probably have occurred.

At one place Mr. Hough remarks :—" Women came and begged for boats to go and " bring away their children, whom they had had to place upon trees as the water had " driven them from their homes."

A few cattle are supposed to have been drowned. The loss of household property is not given. The greatest loss of course is in the standing crops.

The Deputy Commissioner roughly estimates the area over which the crops have been destroyed as 47,767 acres; and but a small portion of this is likely to be planted out again, the season being so far advanced, and seedlings not being easily procurable.

It may be reckoned that an area of 40,000 acres at least will be lost this year.

This is out of a total of about 260,000 acres in the whole of the Bassein district.

4. Colonel Davies appears to have been making very zealous but, I fear, somewhat useless endeavours to induce the people to attempt the cultivation of dry weather crops, such as gram, sessamum, &c. in their paddy-fields. To succeed in raising a dry weather crop out of the ordinary paddy kweng of the delta would be very creditable to a scientific agriculturist; and it is hardly to be expected therefore that the inexperienced peasants of the country should succeed on the spur of the moment in performing such a feat.

5. All the local officials appeared to have laboured zealously, and done what they could to avert the calamity.

The Deputy Commissioner, Colonel Davies, I regret to say, succumbed to the fatigue and exposure which he underwent, and has since been dangerously ill.

Mr. Hough mentions some of the native officials who did good service, but his list is not complete. He has been requested to furnish another and more complete list.

No. 257.

MYSORE FAMINE CODE, 1877.

This code is issued, with the sanction of the Chief Commissioner, for the instruction and guidance of all officers engaged in relief operations. That part of it (Chap. I., Sec. I.) which relates to the duties of the D. P. W. officer has been drawn up with the approval and under the instructions of the chief engineer.

Undoubtedly experience will bring to light errors and omissions in this code, which is issued now as a tentative measure, and the undersigned will be glad to receive suggestions and criticisms from all quarters, and especially from all relief officers.

C. A. ELLIOTT,
Famine Commissioner.

Bangalore, 2nd October 1877.

FAMINE CODE.

PREFACE.

The backbone of the famine policy is the employment of all suitable applicants for relief on large works of permanent utility superintended by professional officers of the Public Works Department. It is the duty of the civil officer to decide who are suitable applicants, *i.e.*, who are sufficiently able-bodied for labour. In the present state of this province it is not intended, until a crop is harvested, that any applicant should be rejected on the ground of being too well to do, provided he submits to the three tests :—

(1.) The distance test—which shows that he is willing to labour at a distance from his home, not returning there at night but being hutted on the work.

(2.) The wage test—*i.e.*, that he receives a wage calculated to provide a bare subsistence for himself, but not enough to support any non-working member of the family.

(3.) The task-work test—*i.e.*, that he performs a daily task proportioned to his strength.

It is important to remember that, while it is desirable to secure the best return in work for the expenditure incurred, the main object of opening and carrying out a relief work, is not for the sake of the work, but for the sake of the labourers employed on the work.

On every large public work there will, if possible, be placed a civil officer to co-operate with and assist the Public Works officer, and a medical officer to take charge of the sick and those requiring special treatment. There will also be three classes of labourers.

Class I.—The moderately able-bodied, who can on an average perform 75 per cent. of the task usually accomplished by an ordinary cooly. Some members of this class will be fully able-bodied; some, though strong themselves, may have a sickly wife or child; some may be reduced by privation below their usual strength. But the class, taken as a whole, counting the stronger with the weaker members, should be able to perform the 75 per cent. condition, and should receive the higher or A. scale of wages, *vide* Appendix I.

Class II.—Those who are weakly, but are still able to work, and can on an average perform 50 per cent. of their ordinary task. This class will consist mainly of those who are old, infirm, partially disabled by some natural defect, or who are temporarily enfeebled by famine, but whom regular work and regular pay may be expected to restore. These should receive the lower or B. scale of wages.

Class III.—Those who are too much emaciated to do any but a very light task, but who under special care may be expected to improve, and whose health and self-respect will be best consulted by employing them in easy open-air work. These are called the class under Special Treatment. They will receive the A. scale of wage, in the hope of restoring their strength and fitting them to be drafted among the able-bodied, in addition to any extra nourishment the medical or the relief officer may prescribe. Old and decrepit persons who cannot be expected to improve in strength are not to be included in this class.

The civil officer will classify the applicants as they arrive according to these three classes, and will from time to time, as they improve or retrograde in strength, suggest their transfer from one class to another. The medical officer will see to the special

treatment of all those who require extra food and nourishment, and for whom the ordinary wage is not sufficient. The D. P. W. officer will receive the gangs and individuals made over to him, set them to work, register and number them, measure up the work they do, and see to their payment and their hutting. Accordingly, the code treats in separate sections—(1.) of the duties of the professional officer of the Public Works Department; (2.) of those of the civil officer; (3.) of those of the medical officer.

II. Civil relief works are supplementary to large P. W. D. relief works, and may be employed in three ways:—(1.) as a safety valve for labour when there are more applicants than the Public Works Department can receive; (2.) as a training school for P. W. D. work, when it is desired to move bodies of men to considerable distances, and they are broken into this by being organised and accustomed to work together in gangs for a short time near their homes; (3.) to give employment to the old and decrepit who do not come up to Class II., *i.e.*, cannot do half an ordinary day's work, and who will not be restored to strength by liberal treatment, and so must not be put in the special treatment class.

The petty relief works, on which small bodies of 10 or 20 labourers have hitherto been employed, being paid by piece-work or by contract, and under no real supervision, are to be discontinued. No work will be undertaken as a civil relief work which will not afford employment for at least 300 people for one month. They will be hutted on the work, and not, except in the second case referred to above, allowed to go to their homes at night, and each work will be supervised by a responsible civil officer. The second chapter of the code expounds the duties of the civil officer with relation to civil relief works.

III. The third main division of the scheme of famine policy is the relief camp. These camps are not to be used, as has generally been the case hitherto, as dining places, where people come for a meal or two meals a day and go away. Every person who receives relief at a relief camp must submit to two conditions:—(1.) residence in the camp; (2.) work. The camp must therefore be enclosed, and be provided with sufficient shed accommodation for its population. The able-bodied should not be received there but sent at once to a work. The weakly applicant should also be generally sent to a relief work, but may sometimes be detained a few days to be fed up. The ordinary population should consist entirely of the old and infirm who are not likely to improve, and of the sick in hospital. For all these, except the sick, such work as they are capable of should be provided.

IV. The fourth main head of the code is Special Treatment. The Chief Commissioner's Proceedings, Famine Department, No. 5, dated 11th September (*vide* Appendix I.), prescribe the ordinary wages on P. W. D. and civil relief works, and the ordinary ration in relief camps. But there are many cases in which the ordinary rates will not apply. Small and emaciated children, nursing mothers, who either themselves or their babies are suffering from innutrition, young and middle-aged adults of both sexes who have been temporarily brought down by starvation, women advanced in pregnancy, convalescents out of the hospitals, these form the chief classes of "special cases" who require "special treatment." No part of the relief officer's duty (whether he be P. W. D., civil, or medical) is more important than the selection of cases for special treatment and seeing that the orders he gives are carried out.

V. The fifth chapter in the code treats of village inspection and relief. This is especially the duty of the civil officers of the district, and unless it is zealously and carefully performed it is impossible for them to find out the true condition of the people of their district, or to know if there are many people in the villages who need relief, but are too proud, or too frightened or too resigned to their fate, to apply for it.

It may often happen that an officer may inspect a village once a week for three weeks running, turn out the inhabitants and find them all looking stout and comfortable, and on the fourth week may see that distress and emaciation have suddenly set in. Then he will act by sending the people on to relief works or into relief camps, and seeing that they go; but without this inspection he may be startled by suddenly finding a large influx of famine-stricken people who have come in too late to be saved.

Special relief for artisans who are unfitted for manual labour is provided by supplying them with the raw material of their trade, and for this purpose it is necessary to provide for the careful house-to-house inspection of all large towns.

Finally, every officer employed in connexion with relief operations, of whatever rank, is held personally responsible that measures adequate to the distress are used, that

unusual or impending distress is early brought to notice, that no question of form is allowed to impede relief, and that all orders are carried into execution.

Relief must never be allowed to run short so long as relief is necessary; foresight must be exercised, and one work planned as fast as another draws near completion, or as fast as there are indications of an influx of labour. A list of works which are ready to be undertaken should be drawn up for each district, so as to be available whenever there is a fresh demand for work. No officer will be held excused for turning off gangs of labourers on the completion of a work, or for refusing *bonâ fide* applicants for labour, by the plea that he had not received a sanction.

CHAPTER I.

Section I.—Duties of the D. P. W. Officer.

Preparation. I. The executive engineer or other officer placed by the chief engineer in charge of a relief work will, after completing his preparations, give information to the Deputy Commissioner of the district that on a given day or at given dates he will be prepared to receive so many labourers to be made over to him at such a place.

Location of classes. II. He will divide the work out so as to locate in separate parts of it the gangs belonging to the different classes :

(1.) Able-bodied.
(2.) Weakly, but fit for labour.
(3.) Special treatment.

Division of classes into gangs. III. When the labourers arrive (they will be already classified by the civil officer according to the above three classes) he will distribute them into gangs, allowing those of the same or neighbouring villages as far as possible to work together, and, where the prejudices of the people require it, those of the same caste. Each gang will ordinarily consist of about 50 people under one gangsman or head cooly; men, women, and children being associated in due proportion; and about four to six gangs will be under one writer who will keep up the nominal register.

Nominal Registers. IV. The first duty will be to frame nominal registers of labourers, showing the name, caste, and village of each, and the date he was taken on the work. The roll will be called daily, and those who are absent for part of the day will receive half a day's pay; if absent during the whole day, no pay for that day.

Hutting. V. The next point is the hutting. Instructions have already been issued (*vide* App. No. II.) as to the kind of hut which should be put up to contain one family. The earthen walls and raised floor should be the labourers' task, the mats for the roof are supplied by the D. P. W. officer. Huts to accommodate about 10 per cent. of the numbers expected may, if necessary, be erected before the arrival of the relief labourers; but this need not be done, if there is any available accommodation on the spot. As to the selection of the site of the camp, and the general rules which should guide its laying out, the instructions of the Bombay Sanitary Commissioner (App. No. III.) should be followed as far as possible.

Task work. VI. The first day or two will be occupied in organizing and hutting the labourers, and for those days full wages (scale A for Classes I. and III., scale B for Class II.) should be given. When the labourers are thoroughly organised and set to work, task work should be exacted from them, not individually but by the gang, the work of each gang being measured up weekly or twice a week. Task work must not, however, be exacted rigidly during the first few days, especially from those who are at all feeble. The able-bodied who are in Class I. are expected to do 75 per cent. of the work done at ordinary times by an able-bodied cooly; if they do less they should be cut down to the lower wage (scale B). Those who belong to Class II. (weakly but fit for some labour) are expected to perform 50 per cent. of the full task which they could ordinarily perform; but if they do less, their wage (being calculated at the minimum sufficient for supporting life for seven days by six days' labour) should not be cut, unless the D. P. W. officer is quite satisfied that the failure to work is wilful and not due to weakness. He should exercise great discretion and patience here, should warn the people two or three times, and if that fails he may deduct the condiment portion of the wage. But this penalty should not be repeated without consulting the civil officer, lest the labourers should begin to fall off in condition. From the 3rd class, those under special treatment, no task can be demanded. The amount exacted as the task in each kind of labour should be reported by the P. W. D. officer to the superintendent engineer, who

will see that the rates are fair and not excessive. No work will be exacted on Sunday and no wages paid, the rate of wages for working days being calculated so as to leave a margin over for Sundays.

Payment of wages.

VII. It will generally be necessary at first to pay the labourers daily, and after a time twice or thrice a week; but weekly payments should be the rule for the able-bodied gangs (Class I.), and should be introduced as soon as possible, without inconvenience and loss to the labourers. When the work has been going on for some time, and the grain merchants acquire confidence in the system, and know that a labourer whose name is on the roll is sure to be paid at the end of the week, they will readily give him credit during the week. But facilities must be given for any labourer's departure from the work at any time for his home, provided there is reasonable presumption that he can support himself when he gets there. He must be paid up and let go even in the middle of a week. All payments must be made in cash; no cooked or raw food is to be given except to the people who are under special treatment. Payments will be made on nominal registers or muster rolls, which should be checked as expeditiously as possible in order to avoid any delay in making the week's payment. They must not be made through low-paid underlings but by regular cashiers borne upon the strength of the establishment, from whom good security should be required. Officers in charge will be expected to check payments, and inspecting officers, civil or D. P. W., must, on visiting a work, endeavour to satisfy themselves that the full Government wage reaches the cooly, less duly authorised cuttings. When required by the civil officer, arrangement should be made for paying new arrivals an interim payment after they have been one or two days on the work.

Shelter for infants.

VIII. Shelter should be erected, in which the infants and children too small to labour, belonging to people in the working gangs, may be collected. About 20 children may be placed together under the care of a woman, who is herself a nursing mother, or otherwise entitled to consideration through age or infirmity. The shelter should be at such a distance that the children of mothers belonging to the gangs should not interfere with the work, but should be within easy access of their mothers. Any of these children who are weakly will be treated and fed as special cases.

Information as to room on the work.

IX. The D. P. W. officer will weekly send a slip in the following form to the Deputy Commissioner of the district, who will circulate it to such of the relief officers under him as he considers proper.

Name of Work.	Number employed on the of .	Additional number to whom employment can be given on or after the of .

Expiry of sanction or completion of work.

X. When a sanction is approaching expiry, or when a relief work is approaching completion, the D. P. W. officer should make timely report to his immediate superior to enable him to pass such orders as may be necessary, and shall also inform the Deputy Commissioner.

General responsibility of the Department Public Works officer.

XI. In cases where a civil officer cannot be spared to be placed on the relief work, the duties which ordinarily belong to him will devolve on the D. P. W. officer, and especially those defined in rules IV., V., VI., VII., VIII., and IX., section II. Every officer in charge of a relief work will be held responsible for the condition of his people, and for the prompt and judicious carrying out of all orders laid down.

Outbreak of epidemic.

XII. The outbreak of any epidemic disease, and especially of cholera, should be immediately reported to the civil officer, or, if there is none present, to the Deputy Commissioner of the district, and also direct to the chief engineer.

Form of weekly report.

XIII. Every officer in charge of a relief work will make a weekly report in the form appended (Appendix No. IV.). The condition and health of the labourers should be specially noticed, and the cause of any increase or decrease in numbers should be explained.

CHAPTER I.

Section II.—Duties of the Civil Relief Officer.

N.B.—The term Civil Relief Officer is applied to a Deputy or Assistant Commissioner or a Special Relief Officer, not to an Amildar.

I. The Deputy Commissioner, on receiving information from the executive engineer or other D. P. W. officer of the number of relief labourers who can be entertained at a given place on a given date, will decide from what taluk or taluks the numbers are to be sent, will instruct the relief officers of the taluks accordingly, and will, if possible, appoint a civil officer to cooperate with the D. P. W. officer on the new relief works.

Drafting of gangs on to relief works.

II. The civil relief officer in charge of a taluk, on hearing how many people he is expected to send to a relief work, will first of all select the number from the relief camp or camps in his taluk. He will be careful not to draft on to relief work those who are too emaciated to do any work at all, or to benefit in health by the move. In the first instance, when the gangs drafted are large, and the people have long been accustomed to gratuitous relief, there will be unwillingness to move, and timidity. This must be overcome by tact and exertion. The relief officer should himself march the earliest gangs to the relief work, so as to prevent any desertion by the way, or he may send them in the charge of a trusty superior official, such as the amildar. When the system is well established, and the people have confidence in the work and crowd to it instead of shrinking from it, it will be sufficient to place the party under the charge of a gangsman or peon or constable, according to his discretion, and to send with him a slip of paper showing so many persons of the 1st class, so many of the 2nd, so many of the 3rd, despatched on such a day, to reach the relief work on such a day. The relief officer will in either case distinguish the individuals by giving to those whom he ranks in Class 1 a paper ticket marked A, to those of Class 2 a ticket marked B, and to Class 3 a C ticket. These tickets are to be delivered up to the D. P. W. officer on arrival.

Batta or travelling allowance to labourers.

III. Batta will be given to the labourers according to the distance to be travelled. If it is not more than one day's march, the best plan is to give them a meal in the morning before starting, and a meal in the evening on arrival. If the distance is more than one day they should either be halted for the night at a relief camp, having an order on it for food, or else at some police station, or some village, the patel of which is known to be trustworthy, where the police officer or patel would on production of the relief Officer's order provide the party with food. The allowance should not exceed 16 oz. of grain, raw or cooked, for each day. Money should not be given to the labourers themselves till they arrive.

Reception of applicants by civil relief officer.

IV. The civil officer on the relief work should receive these labourers, and make them over to the D. P. W. officer. When the first start has been made applicants for labour on the work should apply direct to the civil officer, who should establish a fixed place at which to receive all applicants every morning, in order to classify them and send them on to that or any other work.

Distance test.

V. In all cases the "distance test" should be enforced, tentatively and cautiously at first, more strictly afterwards. People should never be sent to work close to their homes, but a little distance off. The Deputy Commissioner should enforce this test by the direction he gives as to what taluks should supply what work. As a rule the labourers from a relief camp in one taluk should not be sent to a relief work in that taluk, but elsewhere; but the rule should be introduced gradually, the people being employed at first a little distance off, then when they are organized and accustomed to work in gangs, and have got to know each other and the gangsman, and to have confidence in the system, they can be marched to greater distances. Similarly when applicants come to the civil officer on a relief work, if the work is one stretching over some miles, he will send them to that part of it which is farthest from their homes.

No applicants to be rejected.

VI. The civil officer may refuse to send to the work people who are obviously unfit for relief, who wear gold ornaments, rich clothes, &c. But in the present state of the province he is not authorised to refuse employment to any who apply, merely because they are fat and strong and in good condition. It is believed that the enforcement of the three conditions—

1. the distance test,
2. the wage test,
3. the labour test,

are sufficient to prevent the danger of the work becoming too popular.

VII. The civil officer should move daily up and down the work and inspect the gangs; if he sees any falling off in condition, or any improvement, he should suggest to the P. W. D. officer to remove them from one class to another; he should see that there is a bazar sufficiently stocked, at which food can be got at reasonable prices; he should supply the P. W. D. officer with a statement of the price of grain at the end of each week in order that the rate of daily wage for the next week may be found from the sliding scale; he should occasionally inspect the payment of the gangs and should see that there is no peculation and no unlicensed deduction made from their wages; he should carefully watch the carrying out of the orders as to special relief to infants, to nursing mothers, and to the sick and emaciated. Constant inspection and supervision.

VIII. Every civil officer in charge of a relief work will receive a permanent advance of Rs. 100 to enable him to give food or money to applicants the first day they arrive on the works, and to meet any exceptional expenditure. He will send in to the Deputy Commissioner on every Monday an account of his expenditure under this head for the previous week, and also a weekly report on all points of interest and importance. Permanent advance.

X. Relief labourers should be encouraged to bring their whole families with them to the works, and relations of labourers who arrive subsequently should always be taken on, if fit for labour. Attention to this point is particularly necessary when any deterioration of the labourer's physique becomes apparent, and inquiry will probably show that he has been endeavouring to support members of his family on a wage intended only for himself. Inspecting or superintending officers will therefore be expected to watch narrowly the proportion of young children on the works and to take immediate steps when that proportion is improperly small. Entire families to be brought on works.

CHAPTER I.

Section III.—Duties of the Medical Officer.

I. As far as circumstances permit, the Medical Department should arrange for attaching a hospital assistant to each large work. If no other shelter is available for the medical officer, a tent or other accommodation will be provided on application.

II. One or more hospital sheds should be erected as quickly as possible in a convenient locality, and provided with a sufficient number of mats, blankets, and ordinary medical comforts. An adequate supply of common medicines should be furnished by the Medical Department. The cost of the hospitals will be charged to the works, but indents should first be passed by the Deputy Surgeon-General, Indian Medical Department. Care should be taken to keep the hospitals dry and clean, and the requisite nursing and sanitary establishment will be supplied by the officer in charge of the work. Hospital sheds

III. The medical officer will be held responsible for proper arrangements for conservancy, latrines, surface drainage, and water supply at the camps and hospitals, and he should report to the officer in charge his requirements in these respects. Drinking water should be carefully guarded from contamination. Conservancy arrangements.

IV. It will be the duty of the medical officer to inspect the camps every morning. No one should be allowed to live in the camps who is not upon the works. Inspection of camps.

V. The gangs of labourers will also be inspected daily, and the medical officer will point out any persons belonging to Classes I. and II., who in his opinion require hospital or special treatment, paying particular attention to nursing mothers, young children, and weakly adults who are not old, decrepit, or constitutionally infirm. The inspection of Class III., those under special treatment, must be done more carefully, and separate instructions regarding this will be found in Chapter IV. of this Code. Selection of special cases.

VI. The sanitary Inspector of the district will regularly visit D. P. W. and civil relief works, and submit a special report to the Additional Secretary, Famine Department, on each work visited.

APPENDIX I.

No. 5, dated Bangalore, 11th September 1877.

The Chief Commissioner, after consultation with the Famine Commissioner and the Chief Engineer, is pleased, in supersession to all former orders, to lay down the following scale of rates of wages on relief works, and of rates of food in relief camps, for the guidance of all officers in the Mysore Province.

A.—Rates of wages on P. W. D. Relief Works.

Adult male	-	-	value of	1⅓	lb. of grain, plus	9	pie for condiments.	
„ female	-	-	„	1	lb. „	9	„	„
Child above 7	-	-	„	⅔	lb. „	6	„	„
Child under 7	-	-	„	¼	lb. „			

B.—Rates of Wages on Civil Relief Works.

Adult male	-	-	value of	1⅓	lb. of grain, plus	3	pie for condiments.	
„ female	-	-	„	1	lb. „	3	„	„
Child above 7	-	-	„	⅔	lb. „	2	„	„
Child under 7	-	-	„	¼	lb. „			

By grain is meant grain of medium quality and of the description in ordinary use at the time of payment among the labourers on the works. The price to be taken at the retail price of the grain ruling at the head-quarters of the taluk on the previous week.

C.—Rates of cooked food in relief camps for all persons, except those who are in hospital or treated as special cases as being too infirm to labour or as being children under 7 years of age—

Adult male or female	-	1 lb. of grain, plus 3 pie worth of condiments.
Child over 7 years old	-	½ lb. of grain, plus 2 „ „

N.B.—Ordinarily ragi is to be taken as the staple grain. When ragi is not procurable, rice may be given. The same quantity is to be given in either case, whether of rice or ragi flour. The ration described for food in relief camps is the quantity of raw ragi flour or rice which each person is to get; and the officer in charge of every camp will be held responsible for seeing that the ration distributed is the quantity which the one pound or the half pound will produce after baking, or boiling, as the case may be.

The sliding scale of prices attached to this Resolution shows the amount of money wage to be given, according to the varying prices of grain, on Public Works Department or civil relief works. No wages will be given and no work exacted on any relief work on Sundays. The rate of wages laid down is intended to make provision for the Sunday's food.

A. Or Higher Sliding Wage-scale for Relief Works.

Rate of Grain per Rupee.	Adult Male.			Adult Female.	Child over 7.	Child under 7.
	P. W. D. Relief Work.			P. W. D. Wage.	P. W. D. Wage.	
	Cost of 1⅓ lbs.	Condiment.	Daily Wage.			
14 lbs.	0 1 6	0 0 9	0 2 3	0 1 11	0 1 3	0 0 4
13½ lbs.	0 1 7	0 0 9	0 2 4	0 1 11	0 1 3	0 0 4

Appendix II.

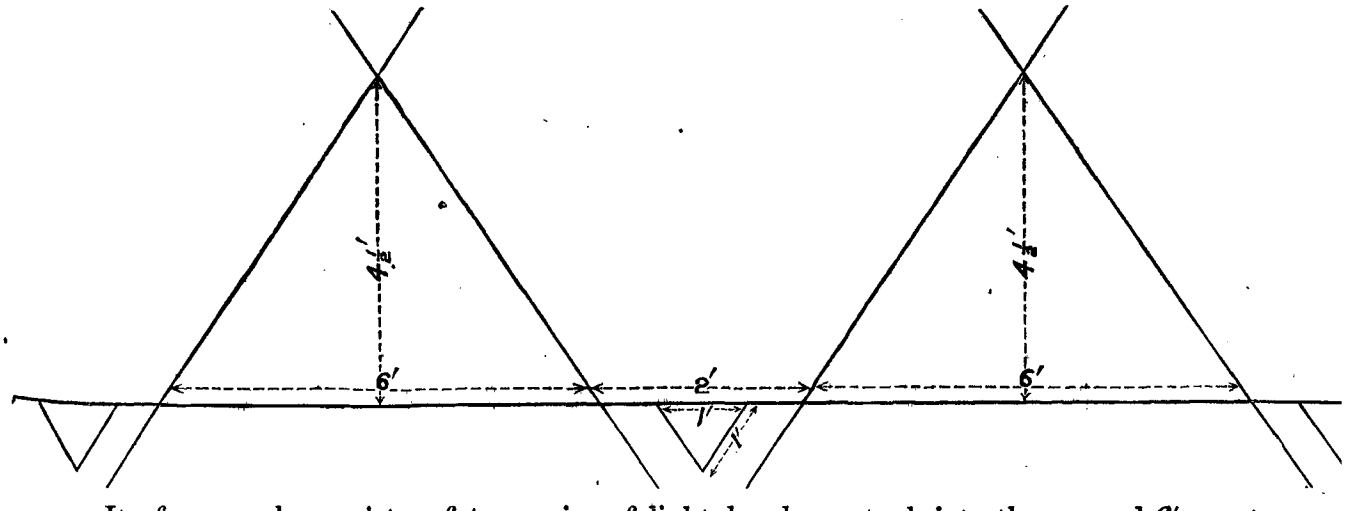
CIRCULAR 19.—For the Guidance of Officers in Charge of Poor Relief Works.

Mysore Public Works Department, Central Office,
Bangalore, 17th September 1877.

The first day's work for the poor-relief party must be hutting themselves. We do not want palatial residences such as the inhabitants never had in their own villages, nor any contractors to build huts and send in large bills. The workpeople must hut themselves; all that should be supplied being the materials that they could not readily procure.

2. The designs of these huts may vary largely. Executive engineers will probably have their own ideas about them; and within certain limits of economy, convenience, and sanitation, there is no reason why they should not follow these ideas. The following is suggested, not ordered, as a form of hut which after experience has been found to answer well.

The hut is 9′ × 6′ ground area; 4½′ high at the ridge.



Its framework consists of two pairs of light bamboos stuck into the ground 6′ apart and tied together where they cross, and a fifth bamboo used as ridge pole. The sides consist each of a bamboo matting 6′ × 5½′. A third matting of the same size is bent over the top. The upper portion then is double, the lower single matting. The latter may be tarred, or covered wattle and dab fashion with a mixture of earth and cowdung.

3. If the site of the camp is soft or cultivated soil, the flooring of the hut should be raised one foot, but if it is hard untilled land this will not be necessary; only precautions

must be taken to keep the camp drained, and the huts dry. Each hut of this description should hold a family (say man, woman, and three children), or, if the labourers are not in families, three adults. They should be placed two feet apart, and arranged in regular streets 50 feet wide, with cross streets at intervals. Between two parallel streets there would always be two rows of huts back to back, with about 15′ to 20′ between them. Each hut should cost about Rs. 3. The camp should be of course near the work, and with people so weakened, we must give them every chance by selecting a good site for it.

4. The Executive engineer is begged to remember that our object is twofold: to get some return for the money Government does not grudge to lay out on saving human life, and also to raise a people demoralised by long pauperism and idleness, and to rally them back into the ranks of working men and women. He must not, therefore, hesitate to enter into little particulars, and to bestow accurate attention on matters that in an ordinary way would never come before him.

5. The water supply must be carefully seen to. Wherever possible it should be from above not below the camp, and wells must be sunk in convenient situations should there be no tanks or streams available for drinking purposes. Conservancy must be closely attended to. The best form for latrine is merely a long trench for each sex, dug daily one foot deep, and daily filled in, at a distance of not less than 500 feet to leeward of the camp, and well removed from the water supply. It will be very difficult to make the people use these trenches, but every effort should be made, and if necessary police stationed to enforce it.

6. Colonel Sankey's design for hospitals should be adhered to, and one or more built at every camp of above 500 people. Executive engineers must use their best judgment in selecting good sites for these. Where it is possible a medical subordinate will be attached to each large camp. Further instructions will be issued as to the special treatment of the more weakly ones who are sent to the works.

7. In anticipation of large works beginning, Executive engineers should look out for suitable head coolies fit to take charge of gangs of say 50 labourers. Over four such gangs there should be a mustering officer able to keep a nominal roll in vernacular, which is a necessary part of this system. Over every four or five of these mustering headmen there should be a sub-overseer. In beginning any new work the payments must be made daily, although, perhaps, only for the first few days. Executive engineers must see that suitable cashiers are present.

C. S. MONCRIEFF, Major R.E.,
Officiating Chief Engineer of Mysore.

Appendix III.

Rules for the Information and Guidance of those entrusted with the Sanitary Arrangements in the Famine Districts.

1. As soon as it is decided to concentrate a large body of labourers at any one place, a site for their encampment should be immediately selected. The points to be remembered in selecting a site are the following:—

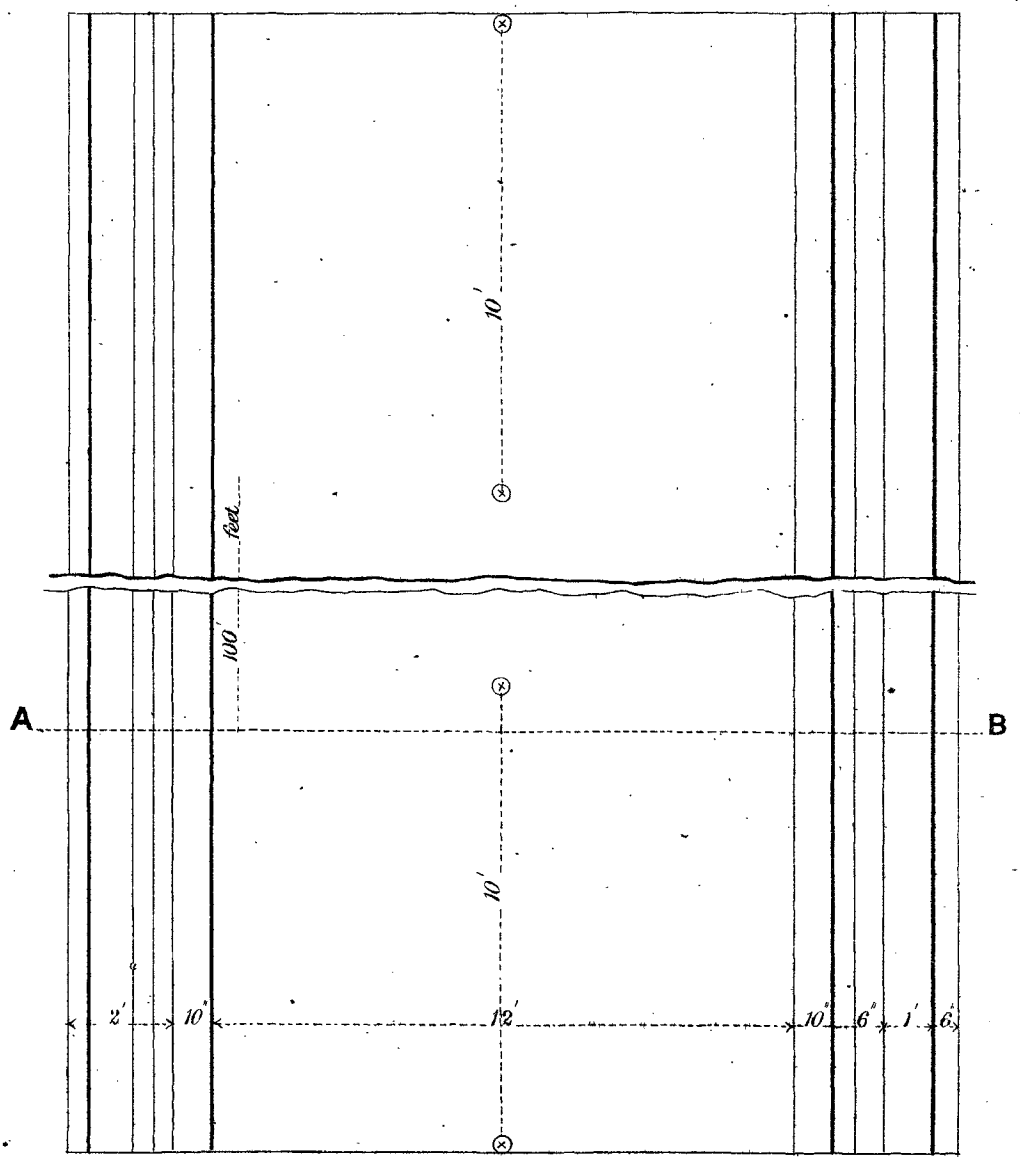
Proximity to drinking water-supply;
Do. to the works where the men will be engaged;
Facilities for procuring fuel and provisions;
Do. for making field latrines;
Do. for surface drainage and provision, that the site, if epidemic disease breaks out, will not be a source of danger to villages in the neighbourhood.

2. The site must be in every case below, and not above, the source of drinking water-supply, to which it should not approach nearer than 300 yards. Elevated ground at a distance from nullahs should, if possible, be chosen. If there is a grove of trees in the neighbourhood, the encampment may be made under them. If there is only an open plain, arrangements, according to the material available, must be made to hut the people. Grass for tatties may not be procurable, but it may be possible to make open sheds with branches of trees. If no other means are at hand, cumbly tents must be rigged up, supported (if there is no wood to make uprights) by stones. One man should give his cumbly for this purpose, and his comrade should reserve his for covering both at night. These temporary habitations should be erected in straight lines, and the

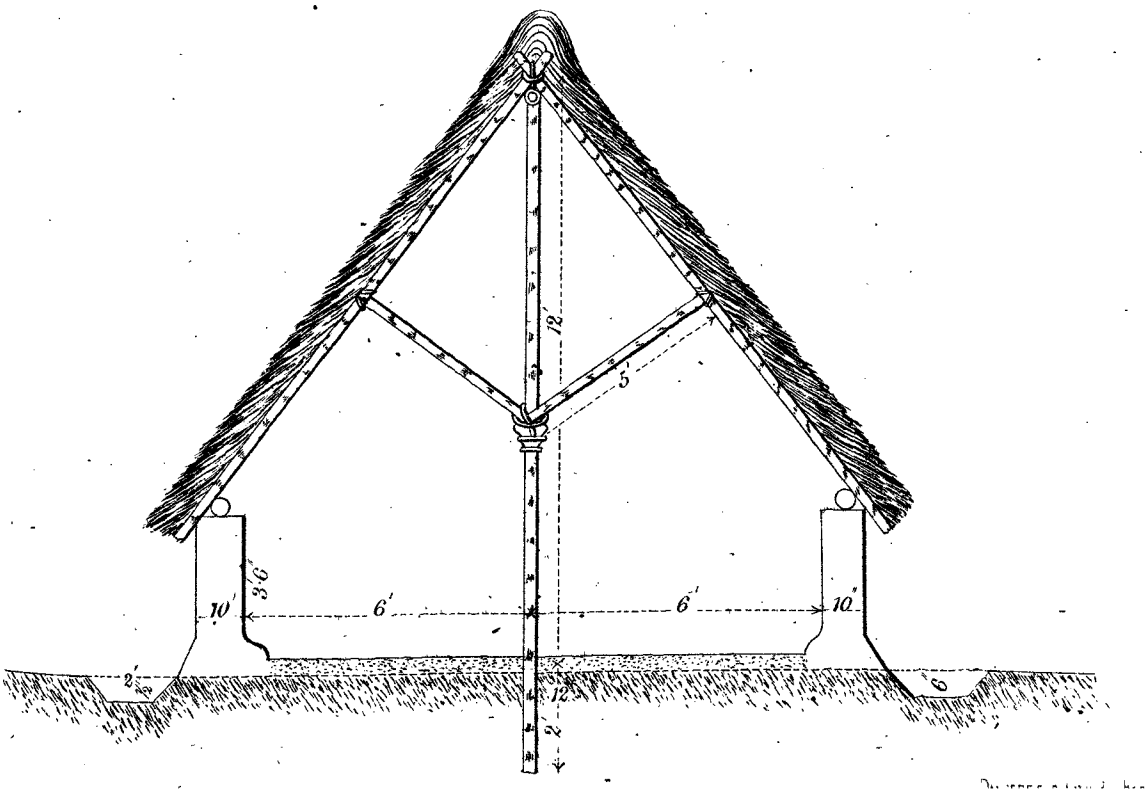
RELIEF CAMP SHED

SUITABLE FOR A HOSPITAL.

Scale 4 feet to an Inch.



Section on **A.B.**



greatest care must be taken to prevent aggregation of too great numbers together in one spot, or in huts. There should not be more than 20 individuals in one block, and no encampment should be allowed to contain more than 500 individuals all told. If a second or a greater number of encampments are necessary they should be in the same line as each other, but separated by at least a quarter of a mile from one another.

3. The accompanying diagram shows how an encampment for 5,000 person should be laid out. In the front line there are five blocks, in each of which 20 individuals are to be located; this number of blocks should not be exceeded. Each block is separated from the next block in the same line by 50 feet, and by 100 feet from the next line, which, however, is not located exactly behind it, but the first hut in the second line is placed opposite the open space, intervening between the two huts in the front line, and so on. The huts should face north and south. There should be also two huts erected on the flanks of the lines, one for the storage of grain, the other for storage of fuel. Of course, these should be under a guard.

4. If it is possible, a raised platform about 1 foot high and consisting of stones below and well-rammed earth above, should be provided for the huts, or cumbly tents to be pitched upon. A surface-trench should be cut along the front and rear of each row. Fireplaces should not be allowed within the lines for fear of the huts catching fire, but should be placed at the head of each line to leeward, and at a distance of 100 feet, and to economise fuel the food for the occupants of each line should be cooked at one time.

5. A site at a distance from any well or water-supply, and not nearer than 300 yards, should be chosen to leeward of the lines for the latrines. Whenever the soil will admit of it, a trench more than 6 inches deep should be dug every day in a straight line. For 500 men there should be two trenches of 100 feet each. The men should be ordered after defæcation to throw some of the earth excavated from the trench into it, but a bildar must be constantly in attendance to cover the ordure with earth. Nullahs must on no account be used for latrines. If the soil is rocky and will not permit the excavation of a trench, or if there is not sufficient earth for the purpose, the people must be allowed to ease themselves in a selected spot to leeward of, and not nearer than, 400 yards to the lines. The ordure must be collected and thrown into a pit dug as deep as may be possible, and covered every day with ashes procured from the *chulas*, or from the burning of *cutçhra* collected in the lines.

6. The medical subordinate's first care should be to place a guard over the drinking water-supply; to allow no person to go down into it; to allow no washing of vessels, persons, or animals near it; to see that there is an efficient drain to carry away the wastage water, which should be preserved for the use of animals, which, however, should not be allowed to approach nearer than 200 feet of well. Every effort must be made to economise the supply of water. If it runs very short, the people must be put on an allowance. "In health, an adult requires about 70 to 100 ozs. ($3\frac{1}{2}$ to 5 pints) " of water for nutrition, but about 20 or 30 ozs. of these are contained in the bread, " meat, &c. of the food, and the remainder is taken in some form of liquid"—(Park's Hygiene). Oxen usually drink about 5 gallons of water, but they should not be allowed to drink from the same source as the men. Great care must be taken to see that the ground all round the well is kept scrupulously clean. If there is no pavement, it can be roughly paved with loose stones if such are found in the neighbourhood. If the encampment is likely to be permanent for some months, drawing wheels with iron buckets and iron chains might with advantage be fixed round well, instead of allowing the people to use ropes.

7. The medical subordinate should get the men from one village hutted together in the lines, each of which should be named according to the village. He must make arrangements for serving out water, fuel, provisions, and, if necessary, clothing, to the occupants of each hut. It is feared that there will be a great scarcity of fuel; but gangs of labourers must be told off to collect what is obtainable, and to bring it to the hut for storage, and the medical subordinate must arrange for serving it out in allotted quantities. The greatest care must be taken to economise it. Another gang of men should be organised for the purpose of keeping every individual hut, its surroundings, and the lines clean. All surface filth must be swept up not later than by 7 a.m. and 4 p.m. every day. This work should be superintended by a peon. The latrines should be placed in the charge of the Mukadam, with a peon under him. All ordure must be covered in as soon as passed. The trenches should be made for one day in advance of what is required, but each day's ordure must be covered in before nightfall. Any person easing himself in any other than the allotted place should be summarily dealt with and punished.

8. A burial ground must be selected at least half a mile to leeward of the lines, and care must be taken to see that there is sufficient soil to bury bodies at a depth of 6 feet.

9. Every morning the medical subordinate should go round himself and inspect the encampments, and find out if any person had been taken ill during the night, and arrangements should be made to give medicine at once.

10. The medical subordinate should live as near as possible in the centre of his encampments for facility of administration, and near his habitation should be erected the hospital, which should be calculated to afford accommodation for at least 7 per cent. of strength.

11. He should indent for chlorodyne, cholera mixture with and without opium; for hospital comforts, *extractum carnis*, which may be required in large quantities; for a large supply of disinfectants, besides other drugs and surgical appliances. He should also have a large supply of clothing.

12. Should epidemic disease, such as cholera, break out, the patients should be treated, not in the general hospital, but in a temporary hospital built to leeward of the lines in which the sick man is, but at a distance from the latrines. The bodies of patients who have died from cholera must be buried speedily in the clothes in which they have died, and the earth from the place where the patient was ill should be dug up and sprinkled with disinfecting powder and buried. If more than three cases occur in the encampment, it must be abandoned, and the people who live in it must march at right angles to the wind to a fresh encampment, which must be prepared for them to leeward of the other encampments. They should, if possible, be put to work in another place at some distance from which the other labourers either work or are encamped.

13. The hospital subordinate should arrange a place on one of the flanks of the encampments for all the carts that may bring in grain, &c. The carts should be ranged in rows, and the bullocks tethered in lines. Similar arrangements regarding water-supply, fuel, fodder, and latrines will be required for the cartmen and animals.

14. If there are any animals to be slaughtered, a place should be selected half a mile to the leeward of the encampment, and care should be taken to bury the offal, blood, and bones.

(Signed) T. G. HEWLETT,
Acting Sanitary Commissioner.

CHAPTER II.

Civil Relief Works.

I. Civil relief works are intended to be used under three circumstances—

When civil relief works are to be used.

(1.) When the applicants for labour are numerous, and there is no relief works under the public works department available for sending them to.

(2.) When the relief work is a long way off and the applicants are unaccustomed to labour, it may be advisable then to employ them for a time on a civil relief work not too far from home, and when they are organized into gangs and accustomed to the system of work, then to march them off to the larger relief work.

(3.) As a means of giving light out-of-door work to the old and decrepit and those who are too infirm to be included in Class 2 and sent to the Public Works Department.

Standard for civil relief works.

II. No work is suitable to be used as a civil relief work unless it will employ 300 people for at least a month; each project of this class must receive separate sanction, a brief report of its character and estimate of its cost being sent up by the Deputy Commissioner; and special sanction must be given before work is begun upon it. But on any emergency or sudden rush of labour, Deputy Commissioners have authority to open works of this kind which have been previously sanctioned, reporting the same at once to the Additional Secretary, Famine Department.

Supervision.

III. Each work of this class must be placed under a responsible and well paid civil officer holding a permanent appointment, and not lower in rank than an inspector of police or peshkar, who will reside permanently on the spot and will be personally responsible for seeing that the labourers are properly treated and paid and tasked as far as their strength goes.

Organization.

IV. The rules laid down for the organization of a P. W. D. relief work apply generally to the organization of a civil relief work. There should be one register-keeper or mutsaddi over the work, who should keep a nominal roll of the labourers and take the daily attendance. They should be divided into gangs of about 40 or 50 under one head cooly (an office which may with advantage be given to a Brahman or Lingayat or other high-caste man in distress). They should be hutted on the work, and the huts and camps be of the pattern directed by the chief engineer. Their rate of pay will be the lower or B scale, and will be paid them as a rule twice a week, unless it is found necessary to pay three times a week or even daily. The civil officer will see that there is a sufficient bazar for them to procure supplies at, and will be responsible generally for their condition as in Chapter I. No medical officer will ordinarily be attached to a civil relief work. But the sanitary inspector will visit the work, and any who fall sick will be sent in to the nearest hospital, which will generally be the one attached to the Taluk relief camp. Task work to the amount of at least 50 per cent of an ordinary task will be exacted from all able-bodied labourers who may be sent to the relief work under the circumstances described in para. I. clauses (1) and (2), and the condiment portion of their wage may if, necessary, be cut as a punishment; but this must be done with great caution and after much patience, and should at once be reported by the officer in charge to his superior relief officer. From the old and decrepit labourers described in para I., clause (3), no task can be exacted.

Inspection by superior officers.

V. The amildar of the taluk will visit the relief work at least once a week; and the superior relief officer in charge of the sub-division should visit it as often as possible and at unexpected times, should count the men on the works and compare them with the nominal register, should see them paid, and inquire if they have any complaints; and both these officials should record the results of inspection in their diaries.

Special treatment.

VI. The rules for special treatment are applicable in their entirety to civil relief works.

Weekly returns.

VII. The officer in charge of the relief work will draw up every Sunday a statement (Appendix No. V.) for the week ending the preceding Saturday, showing the number of persons and the expenditure on the work, and will forward it in duplicate to the amildar, who will send one copy to the Additional Secretary, Famine Department, direct, and one copy to his district or sub-division officer.

CHAPTER III.

Relief Camps.

I. The relief camp is intended to provide temporarily for those who are able to work; and permanently (that is as long as they require it) for those who are sick and unable to do any considerable amount of work through old age and infirmity.

Temporary population.

II. The temporary cases are those where applicants come for labour, and the relief officer is not able at the time to provide them with labour; he must not turn them away, but must relieve them in the camp and work them there till he can draft them on to a relief work. The relief camp may also be used as a rest-house for gangs on their way to a relief work, who come with an order from the relief officer entitling them to food and shelter for the night. There is further the case of the emigrants' rest-houses which will be treated separately.

Resident population.

III. The permanent cases are those who are not so decrepit and bedridden as to require village relief; but who are not fit to be sent on to a relief work, or to look after themselves and cook for themselves. They are the least efficient portion of those who are not fit to be put into Class II. They include those who are in bad health, but not ill enough to be put into hospital, and those who are convalescents, and have just left hospital.

The ration of food.

IV. Nothing but cooked food is given at relief camps, the ration being 1 lb. of rice or of ragi flour plus 3 pie worth of condiments for an adult, and half the quantity for a child over 7 plus 2 pies. The chapter on Special Treatment applies equally to special cases in relief camps. No raw rations are permitted. The daily food is given in two meals, morning and evening, at about 7 a.m. and 5 p.m.

V. The two conditions on which food is given at a relief camp are residence and work. For this reason the camp must be enclosed, and admission or exit only be possible by a gate at which a guard is constantly posted. Sufficient accommodation must be provided inside for the usual population of the camp, with a margin over for any exceptional influx. Every person in the camp must be put to some work however slight, except those who are actually sick. The feeblest old woman can spin a little thread, and others can carry a light basket of sand to throw on the floor, or card cotton, or pick wool, and those who are a little stronger can collect and break stones. For the sake of their own health and spirits and self respect, it is better they should do this than that they should sit idle all day. Conditions of relief.

VI. The establishment should consist of paupers as far as possible. The only paid officials should be the superintendent, the accountant, and the hospital assistant; but 1 rupee per month may be paid to the overseers and to the head cook in addition to food. Carpenters and blacksmiths if required may be called in and paid in cash; but all other servants of the camp should be paid in food, or in raw grain if their caste requires it, and should, as far as possible, be appointed from among the paupers themselves, not from outside. Established.

VII. The duty of the superintendent is general supervision. He is responsible for examining the supply of grain received from the contractor, testing its quantity and quality, and entering it in the stock register; also for seeing that it is securely kept in a safe chamber under a good lock or sufficient guard. He is bound to be always present at feeding time, to see that the food is well cooked and the amount of it correct; to see that the paupers are properly oragnized into gangs and parties, are set to work at labour suitable to their capacities and do a sufficient quantity of the work; and that all members of the establishment do their duty punctually and thoroughly. He will muster the establishment every day and record their attendance in a register, the form of which will be found at the end of this Chapter. He will also receive daily from the taluk relief officer all new admissions, will assort them into gangs, and see that their names are entered by the overseer on his muster roll. The superintendent.

VIII. The accountant must always be a member of the amildar's permanent establishment, and must be selected for this work because of his special qualifications, a temporary officiating man filling his place. He has to keep up the returns and registers, the forms of which are given in the Appendix at the end of this Chapter. They consist of— The accountant.

(1.) The stock register of rice, &c. detailed.
(2.) The daily register of paupers fed in the relief camp.
(3.) The daily abstract statement of paupers fed in the relief camp.
(4.) The pay register of establishment.
(5.) The cash book and register of contingent expenditure.

The manner in which each of these statements is be prepared is explained in a note at the foot of the statement.

IX. The overseer will keep the nominal register (the form of which is given at the end of this Chapter) of the paupers in the camp. If there are more than four hundred a second overseer may be appointed. He should ordinarily be a respectable literate inhabitant of the taluk, Muhammadan or Brahman or of other good caste, who is in distressed circumstance and is glad to do the work for a payment of one rupee, plus half as much again as the daily ration, which may be given raw. He will marshal the people in the morning to the early meal, and will take the roll call while it is being eaten. When it is taken he will write out a slip in the following form and make it over to the accountant. The Overseer.

Attendance morning of the of .

Name of gangsman.	Men.	Women.	Children.	Total.	Total No. of lbs. of grain.

During the day he will supervise the work of the gangs, either generally or any particular set of gangs, as the superintendent may direct. In the evening he will again marshal the people to the evening meal, and take the roll call and give a slip to the accountant in the same form as in the morning.

Organization of gangs.

X. The gangs are to be organised according to their capacity for work, and also, where necessary, according to their caste, provided they are not thereby split up into too small numbers. If the numbers are small, persons of good caste can be allowed to sit a little apart in working and eating from the other members of the gang, and can have a portion of the shed walled off for them, while still continuing to be numbered in the gang. The number of a gang should usually be about 40 or 50; when the work is sedentary, like spinning or stonebreaking, it may be more; when the labourers are scattered over a large space, as on stone collecting, it should be less. The gangsman or head cooly should ordinarily be a respectable illiterate resident of the taluk in distressed circumstances, who is glad to accept the post for the wages of a ration half as large again as the ordinary one, *i.e.*, 1½ lbs. of grain, which may be given raw. The organization of the gangs should be kept as uniform as possible, so that people may know their work and their place and each other; they should sleep in the same shed, eat meals in the same place, and after meals go together to the same work in the same place, as nearly as possible.

Menial establishment.

XI. This establishment, which consists of cooks, water-carriers, rice-cleaners or grinders, guards, and sweepers, should be kept down to a moderate strength, and should, as far as possible, be recruited from the paupers of the kitchen, or from respectable people of the taluk who are in distressed circumstances. As a rule they should be paid in grain, which may be given raw if desired, at the rate of 1½ lbs., or for the most onerous task 2 lbs. a day; but where the numbers are large the head cook may in addition receive Re. 1 per mensem. The number of each class of servants should be arranged on a sliding scale in proportion to the number of paupers to be attended to. The number of cooks should probably be about 1 per cent., but more may be required where rice is cooked than where ragi; and where the resident population is very feeble more persons must be entertained to carry and distribute the cooked food than where there are able-bodied paupers who can be so employed. The number of water-women and of sweepers should be about the same as the cooks. But for the sick in hospital probably one sweeper will be required for 25 patients. The occupation of rice-cleaning or ragi-grinding is one that can be suitably given to women of respectable castes; two women in good health should easily grind 30 seers of ragi a day, or enough for 60 adults; but if they are enfeebled, then two relays of two women each should be allowed for each mill. It is not intended in these rules to tie officers down to a too rigid uniformity, but every superintendent and taluk relief officer is expected to do all in his power to combine efficiency with economy.

Orphans.

XII. The orphans and children deserted by their parents should be formed into a separate gang (or, if necessary, two gangs of boys and girls separately) and clothed in a distinct uniform. As soon as preparations can be made to receive them they should all be sent in to the relief camp at the district head-quarters and not kept in outlying camps. The disposal of these orphans is in the hands of government, and no officer is entitled to make any of them over to any society or private person without the special sanction of the Famine Commissioner.

Reception of applicants for relief.

XIII. In front of and near the door of each relief camp an enclosure shall be railed off in which all fresh applicants for relief shall be received, whether they present themselves voluntarily, or are sent in by the circle inspectors or other relief officers. In this place some superior relief officer shall attend at a fixed hour every day, either the special relief officer of the taluk, or the village relief officer, or the amildar, or in the absence of all of these the peshkar, to receive the applicants and either forward them to a relief work or admit them into the relief camp.

The medical officer.

XIV. There shall be a medical officer attached to each relief camp. He will be responsible for seeing that all the requirements of a hospital are provided, and that the sheds are dry and ventilated. He will send in to the superintendent a daily return showing the number of sick in hospital, the daily admissions, discharges, and deaths. He will constantly go round and inspect the residents in the camp, and carry out in regard to these all the instructions contained in the chapter on special treatment.

Travellers' rest-houses.

XV. On certain roads along which emigrants travel to and from the coffee districts it is considered necessary still to keep up places at which they can be fed. At these places the conditions of residence and work will not be insisted on. Two meals will be cooked a day, morning and evening; those who arrive in the evening will receive a meal, and shelter in a shed for the night, and will be sent on next day after receiving a second meal in the morning. The superintendent is responsible for seeing that they eat the meal in his presence and do not carry it away, and that this indulgence

is granted only to *bonâ fide* travellers who are in want. The taluk relief officer will pay a special attention to the dining-places; will endeavour to dissuade feeble and emaciated persons from emigrating, and offer them employment on a relief work; and if the number becomes at all considerable, he will report the facts to the Deputy Commissioner of the district. The superintendent will add to his daily abstract register a note showing number of people going to the coffee districts and number of people returning from the coffee districts.

XVI. An inspection book will be kept up at each relief camp, in which inspecting officers will record remarks and orders. Inspection book.

CHAPTER IV.

I. The selecting from the ordinary labourers, and the setting apart of those who are reduced by prolonged innutrition, is a most important part of the relief system. The duty of making the selection belongs (Chap. I., sec. II.) to the civil relief officer, or, in his default, to the P. W. D. officer. But either officer in performing the task should act in concert with and under the advice of the medical officer, whose part it is to indicate what treatment he considers necessary.

Special treatment ordinarily the duty of the civil relief officer.

II. The following are the principal classes into which the cases under special treatment may be divided:—

Classification of cases.

(*a.*) Nursing mothers who are themselves weak, or who have weakly or very young babies, may get the higher rate of pay (scale A) and light work.

(*b.*) Thin babies may, in addition to their usual nourishment, be supplied with milk once or twice a day.

(*c.*) Young children, *i.e.*, those under 12 years of age, who are emaciated may—

(1.) be fed instead of being paid. They will, in this case, become out-patients of the hospital.

(2.) get a morning meal of rice and milk, or conjee, in addition to the lower wage (scale B).

(3.) for a few days be treated in any manner the officer in charge, in the exercise of a wise and cautious discretion, deems proper.

The practical difficulty in dealing with young children is that their parents sometimes neglect them, or deprive them of the food given them; hence the rule is necessary that all food given to children should be eaten in the presence of the relief officer.

The women placed in charge of the young children belonging to the special treatment class must be very carefully chosen, and the relief officer must see that they wash the children in warm or cold water, as may be most suitable, and attend closely to their feeding, comfort, and cleanliness.

(*d.*) Young and middle-aged adults, reduced or emaciated by want, may get the higher wage (scale A), and be put to nominal work for a week or so till they gain strength. As a rule, further treatment is unnecessary; if it is necessary, then the patient is probably a fit subject for the hospital.

(*e.*) Any further treatment required is provided for by the discretionary grant allowed the officer in charge of the work. All wages paid to the special treatment class should be paid daily, or three times a week.

Fortnightly Report on Special Treatment.

		Men.	Women.	Over 7.	Under 7.
1	2	3	4	5	6

Cost of Special Treatment.

Paid in wages (Cash).	Cost of food.	Total.	Remarks.
7	8	9	10

General remarks.

III. The amount of special treatment and its results should be reported upon fortnightly, in the form shown in the margin, by the officer who is responsible for the special treatment to his immediate superior, who will submit the report with his opinion to the Famine Commissioner or the Chief Engineer, as the case may be. As a rule, the Government rates of pay with light work will meet all ordinary cases of distress. But it is impossible to lay down rules for every case, and much of the success of the treatment will depend upon constant and careful selection, and upon the humane exertions of the officer in charge. On the one hand, no effort is to be wanting to relieve distress and check mortality; on the other, unnecessary indulgence should be avoided, and a due economy observed.

IV. When a hospital assistant cannot be sent to take charge of a relief work or relief camp, the duties above described must necessarily devolve upon the officer in charge of the work or camp.

CHAPTER V.

Village Inspection.

Objects of village inspection.

I. The object of a system of frequently repeated house-to-house visitation in each village is to make sure that the measures taken by Government for the relief of the famine-stricken are effectual; that the tests enforced to prevent persons not in actual need of relief getting admittance to Government works or relief camps do not produce hardship; that none are allowed to die through neglect or ignorance of the means of help; and that any indications of distress among the general population are immediately brought to notice and checked. The organization and efficiency of the village relief system will accordingly form the principal duty of all district officers, and their activity in this respect will be closely watched. They should be constantly on the move, and in their weekly progress reports give briefly the result of their experience.

Procedure in towns.

A similar system of house-to-house inspection should be adopted in all large towns. A copy of the order introducing the system in Bangalore is appended, and may serve as a guide to the proper procedure in other towns.

Village inspection by whom performed.

II. In the first instance it will be the duty of the village officers to ascertain and register the distressed poor of their respective villages; their work will be checked and supervised by specially appointed inspectors, and the inspectors in their turn will be controlled by special relief officers under the Deputy Commissioner. Where necessary village relief officers may be appointed either instead of or to assist the special relief officer. The village relief officer should be a native gentleman of a superior stamp and of active habits, holding a permanent appointment under Government, a temporary substitute being employed in his place. Assistant Commissioners may, in addition to their own duties, be made special relief officers of the whole or part of their charge.

Division of the taluks into circles, and appointment of circle inspectors.

III. The Deputy Commissioner of each district will at once divide those taluks of his district which are severely distressed into circles containing about 30 villages each. Over each circle an inspector should be appointed, to be called the circle inspector, who should visit each village once a week, or at least once in 10 days. To fill these posts of circle inspectors only officers who hold permanent appointments may be selected; as a rule the more active and intelligent of the Shekdars, and of the Gumastas of the Amildars or of Deputy Commissioners' courts, should be appointed, or officials of that description, and temporary men on Rs. 10 per mensem, should fill their places. Ten per cent. of the circle inspectors' work must be tested weekly by the special relief officer of the taluk, or, if there is none, by the village relief officer of the taluk.

District.	No. of severely distressed taluks.
Bangalore - -	9
Kolar - - -	10
Túmkúr - -	8

Hassan - -	7
Mysore - -	2

All civil relief officers in charge of a taluk (whether Deputy Commissioner, Assistant Commissioners, or special relief officers) will enter in their weekly diaries the result of their own inspections and supervision.

Treatment of persons in distress unable to leave the village.

IV. Every village officer (Patel and Shanbhog) should be again warned that he will be held strictly responsible that his village is free from persons in severe distress. The Patel, assisted by the Shanbhog, of each village must keep up a register as under of those whom the circle inspector selects as requiring relief in the village.

A. Register of Persons unable to leave the Village of , and in need of Relief.

Number.	Name of person.	Age.	Sex.	Cause of incapacity to leave the Village.	Signature of Village Officer.	Amount of grain to be given.	Remarks of Circle Inspector, and date of first entry of name.	Remarks of other Inspecting Officers.

In this Register (A) no one must be entered who is capable of doing any kind of labour on a relief work or in a relief camp, only the bedridden, the cripples, the very infirm, blind, and such cases should be on this register, which entitles these to receive relief at their home, and then only provided that they have no other means of support and no able-bodied relatives in a position to assist them. To such, 1 lb. of raw grain may be given daily to an adult; $\frac{1}{2}$ lb. to a child above 12; and $\frac{1}{4}$ lb. to a young child. The food should usually be given in the presence of the circle inspector, the village officers, and two respectable inhabitants, and the quantity given on each occasion should therefore be sufficient to last the recipients till the next visit of the inspector. A separate Register (B) for such persons should be kept by the Shanbhog in the form given in the margin (*below*), and each entry in this should be signed by the parties witnessing the distribution. To meet this small expenditure a petty advance of money, not exceeding a month's salary, may be allowed the circle inspector. The superior relief officers on visiting a village will invariably examine the people registered and sign the Registers A and B.

Village Register B.

Name of Recipient.	No. in Register A.	Amount of Daily Ration to which entitled.	Amount given by Circle Inspector.	Date.	Witnesses.

Treatment of persons in distress able to leave the village.

V. The village Patel, with the help of the Shanbhog, should also compile a list of those very poor persons who are able to leave the village, but who have not done so. To people on this list food will not be allowed in the village, but the circle inspector will give them a ticket to present to the place fixed for applicants at the Taluk Head-quarter Relief Camp, whence they will be sent either to a relief work or to a relief camp. The circle inspector must not allow them to remain in the village. If it is a day's journey to the taluk head-quarters, the circle inspector will give them either grain or money to buy one day's food, entering the disbursement in column 6 of Register C, and procuring the signatures of two witnesses to the transaction. Ordinary able-bodied labourers will not be entered in this list, which is intended to show that the village officer is aware of any cases of special poverty in his village. At every succeeding inspection the circle inspector will inquire whether any of the people entered on this list who were sent away have returned, and whether there are any others in the village who ought to be entered on it and sent to a relief work or relief camp accordingly.

Village Register C.

Date.	Number.	Name.	Age.	Sex.	Remarks showing date on which they are sent to the Taluk Relief Officer, and whether absent or present in the Village on subsequent Inspections.
1	2	3	4	5	6

Columns 1 to 5 will be filled up by the Shanbhog. Column 6 by the circle inspector on his visits.

Deaths.

VI. The death of any person on Register (A) must be reported by the circle inspector to the special relief officer, who will enter the total number in his weekly report.

Deaths. Duties of circle inspectors.

VII. The first duty of the circle inspector or of an inspecting officer visiting a village is to go carefully through the village house by house, the inspection being made more searching in the poorer quarters and among the lower and Pariah castes. Cases of people of good position in ascertained distress, such as of pardah or high caste women, and any suffering among particular classes, should be specially reported upon to the special relief officer of the taluk. The able-bodied asking for assistance, or who appear in need of relief, should be directed to the public works, and sent with a letter to the head-quarters of the taluk for an order admitting to the works. The results of the inspection should be compared with the Registers (A), (B), (C), and if necessary the registers should be corrected by striking off names improperly entered or adding those omitted. The inspector lastly should satisfy himself that all on Register (A) really in need of relief get relief, and that none on Register (C) are allowed to return and starve quietly in the village.

Professional beggars, &c.

VIII. Professional beggars well able to earn their living, religious mendicants, and the like are not to be relieved; nor are people able to help themselves to be needlessly interfered with.

Wanderers and pauper travellers.

IX. If, when travelling, a pauper or distressed wanderer is met, the circle inspector will take him to the nearest village or have him carried there. Wanderers so brought or arriving in any other way will be fed once by the village officer in the presence of two respectable villagers, and then forwarded to the nearest relief camp under proper escort, with a report, signed also by the two villagers, giving the circumstances of the case.

Registers to be kept by circle inspectors.

X. The circle inspector must keep up two statements of expenditure, the one corresponding to Register A, and showing the number relieved in grain in each village, and in accordance with this statement he will be enabled to draw weekly on the amildar's treasury for the weekly value of grain to be distributed; the other showing particulars of the casual expenditure, advances to paupers on Register C, to wanderers, &c.

Circle Inspector's Register I.

Village.	Number of People on Village Register A.	Quantity of daily grain to which they are entitled.	Quantity distributed by Inspector during week.	Value of grain.

Circle Inspector's Register II.

Date.	Particulars of Expenditure.	Total.

Advance to village officers.

XI. To provide for wanderers Deputy Commissioners are authorised to deposit a sum, not exceeding Rs. 5, with the village officers of any village where circumstances call for the grant. As the money is spent bills should be drawn on the Amildar, after two respectable inhabitants have countersigned the vouchers.

APPENDIX.

Famine. No. 66.

To the PRESIDENT, Municipal Commission, Bangalore.

Mysore, Chief Commissioner's Office,
Bangalore, 26th September 1877.

I am desired by the Chief Commissioner to say that, after consultation with the Famine Commissioner, he has decided that the following arrangements should be made for the relief of distress in the town of Bangalore.

2. Under the orders of the Government of India, all open kitchens, at which paupers receive food which they can take away uneaten, or which they can eat and depart, must be abolished. The pettah kitchen has therefore to be closed as soon as possible, and it remains to make proper arrangements for the people who have hitherto been fed at this place.

3. Those people consist of four classes: First, paupers who have crowded in from the village and from other districts; of these the able-bodied will be removed to relief works, and the infirm and sick alone retained in the hospitals and in the Siledar lines. Secondly, the townspeople; these are (1) sick, (2) able-bodied and accustomed to labour, (3) able-bodied, but unaccustomed to manual labour and earthwork, only to some trade such as weaving, tailoring, working in leather, &c., (4) infirm and unable through old age or bodily weakness to earn their bread. The two former classes will be provided for at the hospitals and on the relief works; the two latter should be cared for by the Municipal Committee in the manner I am now to describe.

4. The town and cantonment should be divided by you into portions, the size of which must be regulated by the number of houses inhabited by members of the two classes referred to; as a rule, there should not be more than 100 of such houses in each beat or portion. These beats should then be put under the charge of some one gentleman who will undertake to perform the duty required of him, and who will be called the inspector of the beat. His duty is to make a house-to-house visitation of his beat to ascertain what persons in the beat are either infirm (Class 4) or fit for other than manual labour (Class 3), and to prepare a register of them. He will give to each person who is too infirm to labour in any way, and yet not sick so as to be a fit case for hospital, a ticket with a number on it (corresponding to the number in his register), which shall entitle that person to receive 1 lb. of rice a day from a grain-merchant in the neighbourhood, who is to be fixed on by the inspector of the beat with your concurrence. He should make out a separate register of such grain recipients in the form annexed, and will revise it every week, and every Monday he should give an order on the grain merchant showing how many lbs. of rice he is entitled to supply every day. The distribution of rice to ticket-holders should take place at a fixed time every morning. Either the inspector or some municipal officer should, if possible, be present at the distribution to see that there is no fraud, and that the infirm persons receive their dole in an orderly and seemly way.

5. The inspectors of beats will be expected to visit their beats weekly, and the tickets for grain must be renewed every week by them; or the grain-merchant will not be authorised to serve out the grain to the ticket-holders.

6. To those persons who belong to some trade and are unable through poverty to carry on their trade, the means of doing so should be given; cotton should be supplied for women to spin, yarn or wool for weavers to weave, leather for shoemakers, and so on, exacting from each of them the return of a due quantity of the manufactured article at the end of the week, which Government will buy from them at a fixed remunerative price. It seems best that this, which is a technical and difficult task, should be performed by a special official, to be called the distributor of work; one such official will probably be sufficient for the pettah and one for the cantonment. The inspectors of beats will send to the distributor of work every Monday all persons belonging to the classes above described, who are not accustomed to manual labour; giving to each a slip showing number of beat, number of house on inspector's register, and name of ticket-holder; but care must be taken to discriminate; the weavers, for instance, who have been working on the Sampangi tank have now become good labourers and should not be set to loom work again, which is much more difficult to supervise. If a volunteer can be procured for this office so much the better; if not, a paid official may be appointed. It is impossible to specify beforehand what the details of the transaction which the distributor of work will have to supervise should be; what quantity should be exacted of any kind of work; at what price it should be paid for; or how Government should dispose of it. Experience will soon provide a set of rules on these points; and,

in all probability, the Charitable Committee will be able to take the cloth woven or the shoes made, &c. off your hands, and to distribute them to orphans and to other fit objects of charity.

7. The Chief Commissioner confidently hopes that every member of the Municipal Committee will be willing to take a beat and to carry out this house-to-house inspection. In case there should be more beats than committee members you should enlist the services of volunteers, applying first to the members of the Charitable Relief Committee to see if any of them are ready to assist you, and afterwards to native gentlemen of good repute in the city. When your arrangements are complete, you are requested to report the number of beats and the names of the inspectors of each. Your own duties should be confined to testing a percentage (not less than 5 per cent.) of the houses in each beat, to see that the work of visiting is thoroughly done, and the aid given is given with judgment and discrimination.

8. When the registers are prepared and the system is ready to be introduced, a day should be fixed after which no more relief in the shape of cooked food will be given to any one who does not enter the relief camp and abide by its discipline. That day should not be more than a fortnight hence, and the Chief Commissioner relies on your energy and experience to secure the due and rapid carrying out of these orders.

9. The form suggested for the registers required for the working of this system are appended, and printed copies will be immediately supplied to you by the press.

No. of Beat.	No. of House.	Name of Recipient.	Quantity of Leather given out.	Quantity of Work given in.	Value paid for Work.	

Incl. in No. 271.

No. 258.

No. 2329 A., dated Naini Tal, the 4th October 1877.

From C. Robertson, Esq., Offg. Secretary to Government, N.W. Provinces and Oudh, to the Additional Secretary to the Government of India.

In continuation of my letter No. 1754 A., dated 22nd August, and with reference to your No. 749, dated 27th idem, I am now desired by his Honour the Lieutenant-Governor and Chief Commissioner to submit a further report on the condition and agricultural prospects of the North-western Provinces and Oudh.

2. The hot west wind, which sprang upon on 6th August, continued to blow until near the end of the month. On the 25th the east wind returned, and on the 27th there was a general but not heavy fall of rain in several districts of the Rohilkhand Division, and showers fell elsewhere.

3. On the 31st of August and 1st September, a severe storm, originating in the Gházipur District of the Benares Division, passed over the Benares, Jaunpur, Mirzapur, Allahabad, and Fatehpur Districts, and the south-east of Oudh. It then crossed the Jumna and went through Bánda, Hamírpur, and the Jhánsi Division. The fall of rain which accompanied did great good to the districts visited by the storm, but unfortunately it did not extend to the Duab, Rohilkhand, and western part of Oudh, where it was urgently needed.

4. The wind changed again to the west on the 8th September, and has continued since to blow with great violence and with damaging results to the crops throughout the provinces.

5. The meeting of the western and eastern currents led, however, to a heavy fall of rain, which was general over the greater part of the eastern districts on the 10th and 11th September; but since the latter date there has been almost no rain anywhere, and the whole of the Provinces have been devastated by a hot dry wind.

6. The following statement, which gives the average rainfall for each district from 1st June to this date, as compared with the average rainfall in the same period for the five years 1870–75, will show how scanty the fall everywhere has been, and that literally in many districts there has been no rainy season. The total fall is much less than in the worst years 1860 and 1868, of which we have records, and the failure has been more general throughout the Provinces:—

Districts.	Average Rainfall of Five Years, 1871–75, June to September.	Average Rainfall from 1st June to 14th September, 1877.	Remarks.
			Varying at different Tahsíls, from—

7. The consequences of this disastrous failure of the usual rains are most deplorable for man and beast. The full effect cannot yet be determined, but it is now certain that in the Meerut, Agra, Rohilkhand, Sitapur, and Lucknow Divisions, and in parts of the Allahabad, Jhánsi, Rae Bareli, and Fyzabad Divisions, the unirrigated kharif crops are entirely destroyed. In Benares and greater part of Allahabad and Fyzabad it was hoped after the rain of the 10th and 11th, that from five to eight annas would be saved. but these hopes it is now known cannot be realised. The hot wind that has raged since the 11th has irretrievably damaged much that survived, and threatens to destroy all, A speedy fall of rain would yet save some; and in part of the Jhánsi Division there is also a little which is not yet utterly ruined.

8. Detailed statements were called for from every district of the condition of the crops when an extensive failure of the rains was seen to be inevitable. These were prepared in the end of August or the beginning of September, but give a more favourable estimate of the probable outturn than could now be made. An abstract of them is appended, but I am to refer you rather to the reports* from the Commissioners of Agra, Rohilkhand, Lucknow, Fyzabad, and Benares, which are herewith forwarded for fuller information on the condition of their respective Divisions.

* From Commissioner, Agra, No. A., dated 21st September 1877.
Ditto ditto Rohilkhand, No. 64, dated the 5th September 1877.
Ditto ditto Fyzabad, No. 2295, dated the 7th ditto 1877.
Ditto ditto Benares, No. 171, dated the 15th ditto 1877, and enclosures.
From Commissioner, Benares, No. 173 A., dated the 22nd ditto 1877, and enclosures.
From Commissioner, Lucknow, No. 2958, dated the 25th ditto 1877.

9. The general result is, as stated above, that except in parts of Benares, Fyzabad, and Allahabad, the outturn of the unirrigated kharif will be nil. Unfortunately the area of irrigated kharif is very small. Canal irrigation exists chiefly in the Meerut and Agra Divisions, and there the crops on irrigated lands are principally sugarcane, indigo, and cotton. Food-grains and fodder are generally grown on lands that depend on the periodical rainfall, and at the sowing season the cultivators could not foresee the terrible drought that was to prevail, and did not avail themselves of canal water for this class of crop.

10. At present the prospects of the rabi crop are as gloomy as the condition of the now ruined kharif. As far as appearances go the monsoon is over, and there is no indication of coming rain. Unless within 15 or 20 days there be a general heavy fall, the cold season crops can be sown only where irrigation is practicable. To the east of Allahabad the rain which fell on the 10th and the 11th would, it was expected, permit the rabi to be sown, but the effect of the hot winds since that date has been such as to render it very doubtful if even there unirrigated lands will be sown. The fate of the

rabi crop will in a great measure be decided by the 15th of October, and on that date district officers have been directed to submit a return in the annexed form.

11. One of the most deplorable consequences of the failure of the kharif is the inevitable great mortality among cattle for want of fodder, and that too at a time when the need of cattle for well-irrigation is most pressing. Already in the Agra Division the cattle are being fed on the leaves of trees. Loss of cattle from starvation has been reported, and there is no means of providing sustenance for them.

12. Endeavours have been made to ascertain what supply of food-grain is stored in these Provinces, and how far it must be supplemented by importation, but great difficulty has been experienced in getting trustworthy information. It has been with some certainty ascertained that what grain there is in the Provinces is chiefly in the hands of dealers, and that the stocks held by cultivators and others are low. Generally the crops in these Provinces during the last two years have been good, but there were large tracts which each year did not share in the general abundance. The last rabi harvest in Rohilkhand and the northern part of the Provinces generally was deficient owing to heavy rain at the time the crop was ripening. Throughout great part of the Provinces also the grain was so wetted when lying on the threshing-floors that it was not fit to be stored, and was sold off for exportation. The demand for exportation to Madras and Bombay has also been great, and has drained the stocks in the Provinces considerably. The result of the detailed inquiries will be reported hereafter, but at present it may be said that the result, as far as can be ascertained up to date from data which must from the nature of the case be more or less imperfect, is that in Rohilkhand the grain locally available will suffice for about three months' consumption, while in the rest of the Provinces it may last for six months or more. But it is right to add that the crisis has already caused large importations from both the Panjab and Bengal, which have had the effect of arresting the rise in prices; and if these sources can continue to be relied on, we shall not be in want of food, although we shall have to find works to enable the poor to obtain money to buy it. But, notwithstanding this aid, the following statement will show the great advance which has taken place in prices since the 1st of July:—

	Wheat.					Barley.					Rice (common).					Bajra (Millet).				
	30th June.	31st July.	15th August.	31st August.	15th September, or later date.	30th June.	31st July.	15th August.	31st August.	15th September, or later date.	30th June.	31st July.	15th August.	31st August.	15th September, or later date.	30th June.	31st July.	15th August.	31st August.	15th September, or later date.

Prices are now in the worst places more than double what they were three months ago, and are higher than they were at a corresponding period in 1868. They verge on famine rates.

13. Under the combined influence of high prices and stoppage of field work great distress has appeared among the labouring classes, which has compelled this Government to sanction the opening of relief works. The measures taken in this way have already been reported in my letter No. 2074 A., dated 14th instant. As then stated Colonel Fraser, Chief Engineer, Public Works Department, and Mr. C. Anderson, Chief Engineer, Irrigation Branch, were deputed to the head-quarters of divisions to decide, in consultation with commissioners and district officers, on what works labourers should be employed. A copy of the reports of their proceedings,* and of the orders issued thereon,

* Minutes of a meeting held at Agra on the 14th, 15th, and 17th September 1877.

To Commissioner of Agra, No. 2233 A., dated 29th September.

Minutes of a meeting held at Meerut on the 18th, 19th, and 20th September 1877.

To Commissioner of Meerut, No. 2238 A., dated 29th September.

From Colonel Fraser, on special duty, No. 13 B.R.T., dated the 9th September 1877, and enclosure (minutes of meeting at Bareilly).

To Commissioner of Rohilkhand, No. 2030 A., dated the 13th September 1877.

Minutes of meeting held at Lucknow on the 10th and 11th of September 1877.

is herewith submitted for the information of the Government of India. It will be observed that the expenditure from provincial funds already sanctioned amounts to—

	Rs.
Rohilkhand - - - - -	1,64,196
Sitapur - - - - -	Small amounts not yet reported.
Lucknow - - - - -	
Rae Bareli - - - - -	
Fyzabad - - - - -	
Benares - - - - -	
Allahabad - - - - -	
Agra - - - - -	3,63,257
Meerut - - - - -	1,53,704
Jhánsi - - - - -	28,000

Distress has increased so much since the middle of September that in every division works must be opened almost immediately.

14. There have been numerous grain riots or dacoities in most of the distressed districts, to repress which vigorous measures have been taken, and which should cease now that relief works are or will be provided. There has also been some emigration from parts of the Agra, Rohilkhand, and Jhánsi Divisions, which the measures taken to provide relief are expected to check. It is trifling compared with the enormous exodus reported to have taken place from Gwalior, Dholpur, and other native states, partly into the Duab, but chiefly through Jhánsi to the south and west. Had the emigrants been able to find their way to a land of plenty, their going from one district to another might have been regarded with indifference, but when the whole of the provinces are almost equally unfortunate, the influx of homeless wanderers is only embarrassing.

15. Many of these wanderers were so emaciated, and many of those who live on charity were so reduced by want of food, that it has been imperatively necessary to authorise the opening of poor houses in the districts of the Rohilkhand and Agra Divisions and elsewhere. His Honour has directed that they shall be conducted on the system followed so successfully at Moradabad in 1860–61 and enjoined in the famine of 1874. His Honour has also directed that where they are opened an appeal be made for their support to the liberality of the wealthier sections of the community, undertaking to give on the part of Government a grant for initial expenses, and the equivalent of all sums raised by subscription. His Honour has also sanctioned the grant of takávi for the digging of wells in places where they can advantageously be made and good security be given, and for the purchase of seed grain should rain fall and otherwise the lands remain unsown. The amounts yet sanctioned have have been as follows:—

	Rs.
Meerut Division - - - -	50,000 for wells.
Agra ditto - - - -	90,000 for wells and seed grain.
Bánda District - - - - -	10,000 for seed grain.
Jhánsi ditto - - - - -	3,000.

The amount required for other divisions cannot yet be stated.

His Honour trusts that his orders will be confirmed by the Government of India.

No. 259.

Telegram, dated 5th October 1877.

From Viceroy to Secretary of State.

Season telegram, 25th September to 3rd October. Madras.—Continuous good rain everywhere, except part of Coimbatore and Madura. Good freshes in rivers; crops thriving; north-east monsoon not yet appeared on coast. Works, 628,259, decrease 70,000; gratuitous 1,603,721, decrease 2,000. Madras revised orders for administration relief issued 24th September. General but slight fall in prices; imports fully maintained. Bengal and Burmah daily grain despatches to Madras ports 5,454 tons, besides from Peninsula Railway 900 tons. Railway working from Madras meagre.

Bombay.—No appreciable rain in Gujerat, where needed; rest of Presidency good general rain. Temple telegraphs: General situation markedly better. Works 219,910, decrease 23,000; gratuitous 163,008, increase 3,000.

Mysore.—Good rain continues; crop prospects good; prices slightly cheaper; supply of sufficient railway imports; reduced people returned to field pursuits. Works 54,000, gratuitous 162,000. Deaths in Bangalore temporarily increased from rain. Famine Commissioner telegraphs that effect of putting paupers on works is marked improvement in health and spirits; they crowd to works.

North-West Provinces.—No rain save showers in Ghazipore; drought and heat continue; distress felt in Agra and Rohilkund Divisions.

Condition in Oudh less serious; prices stationary but high; grain being imported from Nerbudda Valley; October rain would save spring crop; cloudy weather reported on 4th from several districts; suitable relief work arrangements in forward state.

Punjab.—No rain save in Rawul Pindi and frontier; no improvement except Multan Divisions; dear prices; distress not yet reported.

Rajputana.—Partial showers in Ajmere and Marwar; no rain elsewhere; drought increasing in Eastern States; prices not yet excessive; relief works arranged on three sections of railway.

Indore.—No rain, except at Neemuch. Malwa crops beginning to wither; Gwalior condition bad. Great emigration from Northern and Eastern States southwards. Relief work open on three railway sections near Gwalior, Neemuch, and Rutlam.

Hyderabad.—Moderate showers; crop prospects favourable.

Bengal.—Prospects good in Bengal proper. Anxiety about South Behar, where rain holds off.

Burmah.—Prospects favourable; floods subsided; rice being replanted.

Assam.—Prospects good.

Central Provinces.—Protracted break in rains causes some loss of crop, and anxiety in rice-growing tracts; rabi (?) crops good. Large number of immigrants from Central India States, for whom relief works provided.

No. 260.

Telegram, dated 6th October 1877.

From Governor of Bombay, Ahmednagar, to Viceroy, Simla.

Bombay Chamber of Commerce have telegraphed urgently to me. Message begins:—

"Markets in famine districts being amply supplied, and prices daily declining and lower than Bombay; all reason for preference to famine traffic ceased. Holders of grain in Nagpur, other stations, will continue to book it in order to clear stocks owing to preference given, and despatch to Bombay will continue closed, thereby inflicting continued great loss on Bombay trade and merchants."

Message ends. Your Lordship best judge of necessity for preference to twelve hundred tons daily for places beyond Bombay Presidency, namely Hyderabad and Madras. I apprehend that you consider this is still necessary, but I shall be obliged by instructions to make sure. Please reply to Ahmednagar.

No. 261.

Telegram, dated 7th October 1877.

From Governor of Bombay to Secretary of State.

Within past fortnight good rain fallen all over Bombay Presidency, excepting Khandesh and Sind. Autumn crop considerably though not entirely saved. Guzerat cotton crop improved, but short yield feared. Sowing for next spring crop everywhere good. Quantity of grass and fodder for cattle; prices falling. Numbers of people on relief works largely decreasing; numbers on gratuitous relief slightly increasing, as usual towards end of scarcity.

Encl. in No. 271.

No. 262.

No. 914, dated Simla, 8th October 1877.

From C. Bernard, Esq., Additional Secretary to the Government of India, to the Secretary to the Government of Madras.

I am directed to acknowledge the receipt of your endorsement enclosing printed copies of the instructions published by the Madras Government and their proceedings, No. 2847 of 24th September, and in reply I am to express the satisfaction with which his Excellency in Council regards the steps now taken to carry out in detail the line of policy determined on by the Madras Government during the Viceroy's visit to that Presidency.

2. As these instructions have the concurrence and approval of the Government of India, it is unnecessary to comment on them in detail, but I am to say that his Excellency in Council observes with special satisfaction the beneficent arrangements contained in the paragraphs noted in the margin, which provide that in effecting the necessary transfer from gratuitous relief to public works, every possible precaution shall be taken so as to guard not only against loss of life, but against overtasking, against injury to health, and against the separation of families.

23, 24, 31, 32, 37, 45, 48, 51, and 53.

3. His Excellency in Council confidently anticipates that with the loyal co-operation of the district officers, and under their zealous supervision, the measures now taken will have the best results in enforcing economy, in checking peculation, in improving the health and condition of the people, in providing the Presidency with useful communications and increased protection against drought, and in reducing to a minimum the dangers of demoralisation.

Encl. in No. 271.

Telegram, dated 8th October 1877.

From VICEROY, Simla, to GENERAL KENNEDY, Madras.

Temple has represented urgent demand of Bombay Chamber of Commerce for cessation of preference now given to grain consignments for Madras districts on all Peninsula stations. Chamber urges that famine districts are fully stocked and that their prices are below Bombay prices; also that consignors send to famine stations only because preference enables them thus to work off stocks. Temple asks if preference rule can be withdrawn. Duke recently telegraphed prices easier and supplies sufficient in Ceded Districts. But Madras Railway working short from Madras end. I much want to relieve Bombay export trade from pressure at earliest possible moment. Still famine needs are paramount, and I fear difficulties might arise on Madras line and in Ceded Districts by sudden cessation of supply. Does Madras Government consider it safe to reduce the preference waggons now allotted to famine consignment by one half from the 15th October, and to hold out hopes of withdrawing preference order entirely by 1st November, provided improved prospects continue? If so, then Madras Railway could arrange its engines accordingly. Early reply requested.

No. 264.

Encl. in No. 271.

Telegram, dated 8th October 1877.

From VICEROY, Simla, to RESIDENT, Hyderabad, Deccan.

Obligation on Peninsula Railway to deliver daily 300 tons grain at Hyderabad causes inconvenience. Governor Madras telegraphs that new grain from Hyderabad is coming into Khurnool, and your prospects seem favourable. Can Hyderabad afford to reduce her obligatory famine demand on railway by one half from 15th October, and to withdraw it altogether by 25th October. Of course ordinary trade consignments would take their turn as in ordinary times.

No. 265.

Encl. in No. 271.

Telegram, dated 8th October 1877.

From VICEROY, Simla, to GOVERNOR OF BOMBAY, Ahmednagar.

Your message regarding cessation of preference to famine consignments. I am anxious to meet wishes of Bombay trade at earliest possible moment. I have telegraphed to Kennedy to ascertain views of Madras Government. I hope an early reduction of number of preference waggons may be possible.

Encl. in No. 271.

No. 266.

Telegram, dated 9th October 1877.

From Major-General Kennedy, Madras, to Viceroy, Simla.

Duke thinks that at this period, with present still excessive range of prices, no change should be made likely to lessen quantity of grain sent to Madras district. The character of coming season north-east monsoon will be known in a few days, and may affect the question either way.

Encl. in No. 271.

No. 267.

Telegram, dated 9th October 1877.

From Resident, Hyderabad, Deccan, to Viceroy, Simla.

Nizam's Government assents to reduction of obligatory famine demand on railway for Hyderabad to 150 tons from 15th October, but solicits two or three days for consideration as to its entire relinquishment from 25th October, the Government tenders its best thanks to your Excellency for your personal interest in this matter on its behalf, and for great facilities so afforded to grain importations for Hyderabad.

Encl. in No. 271.

No. 268.

Telegram, dated 10th October 1877.

From Viceroy, Simla, to Sir R. Temple, Bombay.

Have consulted Madras Government, who consider that during continuance of excessive prices of food no change should be made to lessen quantity of grain sent to Madras districts. Character of coming season and of north-east monsoon will be known, and matter can be re-opened. Resident, Hyderabad, agrees to reducing the obligatory deliveries and preference wagons for Nizam's line by one-half from 15th October, and he will telegraph in three days whether preference can be wholly withdrawn. I have asked Madras Government to watch supplies and prices, and to inform me directly preference can be reduced or foregone.

Encl. in No. 271.

No. 269.

Telegram, dated 10th October 1877.

From Viceroy, Simla, to General Kennedy, Bombay.

Please inform the Duke that I have telegraphed to Temple, we cannot at present agree to withdraw preference order. Hyderabad has agreed to reduce its obligatory deliveries by one half from 15th October. I am aware Madras Government watches prices and supply closely, and I trust early intimation will be sent when preference order can safely be reduced or withdrawn. Private source in Madras telegraphs that stocks there are rapidly accumulating, prices are falling, and demand from interior is weak. I am anxious to relieve the Bombay trade as soon as famine requirements permit from the temporary inconvenience under which it suffers. So, pray, keep the matter before Madras Government.

Encl. in No. 289.

No. 270.

No. 2401A, dated Naini Tal, 10th October 1877.

From the Secretary to the Government of North-western Provinces and Oudh to the Secretary to the Board of Revenue, North-western Provinces.

The Lieutenant-Governor having had under consideration the question of the suspension of the land revenue demand for the kharif kists, in consequence of the failure of the crops, desires me to communicate the following remarks, and to request that the Board will issue instructions in accordance with them, unless good cause can be shown for any modification.

2. It is almost unnecessary to observe that the principle on which settlements have been made in the North-western Provinces is to fix a moderate average demand for a long course of years, the Government agreeing to relinquish the excess in a good year, and expecting that the deficiency of a bad year shall be made good from the accumulated surplus of past or anticipated surplus of coming years. Notwithstanding, therefore, the great deficiency of assets in the present year, his Honour considers that with reference to the character of the settlement, and the urgency of the demands on Government, remission of revenue ought not to be sanctioned except in very special cases. On this subject I am to forward for the information of the Board a copy of a letter No. 886, dated 4th instant, from the Secretary to the Government of India, Department of Revenue, Agriculture, and Commerce, with its Enclosure.

3. It may, however, in many quarters be necessary to suspend the demand, and it is with reference chiefly to the extent to which suspension should be granted that it is desirable that instructions be communicated to collectors. The demands on Government for funds are at this moment so pressing that it is impossible to authorise a general suspension, nor, great as the failure of crops in some districts has been, is a measure of this sort imperatively called for. In most districts a portion of the crops will be saved, and owing to the rise in prices, the deficiency of produce will be compensated for by the increase in the value of the crops saved.

4. His Honour must therefore direct that zemindars who are well off capitalists, who have other sources of income, and those whose tenants have saved a portion of their crops, and generally all who can pay up, should be required to do so. In particular the revenue ought to be realised without hesitation from those zemindars who have failed to help their tenants in the hard times they have come through, though they had the means of doing so. Such landlords deserve no indulgence.

5. On the other hand, suspension must be granted to those who could not be made to pay up without reducing them to such straits as would render them unable to incur the necessary expenditure on the cultivation of their lands in the cold season. It is to be borne in mind that owing to the large area now lying fallow in consequence of the kharif crop not having been sown, landowners will have the means of meeting any suspensions which may now be granted them by bringing this area under cultivation for the rabi. Some indulgence might also be shown to those who in the past have already helped their tenants, and who are prepared to continue this help during the cold season until the next harvest ripens, if not compelled to pay up the revenue.

6. In regard to these, a large discretion must be allowed to collectors. His Honour is confident that it may safely be given, and that while every effort is made to realise what is urgently required by the necessities of the State, undue pressure will not be put on those who ought to be treated with indulgence.

No. 271.

No. 38 of 1877.

From the Government of India, Public Works Department, to the Most Honourable the Marquis of Salisbury, Her Majesty's Secretary of State for India.

Famine.

Simla, the 11th October 1877.

In the Viceroy's letter of 26th September your Lordship was informed of Lord Lytton's return from the famine-stricken districts in the south of India. In his previous letter dated Bangalore, 20th September, the transfer of the Famine Department to the personal management of his Excellency the Viceroy had been notified, but the office remained a branch of the Department of the Revenue, Agriculture, and Commerce. On Lord Lytton's arrival at Simla it was decided that the administration of famine relief should be a branch of the business of the Public Works Department, and Mr. Bernard, who had accompanied the Viceroy on his tour as Additional Secretary for Famine Business, was accordingly transferred from the Revenue, Agriculture, and Commerce Department to be additional Secretary in the Public Works Department.

2. The transfer was a necessary corollary to the principle already laid down by the Government of India, that the employment and payment of the destitute on useful public works, supervised by departmental agency, was to be the backbone of the relief system, and as this principle has been acted on in Bombay from the beginning, and more recently in Madras, conformity to it required that under the Government of India also the Famine Department should be deemed to be a sub-division of the Public

Works Department. And all questions relating to relief works and their administration will now be considered and determined in that Department.

3. The initiative in all general matters concerning the Famine Department remains, however, in the Viceroy's hands; and to assist him in the work of the Department his Excellency has been pleased as a temporary measure to appoint Mr. S. C. Bayley to be his personal assistant.

4. The Viceroy desires to take the opportunity afforded him by the notification of these changes to your Lordship of placing on record the deep obligation he is under to his colleague Sir A. Arbuthnot, both for his general management of the Famine Department during the last 10 months, and especially for the loyal assistance which he rendered during the recent journey to the south of India. It was a matter of regret to his Excellency that for that journey the services of Mr. Hope, who, as additional Secretary in the Famine Department, had conducted the anxious duties of the Department in complete accordance with his Excellency's views, and entirely to his satisfaction, were not available; Mr. Hope, who represents the Bombay Presidency in the Legislative Council, having previously at his own request resigned the office of Additional Secretary. The Viceroy thinks it due to Mr. Hope to acknowledge in this place his careful and efficient performance, from the beginning of the famine down to August last, of the additional and burthensome duties undertaken by him in the Famine Department.

5. Taking the several provinces affected or threatened with famine in the usual order, we have the honour to report the facts and transactions of the week, as follows:—

6. The Madras Government has issued revised rules for the administration of relief, with a view of giving effect to the decisions taken by the Viceroy and the Governor in Council at the end of August. There was some, apparently needless, delay in issuing these orders. But now that they are issued, and that the prospects of the season are favourable, we have every hope that the due execution of them will secure the systematization of relief, the prevention of fraud, the stoppage of much needless expenditure, and the employment of relief labour on properly supervised works of permanent usefulness. The revised rules together with a letter conveying our approval of their scope, will be found in Enclosure No. 1 of the present letter. Full care has been taken to provide against overtasking persons who may be in a reduced condition of body; and the special treatment of weak persons is enjoined until such time as they shall be fit for full work. We anticipate that the operation of these rules, acting concurrently with the very favourable change in the season, will cause a very great reduction in the number of relief recipients throughout the Madras Presidency. A table showing the useful public works opened for relief labourers in each district has been prepared and sanctioned by the Government of Madras. But as the papers on the subject have not yet reached us, we reserve our remarks on that subject for a future letter.

Madras.

No. 250.

7. We cannot conceal from ourselves that many native subordinate officials are personally interested in the continuance of unnecessarily lavish relief expenditure in Madras, and that it is by no means easy to close the doors kept open by them to peculation and illicit gains. Such persons will no doubt contrive to throw discredit on the recent reforms; and they will, it may be feared, take care that some really necessitous people shall remain unrelieved, in order that their complaints may gain hearing. A paper received to-day from the Madras Government (Enclosure No. 2) shows in a melancholy way how subordinate officials sacrifice the interests and the lives of the poor, in order to procure the continuance of a system whereby they can make illegitimate profit. We have taken great pains, and so also has the Madras Government in the present revised rules, to guard against the occurrence of such disasters. But we are convinced that it is right, even though such cases should unhappily happen, to persevere in the only course which will prevent the pauperisation and demoralization of the people, and check the needless expenditure of hundreds of thousands of pounds.

No. 84.

8. The latest intelligence from each province will be found in the last paragraph of this letter. On the 5th current the Governor of Madras telegraphed that prospects were everywhere improved by the rain; that prices were falling in the Ceded Districts, into which supplies of new grain were coming; and that the Madras Railway was carrying smaller quanties of grain into the interior. At the same time the despatches of grain from Bengal and Burma to Madras ports fell to 2,124 tons daily during the week ending on the 3rd, as compared with 5,454 tons daily during the previous week. We at the same time learnt from Calcutta that grain despatches were likely to become even smaller, because dealers were uncertain whether further importations would be required after the large stocks now in Madras had been worked into the interior. We have informed the Madras Government how matters stand, at the same time we are not

apprehensive of any shortness in the food supply. The Chief Commissioner, Mysore, telegraphs that the railway supply to Bangalore, though much short of the demand previously estimated, suffices for all requirements. Small crops are daily being harvested. And, if the favourable weather continues, no one will store grain so long as prices remain high. A telegram has to-day reached us from a private source in Madras stating that "business has been overdone, prices are daily falling, demand for the "interior is very weak, and stocks in Madras are rapidly accumulating." This intelligence has not yet been confirmed officially, but its purport is borne out by the general course of the trade, and agrees with our anticipations that old stocks would come out, and that the demand for importations would slacken as soon as the prospects of next harvest were assured.

The Governor of Madras has himself gone southwards to visit Salem, Coimbatore, and Madura; regarding which districts only is there ground for present anxiety.

Bombay.

9. Until the 5th current there was anxiety about the crops in Guzerat, where rain was much needed. But heavy rain has now fallen all over Guzerat, and the crops there are quite safe. Sir Richard Temple telegraphs that crop prospects throughout the Presidency are favourable; that prices are falling steadily; and that the situation is decidedly better, although more rain is still wanted in parts of the Khandesh and Násik districts. The numbers on relief works have fallen to 183,613, showing a decrease of 36,121; the numbers on gratuitous relief are 162,348 or nearly the same as in the preceding week.

10. The supply of food grain in the Bombay districts is sufficient; it is expected that consignments from Central and Northern India by the Great Indian Peninsula Railway will decrease, partly in consequence of the cheaper prices in the Deccan and partly in consequence of the demand arising in the North-west Provinces, where dearth was already felt and famine was threatening. Since the 25th September grain consignments, from railway stations as far east as Bhosawul Junction, have been going northwards towards Cawnpore and Agra. In view of the lessening demands of the famine districts and of the inconvenience caused to Bombay trade by the partial stoppage of consignments to Bombay for export, the Chamber of Commerce earnestly requested that the preference shown to famine traffic at stations on the Great Indian Peninsula Railway might cease. The Government of Madras has been consulted; and it has been decided to reduce the number of preference waggons for the Nizam's country by one half from the 15th October, but to await the burst of the north-east monsoon before withdrawing the preference order in favour of grain consigned to Madras districts.

The telegrams which have passed upon the matter will be found in Enclosure No. 3. The Government of India is anxious to meet the wishes of the Chamber of Commerce as soon as the paramount requirements of the famine districts permit a material reduction of grain importations. Before leaving this subject, we desire to record our sense of the loyalty and care with which the Government of Bombay has, notwithstanding much pressure from local interests, carried out the instructions of the Government of India, and secured a regular delivery of grain from the north to the Madras Railway.

Nos. 261, 263 to 269.

Mysore.

11. Great improvement in the season prospects have continued throughout the province of Mysore. During the last 10 days an average of three inches has fallen; even the central dry tract west of Bangalore, where rain has hitherto been withheld, has shared the recent rain. The irrigation tanks are filled; such of the early millet crops as had not withered have revived beyond expectation; irrigated millet and rice are being cut; the late millet crop looks as well as possible, and the sowing of spring crops is proceeding under favourable conditions. Markets are well supplied with grain, and prices continue to fall slowly but steadily. The latest returns (dated 29th September) from Bangalore show 57,274 persons on relief works, which is an increase of about 12,000; and 161,892 on gratuitous relief, as against 208,683 persons in the previous week. The latest weekly report from Mysore forms Enclosure No. 3*a* to this letter. That report says:—

No. 255.

"The decrease is partly due to the improvement in the prospects of field employment, and would have occurred in any case. It is partly due also to the enforcing of the conditions of residence and labour, and to the efforts made to relegate the paupers to works. Of the numbers in the relief camps of the Bangalore Municipality, which have fallen by 19,000 in the last fortnight, over 5,000 have been put on the State Railway and the adjacent embankment; about 2,000 on the embankment of the Alsur lake; and about 1,000 more on different projects, the waterworks, and two lines of road. The improvement in the condition of the labourers is already obvious; they are cheerful, healthy,

and contented; and those who a fortnight ago were thought hardly able to lift a pickaxe are now doing a fair day's work. Of the rest, some have left for their villages, some prefer to beg about the town, but these will be collected and brought in by the police. To every applicant either labour or food is offered; if labour cannot be provided, then food is given till the applicant can be set to work."

12. In the beginning of the month of September there was some increase in the number of deaths reported from Bangalore town as due directly or indirectly to famine. On inquiry it appeared that, during the month of August, the daily average of such deaths was 30; from the 1st to the 10th of September the average was 41; from the 11th, the day on which Mr. Elliott, Famine Commissioner, took charge of his duties, until the 19th the number was 25; from the 30th to the 30th the average was 35. The Famine Commissioner attributes the increase of deaths to the cold rain which fell on several successive nights; he reports that deaths in the relief hospitals have diminished, and he anticipates improvement in the outside death-rate. These deaths occurred among the poor wanderers who came into Bangalore from outside; additional precautions are now being taken to find such persons and bring them under treatment, before they succumb to want or to diseases engendered by want.

13. Revised rules for the management of relief works have been issued, under the Chief Commissioner's orders, thus giving effect to the instructions of the Government of India. In these rules the wage scale provided for a rest on Sundays, and for the Sunday wage being distributed over the six days of the week. We have directed that, while the Sunday remains a non-working day, the wage scale be arranged so as to give full seven days' subsistence wage for the week.

Hyderabad.

14. These are now the crop prospects in the Nizam's country:—Rain has fallen in sufficient quantity; prices are cheaper, and the demand for imported grain is slackening. In Berar, where rain has fallen during the last few days, prospects are good.

Central Provinces.

15. The break in the rains had continued so long in the Central Provinces, that the position of the rice crop was critical; in some places part of the rice crop had actually withered. The millet and pulse crops were still in good condition, but rain was wanted for the spring crop sowings. Rain has now fallen in sufficient quantity at Nagpore, Hingunghat, and Saugor; and the Chief Commissioner reports that, if this rain is general, the prospects of the autumn crop will be everywhere improved. As Chutteesgurh and other districts of the Central Provinces are off the telegraph line, we are unable to write with certainty about those tracts. Into the northern districts of the Central Provinces there came daily, during the last 10 days of September, thousands of immigrants from the drought-stricken Native States and British districts lying in the basin of the river Chumbul. The number of these immigrants is now about 40,000, and for them the Chief Commissioner has provided relief employment on the road leading from the Jhansi border through Saugor and Damoh to Jubbulpore. We have agreed that the Government of India shall meet one half the expenditure on this relief work up to the 30th March, as most of the labourers will be immigrants; the remainder of the cost will be met from the ordinary provincial resources.

Rajputana and Central Indian States.

16. Up to the 5th October the drought and consequent distress had gone on increasing in Northern and Eastern Rajputana, and in most of the Eastern States under the Indore Agency. The price of wheat was 14 lbs. per rupee at Gwalior, and 17 lbs. at Ajmere; pasture for cattle had everywhere failed; tens of thousands of people were pouring through Neemuch, through Goona, through Jhansi, down into Malwa where the condition of the crops was becoming critical. Most of these emigrants were from Native States, but some came from British districts on the right bank of the Jumna. Among some of these poor people, on the great road between Seepree and Goona, cholera broke out. Relief houses were opened at Goona and other places on this road. But from all sides it was reported that severe famine would be felt all over the basin of the Chumbul river, if rain did not come. There was then (end of September) little hope of rain; and by way of providing relief employment for the immigrant poor, we sanctioned the immediate commencement of earthwork and ballast collection on the railway lines from Ajmere through Beawur to Dasori on the north, and on the line from Neemuch to Rutlam in the centre, of the threatened tract. In the east, work on the Gwalior and Agra Railway had previously been opened. Telegrams of the last three days have informed us of seasonable rain all over Central India and Rajputana, from Gwalior on the east to Mullanee and Palee on the west, and from Indore on the south up to Jeypore on the north. We have not yet had tidings from

the Bikaneer and Jeysulmeer deserts. But it appears certain that the rain which has fallen, and which was continuing up to the 8th current, will provide pasture everywhere, and in many places will suffice for the spring crop sowings. If this favourable change continues, the danger of actual famine will have passed away, though scarcity and high prices must continue until the spring crop is secure. We shall not be able to counter-order the commencement of the railway relief works in these countries, until prospects are more assured.

North-west Provinces.

17. In previous letters and telegrams we have informed your Lordship that the unirrigated autumn crop had been lost over the greater part of the North-west Provinces and Oudh, and that the failure of crop had been most marked in the Rohilkund and Agra divisions. Until the 5th October rain held off, fodder for cattle was not to be had; there seemed no hope of more rain, and it was certain that unless plentiful rain fell within the month of October, the spring crop would be lost, and severe widespread famine would be inevitable. Happily there were a number of large useful public works, new canals, extensions, and rectifications of old canals, drainage channels, railway extensions, and railway projects, most of which were ready for commencement, and on which very large numbers of people could be usefully employed. The Lieutenant-Governor of the North-west Provinces had sent his chief engineer round all the threatened districts with a view to settling with the local officers a scheme for relief works. Some such works had already been begun, and we had ordered a contingent of engineer officers from other provinces to aid in completing the preparations for a system of provincial light railways which the Lieutenant-Governor, in concert with our colleague Sir John Strachey, who had visited Naini Tal, proposed as relief works in parts of the North-west where canal schemes were wanting. At Enclosure No. 4 will be found a letter from the North-west Provinces, dated the 4th October, describing the situation as it then stood. It will be observed that the rainfall had been less, that prices were higher, that crime, due mainly to want, was more rife, that panic among the people and the grain dealers was greater, and that emigration was more general than had been the case at the same season in the famine years of 1860 and 1868. No. 258.

18. Happily this has all changed. Rain has fallen from the 5th to the 8th all over the provinces; we have not yet learnt full particulars from all parts of the country. Up to the morning of the 8th three inches had fallen at Agra, where the need was worst; and that the Native States to the west have received bountiful rain. We shall have the honour of informing your Lordship by telegraph of the exact condition of affairs. But at any rate the outlook is entirely changed; Sir George Couper has telegraphed that he does not require any more engineers, and that the project for light railways will not be necessary.

Punjab.

19. The condition of the Punjab was less critical than that of the North-west by reason of the heavy downpour of rain in August. Still there too most of the unirrigated autumn crop was lost; and the spring crops could not be sown unless rain came. The large stocks of grain in the province had kept prices below famine rates; no actual distress had been reported; and no relief operations had been undertaken, nevertheless the position was extremely anxious and critical. The rainfall of the past three days has happily extended to parts of the Punjab; six inches have fallen at Delhi, from one half an inch to two inches have fallen at Amballa, Jullunder, Lahore and Rawul Pindi; there has been half an inch at Amritsir. The Lieutenant-Governor writes that "this rain has been a great relief "to our anxiety; that there will now be great sowing of spring crop all over the "country where rain has fallen, but that prices will keep dear until the fate of the "spring crop is assured."

Bengal.

20. The only part of Bengal, regarding which there was anxiety, namely Behar, has shared the general rain. Three inches of rain were gauged at Patna on the 6th October. We have not yet received particulars; but the rain which fell both at Patna and Benares must have been general over Behar, and cause for anxiety there is past.

21. If the rainfall of the past week should have fully wrought the favourable change which we hope no time will be lost in stopping, as soon as matters are clear, the "extraordinary" undertakings which we have sanctioned for relief purposes. When the need for relief has passed, all such works will be considered and dealt with on their own merits, and with reference to the financial needs of the Government. We invite attention to a paper (Enclosure No. 5) in which the Bombay Government has declined to authorise any measures that will tend to keep up the numbers on any relief work. The Bombay Government has directed that every unfinished relief work shall, when famine

needs are over, be considered and treated under the ordinary rules of the Public Works Department. We consider that in so deciding the Bombay Government has acted loyally to the Imperial Government and for the benefit of the Imperial treasury.

22. We cannot conclude this letter without expressing our deep thankfulness for the rain which has thus come just in time to save the whole of Northern India from a famine which threatened to be both widespread and severe.

23. Up to the time of this letter going to press, namely, the evening of the 10th October, we have received intelligence of rainfall in Northern and Central India since the 4th October as follows:—

Punjab	Peshawar	None.
	Rawalpindi	1 inch.
	Lahore	½ an inch.
	Jullunder	1 inch.
	Amballa	1⅓ of an inch.
	Delhi	6 inches.
North-western Provinces and Oudh	Agra	4½ ,,
	Bareilly	7 ,,
	Lucknow	2½ ,,
	Meerut	6 ,,
	Allahabad	4 ,,
	Benares	2½ ,,
Rajputana and Central India.	Jeypore	1½ ,,
	Ajmere	2 ,,
	Neemuch	7 ,,
	Bhurtpore	7½ ,,
	Gwalior	2 ,,
	Indore	3 ,,
	Rutlam	1¼ ,,
Central Provinces	Saugor	1⅓ ,,
	Jubbulpore	1 ,,
	Nagpore	4¼ ,,
Bengal	Patna	5½ ,,
	Durbanga	7 ,,

We have, &c.

No. 272.

No. 792A, dated Naini Tal, the 11th October 1877.

From the SECRETARY TO THE GOVERNMENT OF THE NORTH-WESTERN PROVINCES AND OUDH to the SECRETARY TO THE GOVERNMENT OF INDIA, FINANCIAL DEPARTMENT.

I am directed to state, for the information of his Excellency the Governor-General in Council, that his Honour has learnt from the Accountant-General that the cash balances in the North-western Provinces and Oudh have fallen from 270 lakhs on the 1st of September 1877 to 162 lakhs on the 1st of October 1877, and that, unless the treasuries are replenished, there will not from the middle of November 1877 be funds to meet the liabilities of this Government.

2. His Honour deems it necessary to state for the information of the Government of India that, owing to the general and nearly complete failure of the kharif crops throughout the provinces, there is on the one hand very little prospect of the early realisation of any thing but a very small part of the land revenue demand for the kharif, while on the other the Lieutenant-Governor has been compelled to sanction a large expenditure for the relief of the distressed, and the grant of takavi for wells and seed-grain. Since the Accountant-General's letter was received, there has been a general fall of rain, which will permit the rabi to be sown, and has made the prospects

of the provinces brighter, but nothing can restore the ruined kharif, or prevent a large suspension of the revenue demand.

3. The Lieutenant-Governor is well aware of the straits to which the Government of India is put at the present time for money, and it is with the utmost reluctance that he makes a report which must necessarily temporarily add to their burdens. But he sees no other course to adopt. If the village communities who form the great mass of our revenue payers be pressed now, they simply will be ruined, whereas, if we allow temporary suspensions there is every reason to believe that by the end of the agricultural year we shall recover all that we forego now from the proceeds of the additional area which the people will be able to bring under cultivation in consequence of the kharif not having been sown and the land being therefore available for the spring sowings. But if we press for immediate payment the people will not have the means of doing this, and they will be reduced to such a state that it is highly probable that the rabi instalments themselves will only be realised with great difficulty.

4. His Honour knows that our revenue theory is that the people should meet the losses of a bad year from the gains of a good one. But as a matter of fact these prudential considerations are unknown to them. They never save. When they have a good harvest they spend the proceeds on marriages or in other ways, and they have moreover been very seriously affected by the present scarcity. Cattle are reported to be dying or sold to the butchers in hundreds in consequence of the want of fodder, and this will add very materially to the agricultural distress and difficulties if they are called on at once to meet their State obligations.

5. Well-to-do zemindars and the owners of tracts in which there has not been a total failure of the autumn harvest will, of course, be made to pay up, but, as has already been stated, well-to-do landlords are the exception in these provinces, and it is quite certain that the tracts which have escaped the calamity are few and far between.

No. 273.

Telegram, dated 13th October 1877.

From Viceroy to the Secretary of State.

Season telegram 4th to 11th October :—Madras, moderate rain general everywhere ; prospects of standing crops favourable ; yield of crops just harvested moderate ; agriculture briskly prosecuted ; prices falling. Importation from outside much reduced ; north-east monsoon not yet due. On works 587,228, decrease 41,031 ; gratuitous 1,531,255, decrease 72,466.

Bombay, excellent rain in Guzerat, good rain and generally good crop prospects in rest of Presidency, except Sind, where rainfall is deficient and prospects poor ; prices falling ; sowing of spring crops progressing ; on works 182,158, decrease 37,752 ; gratuitous 162,348 ; decrease 660.

Mysore, moderate rain everywhere ; crops flourishing ; prices falling ; on works, 69,693, increase 15,693 ; gratuitous 126,204, decrease 36,706 ; decrease due to work in fields.

North-West provinces, good rain everywhere, two to ten inches, heaviest in Rohilkund and Oudh, and very good in Agra ; preparations for spring crop everywhere progressing ; apprehensions of famine removed ; prices falling everywhere though still high.

Punjab, general rain as far north as Jhelum, heavy in Delhi, and Umballa ; spring crop sowings secured ; now no fear of famine.

Rajputana, general rain over all States ; heavy in Neemuch and some other parts ; pasturage and spring crops secured ; some pressure still in Marwar.

Indore, good general rain over all States ; prospects much brighter ; emigrants beginning to return.

Hyderabad, prospects continue good ; prices falling.

Bengal, good rain over Behar, where it was much wanted ; rest good.

Central Provinces, seasonable rain over whole country ; small breadth of rice withered ; all else good.

Assam and Burmah ; condition good.

No. 274.

Encl. in No. 288.

Proceedings of the Government of Madras, Revenue Department (Famine Relief), dated 15th October 1877, F. R. No. 2,331.

The Governor in Council has, by a telegraphic order of the 13th instant, called the attention of collectors to the importance of utilising to the utmost the present favourable

change in the season. The recent rainfall has materially restored the condition of growing crops; many crops are being now harvested; land is nearly everywhere in a fit state for cultivation; and the rains of the north-east monsoon may be shortly expected. Prices have been gradually declining. In this state of the country it is of the utmost importance to its future prosperity that every exertion should be at once made to induce, encourage, and facilitate the return of people to their own homes and ordinary occupations. There may not unnaturally exist some feeling of hesitation amongst many, especially amongst those who have wandered from their own districts, to leave their present shelter, but the interests of the country demand that every available hand shall be turned to agriculture, and every exertion used to increase and expedite the growth of the newly-sown crops, on which the people must rely to restore the prices of food-grains to a normal state.

2. That this necessity is appreciated by the people is evinced by the fact that large numbers have already, of their own accord, left works and camps for agricultural employ, and that in many districts the area cultivated is larger than usual at this period. Yet in these districts more, and in others much, can be done, and no divisional officer should feel satisfied while any available land in his division remains uncultivated.

3. The Governor in Council desires also to impress on collectors the urgent necessity for reducing, as rapidly as may be, the numbers who are receiving State charity on relief works, in relief camps, &c., and consequently of diminishing the heavy drain on current expenditure.

4. The general principles on which relief is to be administered are already laid down in G. O. of 24th September, No. 2,847. The Government have spared no pains to relieve and sustain and also to provide employ for the people; now, however, agricultural or other usual employment is obtainable, and district officers must take care that the measures which were necessary for relief of the famine-stricken are not converted into a prolonged demoralising and pauperising charity.

5. A judicious but firm application of the tests and limitations laid down in the Government Order referred to will prevent the danger while meeting any necessity; but laxity or indecision in any district may not improbably result in the continued dependence of a large pauperised population on State aid through another year.

6. Where the numbers on relief works are materially diminished, proportionate diminution should be made in the establishments, and labour should be consolidated so as to economise supervision. When the numbers in camps are materially diminished, subordinate establishments should be also diminished, or otherwise utilised, permanent officers of the districts being allowed to resume their ordinary work. The general relief organisation of a district, however, is not to be reduced or broken up until further instructions from the Government, the nature of which will be regulated by the advent and extent of the monsoon rains.

7. The Governor in Council has had before him applications for sanction for many new works of a petty and local character, the possible benefit to arise from which can only be of a purely temporary character. He considers such works undesirable, but does not, however, desire to fetter the discretion of collectors, and therefore will not generally refuse to sanction works recommended by them; but the sanction will only be accorded upon the distinct understanding that collectors, before recommending any works for sanction, satisfy themselves that such works are essential to the proper extent of relief, and are not urged from motives of purely local interest, or instigated by subordinates who hope for an opportunity to make an illicit gain from the relief expenditure.

No. 275.

Telegram, dated 16th October 1877.

From VICEROY, Simla, to SECRETARY OF STATE, London.

English newspapers received by mail show misapprehension about mortality in Madras Presidency. Actual returns for nine distressed districts including Madras town during six months, November to April, give results; total population 13,765,165 or 13¾ millions, deaths 373,993, of which 182,114 were reported due to cholera, which raged terribly during January, February, and March. During 1866 when famine visited

northern districts of Madras, 200,000 cholera deaths were reported; monthly total deaths of past seasons were:—

November	28,385
December	56,725
January	82,672
February	76,745
March	70,328
April	59,136

By April cholera had greatly abated. Figures for subsequent months will be furnished hereafter. Death rate was thus 27 per thousand for the half year, 12½ per thousand being due to cholera. Madras Presidency reported death rate of 1875 was 21 per thousand; yearly death rate in India believed to be ordinarily not below 28 per thousand. The reported deaths of the half year thus exceed the reported death rate of 1875 by 16½ per thousand, or 227,123 cases, and they exceed the supposed normal death rate by 13 per thousand or 188,945 cases. This latter number somewhat exceeds total of cholera deaths. Impossible to say how much additional mortality due to famine. Rural registration of deaths not fully trusted. We propose to take census of selected areas in Mysore at end of famine and thereby ascertain actual losses of population. This was done in Bengal in November 1874. We shall recommend same course to Governments of Bombay and Madras.

No. 276.

Telegram, dated 17th October 1877.

From Governor of Bombay to Secretary of State.

Rain generally sufficient, Bombay Presidency; prospects, autumn and winter crops good; fine weather now wanted in Deccan. Numbers on relief works decreasing. Gratuitous relief still maintained for short time longer. Trade, both internal and external, continues active.

No. 277.

Encl. in No. 288.

Nos. 944, 945, and 946, dated Simla, the 17th October 1877.

From the Additional Secretary to the Government of India to the Additional Secretary to the Government of Madras, the Secretary to the Government of Bombay, Public Works Department, and the Additional Secretary to the Government of Mysore.

As there must be some doubt about the accuracy of the returns of deaths, furnished from the distressed districts during the past season, I am directed to suggest that at the end of the famine, steps should be taken to take a census of selected taluks in different parts of the famine country. This course was taken in Bengal during November 1874, and it was found that with the help of the extra famine establishments and of the village officials, the business could be done without any heavy expenditure, beyond the cost of lithographing a sufficient number of forms.

2. It is very desirable to ascertain how far the numbers of the rural population may have been affected by the famine; and it would be necessary, for this purpose, to count the people in some of the most distressed and also in some of less distressed taluks. If possible the counting should be postponed until the very end of the famine, when all the wanderers will probably have returned to their homes.

3. I am to ask you to let me know whether the * consider it practicable to carry out this suggestion.

* Government of Bombay.

Encl. in No. 289.

No 2427A, dated Allahabad, 18th October 1877.

From the Secretary to Government of North-western Provinces and Oudh to the Additional Secretary to the Government of India.

With reference to your letter No. 886 (Famine), dated the 4th October 1877, I am directed to submit, for the information of his Excellency the Governor-General in

To the Secretary to the Board of Revenue, North-western Provinces, No. 2401 A of the 10th instant.

Council, a copy of the letter marginally noted, showing the instructions issued by this Government in regard to the suspension of the kharif kists in consequence of the failure of the crops.

2. I am also to forward a copy of a letter No. 792 A, dated the 11th of October 1877, which has been addressed to the Government of India in the Financial Department.

Encl. in No. 289.

No. 279.

No. 6,276, dated 19th October 1877.

From the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

I am desired by his Excellency the Governor in Council to report, for the information of his Excellency the Viceroy and Governor-General in Council, the following information regarding the realization of the land revenue of this Presidency in the year 1876–77, exclusive of the Province of Sind, where there was no drought.

2. The land revenue to be collected amounted to Rs. 2,62,99,590. Out of this the sum of Rs. 2,33,40,250 was collected on the 31st August 1877. The amount of remissions granted up to the same date on account of failure of crops through drought amounted to Rs. 2,15,110. As regards the residue, the subject was carefully considered by his Excellency the Governor in Council, and it was finally determined that all the outstandings should be treated as recoverable balances and so entered in the accounts.

3. Many of these balances are owing by people who are tolerably well off, and these will be gradually recovered with care and judgment when the ripening crops are brought to market. In other cases the monsoon of 1878 will be awaited. Should that prove abundant, and should a plentiful harvest be the fortunate result, it is confidently anticipated that these remaining arrears may, for the most part, be collected in 1878–79.

4. As regards those remissions which have been granted, his Excellency the Viceroy in Council may be assured that the utmost care and vigilance were exercised before granting them, and the Governor in Council is convinced that the liberality of Government has been very seldom misplaced, considering the enormous number of claims which had to be investigated. At the same time he can unhesitatingly assert that the large revenue which, in an exceptionally distressing time, has been collected, has been realised without any harshness or undue pressure.

5. A further report will be made in due course showing how the out standing balances are being recovered.

Encl. in No. 288.

No. 280.

No. 952, dated Simla, 19th October 1877.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the ADDITIONAL SECRETARY TO THE CHIEF COMMISSIONER OF MYSORE.

I am directed to acknowledge the receipt of your letter, forwarding copies of the Mysore Famine Code, drawn up, under the Chief Commissioner's orders, by Mr. C. A. Elliott, the Famine Commissioner.

2. I am to express the satisfaction of the Governor-General in Council with the completeness of this code, and the promptitude shown in its preparation and issue. The preface, and Chapters I. to IV., are all excellent. It remains for the Famine Commissioner, and the Divisional Commissioners, to see that these orders are fully and systematically carried out. The rules (pages 6, 7, 11, and 12, and Chapter IV.) provide sufficiently for the treatment of persons who, from age, illness, or emaciation, are unfit for hard work. Such persons, who were crowding the relief camps at the time of the Viceroy's visit to Mysore, will, if these rules be properly carried out, have every possible chance of recovering health and strength.

3. The wage-scale (Appendix I., page 13) was approved by the Viceroy and Governor-General at the time of its issue. But instructions have since been communicated to you, desiring that the wage-scale should be re-arranged, so as to give seven distinct

days' wage. At present the wages of the whole week are arranged as six days' wages. The rules which direct that *ad interim* wages should be given to new comers, and that wages should be paid thrice a week until the people get strong and the system becomes known, will prevent evils, such as have, on occasions, arisen from the system of weekly payments.

4. Chapter V. of the Code, regarding village relief, appears to lay upon the village officials duties which may be beyond the powers of some of them. But the expenditure on village relief in Mysore has hitherto been small; and now that the famine is drawing to an end, no harm, it is to be hoped, will result from the imperfect obedience which in some villages may be given to the provisions of Chapter IV.

5. The appended papers regarding the house visitation in Bangalore town, the hutting of labourers, the shape of relief hospitals, and the sanitary arrangements at relief camps and works, are all useful and worthy of a place in the Famine Code.

6. Many of the provisions, and all of the principles embodied in Chapter I.–IV. of the Code, have been in operation for the last four weeks. And the Viceroy and Governor-General in Council has been glad to hear that the inmates of relief kitchens near Bangalore have improved greatly in health and spirits after 15 or 20 days on the relief works where they were well treated and regularly paid. His Excellency in Council has also learnt with pleasure that, under the present arrangements, the lamentable mortality in and near Bangalore town has gradually and steadily diminished. The Government of India will await with interest the reports of the village inspections to be effected under Chapter V. of the Code.

7. I am to request that you will, with the Chief Commissioner's permission, convey to Mr. C. A. Elliott an expression of the interest and approval with which the Mysore Famine Code of 1877 has been perused by his Excellency the Governor-General in Council.

No. 281.

Telegram, dated 20th October 1877.

From VICEROY to SECRETARY OF STATE.

Season telegram, 12th to 18th October.—Madras: rainfall in all districts, averaging 1½ inches. Prospects of standing crops everywhere good. Autumn harvests yield moderate. Prices falling in Bellary, Kurnool, and Cuddapah. Quotations about 20 pounds per rupee for dry grain. On works 550,299, decrease 36,929. Gratuitous. 1,283,966, decrease 247,289. Regular burst of north-east monsoon not yet reported Grain importation slack, but supply sufficient, and large accumulations in Madras itself.

Bombay: Good rain in Deccan and Concan. Prices falling. Crop prospects good everywhere, except Sind, where gloomy. North-east monsoon reported from Dharwar. On works 119,881, decrease 62,277. Gratuitous 152,055, decrease 10,295.

Mysore: Heavy showers. General crop prospects good. Grain 19 pounds the rupee. Prices still falling. On works 62,506. Gratuitous 103,750, decrease 22,554. Mortality slowly decreasing, but still very high all through Mysore.

North-western Provinces: Cold weather set in. No rain. Spring crop sowings progressing everywhere. Prices high. Prospects generally good.

Punjab: Good rain Rawul Pindee; Moderate showers elsewhere. Spring crop cultivation progressing hopefully.

Rajputana: Spring crop cultivation progressing. More rain wanted in parts. Prices falling in places; steady elsewhere.

Indore: Prospects in Malwa and Bundelkund generally good. Some rain at Gwalior. Relief works being maintained for destitute immigrants.

Bengal: Central Provinces, Assam, Burmah; prospects generally good.

Hyderabad: 4 inches of rain. Prospects good. Prices falling.

Reduction of 356,790 during week on relief numbers in Bombay and Madras; causes decrease of 11 lakhs in monthly famine expenditure.

Encl. in No. 289.

No. 282.

From the Additional Secretary to the Government of India, to the Secretary to the Government, North-western Provinces.

No. 957, Dated Simla, the 22nd October 1877.

I am directed to acknowledge the receipt of your letter No. 792 A., dated 11th October, to the address of the Financial Department. With reference to your first paragraph, I am to thank the Lieutenant-Governor for the early warning he has given; and to say that measures will be taken by the Comptroller-General, in communication with the Accountant-General, for the supply of funds to meet the requirements of the public service in the North-western Provinces and Oudh.

2. The Viceroy and Governor-General in Council, however, directs me to address you more at length on those parts of your letter which state that only a very small part of the autumn land revenue instalment can be punctually realised; that a large suspension of the revenue demand is unavoidable; and that heavy expenditure has been necessary for the relief of the distressed, as well as on advances for land improvement and for the purchase of seed grain. A subsequent telegram from the Accountant-General intimates that he expects 99* lakhs of land revenue, namely, 33 lakhs in November and 66 lakhs in December, to be collected during the last two months of the year; so that the prospects of collecting the land revenue may have improved much during the 10 days after the despatch of your letter under acknowledgment. The Governor-General in Council hopes that the collections will be even better than the Accountant-General anticipates. It is understood, moreover, that the timely rainfall of the 6th to 11th of October has obviated the need for any considerable expenditure on relief works in the North-Western Provinces or Oudh.

Note.—The average receipts of the North-western Provinces and Oudh for these two months, during the last four years, have been 147 lakhs.

3. In the event of its being proposed to issue orders for granting any general suspension of the land revenue demand in the North-western Provinces and Oudh, the Government of India desire to make the following observations. In the first place the failure of the autumn crop, though grievous and extensive, has not been universal. Over the greater part of the Benares and Allahabad Divisions, and over some of the south-eastern tracts of Oudh, the autumn crop has escaped. The yield may perhaps be short, but at present high prices the short crops will fetch more than a full crop would do in ordinary years; and in those tracts, at any rate, the land revenue can be punctually paid.

4. On the irrigated lands, again, the land revenue ought to be collected. It may be that many zemindars and ryots abstained from taking canal water for their autumn crops till it was too late. But it is clearly not the interest of the country, or of the public treasury, that such short-sighted policy should be encouraged. One great function of the irrigation canals is to insure the country against famine; if people, who live by the canal, do not take its water until too late in a year of drought, the efficacy of such an insurance is much impaired. And the Government cannot encourage such waste of opportunity by suspending the land revenue due on lands which were unproductive because the landowners failed to make timely use of the water brought to their doors.

5. But, apart from the specially favoured tracts, where the autumn crop was, or might have been, saved, the Viceroy and Governor-General in Council greatly doubts whether, according to the principles and practice of the revenue system of Northern India, the present circumstances are such as to warrant any general suspension of the land revenue demand. One crop only, and that not the greatest crop of the country, has failed on unirrigated lands.† There is every prospect of a good spring crop over an unusually broad area. This failure has come after two or three years of plenty; and years, moreover, when prices were higher than usual. It may be that great part of the profits from the high prices of the past season did not benefit the landholders and ryots, but went into the pockets of the village bankers and the grain-dealers. But these people have, as has been stated in recent correspondence, an interest in the produce of the soil, and in the due payment of the land revenue.

† Note.—In some of the lower districts of the Doab from 25 to 50 per cent. of the cultivated land is returned as protected by well irrigation.

6. The experience of past famines and droughts in the North-western Provinces, moreover, warrants the belief that wholesale suspensions of the land revenue are not required, for—

In 1860 the land revenue collections of the North-western Provinces during November and December were - - -		128 lakhs.
In 1861 they were, for both Oudh and the North-western Provinces - - - - - - - - -		162½ „
In 1868 when the autumn crop failed over a great part of the country, and the spring crop was deficient, the land revenue collections of November and December were—		
North-western Provinces - - -	73 lakhs.	
Oudh - - - - - -	72 „	
	——	145 „

It would thus be a new feature in the revenue administration of the North-western Provinces if the Government were to direct general suspensions of the autumn land revenue instalment because there had been an extensive failure of one crop only.

7. The Government of India does not, as at present advised, share the apprehension that the people will restrict their spring crop sowings, if they are pressed to pay punctually the greater part of their autumn instalment. The reports published in the Gazette show that cultivation for the spring crop is as yet making favourable progress. And it is not understood from your letter that recent reports have reached his Honour the Lieutenant-Governor of the stoppage of cultivation, or of lack of seed grain, over any considerable areas of the North-western Provinces or Oudh. The spring sowings will be nearly over before the land revenue instalments fall due; and the village bankers will, in the ordinary course of business, make advances on the crop in the ground.

8. The practice of neighbouring provinces may be adduced in support of what has in former years been the practice of the North-western Provinces. The districts of Behar are in the same case with the permanently settled districts of the Benares division; yet in the more general failure of 1874 not a rupee of the Behar land revenue was suspended in November and December 1874. During the present season the Lieutenant-Governor of the Punjab has directed that the November instalment shall be collected in full, reserving the grant of any necessary suspensions for the December instalment; yet the failure of the autumn harvest in the Hissar, Delhi, Amballa and Jullundur divisions has been considerable.

9. As your letter points out, the settlement in the North-western Provinces and in Oudh is with superior landholders, to whom a liberal margin of rent is left to meet the chances of bad years, and not with field occupiers as in Madras or Bombay. And therefore the landholders have, as of right, no claim to a suspension of the autumn instalment due from them. In districts like Agra, for instance, where the failure of crops and pasturage has been excessive, and in tracts where single villages are held by cultivating brotherhoods, there may be necessity for partial, but considerable suspensions of revenue. But it would be introducing a new principle into the revenue system of the North-western Provinces, and it would be a direct encouragement of the unthrift described in your fourth paragraph, if the Government were to suspend its demand on any great scale during the present autumn.

10. The Viceroy and Governor-General in Council does not desire to hamper the legitimate discretion of his Honour the Lieutenant-Governor of the North-western Provinces and Oudh; he does not counsel, indeed he would not approve, harsh and rigorous measures to extort the autumn instalments from people who really cannot pay; but he wishes that the collectors and their establishments should be allowed to collect the land revenue, with caution and consideration for the people, in the ordinary way; special cases or special tracts being admitted to special concessions. The Government of India considers that this course may, with the excellent and experienced revenue officers under the Lieutenant-Governor's command, be taken with safety both to the people and to the public treasury. It seems desirable that no general order advising or directing wholesale suspensions of land revenue should be issued, unless matters turn out to be more generally unfavourable than the Government of India is at present aware.

11. With this general expression of the views of the Government of India, the Viceroy and Governor-General in Council would leave the matter to the discretion of the Lieutenant-Governor, in the confidence that the great bulk of the autumn instalment

of land revenue in the North-western Provinces and Oudh will be collected at the ordinary season, and that suspensions will be granted only in cases where they are absolutely necessary.

P.S.—Since the foregoing letter was in type, your letter, No. 2,427A., dated 18th October, has been received. The instructions of the Revenue Board, enclosed in that letter, in the main accord with the views expressed in the present orders of the Government of India. But there may be risk that, under those instructions, suspensions may be granted to deserving landholders not absolutely in need of such concessions. If, however, the injunction at paragraph 4 of your letter to the Board be obeyed, that "all who can pay up, should be required to do so," then the views of the Government of India will have been carried out. It will, doubtless, be understood by collectors that landholders who have credit, and can raise the necessary funds from their bankers, are to be reckoned among those "who can pay up."

Encl. in No. 289.

No. 283.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF MADRAS.

No. 973, dated Simla, the 24th October 1877.

In my letter No. 856, dated 20th September last, was conveyed an expression of the hope entertained by the Government of India, that much of the arrears of land revenue due for the year 1876–77 would be collected if the season turned out favourably.

2. Since that letter was written there has been a very great change for the better in the prospects of the crops throughout the Madras Presidency. During the whole of September and October rain has in moderate but sufficient quantity fallen in almost every district. In some districts the irrigation tanks are fuller than they have been for years. In parts of the Godavery district the supply of river water for irrigation may have been short; and the early autumn crop has not yielded a good outturn by reason of the failure of rain during August;—still, so far as the weekly reports go, there seems every prospect of full winter and spring crops, provided the north-east monsoon is favourable.

3. The Viceroy and Governor-General in Council gathers from the returns of "area "cultivated and revenue collected," that in most districts the area sown this year is larger than the average of previous years, though the revenue collections have been lamentably (and perhaps unavoidably) short. If, however, this large area of crop turns out well, the Government of India would hope that the arrears of last year, and also the full demand of the current year, may be collected without fail. And I am to suggest that some expression of the views of the Government of Madras on this important subject might be conveyed to the Board of Revenue.

4. The punctual collection of the land revenue of the current year is of the utmost importance to the general finances of the Empire; for the expenditure and loss of revenue during the famine, probably not less than eleven millions in all, has very seriously reduced the cash balances of the Empire.

5. The Viceroy and Governor-General in Council does not desire, and he is confident that the Government of Madras would not adopt, harsh measures to compel the people to pay land revenue when they have no money and no credit. But his Excellency in Council believes that, with the crops now on the ground, and with moderately high prices, the Madras ryots will this year, unless the season prospects change, be able to bear their proper share of the country's burden.

6. In order to show that the Government of India is not asking of Madras more than it asks and receives from other provinces, I am directed to forward copies of the letters marginally noted. From these papers it will be seen that, notwithstanding the very extensive failure of the autumn crop of 1877, the Governments of the Punjab and North-western Provinces are expected to collect punctually the greater part of the autumn instalments of land revenue, and that not a rupee of the demand will be remitted, unless circumstances change greatly for the worse. In the Bombay Presidency also, where the land revenue is collected directly from petty occupiers (ryots), as in Madras, 88 per cent. of the land revenue demand of 1876–77 (the famine year) had been collected by the end of August, and less than one per cent. had been remitted. An assurance has also been received from the Bombay Government that, if the winter and spring crops of the present season are good (as it appears they

No. 282. Famine Department letter No. 957, dated 22nd October, to the Government, North-western Provinces.

No. 279. Bombay Government letter No. 6,276, dated 19th October, to the Famine Department.

will be), the whole land revenue demand of 1877–78 will be collected as in ordinary years.

7. The Viceroy and Governor-General in Council would ask that, as soon as the Government of Madras is able to form an estimate of the season, he may be favoured with an estimate of the amount of land revenue that will probably be collected in the Madras Presidency before the 1st June next, both on account of—

(*a.*) The arrears of the year 1876–77;

(*b.*) The current demand of the year 1877–78.

Telegram, dated 26th October 1877.

From the CHIEF SECRETARY, Bombay, to MR. BERNARD, Simla.

Your telegram of to-day. Demand for the districts, which yielded Rs. 2,33,40,250 this year, as per my letter of 19th October, was for 1874–75 Rs. 2,59,85,640, collections were Rs. 2,58,25,619, balance Rs. 1,60,021; for 1875–76, demand Rs. 2,60,32,735, collections Rs. 2,58,70,222, balance Rs. 1,62,513.

No. 285.

Telegram, dated 26th October 1877.

From the VICEROY to the SECRETARY OF STATE.

Season telegram, 19th to 25th October. Madras: Rain general in all districts; average over 2 inches in Madras, Trichinopoly, Salem, Coimbatore. Duke telegraphs to-day that north-east monsoon set in on 16th, but wind unsteady; heavy and partial storms, frequent and general, except near Madras; prospects generally improved, except Godavery Delta, Ganjam, and part of Madura. Message ends.

Weekly report of crop prospects good; prices nowhere dearer than 19 or 20 pounds per rupee for common grain. No fear for Ceded Districts, but some anxiety about irregularity of monsoon in coast districts. Importations by sea and rail average 1,500 tons a day. Demand from interior slack.

On works 484,365, decrease 66,924; gratuitous 1,060,034, decrease 223,932. Administrative arrangements of August working well.

Bombay: General prospects good, save Sind, where no improvement; some damage by excessive rain in some parts of Concan, Deccan, and Dharwar. On works 98,773, decrease 26,108; gratuitous 139,594, decrease 12,641. Preference in favour of grain consignments on Peninsula Railway withdrawn, and traffic to Bombay for export free.

Mysore: Weather showery, crops flourishing, health improving, but mortality still high. Price of common grain 20 pounds per rupee. On works, 72,202, gratuitous, 88,757.

North-west: No rain save partial showers.

In Punjab, spring crop sowings progressing well, prices high, but steady.

Rajputana and Indore: Relief provided for immigrant poor near Ajmere and Neemuch on railway works, also near Gwalior and Rutlam, and road work near Goona. Special relief arrangements made for returning emigrants and wanderers on Agra and Indore road, where distress reported. Other provinces prospects good. Satisfactory report of land revenue collections from Bombay. Relief expenditure decreasing rapidly.

No. 286.

Encl. in No. 288.

No. 979, dated Simla, 26th October 1877.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA, Public Works Department (Famine), to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF MADRAS, Revenue Department.

It is with the greatest satisfaction that his Excellency the Viceroy in Council has received a copy of the proceedings of the Madras Government in the Famine Department, No. 2,331, dated the 15th instant.

2. The favourable change in the season which is described in your first paragraph is most hopeful, and his Excellency in Council is glad to learn by a telegram received last night that the north-east monsoon has at length arrived to supplement and complete the hopeful prospects for the future.

3. The orders of his Grace the Governor urging all district officers to take the fullest advantage of this satisfactory change in the prospects of the season by inducing people to return to their ordinary avocations, are most judicious and opportune, for, as he justly observes, "the interests of the country now demand that every available hand "shall be turned to agriculture," and no less necessary is the caution conveyed to district officers to "take care that the measures which were necessary for relief of the "famine districts are not converted into a long demoralising and pauperising charity."

4. The returns received during the past three weeks show that with the returning prospects of agricultural prosperity, the orders issued by the Madras Government on the 24th September have already borne good fruit, the numbers of people receiving Government aid having diminished during the current month by $6\frac{3}{4}$ lakhs, or by more than one fourth of the whole number; and his Excellency in Council doubts not that with the continued improvement in agricultural prospects and with the steady fall in the price of food which should be the natural consequence thereof, the admirable orders now issued by the Madras Government will have the effect of speedily restoring the province to its normal state, will foster the habitual self-reliance of its people, and will relieve the imperial finances from the severe strain which during the past season they have undergone.

Encl. in No. 289.

No. 287.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY. No. 983.

Simla, the 29th October 1877.

I am directed to acknowledge the receipt of your letter, No. 6,276, dated 19th October, reporting upon the collections of land revenue in the distressed districts of the Bombay Presidency, on account of the demand of the famine year 1876–77.

2. The Government of India gather from your letter that out of the whole land revenue demanded of the year 1876–77, 88 per cent. had been collected up to the end of August last; that as yet only one per cent. of that demand has been remitted; that the greater part of the unremitted balance (Rs. 27,44,230) will be gradually recovered, as the people are able to pay; and that the "large revenue which, in an exceptionally "distressing time, has been collected has been realised without any harshness or undue "pressure."

3. The Viceroy and Governor-General in Council desires to congratulate the Bombay Government and its revenue officers most cordially on the result which has thus followed the policy adopted by his Excellency the Governor in Council in February last, and subsequently carried out by the present Government of Bombay. The Imperial treasury, on which such heavy demands have been made for relief expenditure, has benefited greatly by the careful regard which has been paid in the Bombay Presidency to the interests of the public revenue. It is specially gratifying to the Government of India to learn that no harshness or undue pressure has been exercised in realising the State dues. The diligence and success with which the Bombay ryots have set themselves to make the best of the present favourable season, are good evidence that the payment of the Government revenues did not press too hardly upon the people. This result is, the Government of India believe, in great part due to the care with which Bombay revenue officers investigated every individual case, in which suspension or remission of land revenue was claimed.

No. 288.

No. 39 of 1877.

From the GOVERNMENT OF INDIA, Public Works Department (Famine), to the SECRETARY OF STATE FOR INDIA.

Simla, the 30th October 1877.

No. 271. In our letter No. 38 (Famine), dated 11th October, we had the pleasure of reporting to your Lordship the very favourable change caused in the prospects of the season by the rainfall in Northern, Western, and Central India, during the second week of the present month.

2. Since the date of that letter matters have gone on satisfactorily. Taking the several provinces in order we have to report as follows:—

Madras. Favourable rain has fallen regularly throughout the Presidency of Madras, gauging, on an average, about two inches a week up to the 22nd October. The north-east monsoon (or latter rains), on which the crops in the districts of the Coromandel Coast and the Carnatic greatly

depend, did not burst with its usual vigour. But the change of wind from S.W. to E. set in on the 16th; and since then partial but heavy storms have fallen in most parts of the Presidency. Up to the 26th the monsoon was unsteady and variable; the latest telegram, dated 30th October states that the—

"Monsoon burst in Kistna, Nellore, Kurnool, Bellary, Cuddapah, Madras, Chingleput, South Arcot, Tanjore, Trichinopoly, Madura, Tinnevelly. Not yet reported burst in Coimbatore, Salem, North Arcot; failed at present in Ganjam, where crops withering; in Vizagapatam and Godavery bursting doubtful."*

Successive weekly reports have shown that the early crops which suffered much from the drought during August had revived greatly from the September rain, and have yielded an outturn averaging more than half of a full harvest. The winter crop is almost everywhere in good condition; cultivation and sowings for the spring crops are making satisfactory progress.

3. Prices have fallen steadily both at Madras and in the interior; at Bellary and Kurnool in the north, and at Tinnevelly and Madura in the south, the quotations of the cheaper food grains range from 19 lbs. to 20 lbs. per rupee. Importations of grain by sea and by railway have decreased considerably; the despatches of rice from Bengal and Burmah to Madras ports averaged during last week 1,095 tons daily, as compared with 5,454 tons daily during the corresponding week of September. Consignments to the Madras districts by the Great Indian Peninsula Railway have fallen to about 350 tons a day; this decrease is due not to any failure in the railway working, but to the backwardness of consignors. There are in Madras town accumulations of grain, which are estimated by the Local Government to suffice for six weeks. Despatches of grain from Madras into the interior now average about 1,100 tons a day; dealers at Bellary and Bangalore are stopping their consignments; and the Madras Government report that holders are speculating on the failure of the north-east monsoon. For the present there is no fear as to the sufficiency of the supply of grain.

4. We reported to your Lordship, in our letter quoted above, the substance of telegrams which had passed regarding the cessation of the preference shown by the Great Indian Peninsula Railway to grain consignments to the famine districts of Madras. We explained that though we were most anxious to meet the wishes of the Bombay merchants who urged a withdrawal of the preference, yet we considered that the requirements of the famine districts were of paramount importance. The Governor of Madras telegraphed on the 24th October that—

"The preference given failed to bring at present any large quantity, that the traffic was very small, and that the Madras Government therefore, although prices were still high and imports needed, did not see any objection to the Bombay order for preference being now held in abeyance."

We accordingly (on the 25th October) informed the Bombay Government by telegraph that the preference granted on the Great Indian Peninsula Railway in favour of grain consignments to the famine districts, might cease for the present; and we at the same time explained that the north-east monsoon had not yet burst at Madras, and that therefore the withdrawal of the preference could not as yet be final and permanent.

5. The combined result of the revised relief rules,† and of the favourable change of the season, has been to reduce considerably the numbers in receipt of State receipt in the Madras Presidency. The numbers have been—

† See paragraph 6 of our letter, No. 38, above quoted.

For the Week ending.	On Relief Works.	On Gratuitous Relief.	Total.
29th September -	628,259	1,603,721	2,231,980
6th October -	587,228	1,531,255	2,118,483
13th „ -	550,299	1,283,966	1,834,265
20th „ -	484,365	1,060,034	1,544,399

The reduction during the last three weeks has thus been 687,589, or about 30 per cent. So far as we have learnt the people who have thus ceased to be recipients of relief have gone back to their homes and their fields, to the great advantage of themselves and of the country, as well as to the benefit of the public treasury. The shortening of the administrative chain in famine matters has certainly conduced to efficiency and economy in relief operations; and so far the arrangements made by the Viceroy and the Governor of Madras on the 31st August are working well, though there was at the

* A later telegram received since this letter was struck off reported that the monsoon had burst well everywhere except in Ganjam.

first some delay in giving effect to those arrangements. Subsidiary instructions have been issued by the Government of Madras on minor points and local details outside the scope of the revised relief rules; these instructions all tend to prevent waste of public money and demoralization of the people on the one hand, while on the other they provide that people in real distress shall not be left to starve. A copy of one of the more recent of these instructions, with our letter approving its principles, will be found in Enclosure No. 1 to this letter.

Nos. 274, 286.

6. Throughout the Bombay Presidency there has been sufficient rain; and Sir Richard Temple telegraphed (on the 21st October) that "a new form of anxiety is arising from excessive rain in "parts of Sholapore, Sattara, Kaladgi, Belgaum, and Dharwar, where fine weather is "much needed, as damage is caused by wet to autumn and winter crops." Later telegrams dated the 28th and 30th say that excessive rain continues to retard harvest and threatens to reduce the yield, and that "no favourable change has occurred in the "weather save in Sattara and Sholapore," where it is now dry.

Madras.

On the whole the prospects of the autumn and winter crops throughout the Bombay Presidency continue to be good. Prices are falling, and they now range from 24 lbs. in Khandesh to 13 and 16 lbs. per rupee in Dharwar, Belgaum, and Kaladgi. The numbers in receipt of State relief were—

For the Week ending on the—	On Relief Works.	On Gratuitous Relief.	Total.
29th September - -	219,734	163,008	382,742
6th October - -	183,613	162,348	345,961
13th „ - -	119,881	152,055	271,936
20th „ - -	98,773	139,594	238,367
27th „ - -	70,617	128,307	198,924

So that during the last four weeks the reduction in the number of relief recipients has been 187,818, or about 48 per cent. The Bombay Government has from time to time issued orders providing that, while all who can leave the relief works should be encouraged to do so, destitute persons and wanderers who are unable to labour or who cannot get employment should be carefully looked after and relieved. We are satisfied that relief is not being withheld from any who are really in want.

7. In Mysore there has been moderate rain throughout the fortnight. The condition of the winter crops is good, and the prospects of the spring crops are most favourable. Prices have fallen, and are now quoted at 20 lbs. per rupee in Bangalore. Markets are everywhere sufficiently supplied; new grain is being brought for sale; and dealers are reducing their importations from Madras and the seaboard.

Mysore.

8. Detailed instructions for the administration of relief of all kinds have been drawn up, on the basis of the orders issued by the Viceroy at Bangalore on the 8th September. These instructions have been thrown into the shape of a Famine Code for Mysore copy* of which will be found as Enclosure No. 2 to this letter. The Code has been drawn up by Mr. C. A. Elliott, the Famine Commissioner, under the orders of the Chief Commissioner. It is an excellent compendium of instructions suited to the present state of affairs in Mysore; many of its provisions founded on the orders of the Government of India, will be found applicable to famine relief administration elsewhere. In our Secretary's letter (see Enclosure No. 2) acknowledging the Code, we expressed our special satisfaction with the clauses, which carefully provide for the humane treatment of those who are unable to do a full day's work, or who are in need of medical care and special food.

No. 257.

* Other copies will be sent hereafter, only one is available now.

No. 280.

9. During the past month 25 relief officers (five of whom were native officers of the Bengal Army) 20 engineers of different grades, and 34 medical subordinates have been sent to Mysore. Much has been done to systematise and improve the arrangements at relief works and relief camps, to secure the proper treatment of the suffering poor, and to prevent peculation and mismanagement.

10. Up to the latest reports, deaths, mainly due to famine, are still occurring in and near Bangalore, whither had congregated tens of thousands, for whom adequate relief was not available in their villages. The poor creatures,—who thus wander in search of charity, grow weaker and weaker, and at last die during the cold rainy nights,—mostly come from the distressed tracts in the centre and north of the province; and they are said often to pass by relief works and relief houses, where they could at once obtain relief. A special organisation has been arranged for finding these wanderers, before

they are past recovery, and bringing them forcibly into relief hospitals and relief camps. The reported famine deaths in and round the town and cantonment of Bangalore were—

during August - - - - -	20 per day.
during 1st to 10th September - - - -	41 „
during 11th to 30th September - - -	35 „
during 1st to 13th October - - - -	26 „
during 14th to 17th October - - - -	23 „
during 18th to 20th October - - - -	16 „

The deaths in relief camps and relief hospitals were—

during August - - - - -	84 per day.
during 1st to 10th September - - - -	95 „
during 11th to 30th September - - -	70 „
during 1st to 13th October - - - -	55 „

The numbers fed in the relief camps in and around Bangalore from the 1st August up to the 10th September were about 36,000, of whom barely one sixth were permanent inmates of the camps. From the 11th September to the 30th October the average number of persons relieved at the camps was about 20,000, of whom from one half to three quarters were permanent inmates. The good done by the changes in the relief system, and by the improvement in the season, is apparent from the reduced mortality in Bangalore town and cantonments generally. The number of deaths, exclusive of reported famine deaths and of the deaths in relief hospitals, is returned at—

In Bangalore town and cantonment	884	for the month of	July.
	1,185	„ „	August.
	225	„ „	September.

11. We have not yet received detailed reports, but we learn that the Famine Commissioner fears that the mortality from famine in the Tumkur district and other parts of Central Mysore has been very large. A recent telegram from the Famine Commissioner, who is still journeying through the distressed districts, informs us that the condition of the people in the north-western districts of the province is better than he had expected, and that additional relief operations there are not now needed. At Enclosure No. 3 will be found the relief reports of the province for the last three weeks. The changes in the numbers in receipt of relief has been as follows:—

During the Week ending—	On Relief Works.	On Gratuitous Relief.
15th September- - - - -	53,745	208,683
22nd „ - - - -	56,551	161,892
29th „ - - - -	58,693	126,204
6th October - - - -	62,506	103,750
13th „ - - - -	73,202	88,757
20th „ - - - -	78,478	72,838

It is satisfactory that the numbers on relief works now form a much larger proportion of the total numbers in receipt of relief. The reports state that the paupers gain much in health and spirits within a few days of their being drafted from gratuitous relief at camps or kitchens to relief works.

12. Major Moncrieff, the Acting Chief Engineer of Mysore, has returned from a journey to the district of Coorg. He reports that at the present season there is no need for extensive relief works, as the coffee gardens, now and for the next three months, will furnish ample labour. His detailed report has not yet been received, but we gather that there was ground for the representations made to the Viceroy on his visit to Mysore, regarding the need for relief operations in Coorg during the summer and early autumn months.

Hyderabad.

13. There has been a heavy fall of rain in the Hyderabad country; the crops are in good condition, prices are cheaper, and relief operations are being closed. In Berar the prospects of the crops are excellent.

Central Provinces.

14. In the Central Provinces there has been some loss of the rice crop in the districts of Saugor, Damoh, and Sumbulpore, owing to the shortness of the September rainfall. But, for the rest, the prospects of the winter crops, and the progress of the spring crop sowings, are everywhere good. Immigration into Saugor from the Central India States has now ceased, and the immigrants have begun slowly to return. As yet they return in parties of only

50 to 200 a day; and many thousands are still in Saugor and Damoh, for some of whom relief employment has to be provided.

15. Though the condition of affairs in Rajputana was very greatly improved by the rainfall reported in our letter of the 11th October, yet there were tracts where no autumn crop had been saved, and where spring crops never grow. These tracts were situate principally in Marwar and the desert States north and west of the Aravelli hills. Emigrants from these parts were reported to be still thronging Ajmere; and therefore, whilst postponing the preparation of railway work beyond the Sendra pass towards Erinpoorah, we have directed that our sanction to the prosecution of railway work in the pass shall hold good, in order that relief employment may be provided for destitute immigrants. In Central India, though the prospect of the Malwa crops is good, and though there has been further rain in Gwalior, yet there is not sufficient agricultural employment for the many thousands of immigrants, who have come into the country between Neemuch and Indore. On the representation of the agent, Sir Henry Daly, we have directed that the earthwork on the Neemuch and Rutlam section of the Central India Railway shall be commenced at both ends. In this way employment will be provided for immigrants into the Western States of Central India. But in the South-eastern States also there is need for relief to the immigrant poor, who were flocking down the great road from Agra to Indore. Though the emigrants are beginning to return home northwards, yet all have not the means of supporting themselves on their homeward journey, and deaths among them from cholera and even from hunger are reported. Goona is the only place where British officers are quartered on the whole length of road from Gwalior to Indore. The officers there have, partly from private subscriptions and partly with the help of a grant from the Madras Relief Fund, opened relief houses, and have given food and clothing to many thousands of destitute wayfarers. The Maharaja Scindiah has engaged to maintain and indeed has maintained relief houses as far as Seepree on the Indore road, and arrangements are being made for opening relief places between Seepree and Goona. The recipients of relief are subjects of native States, and the relief houses will be in Native territory. The cost of these operations ought not properly to be a charge on the British Indian taxpayer; but the relief is being given, and if the money for its cost cannot be had elsewhere, the British treasury will have to bear the charge. Effort will be made, however, to procure the necessary funds from the native States interested. For those immigrants who require relief employment near Goona, work is being commenced on a cross road from Goona to Oojein, for which funds are available in the Central India Agency budget of the current year.

Rajputana and Central India States.

16. There has been no further appreciable rain in the North-west Provinces, but there has been a good fall of rain at Rawul Pindee in the Punjab, which had not shared in the rain of the second week of October. Over the whole of the North-west Provinces, the Punjab, and Oudh, preparations for the spring crop are making good progress; an unusually broad area is being sown with spring grains, and prices have fallen somewhat. We have not yet heard whether all the proposed relief works can at once be forgone. But the schemes for extensive relief works in the North-west Provinces have been laid aside, while in the Punjab no need for special relief works had been represented by the local Government.

North-west Provinces and the Punjab.

17. The crop prospects are now good over Bengal and Assam. In the Bassein and Henzada districts of British Burmah, serious floods destroyed (see Enclosure No. 4) large breadths of the young rice crop. But most of the flooded lands have been or will be replanted. The latest advices from Rangoon and Moulmein show that merchants expect a very large rice crop in Burmah, and their estimate is that the exportable surplus will reach 800,000 tons.

No. 256[a].

Bengal, Assam, Burmah.

18. At paragraph 3 of your Despatch No. 53, dated 26th July, it was mentioned that a further report from Dr. Lewis and Dr. D. D. Cunningham, respecting the fevers recently prevalent in Bombay and Madras, would be awaited. We have now the honour to forward (Enclosure No. 5) a short report in which these officers state their opinion that the fevers prevalent in Bombay during the earlier part of the year 1876 were of the ordinary "intermittent" and "continued" types, and were not famine fevers. They state also that, in the Madras Presidency, fevers, "so far from being exceptionally severe during the early months of 1876, were decidedly in abeyance." The mortality returns of the Madras distressed districts for the six months, November 1876 to April 1877, show that cholera and smallpox were the most prevalent diseases from December to March.

No. 231.

No. 275.
" 68.

19. In Enclosure No. 6 will be found copy of a telegram despatched to your Lordship on the 16th current, regarding the death rates of the Madras Presidency, also a table

showing the reported deaths in each of the distressed districts during the six months, November 1876 to April 1877. The net result is that, in these districts, containing a population of 13¾ millions, the reported deaths of the half year were 373,993 (or 27 per thousand), being 227,123 (or 16½ per thousand) above the reported deaths of previous years for the same area and the same period, and 188,945 (or 13 per thousand) above what is believed to be the normal death rate of an Indian population. 182,114 deaths from cholera were reported during the six months; this latter number is nearly equal to the excess of the reported deaths above the supposed normal death rate. It is not possible to say how many of the excess deaths were due to famine. The Madras Government have been asked to furnish tables of the reported deaths in districts which are not distressed for the same six months, and also to send tables for subsequent months as soon as they are ready. The results which these tables may show will be reported to your Lordship. The rural registration of deaths is not as yet very complete or trustworthy anywhere, so far as our Sanitary Commissioner is able to judge (see pages 107–8 of his Annual Report for 1875); and the latest report of the Sanitary Commissioner for Madras (pages 53 et seq.) would show that the registration of deaths in that Presidency is still capable of improvement. Accordingly we have preferred not to trust to the returns of births and deaths alone, but we have proposed a partial counting of the people in the distressed districts as soon as the famine is over, so that we may ascertain approximately what the loss of population may have been. At Enclosure No. 6 will be found a circular letter in which we have issued instructions for a census of selected tracts in the famine-stricken country of Southern India. No. 277.

We have, &c.

No. 289.
No. 40 of 1877.

GOVERNMENT OF INDIA.—PUBLIC WORKS DEPARTMENT.

FAMINE.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.

Simla, the 30th October 1877.

With our letter No. 27, dated the 25th June 1877, we forwarded to your Lordship papers submitted by Sir Richard Temple, describing the differences of practice between the several provinces of India in regard to the collection, suspension, and remission of the land revenue during a year of drought. We had previously decided in February that we would not interfere with the discretion of the Local Governments of Madras and Bombay in this matter; but we forwarded the papers to the Government of Madras for an expression of their views after the present crisis was over. The Madras Government has not yet had leisure, from the more pressing duties of famine relief administration, to consider and report upon those papers. Until the views of the Madras Government have been received, we shall not trouble your Lordship with any discussion of the general question whether land revenue ought to be remitted or suspended in a time of drought.

2. But, although we wait an expression of the views of the Government of Madras before submitting to your Lordship a final expression of our opinion on the important general question, we have now the honour to forward copies of papers which go far to show the need for some general ruling on the matter; while the subject of the papers has a very important bearing upon our present financial position. In Enclosure No. 1 will be found a letter from the Madras Government, forwarding a Table in which the Board of Revenue show the demands, collections, and balances of land revenue for the famine year 1876–77. It will be seen that— No. 198.

	Lakhs.
(*a.*) The land revenue current demand for the year 1876–77 was only -	355
compared with an average demand of the three previous years of	449
(*b.*) The total collections, current and arrears, for the year 1876–77 were only - - - - - - - - -	278
compared with a previous average of - - - -	449
(*c.*) The actual remissions of the year 1876-77 are - - -	3
on account of the arrear demand, no remissions having yet been granted on the current demand.	
(*d.*) The balances of the year 1876–77 are - - - -	130
compared with a previous average of - - - -	60

It thus appears that the deficiency in the year's* land revenue collections amount to 449 minus 278 lakhs, that is to 171 lakhs. This total is considerably in excess of previous estimates. If more than 45 lakhs out of the outstanding balance of 130 lakhs should be collected hereafter, then the deficiency on the year will be proportionately reduced; but if the arrear collections of the present year fall short of 45 lakhs, then the deficiency of the year 1876–77 will practically be increased above the total of 171 lakhs. The attention of the Madras Government has been drawn to the extreme gravity of the losses which the public treasury has, according to these figures, to bear; and we have expressed our hope that it will not sanction any avoidable sacrifice of land revenue, either by reduction of the demand or by remissions.

* July 1876 to June 1877, inclusive.

No. 237.

Nos. 279, 284.

3. In Enclosure No. 2 are papers concerning the demand, collections, and balances of land revenue in the Bombay Presidency for the same year (1876–77). It appears that in the Bombay Districts, exclusive of Sinde—

	Lakhs.
(*a.*) The land revenue current demand for the year 1866–67 was -	263
compared with an average current demand for the two previous years of - - - - - - - -	260
(*b.*) The total collections on account of the current demand of 1876–77 were, up to the 31st August - - - - -	233½
compared with an average for previous years of - -	259
(*c.*) The remissions granted on account of the current demand were -	2
(*d.*) The balances of the year 1876–77 were - - - -	27½
compared with an average for previous years of - -	1½

The Bombay Government report that this large proportion of the land revenue demand has been collected, even during a year of distress, without harshness or undue pressure. We have expressed our approval of these results, and our satisfaction that they should have been attained without undue pressure on the people. The results are much to the credit of the revenue officers of the Bombay Presidency. It will be remembered that the Bombay Government were in the first instance disposed to grant considerable remissions, but that they modified their orders in this respect on our forwarding Sir Richard Temple's representations of the grave but avoidable losses which a policy of heavy remissions would entail. It will be seen, moreover, from the papers forwarded with our letter of the 25th June (quoted above), that the Bombay revenue system differs from the Madras system, in that the Bombay revenue officers inquire into each ryot's claim to remission or suspension on its individual merits, while Madras revenue officers grant remissions "in block" for whole tracts, without respect to the harvests gained by or the paying power of individual ryots. The Bombay system has, so far as the experience of the past season goes, turned out to be the best for the public treasury.

Nos. 270, 272, 278, 282.

4. Enclosure No. 3 contains correspondence with the Government of the North-western Provinces respecting the extent to which suspensions of the land revenue demand should be granted during the months of November and December 1877. The Lieutenant-Governor was at first disposed to think that the greater part of the autumn instalment of land revenue (about 150 lakhs in all) would have to be suspended over the whole of the North-western Provinces and Oudh. His first letter, dated the 11th October, was, however, written before the full effect of the rain that fell all over the country between the 6th and 10th October was appreciated; and his orders to the Board of Revenue, dated the 18th October, do not authorise such extensive suspensions of the land revenue demand as we had feared might be granted. We have instructed the Lieutenant-Governor that the condition of our treasuries does not permit of any postponement of the land revenue demand beyond what may be absolutely necessary. We have pointed out that neither the terms of the land revenue settlement nor the practice of the North-Western Provinces Government in previous years of drought, nor the circumstances of the present and previous seasons, nor consideration for the well-being of the people, nor the procedure of neighbouring and similarly situated provinces, support the view that very extensive suspensions of the land revenue demand are necessary in the North-Western Provinces during the present quarter.

5. The Lieutenant-Governor of the Punjab proposes to collect the November land revenue instalment in full, and to grant suspensions, only where absolutely necessary, on the December instalment of land revenue.

6. The papers now forwarded to your Lordship show that the loss of land revenue in the year 1876–77, on account of the drought, was—

	Lakhs.	
In the Madras Presidency - -	171	or 38 per cent.
In the Bombay Presidency - -	25½	or 10 per cent.
Total - -	196½	

The difference is due in great part to the difference of revenue practice in the two Presidencies. In the Deccan and Southern Mahratta country the famine and the failure of crops was, if the price of food is fair index of such severity, as severe as in any part of the Madras Presidency, for in Dharwar, Kaladgi, Sholapore, and Belgaum the price of food ranged for months dearer than in any district of Madras. The land revenue in Bombay, just as in Madras, is paid by petty occupiers (ryots) direct to Government; and, so far as recent fiscal phenomena went, the condition of the Deccan ryots seemed to be poorer than that of the Madras ryots.

7. We are as yet unable to report how far the land revenue collections of the current year (1877–78) may be affected by the recent famine. Much may depend upon the north-east monsoon (autumn rains) in the south of the Madras Presidency. If the rains are favourable then we hope that the whole of the current demand and much of the balances of last year may be collected in Madras. We have (see Enclosure No. 4) drawn the attention of the Government of Madras to the need for collecting as much as possible of the land revenue of the current year, provided the season continues as favourable as during the past two months; and we have asked for an estimate of the probable collections, on account of the current and arrear demand, as soon as the prospects of the season are clearly known. No. 283.

We have, &c.

No. 290.

Revenue, No. 74.

From the Secretary of State for India in Council to His Excellency the Right Honourable the Governor-General of India in Council.

India Office, London, 31st October 1877.

Para. 1. The Despatch of your Excellency's Government, dated 20th August, No. 34 of 1877, announcing that your Excellency, accompanied by Sir Alexander Arbuthnot, proposed to visit Poona, Bangalore, and Madras for the purpose of conferring with the Local Governments and the Chief Commissioner of Mysore on the condition and prospects of those territories, under the circumstances of a renewed failure of the south-west monsoon in many quarters, has been considered by me in Council. No. 164.

2. The reports which, since the date of the letter under reply, have been received by telegraph, fully establish the wisdom of the resolution to which your Excellency came.

3. I avail myself of this opportunity to express my general concurrence in the views stated in the minute of your Excellency, dated the 12th August, which forms one of the Enclosures to the Despatch under reply.

I have, &c.
(Signed) SALISBURY.

No. 291.

Revenue, No. 82.

From the Secretary of State for India in Council to the Governor-General of India in Council.

India Office, London, 8th November, 1877.

Para. 1. I have to acknowledge the receipt of your Excellency's Despatch of the 5th September, No. 33 of 1877, giving an account of your Lordship's visit to Poona, Madras, and other places, for the purpose of conferring with the Governors of Bombay and Madras, and with other high officers on the subject of the famine. No. 215.

2. The Despatch is one of high importance, but in replying to it I am greatly embarrassed by the fact that more recent information received by telegraph has materially altered the condition of many districts through which your Lordship passed, and that therefore your observations apply in some measure to situations which have ceased to exist. It is very gratifying to me to add, that, as a rule, the prospect has considerably improved.

3. I have to express my cordial appreciation of the wisdom and public spirit which induced your Excellency to undertake this journey for the purpose of examining personally the state of the country, and of strengthening the hands of the local governments and administrations, by your sympathy and counsel, in the performance of those arduous duties which have demanded the exercise of the highest energy and judgment.

4. Your Excellency's journey extended from Simla, through Amballa, Agra, and Allyghur, to Jubbulpore; thence by Khandesh and Nassik to Poona, where you met the Governor of Bombay; thence to Bellary, before reaching which place the Resident at Hyderabad had an interview with your Lordship, and then on to Madras. On the date of the Despatch you were about to start for Bangalore.

5. Your Excellency's Despatch gives a rapid but vivid description of the condition of the territories through which you passed, and you availed yourself of the opportunity of visiting relief camps in Poona, Bellary, and Madras. It is difficult to exaggerate the advantage to the public service in all executive departments when the head of the Government thus sees for himself the terrible proportions of the evil with which he has to contend.

6. The results of your consultations with his Grace the Governor of Madras have been stated in your Despatch No. 34 of the 5th of September, to which I will give a separate reply. Two subjects are prominently dealt with in the Despatch now under reply:—

1st. The carrying powers of the railways.
2nd. Private subscriptions in aid of relief funds.

7. The anxious attention of the Governments of Madras and Bombay has been directed to the increase of the carrying powers of the railways, but it has been found almost impracticable to obtain from them the daily delivery of the number of tons which it was thought each company ought to be able to transport. Under these circumstances, application was made to me for the supply of additional engines and waggons. These indents, as modified by more recent advices, are, as your Lordship has been informed by telegraph, in process of receiving due compliance, and I trust that the railways will soon be able to meet the exigencies of the exceptional demands made on their resources.

8. With respect to private subscriptions in aid of relief funds, I understand your Lordship's view to be this. That the Government is responsible, as far as may be practicable, for the saving of life by all the available means in its power, and that for this purpose an official agency has been organized; that it is not desirable that another agency, or the same agency under another name, should be employed on the same lines in the distribution of private charity; that such an interference would only impair the efficiency of the arrangements of Government, while the subscriptions could hardly make any appreciable difference in the expenditure of the State. At the same time, your Excellency was perfectly alive to the fact that there were objects to which the efforts of private charity might well be directed, such as the extension of relief to women of the respectable classes, of aid to persons of very small fixed incomes, and to others who were struggling if possible to remain in their homes and not to resort to relief camps. Similarly, your Excellency was also of opinion that arrangements by grants to orphanages and to individuals, for the support of those children who had lost their parents through the famine, might reasonably be the work of private charity, and you had requested the Governor of Madras to consider the specific objects to which the operation of such private charity should be directed, and the agency by which it should be distributed and superintended. If I have thus interpreted rightly the views of your Excellency they have my concurrence.

9. I approve of your instructions to the Resident at Baroda to be cautious as to the opening of petty works and the commencement of gratuitous relief. The long and exceptional prosperity of the ryots in Guzerat should render the necessity for the adoption of such measures a distant contingency. Your instructions to political officers in the neighbouring States to Baroda, to urge on the Chiefs the propriety of admitting

free passage of grain from and to tracts threatened to scarcity, were also, I consider, very judicious.

10. The condition of Mysore is a subject of great anxiety to your Excellency. You have strengthened the famine organisation in that province by the deputation of some selected officers, an arrangement which has my full approval. As it appears that the invested funds of the Mysore State, amounting to upwards of forty-six (46) lacs of rupees, have been exhausted by the famine expenditure, I sanction the grant of a loan of fifty (50) lacs, which your Excellency proposes to make in four instalments to that State.

11. The general conclusion which I draw from your Excellency's Despatch is that, terrible as is the calamity which has visited the greater part of India, it has everywhere been met with unsparing energy and devotion by the public service in all Departments, and conspicuously by your Excellency and the Governors of Madras and Bombay.

I have, &c.
(Signed) SALISBURY.

No. 292.

Revenue, No. 83.

From the SECRETARY OF STATE FOR INDIA IN COUNCIL to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 8th November 1877.

Para. 1. Your Excellency's Despatch, dated 20th September, No. 35 of 1877, relative to the famine administration of the Mysore Province, and giving an account of your Lordship's visit to Coimbatoor, Coonoor, and Ootacamund, has been considered by me in Council. No. 239.

2. I regret that your Excellency should have found the administration of relief in Mysore in so unsatisfactory a condition, and I approve of the arrangements which you at once ordered for its improvement. It is gratifying to find that in 10 days, under the able superintendence of Mr. C. A. Elliott and Major Moncrieff, your Lordship was able to report that there was most satisfactory evidence of the beneficial results of the new system.

3. I consider that your Excellency acted with judgment in sanctioning a contribution of Rs. 30,000 towards the laying out and metalling of a road in the Wynad as a relief work for the numerous labourers wandering from Mysore to that district in search of employment. The sum thus advanced is hereafter to be recovered from the Mysore State, and the rest of the estimated expenditure on the road will be provided by the Madras Government and the Planters' Association. On other requests and suggestions made to your Lordship by the Wynad planters, and deputations from various municipalities, I shall await the results of your Excellency's deliberations.

4. The statements made to your Excellency as to the mineral resources of the Wynad and the adjoining country, and especially as to the auriferous character of the soil, are of high interest, and are well deserving of the attention which your Lordship proposes to devote to them.

5. I approve of your Excellency's intention to depute either Mr. Elliott or Major Moncrieff to ascertain personally the wishes of the coffee planters of Coorg on the subject of relief works, and as to the manner in which their co-operation can be most beneficially employed.

6. In the last paragraph of the Despatch under reply, your Excellency was able to give a more cheering view of the general state and prospects of the season than I have received by any previous mail, and it is a source to me of heartfelt satisfaction that subsequent communications by telegraph have shown that the improvement has been progressive.

I have, &c.
(Signed) SALISBURY.

No. 293.

Revenue, No. 85.

From the Secretary of State for India in Council to the Governor-General of India in Council.

India Office, London, 22nd November 1877.

No. 216. Para. 1. Your Excellency's Despatch of the 5th September, No. 34 of 1877, describing the arrangements concluded for systematising the policy and strengthening the administration of State relief throughout the famine-stricken districts of the Madras Presidency, has been considered by me in Council.

2. Your Excellency, in the 4th, 5th, and 6th paragraphs of the report, states with great clearness the peculiar difficulty of the problem presented for solution. The famine in the Madras Presidency had assumed such dimensions, both actually and in prospect, as to become one of the most serious disasters with which, as your Lordship says, the Supreme Government has ever had to deal. While the executive responsibility, at least in the first instance, rested with the Local Government, the financial responsibility rested, as always, with the Government of India. The wide extent and severity of the famine rendered the duty imposed on the Supreme Government one of anxious gravity, but one of which it could not efficiently acquit itself without, in a great degree, interfering with the action of the administration which had on the spot to provide for the mitigation of the calamity.

3. It was not deemed expedient, and I think rightly, to transfer for the time the seat of the Supreme Government to the Madras Presidency, and thus to bring the executive and financial responsibilities into such immediate contact as to prevent all administrative delay. It was, therefore, necessary to devise some plan by which the Supreme Government would be justified in relaxing its control over the Local Government, and by which the action of the latter would be rendered more prompt, direct, and efficient.

4. Your Lordship first laid down in the "Gazette of India Extraordinary" the principles by which famine policy should be guided. These are briefly summed up in the 10th paragraph of the Despatch:

1st. An abstinence by Government from all measures which might interfere with the activity of private trade.

2nd. The initiation of a large scheme of public works as the essential portion of the relief system, other forms of relief being subsidiary. The large works to be under the direction and control of the Public Works Department.

3rd. All gratuitous relief to be as far as possible temporary, and all relief camps to be maintained only for receiving and supporting the starving and the infirm, and for getting them into a condition to labour.

These principles appear to me to be sound and judicious. At the time when these arrangements were being matured, I called your Lordship's attention by telegraph to the importance of guarding from undue pressure, under the piece-work system, the large numbers of those who would not, as wholly infirm, be consigned to gratuitous relief, but who had become so enfeebled by privation as to be incapable of performing the ordinary task. I find that full provision has been made against this danger.

5. Your Lordship then proceeded to arrange that the Supreme Government should be represented by a carefully selected agent. For this most important duty you nominated Major-General Kennedy, the Secretary to the Government of Bombay in the Public Works Department, who had gained great distinction by his successful superintendence of relief operations in the Bombay Presidency.

6. You then determined that, by rules passed under the India Council's Act, the Governor of Madras should take the famine business into his own hands, as was done by Lord Northbrook during the famine of 1874 in Bengal; that Collectors and executive officers should correspond with the Government on famine matters direct, and not through the Revenue Board as heretofore; and that Major-General Kennedy, acting as the accredited agent of the Government of India, should be appointed personal assistant to the Governor in all famine affairs. These measures, by which, in your Excellency's words, the Governor of Madras became virtually a dictator in famine affairs, as far as the constitution permitted such an arrangement, were settled between the Governor and yourself, and have been loyally accepted by the other members of the Madras Government.

7. The arrangements appear to me to have been well calculated to secure the objects which your Excellency had in view. I have to communicate to you, on behalf of Her Majesty's Government, their high appreciation of the judgment with which your policy has been conceived, and the energy with which it has been carried into execution.

I have, &c.
(Signed) SALISBURY.

No. 294.

Revenue, No. 86.

India Office, London, 22nd November 1877.

Para. 1. Your Excellency's Despatch of the 27th September, No. 37 of 1877, which gives a concluding account of your visit to the famine-stricken districts in Southern India, has been considered by me in Council. No. 253.

2. The great improvement which a reformed system of superintendence had in a few days introduced into the Bangalore and Kolar districts of Mysore is highly satisfactory. I share your Lordship's regret that a delay has occurred in the manifestation of a similar improvement in the districts of Madras; but I trust that the new code of instructions drawn up by his Grace the Governor, with the assistance of General Kennedy, for the guidance of officers engaged in famine relief will at once lead to the introduction of the necessary reforms.

3. I have read with attention the correspondence alluded to in the 8th paragraph of the Despatch under reply, relative to the plan of operations proposed for adoption by the General Relief Committee at Madras, and I am of opinion that, under all the circumstances, your Excellency was justified in giving your sanction to the issue of a notification directing local officers to give their best assistance to the Committee. The matter is one of considerable difficulty, but I do not doubt the Government of Madras will be able to indicate the objects to which the operations of the Committee can be directed, without interfering with the general action of the Government, and without imposing too heavy a burden on the Revenue establishments.

4. At the date of the Despatch your Excellency had completed your tour, and expected to arrive at Simla on the following day. Your Lordship places on record your obligations to several high officers for assistance given during the exceptional work which has engaged your personal attention, and it is a source of sincere gratification to me to state my opinion that, in the performance of this arduous duty, your Excellency has rendered a real and important service to the State.

I have, &c.

No. 295.

Revenue, No. 88.

From the SECRETARY OF STATE FOR INDIA IN COUNCIL to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 29th November 1877.

Para. 1. The Despatch of your Excellency in Council, dated 11th October, No. 38 of 1877, reporting on the present condition and prospects of the various provinces in India either affected or threatened with famine, has been considered by me in Council. No. 271.

2. The Despatch passes rapidly in review the situation in Madras, Bombay, Mysore, the Nizam's Country, the Central Provinces, Rajputana, and Central India States, the North-west Provinces, the Punjab, and Bengal.

3. The substance of the statements relative to all the provinces is the same, "general improvement." The calamity with which India has been visited will leave traces which may for some time cause anxiety and involve further expenditure, but I think I may now, without presumption, entertain the hope that the crisis of the famine has passed, and congratulate your Excellency's Government on the improved prospects before you.

4. I approve generally of the orders which have been issued under your Lordship's direction, as reported in the Despatch under reply, in relation to the present state of affairs. But I take for granted that, if the favourable anticipations as to the future are realized, your Excellency will avail yourself of the earliest opportunity to reduce the extra establishments which you have found it necessary to create. I trust that the precautions now taken by the Madras Government may have the effect of checking the peculation which, I regret to be informed by your Government, has been practised by many subordinate Native officials, and in some localities have been the cause of great mortality.

5. I note with satisfaction the testimony borne by your Excellency to the good services rendered by the Honourable Sir Alexander Arbuthnot and the Honourable Mr. Hope.

I have, &c.
(Signed) SALISBURY.

No. 296.

Revenue, No. 98.

From the SECRETARY OF STATE FOR INDIA IN COUNCIL to the GOVERNOR GENERAL OF INDIA IN COUNCIL.

India Office, London, 27th December 1877.

No. 288. Para. 1. The Despatch of your Excellency in Council, dated 30th October, No. 39 of 1877, giving a further account of the condition and prospects of the provinces in India which have suffered from or have been threatened by famine, has been considered by me in Council.

2. The statements submitted in the Despatch are generally favourable. In Madras the north-east monsoon has broken in all the districts except Coimbatore, Salem, North Arcot, Ganjam, Vizagapatam, and Godavery. The early crops have greatly revived, and a yield to the extent of more than half a full harvest is expected. The winter crops are in good condition, and cultivation and sowings for the spring crops are making satisfactory progress. Prices have fallen, and the numbers gratuitously fed and employed on relief works have decreased during the month of October from 2,231,980 to 1,544,399, a fall of 30 per cent. Efficiency and economy have been secured by the shortening of the chain of administration, and the arrangements made by your Lordship in consultation with the Governor of Madras at the end of August have been attended with success.

3. In Bombay a sufficiency of rain has fallen, but in Sholapore, Sattara, Kaludji, Belgaum, and Dharwar, more than a sufficiency, which has caused some damage to the autumn and winter crops; at the date of the Despatch improvement had been manifested in Sattara and Sholapore, and the general prospects of the crops continued to be good. Prices had fallen, and the numbers on relief works and on gratuitous relief had decreased from 382,742 to 198,924, a decrease of 48 per cent.

4. In Mysore, moderate rain had fallen, the condition of the winter crops was good, and the prospects of the spring crops favourable. Prices had fallen, and the markets were sufficiently supplied. The Famine Code, drawn up by Mr. C. A. Elliot, is a compendium of instructions which will be of permanent value.

5. The statement of the mortality in and around Bangalore is a very melancholy record, but it is satisfactory to notice that the improvement in the season and the changes in the relief system had led to a large diminution in the number of deaths during the past month. The numbers gratuitously fed had fallen from 208,683 to 72,838, while the constant drafting from this class to that on the relief works had increased, the latter from 53,745 in the middle of September to 78,478 on the 20th of October.

6. In Hyderabad the crops were in good condition, prices cheaper, and the relief operations closed.

7. In the Central Provinces there had been some loss of rice crop in Saugor, Dumah, and Sambulpore on account of the deficient supply of rain in September. In the other districts the prospects of winter crops were good, and the preparations for the spring crops were in satisfactory progress.

8. In Rajputana and the Central Indian States the general situation was greatly improved by the rainfall in the middle of October. But there were parts, principally

in Marwar, in which the autumn crops had not been saved, and where spring crops never grow; for the relief of emigrants from these parts into Ajmere, railway work had been provided. Similar relief employment had been arranged for immigrants into the Western States of Central India. I note with pleasure that his Highness the Maharajah Scindiah had opened relief houses on the Indore road as far as Seepree.

9. In the North-West Provinces, the Punjab, and Oude preparations for the spring crops were in active progress, and prices had fallen. In the Punjab no necessity for special relief works had been suggested, and in the North-West Provinces all schemes for extensive works had been abandoned. In Bengal, Assam, and British Burmah the crop prospects were very favourable.

10. I am glad to understand that, in the opinion of Doctors Lewis and Cunningham, the fevers prevalent in Bombay in 1876 were of the ordinary "intermittent" and "continued" types, and were not "famine" fevers, and that during the same period in Madras, fever, far from being exceptionally severe, was decidedly in abeyance.

11. I approve, in conclusion, of the resolution of your Excellency in Council to have a partial counting of the people in the distressed districts of Madras as soon as the famine is over, in order approximately to ascertain what the loss of the population may have been.

I have, &c.

Para. 1. The Despatch of your Excellency in Council, dated 30th October, No. 40 of 1877, relative to the suspensions on remissions of Revenue demands in the year 1876-77, has been considered by me in Council. No. 289.

2. I approve of the orders of your Lordship in Council to the Local Governments in connexion with this subject, but I will reserve the expression of my own views on the general question until the information for which you have called is before me.

3. I cannot, however, withhold the expression of my satisfaction that in Bombay so large a portion of the land revenue due has been collected at such a time, and still more, that it has been collected, as stated by the Government of Bombay, without any harshness or undue pressure. This result is highly creditable to the revenue officers, European and Native.

COPIES of PAPERS relating to the MORTALITY during the late FAMINE in SOUTHERN INDIA.

(No. 46, of 1878.)

Government of India.—Public Works Department.

FAMINE.

To the Right Honourable Lord *Cranbrook*, Her Majesty's Secretary of State for India.

My Lord, Simla, 18 April 1878.

ADVERTING to paragraph 19 of our letter to your Lordship's predecessor, No. 39, dated the 30th October last, we have the honour to forward tables furnished by the Government of Madras, showing the mortality from various causes in all the districts of the Presidency from May to October 1877. We append an abstract of the tables. It will be observed that during these six months the number of deaths registered in the nine distressed districts alluded to in our telegram of the 16th October, and noted in the margin, were as follows:—

Nellore. Cuddapah.
Chingleput (including Madras Town). Bellary.
Madura. North Arcot.
Kurnool. Salem.
Coimbatore.

In May - - - - - - - - -	71,307
„ June - - - - - - - -	73,202
„ July - - - - - - - -	94,048
„ August - - - - - - - -	118,978
„ September - - - - - - - -	112,034
„ October - - - - - - - -	81,451

making a total number of 551,020. Adding this figure to the total of the previous six months (*i. e.*, from November 1876 to April 1877), the deaths during 12 months in the nine districts were 925,103, or 67 per mille per annum, on the total population of 13,765,165. The deaths reported in the year 1875 were 340,545, or 25 per mille, showing an excess mortality in the above-mentioned 12 months of 584,468.

2. The partial counting of the people in selected areas of the famine country, which we reported as having been arranged, has been effected by the Madras and Bombay Governments and the Chief Commissioner of Mysore.

3. From Madras his Excellency the Governor has reported to us by telegraph the results of the counting. They are as follows:—

"Famine census taken 15th March gives following results, omitting decimals—percentages are on population 1871 plus five years normal annual increase at 1½ per cent.:—Gooty taluq, Bellary district, houses minus one per cent., population minus 20 per cent.; Nandikotkur, Kurnool, houses plus 5, population minus 26; Madanpali, Cuddapah, houses plus 12, population minus 25; Gudur, Nellore, houses unchanged, population minus 20; Palladam, Coimbatore, houses minus 2, population minus 16; Pouneri, Chingleput, houses plus 2, population minus 10; in non-famine districts Gudivada, Kistna, houses plus 39, population plus 5; Museri, Trichinopoly, houses unchanged, population minus 2; Mayaveram, Tanjore, houses plus 6, population plus 1; Ambasamudram, Tinnevelly, houses minus 1, population minus 1; returns for entire district Salem not quite tabulated."

4. From Mysore the Famine Commissioner reports that the results of the partial census when generalised, and compared with the results of the census of 1871, show a decrease in population of 1¼ millions. Generalising, for the six districts marginally noted, from the results of the selected areas of the Madras Presidency, we find the difference between present figures and those of 1871 to be 759,000, while in Kistna, Tanjore, Trichinopoly, and Tinnevelly, the results exceed the number of 1871. These results are attained without reckoning any normal yearly increase of population since the census of 1871. The loss of 759,000 is due to mortality, to decrease in births, of which comparatively few were registered in the famine year, and also to emigration. For, as reported in paragraph 14 of our letter No. 45 of this day's date, the Madras Government informs us that "many persons who fled the scarcity are still in Ceylon and elsewhere, and many have not returned yet to their homes from remote districts of the Presidency, whither they have wandered for work or sustenance."

Bellary. Nellore. Kurnool. Coimbatore. Cuddapah. Chingleput.

5. It will be noticed that the results of the Salem district have not been furnished yet. When complete figures for the Madras Presidency and Mysore shall have been received, further report shall be submitted to your Lordship. We shall then be in a position to report also the results of the Bombay Presidency which have not reached us yet, but which have been promised to us at an early date.

We have, &c.

* For eleven months.

(No. 50 of 1878.)

From the Government of India to the Secretary of State for India.

My Lord, Simla, 10 June 1878.

THE Government of Bombay, in their Despatch, No. 5, of the 22nd April, furnished your Lordship with tables and memoranda, showing the results of the partial census taken in selected tracts of the famine districts of that Presidency. We now have the honour to forward a table showing the results of the partial census taken in certain districts and talooks of the Madras Presidency. Sir Michael Kennedy, Personal Assistant to his Grace the Governor of Madras, has prepared a memorandum on the figures shown in the Madras table, and a copy of that memorandum will be found in the enclosures to the present letter.

2. We submit, for your Lordship's information, copy of a resolution, in which we have reviewed the results of the partial census in both Presidencies. We cannot avoid the conclusion that there has been a most deplorable diminution of the population in parts of Southern India during the past two years. But we consider that the papers now before us do not furnish means for forming a correct estimate of the famine mortality over the whole of the famine-stricken and partially distressed areas.

We have, &c.

(No. 1299.)

EXTRACT from the PROCEEDINGS of the Government of India, Famine Department, dated Simla, 8 June 1878.

FAMINE.

Read—Letter No. 955, dated 16th April 1878, from the Bombay Government, forwarding, with remarks, tables showing the results of the partial census taken on the 19th January 1878, in parts of five districts, where the famine of 1876-77 had been most severe.

Read—A table showing the results of the partial census taken on the 15th March in parts of 11 districts of the Madras Presidency, and over the whole of the district of Salem.

Read also—A memorandum by Lieutenant General Sir Michael Kennedy, K.C.S.I., Personal Assistant to his Grace the Governor of Madras, commenting on the results of the partial census in Madras.

RESOLUTION.

In order to ascertain how far the population of Southern India had been reduced by the famine of 1876–77, it was decided that a partial census should be taken of selected tracts in the districts where the pressure of the famine had been most severe. It was believed that the actual loss of population could not be known with certainty, until one or two favourable seasons had passed, until emigrants had returned, and until a simultaneous census of the whole country could be taken. But it was desirable to know what the present (and in part perhaps temporary) loss of population had been in the worst tracts.

2. In

2. In the Bombay Presidency nine districts had been afflicted more or less severely by famine. In each of the five districts which had suffered most severely, two talooks were selected; one of the two was the talook which had shown the highest death-rate during the year 1877, and the other was a talook which had shown a death-rate equal to the average of the district during that year. In these 10 talooks a census was taken on the 19th January 1878; no inquiry was made whether the missing people had died, or had emigrated, during the famine; the men, women, and children were counted, and the totals were compared with those of the regular census of February 1872. The results were as follows:—

DISTRICT.	Total Population as per Census of		Difference.	Percentage on Original Population.
	1872.	1878.		
Sholapore (2 talooks) - - - -	166,941	143,957	—22,984	minus 13

Belgaum (2 „) - - - -	246,181	226,358	—19,823	„ 8
Dharwar (2 „) - - - -	152,602	148,537	— 4,065	„ 2
TOTAL (10 talooks) - - -	934,345	834,872	—99,473	„ 10⅔

The memoranda which accompany the Bombay census tables show that the apparent diminution of population has been much greater in the case of the male than in the case of the female population. In some talooks the decrease among the males was nearly double the decrease among females. It is known* that considerable migration took place from the Deccan and Southern Mahratta Country into the Konkan and into South Canara. It is conjectured that men and boys would emigrate in larger numbers than women and girls; and this excess diminution of the male population is held to contribute further evidence that a part of the diminution of population, ascertained at the recent census, must have been due to emigration.

3. The Bombay Government sums up the results of the partial census by saying, that the question of mortality from famine is still left very much in the same doubtful state as before; that the partial census of the worst or most distressed tracts shows some diminution in the population; that the diminution is partly apparent, as arising from emigration, and partly real, as arising from mortality; that the mortality arose partly from sickness, extending not only throughout the year 1877, but throughout the two previous years 1875 and 1876, and partly from famine; and that the mortality arising from famine itself cannot be exactly estimated.

4. The partial census in the famine districts of Madras was taken, on the 15th March 1878, in one talook out of each of the six severely stricken districts of Bellary, Kurnool, Cuddapah, Nellore, Coimbatore, and Chingleput, and in all the nine talooks which constitute the district of Salem; a census was also taken in one talook out of each of the districts of Kistna, Trichinopoly and Tinnevelly, in parts of which some distress was felt, but in parts of which the crops were saved by irrigation, and in one talook of Tanjore, throughout almost the

* NOTE.—As an instance of the emigration which took place from the Deccan may be cited the case of the Indapore talook of Poona. An experienced survey officer, in November 1876, was deputed by the Government of Bombay to inquire into the condition of every village in this talook. The Bombay Government, when reviewing the report made by this officer, recorded that out of a total population of 66,937, as many as 40,289 had temporarily emigrated by the month of November 1876, that is to say, at the very beginning of the scarcity. It was explained that the emigrants had gone to the hill ranges of Poona, to Khandesh, and the Nizam's territory.

the whole of which the crops were saved by irrigation from the Cauvery river. The results of the census were as follows:—

In the	Population as per Census of		Difference.	Percentage of Difference on Original Population.
	November 1871.	March 1878.		
Six talooks of the six very distressed districts	859,132	739,989	— 119,143	minus 13
Nine talooks of the Salem district - -	1,977,034	1,559,896	— 417,138	„ 21
Three talooks of the three slightly distressed districts.	496,702	528,574	+ 31,872	plus 6
One talook of the Tanjore district - -	221,749	242,999	+ 21,250	„ 9

5. No review of these figures has yet been received from the Madras Government; but Sir Michael Kennedy has furnished the Government of India with remarks upon the results of the partial census. He considers that the diminution of the population must be due to the effect of migration, of increased mortality, of diminished births; or to a combination of all these three causes. No figures, even approximate, are available to show the extent to which emigration has taken place from the famine districts. The number of emigrants by sea from the Madras Presidency to Burmah, Ceylon, and elsewhere, is shown by the returns from sea-ports to have been 287,482 during the 14 months of famine, as compared with 156,143, the average number for a corresponding period in ordinary times; that is to say, the emigration by sea nearly doubled during the famine. But there is nothing to show how many of these emigrants came from the famine districts, or from the particular talooks in which the recent census was taken. Again, there is no available information regarding the great exodus of population from the famine districts to the neighbouring tracts in Malabar, Tanjore, Ganjam, and parts of Tinnevelly and Kistna, where drought had comparatively little effect. The figures of the recent census show that the diminution among the males of 10 years old and upwards has been considerably greater than among women of the same age. Sir Michael Kennedy points out that there was no reason why men should have died from famine more rapidly than women, while it is quite probable that men would migrate more readily than women. He considers that this excessive diminution among men tends to show that the total number of persons migrating from the famine tracts must have been very large, and that a part at any rate of the decrease of population must be due to emigration. He shows that a part of the diminution must be due to the decrease in births; for the returns (confessedly imperfect as yet) of births for the 15 famine talooks, in which the census has now been taken, give a decrease of 32,054 births as compared with the average of ordinary years. Further, he shows that, according to the monthly returns of mortality, a great part of the loss of population was due to unusual epidemics of cholera, small-pox, and fever, which swept off, in these 15 talooks, 149,053 persons, compared with an average mortality of 32,909 from these diseases as returned during the years 1870–75.

6. The table, cited in the preamble to this Resolution, regarding the results of the partial census in Madras, takes the normal increment of the population to be $1\frac{1}{2}$ per cent. per annum; and some of the subsidiary statements forwarded by the Government of Bombay assume the normal increase of the population to be 1 per cent. per annum. If it be assumed that any such increase really occurred during the years 1872—75 before the distress began, then the actual loss of population attributable to famine will be proportionately larger. Sir Michael Kennedy, in his memorandum, shows that the excess of registered births over registered deaths, according to the returns published by the Madras Government, gave a normal increase of population at the rate of ·2 per cent. per annum in the 15 talooks during the period 1872—76; and he considers that there is no sufficient ground for the assumption that the population of the Madras

Madras Presidency increases at the rate of 1½ per cent. per annum. It appears to the Government of India that no absolute certainty has yet been attained regarding the normal increase of population in India. The Madras Census Report of December 1873 shows (pp. 11—13) that, according to four censuses taken from 1851 to 1871, the annual rate of increase ranged from 0·74 per cent. during the earliest to 3·02 per cent. during the latest period. But the writer of the Report (Dr. Cornish) rejects these deduced rates of increase, and holds that the figures merely prove the earlier censuses to have been imperfect. In the North Western Provinces a detailed census has been taken on scientific principles more often than in other parts of India. The Report of the 1871 census for the North Western Provinces shows (page 2 of Vol. I. of the Report) the annual increase of population to have been 0·52 per cent., as compared with an increase in Great Britain of 0·56 during the 10 years, 1851—1861. The Census Report of the Bombay Presidency of January 1874 (pp. 72–74 and 236–237) shows the deduced rate of increase in the population to be 0·54 per cent. per annum. Probably, until the information on this subject is more complete, the normal increase of an Indian population might be taken at between 0·5 and 0·6 per cent. At this rate the population would double itself within 130 years. As pointed out by the Bombay Government, parts of the country were afflicted by epidemic diseases during 1875 and 1876, and during those years the supposed normal rate of increase may not have been maintained; but during the years 1872—1875, or four years, some increase of the population must, it may be believed, have occurred. And the apparent, as well as the actual loss of population, during these two sad years of famine, must be proportionately increased above the figures shown or suggested in the foregoing paragraphs of this Resolution.

7. His Excellency the Governor General in Council deduces from the figures now reviewed that there has been a lamentable decrease of the population, during the two past seasons, in the selected famine-stricken tracts where the partial census has recently been taken. But there is still much uncertainty as to the numbers who have migrated, and who may return to their homes. The figures for the several talooks, both in the Bombay and in the Madras Presidency, show remarkable differences between the per-centages of apparent loss of population; and it is not possible to say over what proportion of the famine country the higher, the medium, or the lower per-centages of decrease in the population extend. His Excellency the Viceroy in Council considers, therefore, that the Papers now before the Government of India do not furnish means for forming a correct estimate of the famine mortality in Southern India during 1876—78. Copies of all the Papers will be furnished to the Famine Commission for their consideration.

(True Extract.)

(signed) *C. Bernard,*
Additional Secretary to the Government of India.

COPY of the foregoing Resolution, together with the Papers read, forwarded to the Secretary to the famine Commission.

(signed) *C. Bernard,*
Additional Secretary to the Government of India.

From *J. H. Garstin*, Esq., Additional Secretary to the Government of Madras (Famine), to the Additional Secretary to the Government of India, Public Works Department (Famine), (No. 1257), dated Ootacamund, the 1st June 1878.

I HAVE the honour to forward herewith the returns of the trial census taken in accordance with the directions of the Government of India contained in your letter of the 17th October 1877, No. 944.

2. I am to point out that, although this Government in their letter of the

15th November 1877, No. 328, indicated doubts as to the value of any results to be so obtained, they determined to give the fullest effect to the wishes of the Government of India, and decided to select in addition to certain talooks in famine districts, one entire famine district and some talooks of districts the least affected by the famine pressure. They were of opinion that isolated talooks would be liable to be affected by so many special or local causes, that the results would be more than ordinarily unreliable.

* Bellary	Gooty.
Kurnool	Nandikotkur.
Cuddapah	Madanapalli.
Nellore	Gudur.
Coimbatore	Palladam.
Chingleput	Ponneri.
† Kistna	Gudivada.
Trichinopoly	Museri.
Tanjore	Magaveram.
Tinnevelly	Ambasamudrum.

3. The marginally noted six talooks* of the famine districts, and the marginally noted four talooks† in the districts least affected by scarcity and drought, and also the entire district of Salem, were accordingly selected for the trial census. The enclosed statement gives the result, showing the comparative numbers of houses and of population, and the per-centage of diminution and increase as compared with the census of 1871.

4. The accuracy of the registration is too open to doubt to allow of any safe opinion being formed as to the existence of any, and what, normal increase in the period between the census of 1871 and the close of 1875, but I am directed to enclose a statement showing the registration of births and deaths for that period in the talooks under reference and carried on to the end of February 1878. From this it will be seen that the registered deaths were in excess of the registered births in the remaining portion of 1871, subsequent to the census, in the talooks of—

while in 1873 the same was the case in the entire district of Salem by 5,843.

5. The statement also shows the large increase in the number of deaths registered in the famine period of 1876-77. Of the deaths which occurred during that period, 149,053 were returned in the year 1877 as due to cholera, small-pox

small-pox and fever, this detailed information not being available for 1876. It is, however, impossible to say how far cholera, fever, or many other ailments may have been influenced by the sufferings of famine, or by the use of unaccustomed or unwholesome food, arising from the famine pressure, and it is equally impossible to ascertain how far the loss of the population shown by the trial census in the selected talooks may be partly due to emigration, which by sea alone is known to have increased from about 98,000 in 1875-76 to 198,000 in 1876-77, or to migration which has been very extensive through all the affected districts.

6. The Government have referred these returns, together with a memorandum by Sir M. Kennedy, to the Sanitary Commissioner, and his report thereon will be forwarded.

STATEMENT showing the Results of the partial CENSUS of 1878 in the undermentioned selected Taluqs, as 1872 to 1876, and after certain necessary Additions and Deductions have been made (on account of the

NOTE.

Athur.—One village has been added to Athur since 1871. The population of this village in 1871 is not ascertainable, as the village cannot be identified. The population now entered, has, therefore, been deducted from the totals in both Columns 16 and 17.

Tripatore.—To this taluq one village was added from North Arcot subsequently to 1871, and three were transferred from it to South Arcot. The necessary deductions have been made from the totals entered in Column 17.

Coimbatore.—Since the Census of 1871, two villages in the Palladam taluq were amalgamated into one, while two were added to the taluq (one from Collegal, and another from Darampuri), and one was transferred to Darampuri. In the Census figures of 1871, the populations of two villages were not included, their schedules not having been forthcoming. These have now been taken into account, and on this account, and on account of the transfer of villages above explained, the total given in Column 17 for this taluq does not coincide exactly with the total for the taluq as given in the published Census return for 1871.

compared with the CENSUS of 1871, plus an Increment of 1½ per Cent. per Annum, during the Five Years, from Transfer of certain Villages from one Taluq to another) in order to render the Comparison correct.

NOTE.

Chingleput.—Three villages were added to the Ponneri taluq from Trivellore subsequent to 1871. The population of these villages has been included in the figures given in Columns 16 and 17 for this taluq.

Tinnevelly.—Thirteen villages of the Ambasamudrum taluq were transferred to other taluqs, and one was added to it, since 1871. The population of the added village in 1871 is not ascertainable, as the village cannot be identified. The population now returned has therefore been deducted from the totals in both Columns 16 and 17.

Nellore.—One village was transferred from the Gudur to the Nellore taluq. The population of that village in 1871 has been deducted from the total in Column 17.

MEMORANDUM on the partial CENSUS in MADRAS DISTRICTS taken in March 1878.

THE partial census of 1878 was taken in the Madras Presidency over the whole of the nine taluqs of the district of Salem; in six taluqs of other districts, which have been afflicted with famine; and in four taluqs of districts, where failure of crops did not prevail, or only prevailed to a very limited extent.

2. The result has been that in Salem the returns show an apparent loss of population, as compared with the actual numbers of the census of 1871, of 417,138; in the other six famine taluqs, a loss of 119,143; and in the non-famine taluqs, the returns show a gain of 53,122. The total apparent loss for the 15* famine taluqs amounts, therefore, to 536,281.

* Nine of Salem and six others.

3. In recording the result of the census, an annual increase of $1\frac{1}{2}$ per cent., or $7\frac{1}{2}$ per cent. for the five years ending 1876, has been allowed for, and this raises the apparent loss as follows:—

	Rs.
In Salem to - - - - - - - - - -	569,956
In the six other famine taluqs - - - - -	185,548
	755,504
While the four non-famine taluqs, instead of a gain show a loss of - - - - - - - - - -	2,411

4. This assumed increment has been termed the "normal annual increase," but it is not shown on what grounds it has been assumed.

5. As far as my judgment goes there has been no such increase, and my reasons for arriving at this conclusion are as follow:—

General Considerations.

6. Southern India has enjoyed peace and tranquillity for many years, during which the increase of population up to the limit of the sustaining power of the soil has been unchecked, except by occasional seasons of scarcity, more or less partial and localised, and by periodical outbreaks of epidemic diseases.

7. In the dry tracts, of which the 15 taluqs under reference form a part, the soil is generally poor. Under the most favourable conditions as to season, but also under a rude and primitive system of agriculture, it produces comparatively light crops of food grains, sufficient only for the bare subsistence of a limited number of persons whose wants are few, whose habits are simple, and whose life is passed in laboriously wringing from the soil its scanty produce. No large areas of arable land have, of late years, been available for increased cultivation; and, under the circumstances, it is probable that, in these tracts, so little favoured by nature, the limits of increase of production and of population have been reached, and that the land, under the rude system of cultivation prevailing, now supports, and has for some years past supported, as large a population as can draw a subsistence from it.

8. It is probable that there may have been some amount of aggregation in the larger towns and villages, and, to a trifling extent, emigration to more favoured districts may have taken place; but, as regards the great mass of the purely agricultural population of the famine tracts, the general considerations are, I think, opposed to any considerable increase, since the date of the last census in 1871.

Register of Births and Deaths.

9. The total number of births registered since the census of 1871, up to the end of 1876, was 404,392, while the total number of deaths during the same period was 375,212. This shows an apparent increment, in five years and two months, of 29,180 on a population of 2,836,166, or, in other words, the population appears to have been increasing at the very slow rate of ·2 per cent. per annum. This result is, however, subject to the reliability of the registering, the correctness of which is doubtful. The errors may be either way;

See Statements (A.) and (B.) accompanying (pages 18, 19).

way; but taking the figures as they stand, they lead to the inference that, under normal circumstances, and allowing for a similar increase in 1877, the population of the 15 famine taluqs in March 1878 might have been expected to be as below:—

2,836,166—Census population of 1871.
29,180—Actual difference between births and deaths to end of 1876.
6,000—Normal difference between births and deaths for 14 months (*i.e.*, 12 months of 1877 and two months of 1878).

2,871,346—Total.

Comparative Number of Houses.

10. A comparison of the number of houses shown by the census of 1871 and that of 1878 leads to the inference that the population of the 15 taluqs, so far from having increased, has actually diminished. There were found in 1878 * 73,514 fewer houses than were returned in 1871, and allowing four persons per house (the proportion shown by the census numbers), this would indicate a decrease in the population of 294,056. I do not desire to push this argument too far, or beyond what it may be worth; but it may be urged that an estimate of the increase or decrease of a population based upon the increase or decrease in the number of houses, would be roughly reliable; and it is a fact that, of the 15 taluqs, where a decrease of population is found, nine show a decrease of houses; while of the four taluqs, where there is an increase of population, three show also an increase of houses. Moreover, the social tendencies of the people, and the facilities afforded by law for the division of properties, are in favour of an increase of houses; and it may be fairly urged that, even with a stationary population, the number of separate houses would increase.

* *See* Census Return.

11. Without, therefore, insisting too much on the results indicated by the decrease in houses, it may be sufficient to observe that the apparent fact that they have decreased is directly opposed to the assumed increment in the number of the people.

12. For the above reasons, I think that there is no sufficient ground for assuming a "normal increase" of the population, since the census of 1871, amounting to $1\frac{1}{2}$ per cent. per annum. There may have even been an actual decrease *since* 1871; but I will now proceed on the assumption (*see* paragraph 9 *ante*) that there has been an increase not exceeding ·2 per cent.

13. The population residing in the 15 taluqs being, according to the census of 1878, 2,299,885, instead of 2,871,346, as it should have been, on the assumptions made in paragraph 9, there is a difference of 571,461 to be accounted for.

14. This difference must be due to the effects of migration, of increased mortality, of diminished births, or to a combination of all these causes.

15. As regards the question of migration, it is greatly to be regretted that for the 15 taluqs under notice no figures even approximate are available.† Statements of emigration from the different ports‡ show that the emigrants were very much in excess of the numbers in ordinary years; but how many of these persons belonged to the coast districts, and how many to taluqs similarly situated to those under review, it is impossible to say, while there are no figures whatever showing the extent of inland migration. There can, however, be no doubt, for it is a well-recognised fact, that the migration from the famine to the more favoured districts was very large; how large it is impracticable to determine, but the following figures may throw some light on the subject:—

† Accompanying Statement (E). page 21.

‡ These returns for 14 months, viz., from 1st October 1876 to 30th November 1877, show an increase of 131,339 in the number of emigrants, the average being 156,143, and the actuals being 287,482. The number of emigrants, therefore, nearly doubled.

16. According to the census of 1878, the number of

Males of 10 years and under is - - -	355,311
Females of 10 years and under is - -	351,084

while the number of

Males above 10 years is - - - -	772,517
Females above 10 years is - - - -	820,973

It appears, therefore, that while the males under 10 years were 4,000 in excess of the females, the men were 48,000 less in number than the women. Now there appears to be no reason why more men than women should die from famine or other causes, but there are many obvious reasons why more men than women should migrate.

17. The conclusion is, therefore, fair, that whatever the number of migrants may be, the men exceed the women by at least 48,000.

18. It follows, then, that the number of migrants must be very large, or such an excess of men over women would be impossible; and, supposing the migrant boys and girls to be about equal in number, it would seem a very liberal estimate to assume that the migrant males are 33 per cent. in excess of the migrant females.

19. Under this assumption, the total number of migrants would be about 350,000, *i. e.*, males 200,000, and females 150,000.

20. Adding this number of probable absentees, most of whom may return, to the census population of 1878, we obtain a total of 2,649,885, leaving (*see* paragraph 9) 221,461 persons to be accounted for.

21. The birth and death returns* of the 15 taluqs since the commencement of the famine to the end of February 1878, show a mortality in excess of the average, amounting to 190,814, and a decreased birth-rate compared with the average, amounting to 32,025, that is to say, these returns would lead to the probability of a diminution in the population of 222,839, a result tallying with the numbers shown in the preceding paragraph as still to be accounted for.

* *See* Statement (D.).

	Excess Mortality.	Decrease of Births.
In 1876 - - - -	3,890	+ 57
In 1877 - - - -	181,027	— 26,394
In 1878 to end of February	5,897	— 5,688
TOTAL - -	190,814	— 32,025

22. As regards the excess death-rate of 190,814, shown by the Sanitary Commissioner's mortality returns, the greater part is, no doubt, due to the unfortunate prevalence of cholera, small-pox, and fever, which were by no means confined to the poorer classes, during the famine period. The death-rate in the 15 taluqs from these causes amounted to 149,053 in 1877 alone,† as compared with an average of 32,909 for the six years ending 1875. The excess deaths in 1877 from these causes may, therefore, be set down at 116,000, which, deducted from 181,000, the total excess deaths of that year, leaves 65,000 excess deaths due to other causes.

† *See* Statement (A.) and Abstract (C.), which show the deaths as below:—

	1877.	Average for 1870–71–72–73–74–75.
Cholera - - -	62,230	2,655
Small-pox - -	13,504	3,105
Fevers - - -	73,319	27,149
TOTAL - -	149,053	32,909

Figures for the comparison of the mortality from these causes in the famine months of 1876 and 1878 are not available; but the deaths were probably in much the same proportion.

23. These diseases, then, account for nearly two-thirds of the excess mortality shown by the returns.

24. As regards the diminution of births, part must, no doubt, be set down to the effect of the famine upon the reproductive powers of the community; but part, and by no means a small part, is certainly due to the migratory movements already discussed.

25. It would appear, therefore, that but for the prevalence of cholera, small-pox, and fever, the death-rate in the 15 taluqs under review would not have been very greatly in excess of the average. Assuming (*see* paragraph 23) that two-thirds of the excess deaths in 1876 and 1878 may be set down to these diseases, the whole number of excess deaths due to them will amount to 122,514, which, deducted from the total excess deaths since the commencement of the famine (190,814), will leave 68,290 to be accounted for. Regarding these, it may well be urged that a period remarkable for cholera was probably also remarkable for kindred diseases; but, taking the most unfavourable assumption, and supposing, which is scarcely possible, that all these excess deaths were due to famine, their number would amount to less than $2\frac{1}{2}$ per cent. of the population.

26. This result (and it is to be remembered that it is arrived at on the very unfavourable and most unlikely assumption that all the excess deaths, not due to cholera, small-pox, and fever, are due to famine), is, no doubt, greatly to be regretted; but, considering the vast areas and lengthened periods over which the

the famine has extended, and the helpless nature of a large portion of the population, it may be said that, on the whole, the substantial safety of the people was secured, so far as such a result was practically attainable.

27. To summarise, the conclusions arrived at in this memorandum are as follow:—

(1.) That looking to general considerations, to the records of births and deaths, and to the census results as to the number of existing houses, there has not been an increase of population since 1871 at the rate of 1½ per cent. per annum; that, in all probability, any increase that may have taken place does not exceed ·2 per cent. per annum; and that there may possibly have been a decrease of numbers.

(2.) That a large portion of the apparent loss of population shown by the last census is due to migration. What the number of absentee migrants actually was, it is not practicable to determine; but that, on a consideration of the actual number of resident males and females over 10 years of age, found in the districts, the number may fairly be assumed to be about 350,000.

(3.) That cholera, small-pox, and fever account for nearly two-thirds of the excess mortality during the period between the latter part of 1876 and the end of February 1878.

(4.) That the loss of population, not thus accounted for, amounts to about 68,290, or to less than 2½ per cent.; some; but, not all, of which loss may be attributable to the distress that has prevailed.

(signed) *M. K. Kennedy*,
Lieutenant General, R.E.

Ootacamund, 11 May 1878.

(A.)

(No. 5 of 1878.)

From the Government of Bombay to the Secretary of State for India, London.

Public Works Department, Bombay Castle,
22 April 1878.

My Lord,

ADVERTING to paragraph 10 of Famine Statement No. LVII. for the week ending 22nd December 1877, we have now the honour to submit the results of the Census taken on the 19th January 1878.

2. We find that this new and partial Census leaves the question of mortality from famine very much in the same doubtful state as before; but, so far as we can judge, the following conclusions may be formed:—

1st. That the new Census taken in the Talukas or tracts of country selected as the worst or most distressed by the famine, does seem to show a diminution in the population.

2nd. That this diminution is in a considerable degree apparent only, as arising from migration, and partly real, as arising from mortality.

3rd. That the mortality arose partly from sickness other than famine—sickness extending not only throughout the year 1877, that is, the year of famine, but also throughout the two previous years 1876 and 1875, which were not years of famine—and partly also from famine.

4th. That the mortality arising from famine itself cannot be exactly estimated, but probably it was not considerable, or was, rather, comparatively inconsiderable.

We have, &c.

(signed) *Richard Temple.*
J. Gibbs.
L. R. Ashburner.

NOTE on the Census taken in January 1878 of certain TALUKAS within the Area affected by FAMINE in 1876 and 1877.

THE Census was taken on the 19th January 1878. The General Census of 1872 was taken on the 21st of February. The times of year selected on the two occasions correspond sufficiently to prevent any ordinary annual movement among the population from vitiating a comparison between the results of the two Censuses.

Selection of Districts.

2. Nine Collectorates were affected more or less severely by the famine, but it was not considered necessary to take a Census in all of these. The five districts in which, according to the returns received from the Sanitary Commissioner, the mortality had, during the nine months ending with September 1877, been highest, were chosen. These were, in order according to the height of the rate of mortality in each,

Kaladgi.	Satara.
Dharwar.	Sholapur.
Belgaum.	

The period of nine months mentioned above was taken, as January 1877 was considered to be the first month in which the death-rate could possibly have been affected by the scarcity, and as September was the last month for which returns were available. Had a selection of the five worst districts been made, not on the basis of the mortuary returns, but on the general information in the hands of Government, the only difference would have been that Poona would have been substituted for Satara.

3. Within

Selection of Talukas.

3. Within the five districts, talukas were selected in this wise: In order to know the worst, the taluka in which the death-rate appeared to have been highest was chosen, and in order to have an estimate of the effect of the famine on the whole population of the district, that taluka was chosen in which the death-rate had been most nearly identical with the death-rate of the district. The talukas in which the death-rate was shown as the highest in each district were,

Sangola in Sholapur.	Athni in Belgaum.
Man in Satara.	Ron in Dharwar.
Bagalkot in Kaladgi.	

and the talukas in which the rate of mortality most nearly agreed with that of the district were,

Madha in Sholapur.	Sampgaon in Belgaum.
Khatau in Satara.	Kod in Dharwar.
Badami in Kaladgi.	

The ascertained results for what purposes of calculation available.

4. Of these 10 talukas accordingly a census has been taken; and the method of selection having been as above described, it follows that it would be meaningless to combine, in the way of aggregation, the results pertaining to the first group of five talukas with those of the second group, or indeed to take the aggregate of the results belonging to the first five talukas at all. The returns of each of these talukas must be looked at individually: their purpose is to show how far the population of each district has been affected by the famine in that subdivision in which, as was conjectured, the effect of the famine was greatest; though, as is explained below, they cannot in all cases be accepted as indicating this. On the other hand, the second group of talukas having been selected each as the average representative of its district, the results in their case, it was expected, might have been combined to furnish an estimate of the effect of the famine on the whole population of the five districts. But though at the time of selecting the worst and the mean talukas, it was thought best to be guided by the mortuary returns, the results of the Census tend to show that those returns did not furnish the very best guide. In the cases of Sholapur and Kaladgi the talukas selected as average ones appear from the Census to have suffered much more than those supposed to be the worst. But it is to be noticed that in these two cases the selection of worst talukas made on the basis of the mortuary returns is not the same as would have been made if the recorded accounts of the condition of the talukas only had been considered, while in those cases in which the mortuary returns correspond with the general accounts of the talukas, the Census returns also are found to agree. Thus in the districts of Satara, Belgaum, and Dharwar, the talukas of Man, Athni, and Ron respectively are indicated as the worst as well by the accounts received of the failure of crops, &c., as by the mortuary returns. But in Sholapur it is the very taluka (Madha) selected by the mortuary returns, as an average one, that the reports at the close of 1876 showed to be the worst of all. Madha was the only taluka in Sholapur in which the outturn of both kharif and rabi crops was estimated as nothing. Of the talukas of Kaladgi worse accounts were given of three others than of either Bagalkot or Badami. The returns of the talukas of the second group therefore must be taken, like those of the first, each by itself. And in judging of the returns of the 10 talukas it can safely be assumed only in the case of Man, Athni, and Ron that the taluka in question is the worst of its district, though that is probably true also in the case of Madha. Of the other talukas Sangola may be taken as one of the worst three in Sholapur, Khatau as one of the worst four in Satara; Bagalkot was a little below the average, and Badami, except in the matter of prices, one of the best in Kaladgi; the accounts of Sampgaon are conflicting, as its crops were estimated to be among the best in the district, while as regards rainfall and prices, it was amongst the worst; Kod was one of the best districts in Dharwar.

Selection of particulars of enumeration.

5. The purpose of the Census being merely to ascertain to what extent the growth of the population had been checked by the famine, it was deemed unnecessary to make the Census meet all the requirements of the elaborate returns called for on the occasion of the general Census. Other reasons of

simplifying the work as much as possible were the long and trying labours the district officers and their subordinates had just undergone, and the wish to obtain the results of the Census while famine and famine policy were still prominent objects in the deliberations of the Indian Governments. Accordingly, those of the statements prescribed for the general Census of 1872 which are not addressed to matters liable to be immediately influenced by famine have been on this occasion omitted, and no classifications of the population have been made except those according to (1) sex, (2) age, (3) religion in so far as the divisions connote race, (4) condition as judged from the style of house dwelt in, and (5) occupation in so far as it is agricultural or not. As regards the classification according to ages, the same divisions of age have been observed as in 1872. As regards religion, the numbers of Buddhists and Christians in the districts in question were too small for it to be worth while to maintain them as separate classes; indeed it was only on account of the numbers of these classes in Burma and Madras that they were so distinguished in 1872, so only Hindus and Muhammadans have been shown separately, and the few others remaining counted together. As regards occupation a more particular classification would have been made, but that the previous Census would furnish no standard of comparison, Form No. VI. having been prepared in 1872 according to districts only and not according to talukas.

The returns prepared with additional lines comparing the figures of 1872 with those of 1878.

6. The results of the Census now taken are set forth in the accompanying Tables, and, to facilitate comparison, the corresponding figures of the Census of 1872 are set out in parallel lines throughout the Tables, the difference in each case being shown in a third line below. In some points—but fortunately points of less importance—no comparison is practicable as different standards have been adopted, or some of the instructions differently interpreted on the two occasions, and indeed in different districts and different talukas of the same district on the same occasion. Thus a comparison of the number of enclosures with the number of houses shows that the definition of enclosure has in some cases been misunderstood. A comparison of the number of houses of the better sort in 1872 with the number in 1878 shows that in some cases a different standard of quality has been taken. Again in both talukas of Belgaum and in Madha of Sholapur some classes not counted as Hindus in 1872 have obviously been counted as such in 1878. And lastly, the number given as the total agricultural population is, in many instances in the returns of 1872, and in the case of Kaladgi in 1878, obviously too small in comparison with the number of male agriculturists above 20 years of age. But these discrepancies do not interfere with the more important objects of the Census. The salient points indicated by the different Tables are considered in the following paragraphs.

No. I. General Statement of Area and Population. A. Abstract, p. 31.

7. The first Table shows that with the exception of the taluka of Kod in Dharwar where there is a slight increase, there has been a diminution in the population of every taluka since 1872. Of the population recorded in 1872 the per-centage of diminution for each taluka is given below:—

Sangola	3 per cent.	Badami	20 per cent.
Madha	19 „	Athni	13 „
Man	12 „	Sampgaon	4 „
Khatau	10 „	Ron	7 „
Bagalkot	11 „		

In Kod an increase of 1·7 is shown on the population of 1872.

This is briefly the result of the Census just taken, but an examination of the detailed returns is necessary to a proper understanding of its significance.

No. I. General Statement of Area and Population. B. Details of Population, p. 32.

8. In the second Table the people are classified (1) according as they live in houses of the better or of inferior sort, (2) according to sex, and (3) according as they are Hindus, Muhammadans, or of some other denomination.

That the poorer people should suffer from the scarcity more than those in better condition is axiomatic, but the Table furnishes no means of comparing the ratios of diminution of the two divisions, as the classification of houses has not been regular.

An

Sex.

An examination of columns 7 and 8 of this Table discloses that the number of males has diminished a great deal more than the number of females. This is true of every taluka except Kod, where there has been no diminution, and where such increase as there has been is more among males than females. The exception is important as indicating, so far as it goes, that the difference in the rates of diminution of males and females is really due to a cause relating to famine, the cause being found to bear its result in every taluka except that in which the influence of the famine was least. The per-centage of diminution in the numbers of each sex in each of the nine other talukas is shown below :—

DISTRICT.	TALUKA.	Per-centage of Diminution of the Population of 1872.	
		Males.	Females.
Sholapur	Sangola	4	2
	Madha	21	18
Satara	Man	13	10
	Khatau	11	9
Kaladgi	Bagalkot	13	10
	Badami	22	18
Belgaum	Athni	14	11
	Sampgaon	5	3
Dharwar	Ron	9	5

As there is no known reason why the male population should decrease much, if at all, faster than the female, whereas it is probable that men go further in search of occupation than women, the deduction to be drawn appears to be that part of the diminution of population the Census shows in this respect is due to migration only.

Race.

The columns from No. 9 to the end show the classification according to race. The same numbering of columns has been retained as in the Tables of the Census of 1872, and where one column now represents more than one of those of 1872, the numbers of the component columns are all entered and joined with the sign +. The population of these districts is in such preponderance Hindu that little is indicated by the Census as to the comparative effect of the famine on the different nationalities. In three only of the ten selected talukas is another class found large enough to form a basis of comparison with the other inhabitants. These are the Muhammadans of Athni and Sampgaon in Belgaum and of Bagalkot in Kaladgi. In the last-named taluka the diminution of the Muhammadan population has differed little from that of the other people, it being 12 per cent. in the case of the Muhammadans and nearly 12 per cent. in the case of the others. But in the two talukas of Belgaum the difference is very great, the Muhammadan population of Athni and Sampgaon being less respectively by 24 and 21 per cent. than in 1872, while the diminution in the people of other races is less only by 12 and 2 per cent. respectively.

No. II A. General Statement of Population according to Age, p. 34.

9. The third Table shows, separately for males and females, the population divided into nine classes according to age. Comparing the results with those of the Census of 1872 it will be seen that there is a very great diminution in the numbers of very young children, an increase in the numbers of older children and persons up to 20 years of age, a slight diminution in those between 20 and 40 years of age, a more considerable diminution of those above 40, and a great diminution in those above 60 years of age. Or, stating the results in greater detail, the diminution in the number of infants under one year of age varies from 23 per cent. in Kod to 73 per cent. in Badami; that in the children between one and six years of age from 13 per cent. in Man to 41 per cent. in Bagalkot. The number of children between 6 and 12 has increased in seven

out of the ten talukas. So also the persons between 12 and 20 years of age have increased in seven out of the ten talukas. But those between 20 and 30 are fewer in eight talukas; those between 30 and 40 fewer in seven talukas; those between 40 and 50 fewer in nine talukas, the per-centage of diminution rising to 21 per cent. in Man; those between 50 and 60 are fewer in eight talukas, the per-centage rising to 28 per cent. in Badami; and those above 60 years of age are fewer in eight out of the ten talukas, the per-centage of diminution amounting to 57 per cent. in the Man taluka.

Now, it is well known that in ordinary years the diminution among the very young and the very old is very much more than among those of intermediate ages; and in a year of famine, such diminution would be even much more marked than in ordinary years. The registration during 1877, the records of which are now complete, fully bears this out.

In 1872 it was computed that the death-rate amounted to 3·557 per cent. of the whole population of the Presidency of Bombay, whereas in 1877 it amounted to 3·876 per cent., and in the nine affected districts to 5·477 per cent. of the population of those districts, indicating large mortality; but, even assuming a death-rate based upon the loss of very young children, which is the most unfavourable view of the case, the census of 1878 most distinctly indicates very large migration from Madha and Badami, a fact borne out by the reports of the District Officers, considerable migration from Man, Khatau, Bagalkot, and Athni, and some migration into Kod.

10. It is impossible to state precisely what proportion of the loss exhibited by the Census of 1878 is due to excess deaths from 1872 to 1876, to excess deaths during 1877, and to migration out of the distressed districts, but an examination of the calculations and speculations given in the appendix to this note will tend to throw some light, at any rate, upon the subject.

No. IV. Statement of Population with reference to Land and Land Revenue, p. 36.

11. The materials for comparison are so incomplete in the case of the fourth Table that no deductions can be drawn from it.

C. J. Merriman, Colonel, R.E.,
Acting Secretary to Government.

Public Works Department,
Bombay, 30 March 1878.

APPENDIX,

With Tables (A.) to (G.).

The death-rate for the whole Presidency was, in 1877=38·76 per 1,000 of population.

The death-rate of each class was, during the same year,—

Infants under 1	149·43	per 1,000
Children 1 to 12	28·75	„
Adults 12 to 50	25·64	„
Old people above 50	125·72	„

Taking the ratio of increase as 1 per cent. per annum, the population at the beginning of 1878 ought to have been 6·15 per cent. greater than shown by the Census of 1872. Table (E.) shows the difference between the census returns of January 1878, and the population of 1872 raised 6·15 per cent.

Calling this difference *loss*, Table (F.) shows the loss per 1,000 of each class in each taluka, and the question comes what proportion of this loss, if any, is due to migration?

It may be reasonably supposed that whatever portion of the loss is due to death, in such portion the respective losses of each class would approximate to that shown above, and that the special conditions giving rise to increased mortality in 1877 would tend rather to raise than to lower the loss of infants and old people, as compared with the loss of children and adults.

Table (G.) is obtained by dividing the loss per 1,000 of each class by the figures given above. Where the figures under the columns children and adults exceed the figures under the columns infants and old people, we must either suppose that the special conditions above referred to caused increased mortality among children and adults as compared with infants and old people, or what is more reasonable that a portion of the loss was due to migration of children and adults, and the greater the difference between the figures the greater such migration.

Referring to Table (G.) it will be seen that the figures under children and adults exceed those under infants and old people in greatest proportion in the talukas of Bádámi and Mádha, indicating that a large portion of the loss of population of those two talukas was due to migration. Bádámi shows the highest loss rate for children, and nearly the highest loss rate for old people, indicating a large mortality as well as much migration. More or less migration is also indicated from the following talukas:—Mán, Khatau, Bágalkot and Athni. No migration is indicated from Sángola; here the loss is probably due to mortality, what proportion in 1877, and what in previous years, it is impossible to say. The same remarks apply to Ron. On the other hand, the figures indicate migration into Kod, hence the indications are—

Large migration from Bádámi and Mádha.
Less migration from Mán, Khatau, Bágalkot, and Athni.
No migration indicated Sángola and Ron.*
Migration into Kod.

If the talukas are placed in order of their loss rate, we have—

1st. Bádámi, 254·11; Mádha, 245·15.

2nd. Athni, 187·10; Mán, 171·72; Bágalkot, 169·29; Khatau, 153·14.

3rd. Ron, 127·64; Sampgaon, 98·78; Sángola, 92·66.

4th. Kod, 41·58.

As a speculation, as to the amount of migration from each taluka, we may proceed as follows:—Assuming that the loss rate of children and adults, in excess of that for infants and old people, represents migration, we find that in the six talukas named this amounted to,—

Mádha -	12,091	individuals=loss	per	1,000	of population	of the taluka, 110·95
Bádámi -	10,081	„	„	„	„	83·09
Bágalkot	8,351	„	„	„	„	71·39
Khatau -	4,211	„	„	„	„	48·40
Athni -	5,010	„	„	„	„	41·15
Mán -	1,785	„	„	„	„	26·71

These

* *See* Note to Table (G.).

These figures are obtained by taking from Table (G.) the highest of the two figures under infants and old people, *i. e.*, the figure under infants in every taluka except Khatau, and deducting it from the figures under children and adults, the remainders multiplied by 28·75 and 25·64 respectively, give loss per 1,000 of children and adults due to migration, and these, calculated on the numbers of each class, give the loss of individuals.

But it is fair to suppose that the actual migration was higher than the numbers shown above for the following reasons:—

1st. The migration rate is calculated above on the presumption that the special causes prevailing in 1877 caused increased mortality of all classes alike. Now Table (G.) shows that in every taluka except one (Khatau), and one (Mán) where the losses are equal, the loss of old people was less than that of infants, from which it may be presumed that, of the two classes (infants and old people) likely to suffer most, the infants suffered in greater proportion than the old people.

2nd. Migration of children and adults would, in all probability, be accompanied by migration of infants and old people, of which no notice has been taken in the calculation.

We may attempt to eliminate the error from the first of these two causes by repeating the calculation just made, employing the mean of the figures in Table (G.) under infants and old people in place of the highest of the two figures; modifying the calculation in this way, we get the following migration rates:—

Mádha	-	14,802	individuals = loss per 1,000,	134·10
Bádámi	-	12,952	,, ,,	106·76
Bágalkot	-	13,696	,, ,,	117·09
Khatau	-	8,131	,, ,,	93·46
Athni	-	8,261	,, ,,	67·86
Mán	-	1,785	,, ,,	26·71
Sampgaon		4,921	,, ,,	35·25

The recorded death-rate during 1877, in the nine affected districts, was 54·77 per 1,000, and the death-rate of each class in the same districts was—

Infants under 1	- - - - -	173·16 per 1,000
Children 1 to 12	- - - - -	42·91 ,,
Adults 12 to 50	- - - - -	35·85 ,,
Old people over 50	- - - -	176·16 ,,

Repeating the last calculation, employing these figures instead of the figures for the whole Presidency, we get the following migration rates:—

Mádha, loss per 1,000	- - - -	122·79
Bádámi ,,	- - - -	91·82
Bágalkot ,,	- - - -	115·82
Khatau ,,	- - - -	95·46
Athni ,,	- - - -	56·67
Mán ,,	- - - -	22·76
Sampgaon ,,	- - - -	27·98

It will be noticed that in two cases, Bágalkot and Sampgaon, these estimated migration rates, if deducted from the total loss-rate, give figures below the recorded death-rate in the taluka. But the migration rates deducted from the loss rates, only give the excess loss which has taken place in each taluka during the six years ending January 1878, over and above that due to the loss by average mortality during the same period. Three causes may have been in operation to produce this excess loss,—

1st. Migration of infants and old people accompanying migrating children and adults, of which, in the previous calculations, no notice has been taken.

2nd. Excess mortality during the five years ending January 1877.

3rd. Excess mortality during the year ending January 1878.

What proportion of the excess loss is attributable to each of these heads it is not possible to say.

TABLE (F.)—LOSS per 1,000 of each CLASS per 1,000 of E. on D.

TALAKUS.	TOTAL.	Infants under 1.	Children 1 to 12.	Adults 12 to 50.	Old People over 50.
Sángola - - -	92·663	379·429	108·318	53·491	187·537
Mádha - - - -	245·152	580·145	248·678	216·136	226·869
Mán - - - -	171·725	507·897 (gain.)	87·035	139·426	430·381
Khatau - - -	153·144	144·076	143·435	127·656	366·515 (gain.)
Bágalkot - - -	169·292	579·207	283·338	126·931	87·914
Bádámi - - -	254·117	747·839	294·780	186·852	380·237
Athni - - - -	187·109	590·847	156·827	152·102	207·315
Sampgaon - - -	98·780	380·118	120·747	61·094	87·905
Ron - - - -	127·640	592·270	165·866	47·571 (gain.)	273·796 (gain.)
Kod - - - -	41·589	274·845	168·904	4·741	287·288

TABLE (G.)—PROPORTION LOSS per 1,000 of each CLASS bears to DEATH-RATE of same CLASS for 1877.

TALUKAS.	Infants under 1.	Children 1 to 12.	Adults 12 to 50.	Old People over 50.	Loss per 1,000 of Population.	Recorded Deaths per 1,000.
Sángola - - -	2·54	3·76	2·08	1·49	92·66	66·66
Mádha - - - -	3·88	8·65	8·43	1·80	255·15	41·80
Mán - - - -	3·46	3·02	5·43	3·42	171·72	65·25
Khatau - - - -	+·97	4·98	4·97	2·91	153·14	50·62
Bágalkot - - -	3·87	9·86	4·95	+·69	169·29	95·72
Bádámi - - -	5·00	10·25	7·28	3·02	254·11	104·31
Athni - - - -	3·95	5·46	5·93	1·64	187·10	75·72
Sampgaon - - -	2·54	4·20	2·38	·69	98·78	70·92
Ron - - - -	3·96	5·77	1·85	2·17	127·64	106·79
Kod - - - -	1·84	5·87	+·18	+2·28	41·58	70·46

Note.—In the case of Ron, it is possible that the figures may be explained by a migration of children and adults *out of* the taluka in one period, and of adults *into the* taluka at another. In the case of Kod, the same remarks apply, except that the figures show migration of old people as well as adults *into the* talukas.

THE NORTH WESTERN PROVINCES.

EXTRACT from a DESPATCH from the Government of India to the Secretary of State for India (No. 49), dated 3rd June 1878.

Para. 9.—THE returns of mortality for the North Western Provinces show that during the past months the death-rate has been very much higher than usual. The average death-rate for the whole of the North Western Provinces and Oudh has been, during—

November 1877 - -	1·99	per mille, as compared with a rate per mille in the previous year of—	1·79
December „ - -	2·77		1·59
January 1878 - -	3·27		1·20
February „ - -	3·30		1·05
March „ - -	3·36		1·46

The Lieutenant Governor, when remarking on this mortality, considered that many who had been reduced by want must have succumbed to the cold and damp of the present unusual season. He deplored the unreadiness of the people to come to the relief works, which are open or are ready for them. This difficulty has been felt in other Provinces, where relief works are really supervised, and a fair tale of work is exacted at low rates of wage from the relief labourers. If, unhappily, distress in parts of the North Western Provinces should deepen into famine, it will be necessary to organise arrangements for hunting up the distressed people in their villages.

10. Though high prices and want must have had their share in causing the increased rate of mortality in the North Western Provinces, there is ground for believing that the season has been unhealthy in parts of India not affected by the scarcity. In 22 towns of the Central Provinces, where the registration of deaths is held by our Sanitary Commissioner to be comparatively well done, the death-rate of the past season has been abnormally high; thus the death-rate was, during—

January 1878 - -	2·52	per mille, as compared with a rate per mille in the preceding year of—	2·2
February „ - -	2·40		2·1
March „ - -	3·80		2·3

In the Central Provinces, though prices were high, there was no scarcity of food; and the late Sanitary Commissioner, Dr. S. C. Townsend, has pointed out that the mortality from fever, which usually falls almost to zero in February, has this year continued extraordinarily high.

EAST INDIA (FAMINE).
